'One day,' he said to the writer, 'I overtook a young fellow who was leading a wagon laden with manure. He was a real specimen of a Daler. After a few words of general conversation, I asked: "How much may you get for your job?" "Power millin' a-wick an' me shurt weshin," was the prompt reply. I was in the act of taking stock of the lad's garments, to see if a shirt was the only item of apparel that he might need to have washed weekly, when—looking me earnestly in the face—he said, with a coolness and a deliberation that was perfectly comical: "An' what may thou hev for thy job?"'

My friend did not say whether he enlightened his rustic companion; but it must be acknowledged that he had equal right to know the earnings of the parson.

An instance of an inventive genius in an illiterate farmer's boy is too good to be forgotten. A small farmer hired a youth to assist him in the work of his farm as an indoor servant. The first piece of work he was set to do was to thrash out some corn. As the farmer was passing the barn in which the youth was at work, he heard the flail lazily keeping time to a tune the lad was singing. Stopping to listen, he ascertained that the words were, 'Bread-and-cheese, tak' thy ease.'

Going into the house, the farmer said to his wife: 'This is a queer sort of lad we have gotten; he seems to think that the speed at which he ought to work should be measured by the kind of food he gets.' And then relating what he had heard, he suggested: 'Suppose we give him something different to dinner to-morrow, and see how that acts?'

This being agreed to, he had apple-pie added to his bread-and-cheese. This brought down his flail somewhat more rapidly, for it was going to the speed wherewith the lad sang 'Apple-pie accordin'-ly.'

'Bob's doing a bit better to-day, lass,' said the farmer to his wife; 'let us mend his dinner again to-morrow, and see what that will bring forth.'

So, when the next dinner-time came round, he

had a good plate of beef and pudding set before him, which went down right grandly, and brought the flail into splendid action to the words, 'Beef and puddin', I'll gi'e thee a drubbin',' and to a jolly good tune.

'I see plainly,' said the farmer, 'if we wish to get good work out of Bob, we must feed him well;' so Bob had his bill of fare improved without having recourse to a strike.

In a village in a district crowded with inhabitants in the same latitude but in a different longitude from those hitherto spoken of, and wherein the introduction of manufactures has produced a change in the habits of the people, a friend of the writer's once spent a Sunday. He dined at a farmhouse on a hill-side where the good things of this life were both abundant and good. The after-dinner conversation between him and the heads of the household was interrupted by the ingress of a young woman, who began to rummage a chest of drawers in an impatient style. After a while, seeing that she did not find the object of her search, the mother asked aloud: 'What art ta luteing?' [seeking].

'I's lateing me shift,' was the girl's reply, snappishly.

'Ugh! thaa needn't late it ony langer,' said the mother, with perfect composure; 'for seein' nowt else, aw tuck th' lap on't ta boil t' puddin' in.'

'I could not refrain from laughing outright,' said my informant; 'and felt glad that the task of eating the pudding had already been an accomplished fact.'

Before the passing of the Ballot Act, an election often gave 'free and independent electors' no small amount of anxiety, especially if their landlord was of a different political creed from his tenants. But I knew an instance of another kind. A large estate in the district about which I write was owned by a peer of the realm, who seemed to guide his political action more by the candidates in the field than by principle; for the tenants did not know how they would have to vote until the steward made known his lordship's will. So these sixty or seventy possessors of the franchise never suffered electioneering excitements to come near them until the day of the poll, when, having received a circular the day previously to say 'that the Right Hon. Lord So-and-so wishes you to support Mr So-and-so, and his lordship will be pleased if you can arrange to go to the poll in a body,' they dressed in their best, and drove, with most serene and contented countenances, to the town in which the polling-booth was situated.

One man there was who farmed under two landlords of diverse political creeds. During my residence in the Dales, there chanced to be an election for the division in which this worthy lived. Walking out with him one morning just before the day of election, I asked him if he had made up his mind as to the giving of his vote.

'O yes,' was the reply; and then, without waiting for another question, he said: 'I got a papper first fra th' General axing me to vote yellow. Of coorse I said "I will." Th' next day there com' a papper fra Maister Green, my uther landlord, axing me to vote blue. "Of coorse I will," was my reply.'

'What! do you mean to vote both ways, Mr Claypole?'

'Sure-ly,' was the prompt reply; and then he added: 'Dun yo think as I would vex owther o' my landlords for the sake o' politics? Noa, noa; not soa. I knaws better nor that. I've written 'em boath to say, "I'll do as ye desire me;" so nowther on 'em can say as I've gone contrairy to his wishes.'

This Mr Claypole was proverbial for his avarice, though he kept a capital table; but then most of what was served thereon was grown on his farms. It was therefore not a little surprising to the writer when the old gentleman said to him one day, as they were slowly walking through one of his fields: 'I breeds about fower dozen geease ivery year; but I doesn't sell yan; I either eats or gies 'em all away.' Seeing that my look was an incredulous one, he promptly added: 'Bnt mind! aw taks varry good care wheere aw gies 'em;' then looking me steadily and earnestly in the face, he said, with perfect *sang-froid*, compressing his lips and nodding at the close of the utterance: 'Aw gies a goois wheere aw believes aw sall git a turkey.'

'Exactly!' was my response.

The writer happened to be present at a preaching service which was held in Claypole's kitchen one work-day evening. His better-half was an earnest member of a Methodist body, and was vastly more liberal than her husband, who, however, kept her bare of money, so that it was with much difficulty that she could keep up her subscriptions to the 'cause.' There was to be a collection on this occasion, and it had been a subject of contention beforehand how much each of them should give. Claypole said he would not give more than a few coppers; but Mrs Claypole said she would give a shilling, 'that she would,' which she had managed to save somehow. 'You mun dew nowt ov th' kind,' was the imperious order of her liege lord. As the collector neared the person of Mrs Claypole, the old man's eyes were fixed upon her with a steady and earnest gaze, believing that he would thereby frighten her into compliance with his wish. Mrs Claypole saw the movement and quailed beneath the stare. But waxing bold as the crisis came near, she clutched the shilling between her thumb and forefinger, and holding it up before his steady forbidding look, she said, loud enough for all to hear: 'It's gangin', see thee!' and down it dropped into the hat that did service as a collecting-box. I need not add that the poor woman had a bad time of it that night.

Upon the whole, there is much to reconcile one to a residence in these out-of-the-way places. The people generally are clean both in their persons and houses, and there is a solid comfort which cannot be found so prevalent among their kind in large places; and their kindness endears them to us. Their simplicity and credulity may now and again bring upon them certain pains and penalties, but for the most part they only result in harmless mirth. The iron-road is beginning to penetrate these regions, and this will ere long be the means of greatly altering the character of the people; for when able to mingle with persons of a different mental calibre, and of being made familiar with the vigour and acuteness of their more instructed brethren, they themselves will be inoculated with

similar influences, and thus become incapable of declaring, as did an old lady when taken for the first time to the top of a neighbouring hill: 'Hay! I didna think th' world wor soa big!'

#### ON THE EVE OF THE WEDDING.

O LOVE, before we part to-night,  
Before the last 'I will' is spoken—  
Before the ring has touch'd my hand,  
Of pure, true, endless love the token—  
Before the Church with holy rite,  
Her blessing on our love has given,  
Look straight into my eyes with yours,  
And answer me in sight of Heaven.

Is there within your heart of hearts  
One lingering shadow of regret—  
One thought that you have chosen ill?  
Oh! speak—'tis not too late even yet.  
Is there in all this world of ours,  
One you have ever known or seen,  
Whom, if you had earlier seen or known,  
You would have crown'd your chosen queen?

Is there?—I pray you, tell me now,  
And I will hold you bound no more.  
I will not flinch to hear the truth.  
It could not be so sad, so sore,  
To know it now, as it would be  
If by-and-by a shadow fell  
Upon the sunshine of our home;  
So, if you ever loved me—tell.

I'd hold you pure from blame, dear love;  
And I would leave you free as air,  
To woo and win that happier one.  
All this for your dear sake, I'd bear.  
I will not say how I would pray  
That God might have you in His care;  
That would be easy—when I think  
Of you, my heart is all one prayer.

But could I join *her* name with yours,  
And call down blessings from above  
On her, who had robbed me of my all—  
My life—my light—my only love?  
Yes! even that I'd try to do;  
Although my lonely heart should break,  
I'd try to say 'God bless her!' too,  
Through blinding tears, for your sweet sake.

I'm looking up into your eyes;  
But though my own with tears are dim,  
I read that in their true, clear depths,  
Which tells me, 'You may trust in him.'  
I will—I will! It needs no words,  
Though yours are flowing warm and fast,  
And eloquent with truth and love.  
Forgive my doubts—they are the last!

## FOOD AND FASTING.

THE recent experiment of Dr Tanner, in proving the possibility of sustaining life during a long fast upon air and water alone, affords a text whereon some interesting particulars concerning food and starvation at large may be hung. Apart from their notoriety, such experiments can have little interest. They can certainly never overthrow established physiological ideas regarding the necessity not merely for solid food, but for that due and natural mixture of food-principles which we can easily shew Nature insists upon our receiving day by day. Unless we could rationally indulge in the wild supposition that man's constitution is susceptible of fundamental alteration and sweeping change, the idea of living for any length of time on water and air alone must be viewed as a dream, worse by many degrees than Utopian. These may be strongly expressed opinions, but they can be more than justified by the most elementary study in physiology.

Why do we require to take food? or in plainer terms, why do we eat our dinner? are questions demanding no great exercise of knowledge for their clear solution. It constitutes a great fact of Nature that every action we perform entails a corresponding amount of waste on our physical frame. Work means waste, equally to a human body and a locomotive engine. 'More work, more waste,' is a motto alike true of the mechanic's apparatus and of the mechanic himself. Not an action, we repeat, is performed by us which is not accompanied by an expenditure of force derived from and accompanied by a proportional waste of substance. The movements of muscles, the beating of the heart, the winking of an eyelid, the thinking a thought, entail wear and tear upon the muscles that work and the brain-cells that think. Every action necessitates bodily waste and corresponding physical repair. Waste, however, cannot of necessity be a single and final process in a living body—unless, indeed, we were born with a full complement of matter, and were permitted in the order of Nature to live on the principal with

which we had been provided, instead of wisely using that principal as a means of gaining a livelihood through the interest it acquired. That we are not so constituted is an evident fact; hence our bodies demand pretty constant repair as a companion action to that of work, labour, and duty. This process of repair consists in the reception of matter from the outer world, in the transformation of this matter into ourselves, and in its utilisation in the work and repair of the frame. Such matter we shortly name *food*, and the processes whereby it is converted into our own bodily substance we term *digestion*.

One of the plainest rules for taking food is that which insists that we must find in our nourishment the substances of which the body itself is composed. If we think of it, such a rule is in strict conformity with the dictates of common sense. We are bound to obtain from our food the matter the body lacks; and any food, however pleasant to the palate, but which does not contain elements naturally found in the frame, may be unhesitatingly rejected from the lists of our dietaries. It follows, therefore, that to know what foods are required for our sustenance, we must investigate the chemical composition of our frame. In this way we discover, for instance, that we are largely composed of *water*. Two-thirds of a human body by weight are composed of water. A body weighing one hundred and sixty-five pounds, will include in its belongings one hundred and ten pounds of water. Water further permeates or enters into the composition of every tissue; hence, the reason why thirst is so much more painful than hunger is, that whilst the latter is a comparatively local condition, the former affects the entire frame. And we also see the importance of water as an article of diet—a phase in which we are not usually accustomed to regard it. If we take even the most cursory survey of our bodily composition, we find that our chemical structure is of the most motley and varied description. Thus we shall find a large selection of minerals in our tissues; lime, magnesia, &c., in our bones; common salt in our

stomachs and elsewhere; iron in our blood; and phosphorus in brain and nerve. Then coming to our soft parts, we find that these may be divided into what physiologists call the *nitrogenous* and *non-nitrogenous* compounds. Of these, the former contain the element *nitrogen* in addition to other elements, whilst the latter want this element. Thus the 'albuminous' or white-of-egg-like substances existing in our frames, contain nitrogen; whilst the fats of the body and the sugars and starches, do not. To these latter, we may add water and minerals as also non-nitrogenous in their nature.

Now in such a simple study of what we are made of, we have already made some important discoveries as to the kinds of food on which we are intended to subsist. If these matters compose our frames, and if further the substances just enumerated waste and wear and disappear in the work of life, it must follow that we shall require to find new matters of like kind in our food. And it is in accordance with such plain information afforded by chemistry, that we find physiologists dividing foods into two classes—the 'nitrogenous' and 'non-nitrogenous' groups just alluded to. When, for example, we eat a piece of beef, we are receiving 'nitrogenous' food in its juice and in its fibres; and we are also obtaining the other variety of foods from its water, its fats, and its mineral matters which are not nitrogenous in their composition. If we eat an egg, we are presented with a more perfect compound and union of the two classes of foods; for in an egg, water, fats, and minerals are present, in addition to the white and other parts which consist largely of albumen or nitrogenous matter. It is perfectly clear therefore, that for health we require a mixture of the two kinds of foods just mentioned. We cannot live either on a diet solely nitrogenous, or solely lacking nitrogen. And this great truth as to foods can be proved very directly by an appeal to Nature herself. On what food, let us ask, does Nature intend and cause us to subsist during the earliest or infantile period of life, when bones, muscles, sinews, nerve, and brain are all growing rapidly, and laying the foundations of their future? The reply bears that *milk* is the fluid-food upon which Nature relies for the perfect support of man in his early life. Hence it is but proper to acquire a knowledge of the component parts of milk. In one thousand parts of cow's milk for example, there are eight hundred and fifty-eight parts of water and one hundred and forty-two parts of solids. Here again, we find a proof of the importance of water, even in Nature's typical food. The solids of cow's milk are distributed as follows: of casein there are sixty-eight parts, this substance representing the nitrogenous element in milk; of butter or fat there are thirty-eight parts; of sugar thirty parts; and of mineral matters six parts. Thus milk, then, is purely and simply a mixture of nitrogenous and non-nitrogenous foods. Nature

teaches us through the composition of her own fluid food, that on both classes of nutriment we must rely for support; and experiment shows us that one kind of food alone, however nutrient it may be, will not nourish the body or maintain it in a normal state. In an egg too, we find much the same composition. From this body which forms the young animal and which affords all the nourishment necessary for growth, we obtain a combination of the nitrogen-bearing substances with the non-nitrogenous, such as milk itself contains. We are not at present concerned with discussing the merits of a vegetable or a mixed dietary. From plants alone, or from animal matter alone for that matter, both kinds of foods can be obtained. All that is required in any dietary is to insure that a due mixture of nitrogenous and non-nitrogenous parts should enter; and we obtain such a mixture most readily from a mixed, that is, an animal and plant diet combined, than from a purely vegetable or a purely animal dietary alone.

Bearing these facts in mind, the folly of attempting to sustain life, without having recourse to those substances which can give heat and restore waste, is plainly apparent. Water and air alone cannot support life adequately. The water will, of course, enter into combination with the tissues, and will in that sense prove itself a necessary condition for normal and healthy existence. The oxygen of the air entering the blood in the lungs into which it has been breathed, will give heat, but only through entering into chemical union with the carbon found in the body, and most notably in the fats. Hence mere atmospheric air itself is relatively useless, unless we can supply it with substances with which it can combine; and these substances it need hardly be said are daily renewed from the solid foods we eat.

So much for the foods we require. It may interest our readers to learn that even plants require something more than air and water to support them. True, a plant is a more wonderful organism than an animal in one sense, because it can live upon inorganic or lifeless matter, and also because it has the power of converting that matter into a living plant. Plants live upon water, minerals, ammonia, and carbonic acid—the latter being the gas which is exhaled from the breathing organs of animals. From these matters, the life-forces build up the living plant. On the other hand, an animal demands living matter for its support. It could not live on the water, carbonic acid, and other matters with which the plant is perfectly contented. And we accordingly find animals requiring the matter of other animals or plants for their food. There are some plants—such as the fungi and lower plants at large—which resemble animals in that they demand living matter for their support. A mushroom, for instance, can only thrive where there is decaying living or organic matter. It likewise breathes oxygen as if it were an animal, and utterly rejects the carbonic acid gas which the green leaves of its plant-neighbours are greedily drinking in. So that the boundary lines between plants and animals are but faintly drawn in the matter of

foods; and we also learn that even the plants which we are accustomed to regard as lower than animals in their feeding and dietary, may in reality approach very near to the animal world in the essential characters of their nutrition.

When the human body suffers from a lack of food, it practically feeds upon itself and absorbs its own substance as food. Every one knows that certain animals normally exhibit this process of feeding upon themselves under certain conditions. The humps of the camel or those of the Indian cattle visibly decrease and may disappear altogether, if the animals are starved. A superfluous store of fat, in other words, is made use of under the exigency of hunger. So is it also with the bears and other animals which hibernate or sleep through the winter's cold. The bear, which in autumn retires to winter-quarters in a well-favoured condition, comes forth in spring lean and meagre. His fats have been absorbed in his nutrition, and the succeeding summer will lay the foundation of new stores of stable food to be utilised during the next winter. With man, we repeat, the phenomena of starvation are essentially similar. In the starving man, the fats of the body are the first substances to disappear. The fats lose weight to the extent of ninety-three per cent.; next in order the blood suffers; then the internal organs such as liver and spleen suffer; the muscles, bones, and nervous system being the last to lose weight. In due time, also, the heat of the body decreases to such an extent that ultimately death in a case of starvation is really a case of death from loss of heat. When the temperature falls to about thirty degrees Fahrenheit, death ensues. This decrease arises from want of bodily fuel or food; but the immediate cause of the fatal ending of such a case is decrease of temperature. It is likewise a curious fact that the application of external warmth is even more effectual in reviving animals dying of starvation than a supply of food. In exhausting diseases in man, in which the phenomena are strikingly like, and indeed thoroughly analogous to those of starvation, the same facts are observed.

A highly interesting and important observation in reference to starvation is, that life may be prolonged well-nigh indefinitely by fluid nourishment alone, and for long periods simply on water. Life will continue surprisingly long if water be within reach; but, as a rule, it terminates in from six to ten days with a total deprivation of food and water together; though much depends upon the state of health, condition, and weight of body. As can readily be understood, the stout will last longer than the lean, and the healthy and strong will possess a plain advantage in starvation over the diseased or weak.

Many interesting cases are on record, in which the phenomena of starvation have been practically even if painfully illustrated. As illustrating the fact of the prolongation of life when small quantities of water have been at hand, we may cite a case quoted by Foderé, who mentions that some workmen who had been accidentally buried in a damp vault by the fall of a ruin, were extricated alive after fourteen days' entombment. The dampness of the atmosphere doubtless materially aided their preservation through retarding the exhalation from the skin. It is on the same grounds that shipwrecked sailors assuage

the pangs of thirst by soaking their clothes in seawater. It was formerly believed that the water was inhaled by the skin. It is not any longer matter of doubt however, that the skin is but a poor absorptive medium, and that therefore the wet clothes of the sailors merely act through lessening the skin-evaporation which in its turn causes thirst.

Cases of extreme prolongation of life under a dietary consisting of fluid alone are familiar to every physician. In exhausting diseases, life may be sustained, as already noted, on small quantities of fluid nourishment for lengthened periods of time. Dr Willan records a case in which a gentleman, the subject of religious melancholia, and who abstained from solid food, lived for sixty days on a little orange juice. Dr Carpenter quotes a case in which a young French lady who was insane, ate nothing during a period of fifteen days; whilst in hysterical states, as Carpenter remarks, 'there is frequently a very remarkable disposition for abstinence and power of sustaining it. In a case of this kind,' continues Dr Carpenter, 'a young lady who had just before suffered severely from the tetanic form of hysteria, was unable to take food for three weeks. The slightest attempt to introduce a morsel of solid matter into the stomach occasioned violent efforts at vomiting; and the only nourishment taken during the period mentioned was a cup of tea once or twice a day.'

By way of shewing how much depends on the weight of body prior to starvation, we may by way of conclusion mention the case of a fat pig weighing one hundred and sixty pounds, and which, by the fall of a Dover chalk cliff, was buried beneath a mass of debris for one hundred and sixty days. At the end of that period it was dug out lean and meagre, and weighing only forty pounds. Here the heat of the body had been preserved by the utilisation of the fat, and to this circumstance the preservation of life must be chiefly attributed. A case equally in point appeared in the *Times* only a few weeks ago, of a Skye terrier belonging to a gentleman in Devonshire, which went amissing about the time of its master's departure on a series of visits. On his return home, after an absence of one month and five days, he unlocked the library, the doors and windows of which had been bolted and barred during his absence, and to his astonishment the missing dog crept out into the light, a living skeleton, and totally blind. Being well cared for, he quite recovered his health and sight. 'During this period of cruel imprisonment he had neither food nor water, and had not gnawed the books or obtained sustenance from any source whatever, but had subsisted by the absorption of the fatty parts of his own body.'

To sum up our inquiries, we thus learn, firstly, that in the healthy adult the requirements of Nature demand daily a due supply of food, liquid and solid, equal in amount to the wear and tear of the body. About eight and one-third pounds of matter are thus on an average daily given off and daily received by the healthy adult frame; or about three thousand pounds of matter are excreted and received in the year. Secondly, we learn that the food must give to the body the substances of which the body consists, and that mere air and water are in nowise

sufficient to sustain life beyond a varying period of days. Whilst, lastly, we may form the opinion that experimentation on foods to be of practical value should lie within the lines which physiology has clearly enough marked out.

## A LIFE'S ATONEMENT.

### CHAPTER XXXIII.—HISTORY.

*'I am glad that you have a good heart; I hope you will be happy.'*

It came to pass, when many years had gone thus heavily by, that Frank felt in his heart a great yearning for green fields; and it came into his mind that he was not much longer for the world. And the yearning drew him day by day, until he had no power to hold himself against it; so he made ready for a journey, and set out in the autumn-time, when the harvest was yellowing towards the sickle, and the fruits were ripening on the trees. He had been more than sixteen years a prisoner in the town, and the solemn sad delights of the fields and woods filled him with awe, and with new longing towards the grave. He went bowed and oppressed with the weight of the slowly revolving years; and the rural people whom he met looked with surprise at his sorrowful face and his silver beard and his heavy long-shore dress; but somehow, for the dignity that was upon him, forbore to mob him.

He went, as though an invisible chain had drawn him, in the direction of his old home. Even the most morbid cowardice may feel secure after years of escape, and Frank's dread had given way to a certainty that he need fear no recognition. Yet when he came to Hetherton, he trembled a little inwardly as he walked the main street and saw Mr Crisp at the bank door talking with a friend. The place was greatly altered; but the bank was unchanged; and neither the corn-chandler nor the baker had invested as yet in plate-glass windows. But there were new shops and new names; and he had no more of friendly greeting at heart for the old town than it had of welcome for his coming. He felt it alien and foreign; and the few familiar things left, reproached him.

But when once he had skirted the new and raw-looking houses which made a cheerless fringe to the town, and seemed an appanage altogether ill suited to it, the fields gave his tired soul a melancholy welcome. He had climbed that oak as a lad, and its mighty arms and luxuriant foliage were pictured on the first canvas he had sold. Red tiles of a little cottage, blue smoke from the hearth, the deep green of foliage with a leaf sienna-coloured here and there, and here and there a flash of red and yellow like a flame—this was the scene which had made his first successful picture, and had been painted at this season a score of years ago or more. He could almost see under the hedges amid the quaking grasses and the ferns, the children who were nutting there in his picture. There was a gap in the distant belt of foliage before the landscape faded to the hill and mingled with the tints of the softly clouded

skies, and he could remember the shape the departed trees had taken. Half a mile farther was a meadow in which his brother Will and he had fought in boyhood; and Frank remembered that he had won, though he had the wrong side in the quarrel. There was scarcely a field that had not its memories for him; and here at last was the entrance to the lane in which he had persuaded his brother to lend him his name for the last time. That lane led nowhere save to his father's house, and he was full of fears as he set foot in it. But the longing which drew him on was not to be resisted, and he went with slow steps, reluctant and yet eager. Did his father live? he asked himself, or was the old house given over to his brother? or had even his brother vanished with the years? The place might be in the hands of strangers. Who could tell what had happened in such a lapse of time? He heard a step in the rustling leaves beyond a bend in the lane, and stood uncertain whether to retreat or to advance. He longed for a familiar form, and dreaded it; but the footstep coming nearer, brought only a groom in sight. The man regarded him curiously, but spoke civilly enough.

'Did you want anything up at the house?'

'No,' Frank answered, shaking his head; 'nothing.'

'This road don't lead nowhere else,' said the groom.

'I know,' said Frank.

'You don't belong about here, do you?' asked the groom.

'I knew the place many years ago,' Frank answered. 'Does the old family still live here?'

'Yes,' said the groom; 'Squire Fairholt lives here.'

'Is the old Squire alive?' Frank asked with outward calm, but inward misgiving.

'Ah!' said the groom, a little ungraciously; 'he's alive, right enough.'

Frank, with a farewell motion of the head, was passing on, when the groom added warningly: 'This is a private road, you know.'

'I know,' Frank answered again. 'But I want to see the old place. That is all.'

'Well, there ain't no harm in that, as far as I see,' the groom responded. 'Only, don't let the Squire see you. He don't like no one a-trespassin' on the grounds. Good-morning.'

'Good-morning,' Frank responded, and passed on, whilst the groom stood to look after him. He reached the gates which opened on the drive, and saw through a gap in the hedge behind which he ensconced himself, the figure of an old man, who walked to and fro on the gravel. He knew the old man for his father, and his heart yearned over him with indescribable love and sorrow. Whilst he watched with tear-dimmed eyes, there came another figure to join that upon the walk—a portly gentleman of middle age, with square shoulders and a brown beard; and after he had watched awhile, the outcast knew him for his brother. He could hear the murmur of their talk, though only a disconnected word reached him, with no meaning, now and then; and he turned away.

'They have buried me years ago,' he thought, 'with my disgraces.' He strove to be calm; but the regrets and loves and yearnings which wrestled in his heart overcame him before he had left the

lane, and he sat down on the bank and struggled to recover his composure. Whilst he sat thus, fighting down the passions which fought within, another step came rustling through the dead leaves, and looking up, he saw a face which almost brought him to his knees. For it seemed to him that his mother was before him; but the wild thought lasted only for a flash of time; and though he had not seen her since she left infancy, his heart told him that this was his sister. Her glance met his with pitying inquiry.

'Are you ill, or in pain?' she asked.

'No,' he answered gently; and arose and stood before her without fear. She at least could have no knowledge of him—no remembrance.

'But you were crying,' she said simply. 'Are you in trouble? Do you want anything at the Hall?'

'I was born near here,' he answered, looking upon her with a sad and tender pleasure; 'and I have not seen the place for many years.'

'You have been abroad?' she asked, looking with frank and unfearing interest in his eyes.

'No,' he answered. 'But I have been many, many years away.' He looked older than his father, and she took him to mean fifty or sixty years.

'And are your friends all gone?'

'I am alone,' he said, not mournfully, for he thought rather of the sweet face and pitying eyes than of his own condition.

'That is very sad,' she said. 'Do you'—She stopped short with a little blush; and he, seeing that she had drawn forth her purse, waved his hand against it with a melancholy smile.

'No,' he said gently; 'but I am glad that you have a good heart; I hope you will be happy.' Then seeing that she scarcely knew what response to make, and that she surveyed him with a little trouble in her eyes, he bared his head and bowed to her, and stood on one side, to let her pass. But she lingered still. She was the Queen of all the country-people, and her fearless candid nature shone out in her lovely eyes and her beautiful imperious face, which was stately and yet tender.

'You do not speak like one of the country-people,' she said, as he stood bareheaded before her. A look of wonder and inquiry crossed her face, a glance almost of recognition, lost in perplexity. It alarmed him, and he cast his eyes upon the ground and bent his head.

'I have spent my life in London,' he answered. 'Good-day, madam.' For a second she lingered; but there was something in the figure and face before her which forbade the cross-examination with which she would have assailed any of the village people. Her answer included an involuntary 'Sir,' at which she crushed her lips a second later, fearing that it might have sounded like a satire. It was not until she had left him far behind that she asked herself what it was in the stranger which had made her answer him so. 'It was no wonder,' she said then, 'for he took off that old hat like a nobleman.' She thought of his voice, and could almost rehear its words: 'I am glad that you have a good heart; I hope you will be happy.' The approval of the shabbily dressed, picturesque, strange old man, though it seemed familiar, did not offend her. 'He is like somebody,' she thought, pleasantly interested, 'or perhaps he is like a picture I have seen. A head

of Rembrandt's? I am sure he has been a gentleman. Only a gentleman could speak as he did.' And she went away, weaving romances about him—mere cobwebs of invention to catch flies of fancy. 'I should like to know all about him,' she said to herself, little guessing how happy her ignorance kept her.

Frank watched her tall and graceful figure out of sight, losing it now and again in the dimness of his eyes. Then he journeyed into the main road, and walked until the well-remembered walls of Hartley Hall appeared. He did not pass by the great gates, but took a by-road which led him to the village through the corn-fields, where many a shock of corn stood ready for the wain. Emerging upon the high-road, he was aware of a great arch of evergreens at which workmen were still busy. A man on a scaffolding was nailing over the foliage of the arch a linen scroll on which in scarlet baize were marked the words, 'May their Union be happy.' There were flags everywhere in the village street; and there were two other arches visible in the distance. The village people were looking on at the completion of the display; the butcher with his hat at the back of his head, and his hands tucked beneath a white apron; the landlord of *The King, God Bless Him*, at the door of that loyally named hostel, with a pint jug in one hand and a yard of clean clay in the other, blinking comfortably in the afternoon sunshine; the local constable in official cap and trousers, but unofficial coat; the grocer in his snowy shirt-sleeves, with a pen behind his ear; the curate directing the proceedings of the decorators; many children; two or three old women in blue or scarlet cloaks; and one old man in a smock-frock. A pleasant rural picture in the autumn sunshine. Frank saw that it indicated the approaching marriage of some local magnate, but took no great interest in the matter, being filled with his own thoughts. He was thinking chiefly how much less burdensome it would be to spend his last days in the quiet of the country, than amidst the din of town. He would rather that his grave were green, and that the sun should shine upon it sometimes. But he knew, in spite of his desire, that duty held him to Bolter's Rents. He had found a work there; and he could but know, if he were never so humble in his thoughts, that there were some there who could ill spare him. 'I will rest here to-night,' he said to himself, 'and to-morrow I will go back to London.' He entered the common room of the little inn and called for a humble meal.

'Theer ull be rar' doin's yer, in the mornin',' said the landlord, as he set the brown loaf and the cheese before his guest, and flanked them with a cup of thin cider.

'Ay?' said Frank, but little interested.

'Ay indeed,' said the landlord. 'Theer won't a-be such a thing again for many a 'ear, and theer ain't a-been nothin' like it, not in *my* time afore.'

'What is it to be?' Frank asked, being civil by nature with all sorts and conditions of men.

'Did yon ever yeer o' Mr Hartley?' asked the landlord. 'Well, his niece do be a-goin' to be married to-morrer.'

'Mr Hartley of Hartley Hall?' said Frank, feeling his heart beat like a sledge-hammer.

'That's him,' said the landlord. 'Her's a-goin' to be married to young Squire Fairholt up to

the Hall theer—Island Hall, up Wrethedale-way, like.'

'I know the place,' said Frank, controlling himself to quiet speech.

'They do say,' the landlord went on, 'as her an' young Squire's brother used to be very thick together in bygone times. But I don't know naught about that, for I warn't settled yer not till later. They be both middle-aged; but they do seem to ha' struck up a match at last. Young Squire ull be main rich now, um do say. Be you a foreigner?'

'I have not been here for a long time,' Frank answered.

'Ah!' said the landlord; 'it doan't much matter. Annybody ull be welcome up at the new Hall to-morrer. Theer 'ud be enough an' to spare, if the country-side was to come in. Theer's three sheep and a ox 'a-goin' fur to be roasted, whole. An' Squire Hartley he ain't the man to be sparin' with the poor, that I will say. He ain't like one o' th' old gentry, as they talks about sometimes, as is as poor as poor, an' as proud as proud. I doan't hold along o' they,' said the landlord, who in spite of the loyalty of his sign, may have been something of a republican.

Frank answered his further talk as well as he was able; and when at last the innkeeper went away to the door and resumed his watching of the final decorations of the triumphal arch, he noticed that the guest stayed an unusual time above the bread and cheese, and went back, on pretence of having something to do in the room, to see what was happening to the provisions. He saw that there was little to fear on that head, but cleared away to prevent the chance of mischief. Frank had drawn back from the table, and was sunk fathoms deep in memory's waters. He was trying to divine whether or not Will had long cared for Maud; and he came at length to see that Will had always cared for her. 'Why so patient? Why so patient?' he murmured. Perhaps Maud had only now yielded; and yet one negative in such a matter would have been enough for Will. Could he trust himself to see them go by to-morrow? Yes; he would trust himself. He would see Maud once more; and she should have his prayers at least, though she would never know it. 'All these years,' he muttered in his beard, thinking of the changes which time might have made in her, and questioning, should he know her face? He strayed about the village fields till nightfall, and then went back to the little inn, and was shewn to a low-pitched bedroom with clean walls of carved oak, whitewashed after the manner of British rusticity dealing with carved oak. There were two beds in the room; and a lanky lad who was a sort of factotum to the inn, would sleep in one of them. Frank sat awhile on the bedside, looking out at the open window, round which the ivy talked in leafy whispers. The night was warm and silent, and the voices from the taproom went far afield on the still air. All the talk was of the morrow's festivities—of the ox and the three sheep and the limitless ocean of beer. One by one the people below took leave, and their voices died away on the widespread tranquillity of the harvest-fields. The moon, as yet a sickle, hung steadfast in the violet of the lower skies, with one keen star for a companion. A sound of clanging bars and

grating bolts warned him that the house was being closed; and he went to bed before his room-companion came up, and lay still, looking at the sharp outlines of the leaves against the fathomless clear dusk of the heaven, with here and there the crisp light of a star in it.

No sleep had visited him; but he lay wan and worn in the darkness, and arose ghostlike with the dawn, and awaited the coming of the wedding cortège. Straying along the highway, he noted silently all the preparations. Here was a stand from which the school children would sing a hymn. A carpenter was putting the finishing touches to it; and Frank stood to watch, not guessing that he had lain ill of fever under this man's roof. The carpenter, with his lips full of nails, gave the onlooker a muffled good-morning, not guessing that the one great tragedy on which his life had edged, stood now in bodily form before him. The time passed, and the sound of bells came over the woods and the corn-fields—a merry peal. They had rung for Maud in his dreams years ago, and now their sound drew him as his longing for the fields and for home had drawn him; and his footsteps, eager yet reluctant, took him to the church. The bells were silent; but there was a voice within the church. He had reached the churchyard from the fields, for he knew every foot of the country; and looking over the close-trimmed hedge that bounded it, he saw many carriages in the road. He entered the churchyard and walked to the door of the church, and stood there in silent waiting. Suddenly above him the bells clashed out again with a very cascade of cheerful noise, and the church poured forth its people. He had eyes only for the wedded pair; and now they came, the bride and bridegroom, Maud leaning on her husband's arm. He could have put his hand upon her as she passed him. His brother Will looked him in the face with eyes full of joyful pride and kindness to the world, and had no more thought of him or knowledge of him at that second than if he had never existed. An old woman, scarlet cloaked, who stood beside Frank, cried out: 'God bless you, Madam Fairholt!' in a quavering old voice with tears in it; and Maud's placid eyes passed Frank's face as they thanked the well-wisher. For a mere second of time the soft eyes rested upon him; but it was enough. Calm, good, gentle, almost angelic, they seemed. Grief had made a home there long, and had left signs of his dwelling behind him. Her delicate beauty had none of its old atmosphere of vivacity. There were one or two straight lines upon her forehead, and her face was paler than it had used to be. Yet she seemed wonderfully little changed; and he could see that the ancient sorrow had departed. The bells clashed on, the people cheered; the little procession had passed him. Her image dwelt with him. He could set them side by side, his lover who was almost a child, his brother's wife who was so sweetly grave a woman. In their society he turned his back upon the pealing bells, and set out for London.

He went often by the way, for he was weak, and the fountain of his tears was full. But whereas of old they had tortured him with their scaldings, they fell now like the dew upon Hermon. And this heart-broken saint, who had sinned so terribly, and so sorely suffered,

went back to the congregation to whom he ministered, and dwelt with them, waiting with yearning patience until it should please God to lead him to his rest.

(To be continued.)

### THE SOUTH-AFRICAN DIAMOND FIELDS.

THE Diamond Fields of South Africa, though now comparatively unheard of, present a busy and wonderful contrast to the rest of South Africa generally; they support a population of from fifteen to twenty thousand inhabitants, of various nationalities; and although the excitement of the first discovery of diamonds has long since passed away, a sketch of the Fields at present may prove interesting to many of the readers of this *Journal*.

The first discovery of diamonds took place on the Vaal River, and caused the burden of the immigration to set towards there, where during 1869-70, hundreds of tents might be seen pitched, the diggers for the most part doing all the manual labour themselves, instead of relying on Kaffir labour, as at present. The method of working was very primitive, and consisted merely in washing a sieveful of the diamondiferous soil in a hand-sieve, to clear it of mud; then turning it over on the sorting-table, and laboriously searching for the hidden gems. This style of work sometimes was the means of enriching a digger; but the majority of them lost more than they made, the amount of diamondiferous soil worked by each digger in a week being comparatively trifling. In 1870-71 the dry-diggings at Dutoitspan began to be talked of; and the river-diggings were gradually deserted, until now they support a very trifling population, the most of the work being concentrated on what is still called the Fields—namely, the four mines, Kimberley, De Beers, Dutoitspan, and Bultfontein; all lying within a radius of three miles, about midway between the Vaal and Modder rivers, in the territory known as Griqualand West, on the western border of the Orange Free State. The most productive of these mines up to the present time has been that of Kimberley; but as the depth of this mine increases, the difficulties of working it become greater, so that during the last year or two the neighbouring mines have been more worked than formerly, the lesser quantity of diamonds being compensated for by the lessened cost of obtaining them.

The Kimberley Mine as it now is, consists of a huge excavation in the earth of a slightly oval form, about ten or eleven acres in size, and about three hundred feet deep at the deepest point. The walls of this huge quarry are formed of non-diamondiferous rock, or reef as it is called, and are a fruitful source of annoyance and loss to the diggers, as they are perpetually crumbling and falling upon the top of the diamondiferous soil, causing much expense in hauling out and carting away; the work thus done being utterly unremunerative.

The diamondiferous ground in all the mines for the first eighty or hundred feet deep, consists of a sandy soil intermixed with gravel and pebbles; below this the ground changes to a bluish colour, and has to be subjected to various processes before it is fit for the extraction of the diamond; in addition to which the blue soil is much harder to excavate, and is for the most part dislodged by blasting; the sale of explosives forming no inconsiderable item in the merchandise of the Fields. The diamondiferous ground is divided into claims of thirty feet square, the value of which varies from one hundred to six thousand pounds, the richest ground producing, as a matter of course, the best price.

The system of working—not to trouble the reader with too much detail—is, briefly as follows. The ground being picked loose by natives and broken up, is hauled out of the mine in tubs running on inclined wires; from these tubs it is transferred to a sifting cylinder, which removes the coarser stones; the remaining soil being mixed with water and slowly stirred in a flat pan of circular form, by means of arms fitted with teeth; this pan varying from six to fifteen feet in diameter according to the amount of work to be done. The effect of this is to leave the diamonds, which are heaviest, at the bottom; the lighter soil escaping over the edge of the pan, to be taken up by a dredger, and trucked away. At the end of the day's work, the contents of the circular pan are cleaned out and washed up in hand-sieves; when in turning over the sieve on the table, the diamonds can be at once seen from their brilliance, some being of most perfect octahedron shape and as clear as crystal. In the case of the blue soil, the process of washing is the same; but the latter has this disadvantage, that it has to be exposed to the sun and sprinkled with water for some weeks before it is fit to be washed, which of course increases the expense of manipulation. The value of the yellow soil varies from two to fifteen shillings per load of sixteen cubic feet, and the blue soil from five to thirty shillings—in some cases in Kimberley, even reaching sixty and seventy shillings; so that a claim-holder who can wash from three to four hundred loads per day, has a fair chance of a good profit; the cost of working the yellow soil being about three shillings, and the blue six to nine shillings per load.

It is almost needless to remind the reader, that diamonds when first taken from the earth are in a rough state, and are destined to lose much of their weight by the after-process of 'cutting.' Those found are almost invariably below ten carats in weight, the average being about the size of a pea; indeed in the Bultfontein mine, a ten-carat stone is looked upon as a curiosity, though specimens exceeding a hundred carats in weight have on rare occasions been secured. The value of a stone depends entirely on its colour, shape, and freedom from spots or flaws; those of faultless shape and perfect whiteness taking the precedence of all others. The diamonds exceeding twenty carats in weight are mostly of various

shades of yellow, a large white diamond being a comparative rarity.

The natives who work in the mines are of various nationalities and tribes of Kaffirs, Zulus, Basutos, Bechuanas, Buralongs, &c.; and receive about three pounds per month in addition to their food. On the whole, they work fairly well, although many of them have no hesitation in appropriating a diamond and selling it by night to one of the numerous illicit buyers, who are the greatest pest on the Fields. These illicit buyers generally pursue some ostensible calling, and have natives in their employ who 'tout' amongst the claim-Kaffirs for diamonds, sometimes buying for a few pounds a secreted stone which may be worth two or three hundred; the profits being so enormous, that no punishment seems to deter them. Until some means of removing the soil from the mines by other than Kaffir labour is discovered, this will always be a drawback to the profits of digging. There can be no doubt, however, that a large working community like this being planted in the centre of South Africa has done much to civilise the natives and bring industrious habits more into vogue with them, as during the last ten years they have increased much in worldly comfort, and become large purchasers of cattle, their chief recognised standard of wealth.

The system of government on the Fields is by means of an Administrator and a Legislative Council, consisting partly of elected and partly of official members; but as the official vote is always in excess of that of the electors, it does not give universal satisfaction. But this and other anomalies may disappear with the annexation of Griqualand West, which is announced to take place in October next. The various mines are managed by Boards elected by the diggers; and Kimberley has an organised Town-council with a Mayor and various municipal officers.

The people of the Diamond Fields are of most varied nationalities, the Jewish people forming a large portion of the community, most of the diamond-buying business being in their hands; but there are representatives of all countries—France, Germany, Russia, Turkey, India; and a great proportion from Holland, the chief town of which (Amsterdam) is the great emporium of diamond-cutting. The language most in use is English; but Dutch, or rather Cape Dutch, is spoken to a far greater extent than one would imagine in an English colony. Very few of the natives speak anything but their own language; and to those with whom they are employed, this is a great source of difficulty.

The cost of living is very great, and the Diamond Fields cannot therefore be recommended as a field for emigration; the country producing absolutely nothing but meat, maize, on which the Kaffirs feed, and a few vegetables, which realise enormous prices, five and six shillings being no uncommon price for a good cabbage or cauliflower. The greater proportion of the food is in the shape of tinned provisions, which come from all parts of the world. The cost of transport is also very great, as all goods are brought by bullock-wagon, a fifty or sixty days' journey from Algoa Bay, at the rate of twenty to thirty pounds per ton. Those readers who are conversant with the weights of machinery, can form some estimate of the cost

of bringing up a twenty or thirty horse-power engine at this rate. The railways are slowly approaching from the Cape Colony; but it will be years before they reach the Fields.

The population mainly reside in the towns of Kimberley and Dutoitspan, about two miles apart. The buildings are mostly of galvanised iron lined with brick; and considering the amount of population, there are quite a number of places of worship—three English churches, three Wesleyan, two Dutch Reformed, two Roman Catholic, one Presbyterian, one synagogue, one Mohammedan and four Kaffir churches; and a place of worship of some unknown denomination frequented by the Indian coolies, of whom there are a good number here.

Copper money is not in use, the smallest transaction being of the value of threepence, commonly called a 'tickey'; and change is very scarce, the principal monetary transactions being by cheques and notes. The natives, however, must be paid in gold, and mostly convey it to their own homes, the value of a sovereign being known as well at the Zambesi as here. On no account will a native take paper money; it possesses no value for him.

Water and fuel are amongst the dearest articles; the water supply being mainly derived from wells sunk at great expense in the hard rock, at a cost of from one to four pounds per foot. Firewood is brought from a distance of sixty or seventy miles by bullock-wagon, and costs from three to four pounds per ton. The supply of fuel is one of the most serious questions for the future, as most of the mining-works now being carried on by steam-power necessitate the use of a large amount, and the supply is rapidly being exhausted. Coal of fair quality is found in the Transvaal about two hundred miles north; but the cost of transport precludes its use at present.

In the matter of recreation and amusement, the Diamond Fields are about the worst place one could be in. There are no rivers near; and the mines stand in the centre of a vast undulating plain, without tree or shelter of any kind for miles, so that promenadeing or driving has no particular attraction. A few enthusiasts go in for coursing; but as the game is scarce and the prairie or *veldt* full of holes made by the mere-cat, a ride after the dogs is more to be remembered for the bother of dodging the holes, than the pleasures of the chase. Athletic sports are not much indulged in, the temperature for the greater part of the year being too great. Kimberley has a tolerable theatre, in which performances are given occasionally by wandering companies, who make this the limit of their African travels; and a small good company can make it pay very well if they only stay a fortnight, by which time everybody who will go has seen them twice. The Kennedy family, with whose pleasing vocal powers the readers of this *Journal* are familiar, visited us in 1878, and gave about twelve nights' performances to thoroughly appreciative audiences.

Taking everything into consideration, the Diamond Fields are not a desirable place of residence. Plenty of money is made and lost here, as elsewhere; but there are few, if any, who seem to think of making them a permanent residence; although, from its position, Kimberley must long continue to be the centre of a large inland African

trade, even if the mines were to be worked out altogether. This, however, is not likely to be soon the case; as in Dutoitspan alone, at the present rate of working, it would take thirty years to bring the whole mine to a depth of three hundred feet; by which time, no doubt, other mines will have been discovered in this vast region, which as yet has been only imperfectly explored.

## A STRANGE WEDDING.

### IN THREE CHAPTERS.—CHAPTER I.

A WELSH valley on a summer's day. A little cottage peeping up from behind a clump of ruddy fir-trees. A broad blue lake stretching along the vale, with a white, sun-baked road skirting its southern shores; while on the opposite side, rising upwards from the water's edge in all its towering majesty, its bold and rugged outline, its massiveness of colouring, stands the mountain-monarch Snowdon. An old man is sitting outside the cottage-door, enjoying the fresh fragrance of the early morning and the gentle breeze that blows upwards from the lake. A child is playing at his feet. The sound of a voice—strong and powerful, with a silvery ring in it—suddenly breaks the peaceful stillness of the spot, causing the old cottager to turn hastily round and scrutinise the intruder. A tall, well-built, handsome-visaged man, clad in loose, tourist attire, is walking up the garden pathway. 'Good-morning, friend,' he exclaimed as he neared the house. 'I am a stranger in these parts, and would be glad if you could tell me where a Mr Penrose lives hereabouts—a Mr Archibald Penrose?'

The old man shook his head. He did not understand the stranger's foreign, English tongue; but after calling to some one within the house, a comely damsel soon appeared at the porch, and courtesied, with a blush, on seeing the strange gentleman. He repeated his query.

'O yes, sir,' she answered in very good English; 'you mean Mr Penrose of the Hafod Gwynant. That is the *plas*, sir, over there on the *bryn* across the road.'

'That?' he cried with a look of surprise; 'that fine old house yonder among the trees? I had no idea I was so near. Then this lovely sheet of water must be the Lake Gwynant I have so often heard about?'

'Yes,' the girl answered with a pleased look; 'this is the Llyn Gwynant, and the bonniest bit o' water in all Wales.'

'It is, my dear,' he continued gaily with a smile. 'I quite agree with you, though it is the first of your larger lakes I have seen. I only arrived in Beddgelert late last night from Tremadoc, and have walked up from there this morning. I have been in ecstasies the whole way with your charming country. I had no idea Wales was half so beautiful.—So that is the house I seek, round the lake there? I wish it had been farther off, so that I might have extended my walk through this lovely scenery.' So saying, he slipped a coin into the girl's hand—whose face was aglow with pleasure at hearing her native land extolled by so grand-looking a gentleman—and with a smile and a nod to the old man, he strode away to reach the road that wound by the lake-side.

The Hafod Gwynant was a picturesque old

house close by the shores of the lake, and lying on the slope of a little fir-clad hillock. Its tall gables rising from amid the trees were all of it that could be seen from the road; but the windows of the house itself commanded uninterrupted views of the valley stretched out below. The young pedestrian as he walked up the avenue thought it a perfect paradise. On being informed that Mr Penrose was at home, he sent in his card, and was ushered into a sitting-room.

Soon afterwards the door opened, and the gentleman he sought for entered. He was a tall, elderly man, with a benignant countenance and well-cut features. 'Mr Nelson—Mr Guy Nelson, I believe?' he said, alternately looking at the card he held in his hand and his visitor, who had risen and bowed to him on his entrance.

'Yes; that is my name, sir,' replied the younger man. 'You are not acquainted with me personally; but I believe you will remember my father—Mr Henry Nelson of Cloughborough.'

'Henry Nelson! Remember him! I should think I do. Why, he was my old schoolfellow at Rugby. We were the closest chums in those days.—And—and you are his son? Let me grasp your hand, for dear old Harry's sake.'

The two men shook hands warmly.

'And how is my old friend? I have not heard of him for a long, long time now,' continued Mr Penrose.

'Alas, sir, he has been dead these eight years. I am his only son. He often spoke of you to me, and told me many and many a story of the school-boy frolics you two had had together.'

Tears were fast rising into the other's eyes. These old memories of our boyhood's happy past, how dear they are to us all; how vividly they come back to us across the ocean of a lifetime!

The two were silent for a few minutes, when the young man continued: 'I am rambling through North Wales on a tourist expedition. Having heard at Beddgelert that you had a residence in the neighbourhood, I have taken the liberty to call and introduce myself to one whom my poor father so often spoke of, and so dearly loved.'

'And I am only too pleased to make your acquaintance,' replied Mr Penrose. 'A son of Henry Nelson's will ever find a true friend in me. Come and let me introduce you to my wife and niece. You must stay the day with us.'

He led the way into another room, where two ladies were seated at work. One was an elderly little woman; the other, a pretty, coquettish-looking girl, scarcely nineteen, with a wavy mass of rippling golden hair, and soft gray eyes under dark eyelashes. These were respectively Mrs Archibald Penrose and Miss Amy Brightwell. The latter was Mr Penrose's dead sister's child—an orphan, and his ward. She was a frivolous little creature enough; but her pretty, caressing ways made her a favourite everywhere. Her life though, was not so gay as she would have liked it. She sighed for the gaieties, the fashions, the frivolities of the age. Her uncle, though very well off, was but a Manchester cotton-spinner after all; and between a red-brick villa in the suburbs of Cottonopolis and this summer resort by the Welsh lake, their days were divided. She had never been to London; but longed for its gaieties, as a child longs for a beautiful toy it has heard of and has never seen. Her delight on

seeing this tall, handsome stranger was unfeigned. Visitors were not every-day occurrences at the Hafod, by any means; and a fine-looking man like Guy Nelson was a special rarity.

Amy had a good deal of romance about her, imbibed no doubt from the vast amount of fiction with which she filled her little brain. Indeed she knew literally nothing of the world but what she had gleaned more or less from novels—with all that unreal glamour of impossible life which too often pervades works of this kind. So before she had known this new acquaintance ten minutes, she had put him down in her mind as one of her model heroes. It was indeed a red-letter day for Amy; a delightful change from the dull monotony of her every-day life. She found the young man as agreeable to talk to as he was to look at. He was evidently a polished cultured gentleman. He told her about the great world of London she so longed to see—of its life, its gaieties, its vortex of unending amusements and rounds of pleasure-making. She listened to him dreamily and happily. The story of these unknown glories was to her the next best thing to sweet reality itself.

When evening came, he rose to take his departure; to walk back to Beddgelert in the rosy stillness of the summer afterglow. Before leaving, his host pressed him to come and spend a few days at the Hafod, if his time were his own, and he were not in too great a hurry to see all the 'lions' of Wales. Amy was delighted on hearing the invitation. Would he accept it?

'You are very kind, Mr Penrose,' the young man replied warmly; 'but I could not trespass further on your hospitality. I have done so already too much, I fear.'

'My dear sir, don't talk nonsense. It would be quite a charity to us all if you would come. Look at poor Amy there. She says she is moped to death in this quiet old house. Do come, if it will not be a bore to you.'

And so it was arranged that Guy should come back again on the morrow by the coach, and bring his luggage with him.

#### CHAPTER II.

The next morning, when the sun's first rays were tinging Snowdon's summit with all manner of prismatic hues, Amy was up with the lark, and busily employing herself about the house, rearranging and adjusting everything to her own entire satisfaction. When her aunt came downstairs, she was quite astonished at her niece's unwonted industry.

'It is all for our handsome visitor to admire,' remarked Uncle Archie slyly at breakfast, explaining the reasons for Amy's handiwork.

The young man arrived at noon; and the rest of the day was spent in strolling about the grounds and down by the margin of the lake.

Day succeeded day, and there was always plenty for the stranger to do and see in this lovely Cambrian district. The young people were left pretty much to themselves to find out new amusements and plan excursions. Sometimes Uncle Archie would accompany them in their longer trips; but in their many walks and mountain-climbing scrambles about home, the two were nearly always alone. Perhaps the old people were to blame in not keeping a stricter watch over their

wayward little niece, and in not checking her too constant companionship with a comparative stranger; perhaps the stranger himself was hardly honourable and straightforward enough in allowing such a state of affairs to go on so long; but however it was, in a very short time Amy had fallen madly, hopelessly in love with her new companion. In love—with all the exuberance and delight of a first giddy passion—with all the romance of her young girlish nature. He had become her hero, her idol!

One day, down by the reedy lake, under the shadows of the mighty mountain, he asked her to be his wife. In a moment she consented. With all the wild impetuosity of her temperament, she gave herself up to him—only that she might love him, love and adore him always. And then came a great temptation. He told her that for reasons she would not understand, he was unable at present to ask her guardian formally for her hand. And in a flood of passionate entreaty, he asked her to leave her home and kindred; to go with him to London, and there be married secretly. Once married, the rest would follow easily. Her uncle and aunt would pardon and forgive.

Poor Amy listened, believed, and trusted. For his sake she would do and dare anything. She tried to look upon it all as a mere frolic, this secret elopement. Had not hundreds done so before-time? Did not all her cherished romances hinge on clandestine marriages? Why should not she have a romance of her own? And happiness was sure—so sure—to follow. Of course Uncle Archie would forgive her, and only laugh at her foolishness, as he had done oftentimes before over her girlish pranks and foibles. Thus carefully she shaped her argument to convince herself.

A night was fixed for the *escapade*. Guy was to procure a trap; and they were to start an hour after midnight for Tremadoc—a distance of fourteen miles—where they would be in time for an early morning express that left for London.

The eventful evening arrived. A portmanteau or two had been packed, and carefully secreted amongst the bracken by the entrance-gate, to be in readiness at the time of departure. Amy, in spite of all her romance, was thoughtful enough to leave a letter of farewell and explanation on her dressing-table. At the appointed time she was ready and waiting for him. Her window opened on a balcony, which conducted by a flight of steps—in the old Italian fashion—to the garden below. Thither Guy came for her in the moonlight. Amy fondly pictured him as ardent Romeo of old; while she—poor foolish girl—imagined herself a very Juliet. And so she passed out into the night, and he led her to the waiting carriage; passed, without one last look behind her at the old home she was leaving; oblivious of everything save the unutterable happiness of the present. And the carriage rolled on, through the moonlit woods and sleeping villages, past sombre lakes and mountain streams; away—through the starry stillness of the night, through the dusky shadows, through the faint beams of the waning moon, through the soft-breaking gray of the dawn; away—to a new world, a new life; away—to the dim horizon of an unknown future; away—to what fate, who could tell?

CHAPTER III.

Married, and in London! Dreams realised, hopes fulfilled. The wedding had taken place by special license soon after their arrival, in a little church down Paddington way. They then remained at an hotel until their own apartments should be ready to receive them.

Once duly installed, however, in what was to be their permanent abode, Amy found everything comfortable, and even elegant. Guy seemed a really well-to-do man. What his business or profession was, she had never troubled herself to inquire. Her love had been far too ethereal ever to descend to such a mere worldly consideration. But as the weeks went by she began to lack one thing—the one great thing, society. No one called upon her; nor did Guy take her out visiting or introduce her to a single soul. He too began to be less at home; generally being away all day, and not returning until late at night. The days grew as monotonous as they used to be in the old time at her uncle's house; though she had now plenty of money at her own disposal, and every opportunity for spending it. In one thing only did Guy put a check on her expenditure—he forbade her to give anything away in street charity; the reason for which prohibition she could not understand.

Soon after her arrival in London, she had written to her dear old guardian, telling him she was happy, and beseeching his forgiveness in true novelistic fashion. He wrote back to her a long severe letter, which made her weep bitter tears of repentance; but from its tone, she knew that he would not carry his righteous indignation any further than this mere written reproof. In fact, she was married, and it was too late to do anything now without raising a public scandal.

At length, tired of her loneliness, Amy appealed to her husband. She wanted friends, society—the life of fashionable gaiety she had so long sighed for.

'Amy,' he replied, almost angrily, 'I married you for yourself, and I had hoped that you married me for a similar reason. I have never contracted friendships; and do not wish *you* to contract any.'

What a cruel, bitter blow to all her bright anticipations! She did not answer him, but brooded over what he had told her for days in silence. What a life lay before her! No friends, no gaieties, no amusements. The dull humdrum of a solitary married life, in which even her husband took but little part. She looked back upon the old, happy, daily companionship of a loving uncle and aunt with regret—the old life she had deemed so listless, so monotonous, so void of pleasure.

At length Guy gave her permission to write for Mrs Penrose to come and stay with her. She did so, but feared the invitation would be declined. Were not all home-ties cut asunder for ever? But no; the kindly old lady had forgiven her, and promised to come. With her arrival, Amy's spirits revived. Though the two went to many of the metropolitan places of amusement, Mrs Penrose was considerably surprised at finding her niece friendless; without even an acquaintance. She wanted to know too what was Mr Nelson's business. Amy had some confused notions that he

had a large warehouse in the City; but beyond this, was utterly ignorant of her husband's doings. The old lady shook her head. A pretty wife indeed, not to know how her husband earned his living! She questioned Guy herself that evening, but received only an evasive answer.

The weeks went by, and the state of affairs between Guy and his wife began to grow more and more unsatisfactory. He was away from home more than ever—sometimes whole nights without properly accounting for his absence. He grew less communicative. She knew literally nothing of his daily life. Mrs Penrose, however, continued to remain, and to her Amy confided all her troubles. Some sort of mystery seemed to hang over this married life of hers. Why had not Guy told her everything about himself before she married him? Why did he keep secrets from her now? She began to suspect and fear all sorts of evil, so greatly did her husband's reserve and strange habits puzzle and alarm her. Mrs Penrose found her becoming strangely altered; no longer the sprightly girl of six short months ago. An appearance of settled melancholy and unhappiness came over her; the passionate love that had been, seemed dead within her.

'My dear Amy,' exclaimed her aunt one day, when the young wife was sadder than usual, 'I have made up my mind to put a stop to this unhappy state of affairs. So strange a position between a newly married couple is not to be tolerated. Try to be more cheerful, and leave everything to me. Depend upon it, I will clear up this mystery, if there be one; and for your future peace of mind, I trust satisfactorily.'

The next day Mrs Penrose went out alone, and returned after several hours very agitated, and apparently ill. She would not, however, tell Amy the cause of her uneasiness. The day following she went again, and on her return in the evening, went straight into Amy's little boudoir. Taking her hands gently into her own, she said gravely: 'Amy, I have discovered all. Do you wish to know your husband's secrets, which are improperly held from you? Do you wish to know how he obtains a livelihood?'

'O aunt,' she cried in an agonised voice, 'I *must* know everything, even the worst. A fearful presentiment has been with me night and day for months. Let me know the worst at once!'

'To-morrow, darling, you shall *see* it with your own eyes. Be prepared to follow your husband with me after breakfast.'

Amy passed a dreadful night, as may be imagined, full of vague forebodings of coming troubles. In the morning she rose unrefreshed but resolute, determined to put an end to all this unrest and suspense. After breakfast, Guy as usual wished them a good-morning, and departed. They hastily put on bonnets and shawls, and followed him.

It was all they could do to keep up with him; following at a safe distance behind, through streets and squares, courts and by-lanes. Two long miles had been thus anxiously traversed, when he suddenly turned into a long narrow alley in one of the lowest quarters of 'the great city.' The distressed young wife was too excited to talk. All she could do was to follow blindly whither her companion led her. What was this horrible truth that was about to be revealed to her? this terrible

artifice or deceit, that thus needed bringing to the light of day? She half repented of the loathsome task she had set herself—of this underhand method of learning the secrets her husband chose to keep hidden from her; but an irresistible impulse held her forward; and the two women hurried on, tired though they were, and straining their eyes to keep in view the footsteps of the mysterious man they were following. At length he paused at the corner of a shabby little street; looked carefully round; drew off his gloves; and—to Amy's amazement—descended into a cellar, down some steep crooked steps.

Amy awaited his reappearance with trembling anxiety and fearful expectation. Minutes seemed hours of torture to her. It was all Mrs Penrose could do to prevent her rushing forward and following her mysterious husband. At last, after half an hour's weary waiting, there came up the cellar-steps what appeared to be an old decrepit soldier, bent double almost with age and suffering. He had but one arm, the other sleeve of his coat hanging loosely by his side. On his right eye there was a large black patch. His cheeks looked seared and hollow; while long shaggy locks of thick gray hair hung down his shoulders. His dress was that of a by-gone military fashion. On his arm was hung a basket, filled with the cheap vulgar ballads of the day. He was supported by a crutch, with which he hobbled along at a shuffling gait.

The two ladies on his reappearance had hurried up to the spot whence he emerged. Amy was aghast, horror-stricken, bewildered, hardly crediting her senses. This wretched spectacle that stood before her was her husband—a common tramp, a wayside beggar, an artful impostor in the streets of London! In a moment he had seen her standing there and looking at him with dilated eyes and face of abject terror, unable to speak or move. For a second he stood still and watched her, his face livid under his disguise with rage and baffled fury; then turning suddenly in an opposite direction, he fled down the street, unchecked and unfollowed, till he was lost from view in the maze of winding lanes and alleys that everywhere surrounded him.

With a wild scream, Amy fell forward. The utter stupefaction into which the first horror of her discovery had thrown her, had for the moment prevented her from realising to the full the truth of what had just been revealed. She had been like one in a momentary trance, unconscious of what had caused the sudden change in her condition. But as reason came back and the truth began to dawn, in all its hideous terrible reality, she cried aloud in the agony of her despair, and would have fallen, had not her aunt supported her. A little crowd soon collected round them—gaping women and gutter children of the usual street pattern—and one or two helped to carry Amy, who had fainted, into an adjacent house. When she had sufficiently recovered, the woman who resided there—a gossip old soul—asked what had so alarmed her.

Of course Amy returned an evasive answer; but Mrs Penrose questioned the woman as to what she knew of the street tramp, who had behaved so strangely, and who appeared in some way connected with the neighbourhood. She told them that she knew very little; there was a

deal of mystery about him; but of one thing she was quite sure—he was making a deal of money by the practising of his deceitful trade. When he was dressed up, she said, he appeared quite the gentleman; and—this with an odd, curious look at Amy—it was reported he had a grand house somewhere at the fashionable end of London, where he had lately brought home a rich young-lady wife, who knew nothing of his way of living, or that he had already another wife—a beggar like himself—alive in London.

Amy could bear to hear no more. The horror of it all was more than she could endure. She fell back in her chair, once more unconscious. A cab was hurriedly called, and Mrs Penrose got her into it. She took her to an hotel in the Strand, then telegraphed for her husband to come immediately.

Poor Amy—broken-hearted, anguish-stricken, almost wishing she might die—lay languishing for weeks upon a bed of sickness. The memories of that frightful past would haunt her to her grave.

Six months afterwards there was once more a household of three in the old Hafod down by the margin of the fair blue lake in sunny Carnarvonshire. Amy had gone back again to the old home, the old life, the old ties of kindred. But she was no longer the bright happy girl of yore, when she had neither a care to trouble nor a remembrance to embitter the gay spring-time holiday of her youth. No longer a girl, but a woman—aged if not in years yet in experience; a woman who had known bitter sorrow, cruel suffering, grossest treachery, and deepest shame; the rude awakening from a first fond dream of passionate, all-trusting love, the total breaking of a heart that had given itself up wholly and entirely to the man who had so basely, so wickedly deceived her.

Of him they never heard again; only that he was an impostor from first to last; for Mr Penrose had made inquiries, and found that his old friend Henry Nelson had died childless. How the man had obtained sufficient information to enable him to pass himself off as his son, ever remained an unsolved mystery.

And Amy lived on with her uncle and aunt, contentedly and even happily, as far as happiness could be her portion now; lived a better and more useful life than in the old days of her youth. She had no longings now for mere worldly joys and pleasures, no ambitions to gratify, no earthly prospects to look forward to. Perhaps, after all, she was the better for the change in her existence—a change which could never have come about had it not been for the sudden ending to her bright young dreams and the cruel blighting of a lifetime. No; the romance was over, the illusion was dispelled. She was left—heart-broken, and the love of her glad young nature was dead for evermore; but still the best part of her life lay before her, and there is little doubt that she would spend it profitably and well.

[The moral to be derived from the foregoing story—which is faithfully true—is never to place too much confidence in strangers until their antecedents are beyond doubt, and their good intentions put to practical test. Let the fair

reader beware of adventurers who in the guise of plausible gentlemen, haunt nearly every fashionable watering-place. The attentions of a man who obtrudes himself without introduction, or minus a letter from some well-known friend, ought to be regarded with caution by every well-conducted young lady.]

### YOUNG JERMYN STREET.

YOUNG JERMYN STREET is fresh-coloured, ruddy, and full of life. He comes up to London to enjoy himself, and he does so to his heart's content. His stay is not long—a fortnight or a month at the outside. He is up from school, or Aldershot, or the university. In Boat-race week and Derby week he abounds—a little over-dressed perhaps, and very shiny as to his hat and his boots. He is great at breakfasts, and usually rather late. Breakfasts in Jermyrn Street are the great feature of that locality. It is only a stray old foggy who would ever think of dining at his rooms or hotel there. From ten to twelve A.M. the prevailing odour in most of the houses is that of broiled soles, deviled kidneys and chickens, frizzled ham, fried potatoes, curried eggs, grilled chops, and mushrooms; and the way young Jermyrn Street does justice to dish after dish, winding up with a few table-spoonfuls of 'squish' (jam), the whole washed down with the inevitable tankard of beer, is enough to make any one with the smallest respect for his digestion ill for a week. He makes a tremendous row while he is tubbing, and splashes everything within six feet of him. He whistles or sings at the top of his strength—a little out of tune generally—the airs from the last burlesque while he is dressing; and so full of spontaneous activity is he, that if he were not permitted to shout or jump or throw himself about, he would almost infallibly break a blood-vessel or do himself some injury.

He doesn't care much for the Opera, and goes to the Academy to see the people, not the pictures. He hires a hack, and takes a couple of hours in the Park of an afternoon. He flirts with and is treated kindly by the young person who pins the flower in his coat; but he is such a handsome, open-hearted young fellow, that it is not surprising that the women are fond of him. He pays ninepence apiece for cigars, and has always some for his friends. He goes to his club at six to see the evening papers and take a glass of vermouth, and thence back to his rooms to dress for the evening. One of the West End restaurants supplies him with dinner if he is not dining out; but he usually has plenty of friends of his own kidney, and if he is not dining with them, some of them are dining with him. He carefully avoids family people, and it is not kind to ask him to solemn repasts when he is up for a holiday. He is the last man in the club of an evening; and anchovy toasts, lobster salads 'laced' with plenty of Cayenne pepper and tarragon vinegar, and deviled bones, are in constant demand while he is there.

His landlady in Jermyrn Street is a very haughty female, of a commanding presence, much given to black silks and bullying the housemaids. Her husband 'valets'—as he calls it—the young gentleman, and spends his happier moments in this occupation. He is not averse to a glass of wine,

and always has a little joke or some of the scandal of the clubs to impart while serving breakfast or brushing clothes—just something to mark him off from an ordinary servant. He has usually been a hall-porter at a club, or has seen service—in the butler's pantry.

Ordinarily, young Jermyrn Street lives at something like ten times his income while he is in town; but then it is a holiday, and does not last long. He does not usually come to much harm; but if he should, there are plenty of the hook-nosed fraternity about Piccadilly and Sackville Street to 'help' him out of his difficulties. It is refreshing to see him 'doing' a bill—for which he pays eighty or ninety per cent.—with those highly respectable solicitors Meshach Brothers. He smokes a cigar and takes a glass of dry sherry—both of exquisite brands—with the sporting member of the firm, and has a friendly chat about the coming Derby or Leger—while the business partner covers a slip or so of stamped paper with the needful promises and figures. He leaves their office with a light heart, and protests to his comrades afterwards that they really are very decent fellows to do 'business' with. If this should prove to be only the first of a series of visits to Messrs Meshach, and young Jermyrn Street should unhappily come to the length of his tether, he will find that the talons of those hawk-faced usurers will strike as surely and swiftly as ever those of any falcon on his quarry.

Young Jermyrn Street does not often become a great general, a distinguished lawyer, or eminent in the walks of art, literature, science, philosophy, or theology. But where there is fighting, he will be found in the thick of it; or, what perhaps requires even more courage, when the happy and extravagant days of school and college are over, he will accept his position as a working member of society with boldness, unconvincing of those with whom he has mixed on terms of social equality, whose means enable them to flutter about Pall Mall and St James's Street for an indefinite—sometimes a wearying—period. A few years change him into the active, good-tempered, gentlemanly young man who is found at Westminster or the Temple from eleven to four; or in the City; or at the hospitals; perhaps holding a curacy in the country; or perhaps in these few years he has been half round the world, or roughing it in the North American or Australian Bush. He plunges into matrimony—often on insufficient means—without any misgivings, and regards his increasing family with perfect composure. He brings his boys up as gentlemen, and his girls—well, as English girls. And when the lads are in a scrape, he helps them out of it, and gets into their confidence as an elder brother might; and if an extra heavy cheque is required to cover that week or so in Jermyrn Street which the boys in their turn indulge in, he remembers how in his own youth he conducted himself, and how pleasant have been the memories of that time; how he feels he has never been the worse for it—and he pays up without a grumble. He is never better pleased than when they ask him to stroke their boat on the river, or to make up the team for a cricket-match with a neighbouring Eleven.

Middle-aged Jermyrn Street is rather 'vapid.' The gentlemen usually addressed as 'Captng,' who live no one knows how, and rarely go to bed

before four o'clock in the morning—who are faultlessly attired, and to be found wherever fashion wends its course—the gentlemen with bird's-eye neckties and knowing scarf-pins, who drive very smart traps with high steppers accompanied by imperceptible tigers, and who are often visited by clean-shaven men with tight trousers, straws in their mouths, and with a habit of flicking their calves with a cane or whip—old dandies vainly endeavouring to renew their youth—are all to be found in this region; but none are so pleasant to contemplate as our friend young Jermyn Street.

## THE MONTH

### SCIENCE AND ARTS.

IN 1878, Mr C. W. Siemens, while delivering a lecture to the Society of Telegraph Engineers, expressed his belief that the dynamo-electric current would in time be employed for purposes then supposed to be beyond the scope of electricity. In the two years since elapsed, that belief has been verified; for the current is now used for transmission of power, for great chemical operations, for illumination, and as Mr Siemens explained, for effecting the fusion of refractory materials in large quantities in an electric furnace; for horticulture, as a promoter of the chemical changes by which plants take their chief ingredients of food from the atmosphere; and for mechanical propulsion, in which the current enters the lists as a rival of steam, to work either stationary machinery, hoists, or lifts, or to propel trains along rails or tramways.

The fusing capabilities were demonstrated in a remarkable way. A crucible was charged with one pound weight of broken files; the dynamo-electric current was passed through them, and in thirteen minutes they were melted and poured out of the crucible a coruscating fluid. The crucible having become heated, a second charge was melted in eight minutes. Mr Siemens finds by calculation that one pound of coal will melt nearly one pound of mild steel. The coal is burned in the steam-engine which drives the dynamo-electric machine. By way of contrast, we are told that 'to melt a ton of steel in crucibles in the ordinary air-furnace used at Sheffield, from two and a half to three tons of best Durham coke are consumed: the same effect is produced with one ton of coal when the crucibles are heated in the regenerative gas furnace;' while with the furnace to which the dynamo-electric current is applied, a ton of steel is produced by the burning of twelve hundredweights of coal. The electric furnace thus has economy in its favour, but will doubtless be further improved. Meanwhile, as Mr Siemens says, it will be useful 'for carrying on chemical reactions of various kinds at temperatures and under conditions which it has hitherto been impossible to secure.' Chief among the advantages is the enormous temperature attainable. An American Professor estimates it at three thousand five hundred degrees Centigrade. According to Mr Siemens, it is 'theoretically unlimited.'

The application of the current to locomotion has been exemplified at Berlin, where last year a circular narrow-gauge railway of nine hundred yards was laid down. A train was put on of three or four carriages, two wheels of the foremost being worked by a dynamo-electric machine. The rails, supported on wooden sleepers, were sufficiently insulated to serve as electric conductors; and when proper connections were made, the trains, crowded with passengers, travelled round the circle at from fifteen to twenty miles an hour. This success has led to a scheme for an elevated electric railway in the streets of Berlin, and as we mentioned three months ago, to the suggestion that dynamo-electric machines should be used in tunnels.

There is something almost marvellous in the exhibition of machines and other appliances used by printers and stationers. The cutting of paper into shapes and sizes is no longer a slow sawing or squeezing operation, for a whole ream can now be cut through at a single blow. A machine that seems alive, makes envelopes at the rate of two thousand four hundred an hour; and books and pamphlets can be stitched by wire ten times as fast as in the ordinary way.—An instrument for preventing a faulty position of the hand or body in writing, was shewn at the last International Exhibition in Paris.

Cornwall is a far-away county, but shews itself as alert as the counties near the metropolis, and maintains a good character for invention and enterprise, as is well shewn in the annual meetings of the Royal Cornwall Polytechnic Society at Falmouth. In the Report of the forty-seventh meeting there are articles which appear entitled to wider publicity: for example, corrugated tubes for boilers, furnaces, and flues, manufactured by the Leeds Forge Company. These tubes are 'immensely' stronger than ordinary tubes, because 'their resistance is measured by that of the material to crushing, and not simply by the resistance to distortion: they do not strain the boiler-shell by unequal expansion: they evaporate twelve and a half per cent. more water; keep much cleaner; break and throw off all incrustation and sediment; have more heating surface, strength with lightness, safety, endurance, and economy in fuel, than any other flue made or used.' After this, the bursting of boilers should be of rare occurrence.

Mr Brenton, of Polbathick, Cornwall, exhibited a Lock-pin Safety Bolt, and Anti-burglar Sash Fastener, which will hardly be regarded with favour by housebreakers. The Bolt is described as suitable 'for cattle-houses, because it is impossible for cattle to unfasten it; for railway doors and gates, because it dispenses with pins and chains, and will not unfasten through oscillation; and for dwelling-houses, because it is more difficult to pick than any other bolt or lock, being fitted with a stop which prevents the lock-pin being lifted from the outside.' Concerning the Sash Fastener, we are told that 'by simply turning the knob from right to left, the operation of fastening a window securely is completed. A tongued bolt draws both sashes together; and it is impossible for any one to pick the fastener from the outside without breaking the glass.'

Specimens were exhibited of iron oxidised by

Bower's patent process. Air, as is well known to everybody, rusts and destroys iron; but in this case, deposited as magnetic oxide, it becomes protective. The castings to be operated on are placed in a retort or chamber, and made red-hot, at which they are maintained from six to twelve hours, while a slight current of atmospheric air is passed through the chamber. They are kept closely shut up two hours more, and then are found to be covered with a coating (the magnetic oxide) beautiful in appearance, and of lasting effect in preserving the articles from rust. Thus it will now be possible to erect ornamental iron-work out of doors without risk of damage or destruction from rust.

Follows & Bate, of Manchester, exhibited an Agate-centred Archimedean Ventilator. It comprises a tube and hood side-vanes, and an Archimedean screw. The shaft of the screws rests on a polished agate footstep, and the friction being small, rotates easily inside the tube. It may be made to move by wind or steam, when, as stated in the Report, it draws accumulations of hot air, sulphurous gases, dirt, waste flyings, and other effluvia from gassing rooms,\* or from any other part of a factory. In like manner, steam may be drawn from dye and bleach works, foul air from printing-offices and tailors' workshops; and hospitals, prisons, and sewers may be thoroughly ventilated.

We mentioned last year the utilisation of waste clays in the manufacture of certain kinds of pottery. The meeting at Falmouth shewed that the search for clays had been extended to other parts of Cornwall, and that slimes and sands accumulated by mining operations can be converted into bricks, tiles, drain-pipes, vases, models, and figures of animals varying in appearance and character from 'vitrified stone-ware to a fair average quality terra-cotta.' If he who makes two blades of grass grow in the place of one deserves well of his contemporaries, so does he who converts waste into articles of use and ornament.

The electric light has been brought into use with great advantage in the slate quarries of Angers, France, for instead of digging away the upper strata to get at the good merchantable slate—an operation that required months of unremunerative labour—the quarrymen get out the slate by mining. It is in the deep underground workings that the electric light is employed, the result being that with the increased light the labourers do not require their hand-lamps, that the work is better done than before, that a greater quantity of slates is produced, and the liability to accident is diminished.

The trial at Portsmouth of a new screw for steam-vessels gave a very encouraging result. From the name of the inventor, an American, it is called the Mallory Screw; and especially remarkable is the fact that a vessel fitted therewith requires no rudder. The cylinders are at the stern: they act directly on the shaft which turns the screw; and the screw, obedient to the movement imparted to it, effects the steering. The trial was made with a steam pinnace forty-two feet in length; and the

little craft behaved like a fish, darting hither and thither, or turning within its own length, or going through the movements of a quadrille with astonishing swiftness. The engines can be reversed from full speed ahead to full speed astern in ten seconds; and it is thought that the Mallory Screw may render good service in torpedo warfare. But (there is a but) the vibration at the stern of the little vessel is so severe that extra strength will be there required to make her entirely trustworthy.

An experiment tried in the port of Kiel proves that heavy weights can by means of a balloon be raised from the bottom of the sea. The balloon is made of canvas and metal plates, with an attached cistern containing carbonic acid gas compressed to a liquid state. When made fast to the sunken object, the communication between the cistern and the balloon is opened; inflation takes place; the sunken vessel or whatever else it may be, is lifted, and can be towed away at pleasure. In the experiment at Kiel, an anchor-stone weighing fifteen tons was thus raised from a depth of thirty-two feet. The lifting power of a balloon ten feet in diameter is said to be more than one hundred and thirteen tons.

Mr Latry, 12 Boulevard St Martin, Paris, has invented historical cards and geographical dominoes, with a view to interest children and young people in their own education, and to provide a means of instructive recreation. For example: the departments of France are represented by different series of picture-cards: the name of a department is called; the players immediately produce the prefectures and under-prefectures of that department or any other particulars. In the same manner, on specifying a reign, the cards are played which illustrate the incidents of that reign; and the best player is the one who places the incidents in true chronological order. In geography, the cards aid in defining the ancient provinces as well as the modern departments; they illustrate, moreover, the leading historic facts and the characteristic manufactures of the towns and cities.

The dominoes, inscribed with dates instead of the usual numerical spots, convert the study of history into a pastime; or, applied to geography, may represent the principal river-valleys of France or any other country. In practice, it is found that a child soon learns the names of the water-courses in a river-basin, of the towns through which they flow, is able to identify their position and form a mental picture of the whole. The name chosen for this new game is 'Magister,' because any one of the players by clever moves may become master. So far as can be judged from these particulars, it is an amusing as well as instructive recreation.

At what height does the aurora appear? Messrs De La Rue and Müller have attempted to answer this question at a meeting of the Royal Society, their experiments on the electric discharge in various gases and in vacua being taken as evidence. They believe that at a height of about thirty-seven miles, the display of the aurora is at its highest brilliancy; is much less brilliant at eighty-one miles; and scarcely visible or even possible at one hundred and twenty-four miles. The colour varies markedly with the tenuity of the air. At a pressure of sixty-two millimetres, the magnificent

\* The gassing room in a factory is the room in which the fluff is singed from woven goods passed rapidly over an array of lighted gas jets.

carmine tint prevails which is so characteristic of auroral phenomena ; but as the pressure is reduced, the tint changes to salmon colour, and from that pales off to milky whiteness. 'The roseate and violet tints,' say the experimentalists, 'are always in the vicinity of the positive source of the electric current. The positive luminosity fades away gradually, and frequently becomes almost invisible at some distance from its source.'

Mr W. H. Pickering of the Massachusetts Institute of Technology, in making photometric researches, has discovered a few important facts, and shewn new methods of observation. On one occasion he found the total brilliancy of the sun to be equal to about three hundred and fifty thousand full moons. Or, as he remarks : 'To understand this comparison better, we may add that, if the whole visible heavens were turned into one extensive full moon, it would give rather less than one quarter of the light of the sun.' On the question of heat, his observations lead him to conclude that the temperature of the sun is twenty-two thousand degrees Centigrade.

The American Arctic enthusiasts are making their way through the icy latitudes to the spot chosen for their experimental colony. Captain Cheyne in this country is preparing his expedition, and rehearsing the balloon trips that serve as a preliminary to the aerial voyage which, when the time comes, is to discover the Pole. And it may be said that Polar exploration is assuming an international and comprehensive form.

The Danish government have agreed to establish an observing station at Upernavik ; Russia undertakes one at the mouth of the Lena, with a branch at the Siberian Isles ; an Austrian nobleman will defray the cost of one on Nova Zembla ; Point Barrow has been selected by the United States Signal Service as their place of observation ; it is thought too that Canada will maintain an Arctic station somewhere within her vast territories ; and the Dutch government one on Spitzbergen, the scene of their early discoveries. These are all northern projects ; but the south polar regions are not to be neglected, for a ship is to be despatched by the German government to explore the coasts of South Georgia.

The so-called Celluloid, to which we have on several occasions referred, is manufactured under that name in the United States. In England it is called Xylenite ; and the manufacture thereof is carried on by the British Xylenite Company at Homerton, London, E. The production of the substance in this country was, we believe, an independent discovery.

We observe that Messrs Field and Tuer, whose elaborately got-up work on *Luxurious Bathing* we recently noticed, have produced a cheap and popular edition. This, in the interests of Sanitary Science, is a proper step.

With regard to remedies for Sea-sickness, a correspondent writes : 'Allow me to recommend a very simple and almost certain cure for this dreadful malady, and tried by my advice by many who have suffered. It consists of a broad, or as it is called an abdominal belt, put on before going on board, and worn as tight as comfort and convenience will allow. I have never suffered myself from sea-sickness, being a good sailor, but I have the assurance of a great many of the efficacy of my remedy.'

## CRAIG-Y-BARNES.

(NEAR DUNKELD.)

'Tis years since thus I rested,  
To watch the Tay broad-breasted,  
From thy cliffs with pine-woods crested,  
Craig-y-barns.

Through all the world a ranger,  
In many a storm and danger,  
Now, alas ! at home, a stranger,  
Craig-y-barns.

For *Death* has laid down lowly,  
In yonder graveyard holy,  
All the hearts that loved me solely,  
Craig-y-barns.

And *Life* has brought new treasure,  
Fair joys beyond all measure ;  
But to me, they bring no pleasure,  
Craig-y-barns.

O dear days, long departed !  
And dear hearts from me parted,  
Since we climbed thy crags light-hearted,  
Craig-y-barns.

More fair than poet's dreaming,  
With fullest beauty teeming,  
Is the scene before me gleaming,  
Craig-y-barns.

I see the river wending,  
And classic Birnam blending  
Purple light with blue unending,  
Craig-y-barns.

And yet, that valley shining,  
That placid river twining,  
Only mock my heart's repining,  
Craig-y-barns.

Each beauty but a token,  
That tells with words unspoken,  
Of a charm for ever broken,  
Craig-y-barns.

H. K. W.

The Conductors of CHAMBERS'S JOURNAL beg to direct the attention of CONTRIBUTORS to the following notice :

- 1st. All communications should be addressed to the 'Editor, 339 High Street, Edinburgh.'
  - 2d. To insure return in case of ineligibility, postage-stamps should accompany every manuscript.
  - 3d. MANUSCRIPTS should bear the author's full *Christian* name, surname, and address, legibly written ; and should be written on white (not blue) paper, and on one side of the leaf only.
  - 4th. Poetical offerings should be accompanied by an envelope, stamped and directed.
- Unless Contributors comply with the above rules, the Editor cannot undertake to return ineligible papers.

## THE RESTORATION MOVEMENT.

### THIRD ARTICLE.

ST GILES' CATHEDRAL church, Edinburgh, of which we have now to speak, has, like many similar buildings, had its days of tribulation, but is at length in the course of being set to rights. Its history can be satisfactorily traced to the early part of the twelfth century, when it superseded a much older but less imposing structure. Occupying a prominent central position in the old city, its lofty and beautiful spire is seen from a great distance. No existing ecclesiastical edifice in Scotland has passed through so many vicissitudes, or has been so cruelly maltreated, and yet has so tenaciously survived as an interesting memorial of the past. Identified with many stirring events in Scottish history, St Giles' may claim a national character, while it invites examination as a relic of art from the twelfth to the fifteenth century. We shall try to tell its story.

The date of St Giles' Church is about 1120, in the reign of Alexander I., king of Scots. At this period the Norman style of Gothic architecture was in vogue, and in that strong sturdy style of art it was erected in the usual form, with choir, nave, and transepts; the spire or tower being supported on arches, and octagonal pillars at a central point between the choir and the nave; the whole producing a singularly solemnising effect. Endowed by royal and local munificence, the church was ministered to by a Vicar, probably deputed from a distant Priory, with his assistants. In a preceding article we attempted to shew how the higher class of ecclesiastical edifices in Scotland lying south of the Firth of Forth suffered by ruthless warlike invasions from England. Suddenly, with a vengeful sweep, abbeys and churches were laid in ruin. We are perhaps not to impute these attacks to unprovoked hostility. For centuries, with little intermission, there were wars between English and Scotch, in which it would now be difficult to say which of the two contem- minous nations was in the right. Anyway, there

were vast devastations, extending from the Tyne to the Forth, which might be called the international battle-ground, where there was no absolute certainty at any time of settled peace and comfort.

St Giles' came in for a share of these unhappy disasters. Richard II., in retaliation for alleged wrongs, invaded Scotland in 1385. He laid waste the country, took possession of Edinburgh, and after an occupation of five days, committed the city to the flames. St Giles' perished in the conflagration. All that remained of the building were the entrance porch, a part of the choir and nave, with the heavier portions that formed the base of the spire. One wonders how so very substantial a structure should have been so effectually laid in ruin by burning; but the fact is beyond dispute, for on the occasion of late repairs, the marks of the disastrous fire were still visible.

Rallying after this grievous calamity, the town was rebuilt, and the civic authorities made a strenuous effort to reconstruct St Giles'. They entered into a contract for the building of 'five chapels' in St Giles', with pillars and vaulted roofs, covered with stone, and lighted with windows. The contract was dated 29th November 1387, in the reign of Robert II., and we may assume that the reparation was completed early in the fifteenth century. The part so executed was on the south of the nave. The style of art was lighter and more ornamental than that which had been destroyed. Afterwards, some aisles were added through the munificence of pious individuals. The most remarkable of these additions was the Albany Aisle, which occupies the north-west corner of the nave.

In the centre of this beautiful aisle stands a light and graceful pillar, which sustains a groined roof all around. The aisle takes its name from Robert, Duke of Albany, the second son of King Robert II., who, having been intrusted with the custody of his nephew, David, Duke of Rothesay, cruelly starved him to death in a dungeon in the castle of Falkland, 1402. Though escaping punishment for this atrocious act, Albany and his prime

associate, Archibald, fourth Earl of Douglas, seem to have been haunted with a consciousness of guilt. According to the practice of the period, they are said to have built the Albany Aisle in St Giles' as a chapel expiatory of their crime. The capital of the pillar in the centre of the aisle bears two shields. One of these bears the Albany arms, in which the Scottish lion is quartered with the fess chequé of the Stuarts. The other shield has the heart and other armorial bearings of the Earl of Douglas.

Our historical sketch now brings us to the middle of the fifteenth century, when the renovated edifice received an extension of the choir or chancel eastwards in its present form. The new part embraces four pillars with arches in the ornate fifteenth-century style, with royal shields corresponding to that period. We place the date of this newer part of the building at 1460. About the same time, the community of Edinburgh, in grateful acknowledgment of the services of William Preston of Gorton, built an aisle with vaulted roof on the south, divided from the choir only by a row of pillars. Shortly afterwards, the ecclesiastical organisation of St Giles' underwent an important change. In 1466, a charter of James III. converted the parish church of St Giles' into a collegiate foundation, with a chapter to consist of a Provost and other officials. One of the early Provosts of the new organisation was Gawin Douglas, third son of Archibald, fifth Earl of Angus, and who with poetical tastes did good service to Scottish literature, which was still in its infancy. His longest poem was the 'Palace of Honour,' an apologue addressed to James IV. The most remarkable of his productions was a translation of Virgil's 'Æneid' into Scottish verse, being the first version of a Latin classic into any British tongue. Gawin Douglas was promoted to be Bishop of Dunkeld, and died in 1522.

From his literary attainments, as well as from his social position while Provost of St Giles', we are to imagine Gawin Douglas as a favourite guest at Holyrood, where James IV. held court with his queen, Margaret, both of whom were encouragers of learning and the useful arts. The art of printing had been introduced by Caxton into England about 1477; but it was unknown in Scotland until it was introduced by Walter Chepman and Andrew Myllar, under the auspices of James IV. and his queen, in 1507. The types, apparatus, and workmen appear to have been brought from France. Chepman was the moneyed man in the concern, and from all we can learn, he was a person of extraordinary energy. The first work attempted was a collection of ancient ballads, forming a thin quarto volume in black-letter, which appeared in 1508. A fac-simile was reprinted in 1827, under the editorship of Dr Laing; but copies of it are exceedingly scarce. Myllar finally gave up the printing profession, which continued to be carried on with success by Chepman, who became a wealthy and respected citizen.

The wealth, piety, and munificence of Walter Chepman, the Scottish Caxton, were manifested in various endowments connected with St Giles'. On the 21st August 1513, he founded a chapel, or aisle, in honour of his royal patron and kind friend, James IV., the Queen Margaret, and their offspring. In less than a month, James perished at Flodden, 9th of September 1513. This unfortunate event did not stop the completion of the aisle. It projected southwards from the Preston Aisle, one of the windows of which was appropriated to form the entrance, and was immediately east of the south transept, of which exteriorly it seemed an enlargement. This handsome aisle became a family chapel and place of burial. Walter Chepman died in 1532. A brass tablet has lately been set up to his memory in the aisle he founded.

In 1558, at the dawn of the Reformation in Scotland, a tumult occurred, in which the ecclesiastical organisation came to an end, and the interior of the church was disturnished. It was a clean sweep. Excepting, perhaps, a pulpit or a reading-desk, and a few benches, nothing was left in the old edifice. At the settlement of affairs in 1560, St Giles' resumed its original character of a parish church, with John Knox as pastor, and here he sometimes preached to three thousand people, his voice resounding through the far withdrawing aisles. Knox occupied a conspicuous position when acting as chaplain at the funeral of the 'Good Regent,' James Stuart, Earl of Murray, who was assassinated at Linlithgow, 23d January 1569-70.

Now ensues a remarkable incident in connection with St Giles'. The death of Murray led to a keen contest as to who should be Regent. The choice fell on the Earl of Lennox, paternal grandfather of the young king, James VI. This gave offence to Sir William Kirkaldy of Grange, who had hitherto belonged to the king's party, and as such was Governor of Edinburgh Castle. He now changed sides, went over to the party of the exiled Mary Queen of Scots, and commenced a fierce civil war, in which he fortified Edinburgh, and on the 28th March 1571, placed a military force on the roof and steeple of St Giles' Church, to keep the citizens in awe. The craftsmen of the city, however, were not easily daunted. They broke into the church, and to bring matters to a crisis, proposed to pull down the pillars which sustained the roof. Alarmed for their safety, Kirkaldy's men, on the 4th June, began to make holes in the vaulted ceiling, from which they fired down with muskets on the crowd of assailants. Calderwood, the church historian, says they 'made the vault like a riddle to shoot through;' which gives us an impressive idea of this warlike strife inside a church. Kirkaldy withdrew his forces in July 1572. Under the merciless Regency of Morton, he was hanged at the Cross of Edinburgh, 3d August 1573.

The roof of the church being duly repaired after the late hostile visitation, things went on in their usual quiet way. But St Giles' was destined to suffer infinitely more damage than anything that had been done to it by the operations of Kirkaldy of Grange—damage that has taken three centuries to remedy, and is not remedied yet. Previous to the death of Knox, the magistrates and council began to section the church of St Giles' into

separate divisions. This proceeding was commenced within twelve years after the Reformation; and ultimately, by means of built partitions, there were four places of public worship, besides accommodation for other purposes, under one roof. To aggravate the violation of all taste, the different churches were fitted up with galleries and staircases, while the practice continued of interring deceased citizens in the building.

Consequent on the introduction of Laud's Service-book into Scotland by Charles I., an overturn ensued in the ecclesiastical character of St Giles'. Edinburgh was erected into a bishopric 23d September 1633; and an order was given to the magistrates and council to convert the edifice into a cathedral church. The tumult that took place on the attempt to introduce the Service-book—Sunday, 23d July 1637—along with subsequent events, restored the church for the Presbyterian form of worship. St Giles' ceased to have the status of a cathedral; but this was resumed on the establishment of Episcopacy in 1662, and it remained so until the Revolution of 1688. The building, however, is still popularly designated St Giles' Cathedral Church. In point of dimensions, it equals that of the medium-sized English cathedrals, being a hundred and ninety-six feet in length within the walls, by a hundred and thirty feet wide at the transepts.

Possessing the possibilities of grandeur, and interesting as an historical monument, what will strike every one with surprise is, that throughout the eighteenth and the early years of the present century, there should have been such a general acquiescence in the hideous internal condition of St Giles'. Accomplished men of letters, now reckoned as national luminaries, did not imagine there was anything unseemly in the condition of this ancient edifice. Within our recollection, in 1817, there were still four churches, and the city Police Office in St Giles'. Twelve years later, a plan was matured by W. Burn, an architect, for partially remodelling the building at a cost of about £20,000, towards which sum the government contributed £12,600; the remainder being paid by the corporation. Burn commenced operations in 1829, and the work was finished in 1833. At this period, there was no proper awakening among architects or the public to the necessity of preserving the Gothic character impressed on the ancient ecclesiastical buildings. The chief idea was to make things pretty. Burn made dreadful havoc with St Giles', and nobody found fault with him. As has been observed by Lord Cockburn in his 'Memorials,' the building 'might have been painted scarlet, without anybody objecting.'

Mr Burn changed the entire aspect of St Giles', the spire alone excepted. He removed two of the five aisles founded in 1387, and made changes on the west end of the nave. Picturesque roofs and pinnacles disappeared. The whole fabric was cased in a bald style of art. Whether these alterations were executed under special orders from the public authorities, has never been explained. The best thing done was the expulsion of the Police Office. At this time, the number of churches accommodated in the building was reduced to three, and by a subsequent statute, the number that remained was only two—namely, one in the choir, and another in the nave, with a strip of

vacant aisles in the south. In the course of the later alterations, the custody and administration of St Giles' passed by statute from the civic corporation to a body of local Ecclesiastical Commissioners; the heritable proprietary rights of the Magistrates and Council being rendered of no substantial avail.

When the present writer, or to speak more personally, when I had the honour of being Lord Provost of Edinburgh, 1865-69, I had often occasion to attend public worship officially in the choir or High Church of St Giles'; and so offensive was the cram of old-fashioned pews and galleries, and such the mustiness of the atmosphere, that I conceived the idea of clearing out the whole building, and of bringing it back, as far as practicable, to its original condition. I was not able to commence the scheme of Restoration until 1871, when, with the concurrence of the civic and ecclesiastical authorities, a Committee, of which I was chairman, was appointed for the purpose, and began operations. The design was to restore the edifice, bit by bit; no second part to be begun till the first was finished; and trusting that the requisite funds might be obtained by public subscription. The part earliest executed was the choir, which was thoroughly cleared out. Every pew and gallery was removed; the walls and pillars were repaired; and from the floor there were dug up and taken away cart-loads of mortal remains. Finally, the interior was fitted up with open oak benches for the congregation, an elevated ornamental pew for royalty, pews for the judges and magistrates, and a pulpit of Caen stone, richly carved, for the officiating minister. Altogether, including the cost of heating by hot-water pipes, the expense amounted to four thousand four hundred and ninety pounds. The subscriptions actually realised fell short of that sum to the extent of six hundred and fifty pounds, which deficiency was made good by several members of the Committee, myself included. The newly restored church was opened for public worship, 9th March 1873, and was much admired. Under the incumbency of the Rev. Dr J. Cameron Lees, the church in its improved form has become one of the most attractive in Edinburgh. All the windows in the choir, nine in number, are now filled with stained glass, representing scenes in Biblical history, executed as memorials of deceased relatives by private individuals. Others are in preparation.

The second step in the process of Restoration was the clearing of a series of aisles along the southern side of the building, which had formerly been a separate church, and now lay in a very uncouth condition. A similar consent being obtained for the restoration of this part of the edifice, I went to work upon it at the beginning of 1879. The estimated outlay was fifteen hundred pounds, which, looking to past shortcomings, I resolved should not be left to the hazards of a subscription list, but be undertaken by myself. Operations on these aisles extended over eighteen months. With the professional assistance of Mr W. Hay, architect, the restorations have been most effective. Lath and plaster partitions between the pillars which divided the Preston Aisle from the choir have been removed, and the pillars which were grievously shattered have been repaired. The roof of the aisle, reckoned to be the gem of St

Giles', has been cleared of plaster and whitewash, and now exhibits a remarkably fine specimen of groined vaulting in stone, with ornamental bosses. The other side aisles have been laid with encaustic tiles, and the remainder properly paved. At the western extremity, Mr Burn had left a huge ungainly doorway, like that for a coach-house. This has been superseded by a lesser doorway of antique character, surmounted by ornamental carved work in stone representing the Royal shield environed by the national thistle, with the legend 'Robertus II. Rex Scotorum,' and the date of foundation 1387. The doorway is specially designed as an entrance for the judges of the Court of Session, but it is also available as a door of exit.

In the course of general operations, it became necessary to examine some vaults which were reputed to contain the remains of the Marquis of Montrose and several other distinguished individuals. The search was disappointing. The remains sought for had vanished. During the alterations in 1830, and I have no doubt without Mr Burn's knowledge, some leaden coffins had been emptied into heaps of rubbish, and the lead carried off and sold to plumbers. Such was the explanation offered by an aged individual acquainted with the circumstances. The tomb of the Good Regent, James Stuart, Earl of Murray, had been spared this desecration. There we found three leaden coffins in a partially decayed condition, with their contents undisturbed. One of these coffins was that of Alexander Stewart, fourth Earl of Galloway, who died 1690. The coffin of the Regent had disappeared; but there was a mass of bones in the tomb, with a skull of excellent development, which it was conjectured had been his. As a concluding measure in the work of Restoration, the tombs have been carefully indicated by marble slabs with names and dates in the pavement. The monument to the Earl of Murray, which had been removed as insecure, has been re-erected in the Moray Aisle, immediately adjoining the tomb. By the munificence of the present Earl of Moray, the window of the aisle is to be of stained glass; the upper lights representing the assassination of the Regent, and the lower lights representing the memorable funeral service over his remains by Knox.

The cost of restoring the southern aisles has considerably exceeded the estimate—it is unnecessary to say how much. All that is now required for the complete Restoration of St Giles' is the clearing out of the nave; but here an unpleasant interruption has taken place. The nave is occupied as a parish church, known as West St Giles', and nothing can be done till a new church is found for the congregation. In April 1879, I made the offer to restore this portion of the building at my own expense, provided such offer was accepted on or before the 15th May 1880, and the keys delivered up by Whitsunday 1881. The proposal was seemingly appreciated. An Act of Parliament was procured to authorise the removal of the congregation on the payment or guarantee of paying the sum of ten thousand five hundred pounds. Following up this measure, an effort was made to raise the requisite sum by subscription; but it signally failed. Only about half the sum was subscribed, and the offer accordingly lapsed.

Here the narrative must suddenly break off. At the time this is written, nothing has been definitely settled as to when the nave shall be rendered up, so as to permit of an entire restoration of the edifice by myself or others. In a future number of the *Journal*, an account of final proceedings may be given. So much remains to be done, that were the work to be commenced immediately, it could not be completed in less than two years.

W. C.

June 5, 1880.

## A LIFE'S ATONEMENT.

BY D. CHRISTIE MURRAY.

### CHAPTER XXV.—HISTORY.

*The cruel road seems lovable, though the feet bleed and are weary.*

THERE are many places in London where the struggle of poverty for its daily bread is visible to the eye of the most careless wayfarer. But there are not many places where the simile of a fight for life is so palpably true as it is at the gates of some of the London Docks, twice a day. At almost any of the docks you may see this strange conflict at early morning, or at the close of the time set apart for the mid-day meal. Round the closed gates are gathered some scores of men in rough working-dress, who lounge about with their hands in their pockets, kicking the pebbles on the highway in a listless fashion; or leaning in listless fashion against the gate or the walls; or standing listlessly, with humped shoulders, on the kerbstone, spitting at a mark on the road. They are for the most part sturdy fellows, with a general aspect of uneasy massiveness; an aspect strengthened by the cut and weight of their loose clothing. Suddenly the incurious traveller who observes these things is startled by a yell in which many voices mingle, and the lounging crowd is thrown into a state of mad activity. Everybody converges to one point, and there is a fight to get there. At that point a human head and shoulders appear above the high dock-wall, and a hand showers down a little snow-storm of limp tickets. The snow-storm lasts for a second or two only, and every man in the crowd fights for a flake of it, for dear life. Like other flakes, it will melt in his hand, though somewhat more slowly than the common, since it will at least last until meat and drink are found. The scrambling fight goes on until the last ticket is rescued from the dust or mud; and never did men put their muscles to the task more strongly, though it were round the last banner of an army on the battle-field, and hand to hand with an overwhelming enemy. When the last ticket is secured, the winners in the fight range themselves outside the dock-gates; the losers subsiding suddenly from their heat of passion, lounge again as listlessly as ever; and the two who have torn a ticket between them toss up for it, or bargain for it, or fight for it, as chance or their nature may determine. The small gate within the large one being opened, the winners go in, and are allowed to work; and the losers hang about outside on the chance of being wanted in the course of the morning or afternoon. And by

this conflict, twice renewed daily, men earn the right to earn their bread in the capital city of the world's most prosperous empire.

Two days' rest had restored Frank to something of his old strength, and had left him penniless. For a shilling and a halfpenny husbanded never so carefully, will not find food for any great length of time in London. On the morning of the third day he arose, and wandered into the street before the faintest light of dawn had touched the sky. With returning strength came appetite; and before he had gone far he pulled from his coat-pocket the heel of a loaf saved from last night's meal, and munched it as he went. His mind had not lost the power to grasp, but he had lost the will; and all mental outlines were dim and clouded to him. Hardship in itself is not so pitiable a thing. It is the feeling in a man's mind that he suffers hardship, which crushes and kills. The young athletes of the Thames every year challenge discomfort with joyful hearts, and flourish in it, and go back to the routine of business or professional strife, made strong by it. But if they faced the same discomforts—light as they are, when compared to those of poverty—with a spirit already broken by the insupportable burden of fruitless hope, the very things that bring health might carry death with them. As for Frank, he had borne the chief agony of his remorse, and a dull rest which had no sense of rest in it had taken the place of pain. It was rather that the passion of his grief had wept itself to sleep, than that Peace had as yet even touched him with one feather of her healing wings. But if he had not the jocundity of spirit which makes hardship pleasurable, he had at least a careless contempt for it, which made it a thing of no moment to him. He was in the wilderness, with no land of promise in sight, even for the soul's eyes; but he had no longings after the flesh-pots of lost Egypt. He scarcely went back to his old life, in thought, at this time; and whatever change went on within him, whatever process of gathering strength, whatever growth in duty, was unconscious. Creeds shift and change, and the light fades here and flashes there in broken gleams on nebulous faiths and hopes which are not steadfast. But in their midst stands one rock solid and fast-rooted, and he who sets his foot thereon is blest even though he be not happy. The name of that rock is Duty, and who walks the harsh and difficult way which lies along it, gathers no clogging load from quagmire, dies no son's death by the miasma of that murky world which swelters down below it. We slip, we fall, we bemire ourselves, we choke in the deadly fog; but to the sincere soul the hand of guidance comes, and the weak feet find a standing-place again, and the cruel road seems lovable, though the feet bleed and are weary.

It was but a dim sense of Duty which left death by starvation in its budget of obvious chances, yet threw suicide out of it. Yet it was something; and the light broadened above the head and about the feet of this forlornest soul, and lo! the firm eternal rock was there beneath him and the way was clear.

Frank walked, vacuous and unobservant, as the day grew. The twilight was chill and faint, and the wind swept in shivering gusts along the line of street-lamps, and the little pools of water in the road. He had travelled altogether out of his

knowledge of London, taking no note of the unaccustomed streets. There were few signs of life in them, and the steps of here and there a solitary workman sounded with a strange and melancholy distinctness. But at length the road he took brought him to a high brick wall, into the colour of which the smoke of myriads of chimneys had entered—a desolate bleak black wall which stretched as far as he could see along the lonely road. Rounding the corner of this wall at length, he saw before him a small mob of men, who lounged with lazy shoulders at the roadside, or propped themselves against the wall, or talked in uninterested knots with each other. Whilst he noticed them in that vague way which had now become habitual with him, he was startled into interest by a simultaneous shout from half the unoccupied assembly; and almost before he had time to ask himself what this might mean, the men before him were tied in one great knot of struggling legs and arms. He walked on faster than before, and reached the place just as the crowd dissolved of its own accord and melted back to its own elements. Though he did not yet know the reason of the struggle, he could single out at a glance those who had won and those who had not won. The former were full of alacrity, and moved with a definite step, like men who had got what they wanted and knew what to do with it. The others fell back into the old lounge, or moved irresolutely from side to side of the road, and were evidently undecided as to whether they should go or stay. Whilst Frank stood still to see what would come of it all, a heavy hand came down upon his shoulder, and a hoarse voice with a genial chuckle in it cried: 'Hillo! shipmet. Want a day's turn at work? Eh?'

Frank nodded.

'You look as if you did,' said the man with the hoarse voice. He was a red-faced, bright-eyed fellow, past middle age, and had a grizzled beard of a fortnight's growth. He stood something over six feet high, and his shoulders were broad and square. He had on a son'-wester, and big sea-boots very much the worse for wear; and his great arms and chest shewed their swelling muscles through a tight-fitting gray jersey. 'I've picked up two tickets,' he said, 'and you're welcome to one of 'em.' Two or three of the unsuccessful loungers stood staring hungrily at Frank's new acquaintance; but when they saw him hand over the little ticket, they drew back with disappointed looks, and joined the scattered throng in the road.

Frank had no notion as to the nature of the work or the character of the pay; but he ranged himself beside the man who had befriended him, and when the little gate opened, followed his companion through it. They were employed in ordinary dock-labour, and were kept at it until noon, when they were paid and dismissed. Frank had no fear of labour; but he was unused to it, and was not altogether grieved when he failed to secure a ticket in the afternoon's scramble. The pay was poor, but it was better than nothing; and Frank was on the ground early next morning. As Fortune had it, the shower fell about him as he stood a little apart from the rest, and he secured two tickets. Looking round, he saw that the man who had helped him the day before was going away; and bethinking him of that good turn, ran after the burly figure.

'One good turn deserves another,' said Frank. 'I have two tickets.'

'You're the right sort,' said the Dockman with an oath, to make the statement more emphatic. 'Half these dogs ud kick your heart out as lief as look at you, even if you saved 'em from starving a day before.'

All that morning he worked alongside Frank and lightened labour for him; but by mid-day the unaccustomed muscles were tired and stiff again, and Frank was glad to betake him to Bolter's Rents before nightfall. He walked on calmly enough until he reached the boundaries of his old haunts, and there his heart began to beat with the fear of recognition. He bent his head and slouched along, determined to give as little chance to any scrutiny as possible; and as he walked, he thought how necessary it would be to get lodgings out of the way of his friends, if he meant to live in London. I do not know if I have yet made this clear, that Frank Fairholt's sole dread was that a further sorrow might fall on those whom he had so much wronged already. If it had been possible to surrender himself to justice and to suffer the penalty of his misdeeds without their knowledge, he would even have rejoiced so to quiet his conscience. Therefore he dreaded detection, not for his sake, but for theirs. It is not easy to see how any wretchedness could have added one pang to his sorrows. Walking along, bent on nothing so much as escaping without notice, and feeling that now and again the eyes of passers-by were upon him, and knowing what a blot on the spring sunlight he must look as he crept through the streets, he heard his own name mentioned by a familiar voice. Those genial young people the Messrs Brooks and Bonder were at his elbow, and were talking of him. His heart almost stood still; but he bent his head yet lower, and they passed him by unnoticed.

'Poor Fairholt!' one said. 'What has become of him, I wonder?'

'I think he went to the bad about Tasker's business, and bolted somewhere,' said the other.

'Hastings has been spending money like water, trying to find him.'

With that they went on out of hearing, and a new dread arose in the listener's mind. It gave him an impulse, and he began to make an effort to see and understand. He reached his lodgings, and sat down alone, to think. What were the chances of detection, and what would come of it? It was clear that Frank Fairholt and the crime of Spaniard's Lane were not associated, or Hastings would not be hunting for him, and Brooks and Bonder would have had some inkling of it. If it were true that his friends were seeking him—and that he could not doubt—they were striving to restore him to his old place in the world. From the lifelong hypocrisy and horror involved in such a restoration, he shrank back appalled; and rising from his seat, he paced to and fro along the crazy floor, turning over in his mind the chances of escape. Here in London, he thought—I am safer than I could be elsewhere. Who could look for him, he thought, contrasting what he was with what he had been, in such a den as this? What better hope of escape could he find from that inexorable love, which was harder to bear than any severity of punishment, with which he now felt sure some of his old friends would pursue

him? Remembering how Maud's uncle loved her, it came into his mind that Hastings had received from him the money he was said to be so lavishly spending, and he trembled as he thought how far Maud's love might follow him. The image of her tenderness, the thought of the heart-breaking sorrow and anxiety he knew she bore, the place he dwelt in, the clothes he wore, the life he lived, the black secret that lay hidden in his own soul, love, remorse, self-loathing, the hideous prospect of his life—all these were in his mind, and tore him with unutterable anguish. How sweet seemed the quiet of the grave! How the chill voice the river's waters uttered as they lapped against their oozy banks called to him! No, no, no! Not that! He cast out his hands in resolute refusal of that drear enticement, as the voiceless words shaped themselves within him. Then a thought came to strengthen his resolve. 'If I were hunting,' he said within himself, 'for any one I cared for, who had vanished out of life as I have, I should look out for suicides. What if that dread is in their minds, and they should find their search rewarded *there*!' And the Water-Siren beckoned no more.

He kept his place till dark, and then stole out for food. In the darkness before dawn he set out for the scene of his chance labours; and failing, hung about till noon; and failing again, lounged there still until night came on, and under the shelter of its gloom stole home again. It was a hard life; but it held body and soul together, if by a most uncertain tie; and since nothing else opened, he stuck to it. As he became inured to the labour, his daily fatigue decreased; but that was scarcely a thing to be thankful for. His broad-built acquaintance, who answered to the improbable name of Gorridge, stuck to him with great faithfulness; and the two entered into a sort of unspoken compact to supply each other's failing in the fight for tickets, whenever occasion offered. Frank bethought him often that he might avoid the familiar parts of the town, and the risk of detection which attended his travels through them; but the solitude he generally secured at Bolter's Rents, made the place more easily endurable than any other. As time went on, his clothes by small additions here and there began to assume a heavy long-shore look; and his hair and beard were rapidly whitening, whether with suffering, or from neglect, or by purely natural causes. After a month or two, a change came over his life, and the coarse employment he had fallen upon became secured to him. The man whose business it was to distribute the tickets took a fancy to this gray, quiet, inoffensive Dockman, who was always to be depended on, who never squabbled, never drank, never shirked his work, and who now began to go about his business with an air of sense and aptitude which the rougher and stronger had no chance to reach to. So whenever Frank was thrown out in the scrimmage, which was not very often, since the distributor meant to help him, it came to pass that another man was wanted, and he was called in. His needs were so few, that eight-pence a day supplied them; and the residue of his poor earnings anybody in want was welcome to. This was the sacrifice to which he set himself—to live among these people, and do his duty as one of them, and to help such of them as stood in need. It came about that after a while the rough fellows

got to know him, and seeing how his money was mainly spent, forbore to envy the favouritism shewn by the ganger, and some of the set whom he had helped in times of especial hardship, would have belaboured an who dared to offer him an insult. It got about somehow—for he never spoke a word concerning it, and might indeed almost have been a dumb man—that he had a special dislike to the vile blasphemies which seasoned their common talk; and though they were as coarse and hard a set as might be found in London, they were contented after a time to let their conversation go without that gruesome flavour.

In his old life, Frank had been remarkable for the sweet clearness and manly delicacy of his speech. The accent of an English gentleman is not a thing to be acquired by a dock labourer, and it is not easily mistakable. He had never given a thought to the rare beauty of his own speech. He was unconscious of that gift of nature and breeding, and so made no attempt to hide it. It went with his blameless conduct and his unfailing industry and his open-handed generosity, to make him noticeable in that rough crowd; and they conferred upon him the name of 'The Duke,' half in genuine admiration, and half in satire. When it happened, as it sometimes did, that Frank found himself addressed by any of those in authority, his speech surprised them; and there were legends about him among the leeks, one of which was that he had been worth half a million, and had lost it every penny on three successive Derbies. Had he known these things, they would have re-awakened the fears that slumbered in him, and he would have left the place and returned no more; but he knew nothing except that the inward burden was no lighter, whilst the outside burden seemed too light to think of.

Under these conditions, his bodily health returned, and his native dexterity made him more than a match at his work for those who were vastly stronger. Meantime, there came even to his ears the news of a great war. The recruiting sergeant became a common figure at the dock-gates at mid-day; and Frank had longings to be out in the Crimea, where, haply, Fate might be good to him and give the only thing it had to give—an unknown grave. But his gray beard made the recruiting sergeant laugh at his proposal to enlist, and he went back quietly to his work again. The sergeant might well be excused, for the gray beard and wrinkled face doubled the applicant's apparent age; and Frank passed commonly amongst those who knew him for a man of fifty or five-and-forty at the least. Sundays were the days on which his inward burden seemed heaviest, for he dared not leave the house to wander in the streets, safe as he might have been, and the hours were leaden-footed. But one day he picked up a scrap of pencil in the docks and absently put it in his pocket. Finding it there next Sunday, he began to sketch upon the dingy whitewash of the wall; and growing interested in the task, wore the pencil down to a stump, sharpening it roughly with an old table-knife, the back of which was keener than the edge. He was a born artist; and his old passion awaking again within him, he took to saving all manner of scraps of paper and bearing them home with him. There on Sundays he would sketch all day, for Penkridge was generally absent; and at night would

burn his work carefully, lest any of it should by any chance get abroad and betray him. Many faces of old friends, many scenes in which he had been happy, his busy pencil traced as he sat alone; and many a time his eyes were too full of tears to see the lines he had drawn.

The old habit took such a hold upon him anew, as old abandoned habits will when reassumed, that he caught himself sometimes in lonely corners at the docks in disengaged moments sketching on the walls, on fragments of board, on anything, with any bit of charcoal or chalk that came to his fingers. There was a certain English official there who for some occult reason had an ambition to pass for a Yankee, and always spoke through his nose, in transparently unsuccessful imitation of the American twang. This man's face was in Frank's mind, and somehow went from his mind into his fingers, which conveyed it through the medium of a piece of chalk to the top of a tea-chest. It was an absolute likeness; and when the man came that way and saw it, he stared in amaze.

'Come yer,' said he to a passing clerk from the Customs. 'What do you think o' that?'

The clerk laughed, and said it was an amazing likeness.

'Now,' said the depicted one, in nasal following of the typical down-Easter of the British stage, 'who could 'a done that thar? Ain't it like? Why, if I didn't think I'd took a white outline and got spread out on that old tea-chest. Petrified fact. I did.'

The official did little else that day but march up to the tea-chest with newly-caught friends and acquaintances, to whom he displayed the outline with the same unvarying formula. No man with whom the official had the slightest acquaintance went through the yard free of that joke, until in the course of the evening the tea-chest was removed. Frank was at work in the neighbourhood, and overheard it half-a-dozen times; but it carried no merriment to him, though every one to whom it was offered was complaisant enough to smile at it. It awoke anew his dread of discovery, and he thought: 'I must do no more sketching here. It would surely be too strange a thing to find an artist in a place like mine to pass without some comment or suspicion.' He kept watch upon his fingers after this; and in Bolter's Rents he still burned his Sunday's work with rigid care. The inhabitants of that doleful region saw but little of him, and for a long time his evident desire for solitude was humourous to the full. He learned from Penkridge occasional news of the doings of the place, which otherwise would not have reached him. He relieved that broken creature's necessities at times; and once or twice bestowed some charity upon the neediest, where all were needy. Very often his companion talked to him for an hour together on his return from the docks; and Frank sitting stock-still, heard scarce a word, but murmured mechanically Ay and Yes and No.

One evening he sat thus; and Penkridge's talk gnrgled on unnoticed till the current of Frank's thought suddenly ran silent, and his companion's voice went on to this effect: 'Which she's a reg'lar angel, if you'll believe me, sir. It isn't what she gives, though I do assure you as that's quite considerable; but it's how she gives it. Many's the 'elping' and she's lent me sence I've been brought

so low; and many's the 'elping 'and as 'er 'usband lent my poor dear pardner.'

'Ay,' said Frank, not caring whose praises were thus spoken; and turning to the dingy window, he looked out upon the night, where for once the moonlight laid a sanctifying hand upon the squalors of Bolter's Rents. For the pure light of the moon seems only to rest on beauty, and makes ugliness lovely when it beholds it; as the light of a kindly spirit lays a kindly glow on the hard world, or as love beautifies that which it loves. And for a while the laden heart rested itself upon beauty, and Frank's thoughts roamed sadly, but without anguish, into the autumn fields. He came back from his reverie in time to hear a creaking on the stair—perhaps that awoke him—and a second later, the jarring door was pushed back on its one creaking hinge. But for the moonlight, the room was dark; and as the door was in shadow, Frank could not make out even the outline of the new-comer. The new-comer looking towards the light, saw a bent figure with a long beard which looked white in the moon-beams. Frank stood to listen, and his profile was thrown out clearly against the light. There was silence for a second, and Penkridge cried: 'Who's there?'

'Have you a candle, Penkridge?' a female voice asked in tones of great sweetness. The owner of the voice looked at the profile from where she stood, and could have borne to look longer, such a picture the clear-cut face and sweeping silver beard and the bent shoulders made. But Frank moved away from the window, and when Penkridge struck a light, had thrown himself upon his rough bed in a shadowed corner, and was shrouded from observation there. With a side-glance thrown towards him swiftly, the new-comer sat down upon a tea-chest placed for her by Penkridge, who was imprecating blessings upon her with a whining fluency.

'I have been to see Mrs 'Olosky,' she said when she could get a word in; and Frank's eyes, as he regarded her from his shadowed corner, confirmed his ears, and told him that she was a lady. 'I am pleased to hear so good an account of you as she gave me. But why don't you give up drinking altogether, my poor fellow? I think that if I knew you had signed the pledge and would keep it, I could take you out of this place, and put you into a situation where you could live in greater comfort. Will you try?'

Mr Penkridge, who had that evening taken much more than was good for him, and who bade fair to go on taking more than was good for him daily to the end of the chapter, shed maudlin tears at this appeal. Which, he said, he would do anything to oblige such an 'ev'ing lady; but the lady perceiving his condition, forbore to press him. 'Is this,' she asked Penkridge, 'your companion?'

'Yes, ma'am,' replied Penkridge, sobbing audibly. 'That's the gentleman which I spoke of, ma'am. And a real good sort he is, ma'am. O yes, ma'am, that he is indeed.'

The visitor turned round, and looked to where Frank lay upon the heap of shavings in the corner. 'I know,' she said pleasantly, 'that you have been helping me already; and I want you, if you can, to help me more.'

'In what have I helped you already?' asked Frank, speaking unwillingly from the darkness.

'I should have said rather that we had worked together without knowing it.'

'How?' said Frank, helping to keep the talk going, but much against his inclination.

'There are many in Bolter's Rents who are very poor and comfortless. I have been trying to help them a little; but I am almost helpless. I do not know them; and those who are really poorest will not let me know them; though the undeserving come to me with all sorts of terrible stories. Now you who know them, might'—

'I do not know them,' Frank made answer.

'I have tried to meet you before now,' the visitor continued; 'and finding that you were never at home in the daytime, I came down to-night on purpose to see you. Will you help me?'

'I am as poor as most of those about me,' he answered; and his tone shewed more clearly than he intended, how little he desired to speak at all.

The visitor persevered. 'You give me the best of all reasons for believing that you will help me. There is no generosity in giving away that which you do not want.'

'I want one thing only, ma'am,' Frank answered, 'and that I cannot give away.'

'What is that?' the visitor asked quickly.

'My solitude,' he said in answer; and with that he turned his face to the wall.

'I shall try again,' said the visitor, rising to go.

'A second trial can have but one result,' he answered, raising his head, but not turning it. 'It will drive me from the only home I have; and wretched as it is, I have no wish to leave it.'

'Then,' said the visitor, as she moved towards the door, 'I will trust to time.'

#### GOSSIP ABOUT TRAVELLERS.

IF it does not necessarily follow that the study of travellers is travellers, there is—at least to the older members of the fraternity—an almost never-failing fund both of amusement and pleasure to be derived from it in the persons of all classes of the genus Traveller, from the tyro who is making his first trip, to the seasoned old veteran whose bronzed face testifies plainly to many a year passed under other and brighter than our own British skies. Between those of the last-named class there exists a sort of freemasonry, the signs of which, although not easily explained, are quickly recognised by the brotherhood, and are a ready passport to a mutual introduction. The proverbial stiffness of the English traveller is not for them, for thoroughly national in their national feelings, they are cosmopolitan in everything else. Whether it be among our continental neighbours or with our American cousins, in Mexico, South America, or Africa, they have a way of adapting themselves so thoroughly to circumstances and people, doing in Rome as the Romans do, that none but one of themselves would be likely to make the discovery, on meeting with one of them away from home, that he was probably for the first time in the country where he appears as entirely at his ease as though he were an old resident.

We were once travelling by rail to Southampton, the compartment being occupied by an elderly gentleman, a younger man apparently about thirty-

two or thirty-four, and ourselves. One or two furtive glances at our companions were enough to make it quite plain to us, that although the elderly gentleman would respond with a quiet 'Certainly, with pleasure,' should we request the loan of one of his newspapers; and the younger of our fellow-occupants would courteously reply to any observation we might venture to make, there was no need for us to count upon their society for making the dreary journey on a cold dismal autumnal day seem either shorter or more agreeable. By and by a full-bearded, middle-aged gentleman made his appearance at the door of the carriage, and giving a glance into our compartment, was about to turn away, when our eyes met. He understood our mute welcome; for he at once entered, and took the vacant seat opposite. We almost immediately entered into an animated conversation; for there was no need for any hesitation here. We were, or rather we felt mutually assured of our ground. That we were both travellers, and both going by the *Moselle*, was learned almost without surprise; and that we should stay at Radley's was a matter of course. Our lively conversation was listened to with evident interest by our companions until they left us at Winchester; and after a few hours' pleasant interchange of experiences and inquiries about mutual acquaintances in various parts of the world, a friendship was formed; and renewed when we again met, some years afterwards, under a tropical sun.

How easy on board an ocean-going steamer to pick out, from a crowd of about two hundred passengers, those who are embarking for the first time! Their anxiety about their luggage, the greater part of which they want in their staterooms; the constant persecution of stewards, who are busily engaged in preparing luncheon for the passengers and their numerous friends; annoying the purser with requests that their room may be changed; asking every one but the right man the most absurd questions about time of starting, sending letters ashore, and the exorbitance of the baggage-agent's charges—all betray the individual whose inexperience, and more especially his want of coolness, are so productive of worry to himself and to those around him.

Let us advise intending travellers never to annoy even the most obliging of all the obliging pursers of the numerous steamship lines, with requests during the bustle and confusion of sailing, for other rooms than those assigned to them on their ticket, nor with complaints about baggage which they are 'certain has not come on board.' Let them take things calmly. If it be possible, the first will be attended to on the day after sailing; and the latter is certainly in the ship, and will be found sooner or later. We were once in trouble with our luggage. It could not be found after we had started, and our entire available wardrobe consisted of a few things in a dressing-bag. It was only after a hunt lasting several days that the missing portmanteaus were found in the very bottom of the hold. But such *contre-temps* rarely occur; and neither our temper nor our appetite suffered from the fact that we were dependent on the good-natured little doctor for nearly a week's supply of clean linen.

We like to see the boyish enjoyment of some young *voyageurs* who are determined to make the

most and the best of everything, and who invariably get entrapped into that part of the bow where a mystic chalk-line is drawn on the deck by one of the sailors, cutting off all retreat except by the door which is only opened by a silver key; grudgingly used by some, but willingly enough by sensible passengers who are not of the class to indulge in threats of complaint to the Captain or the Company.

Do you see those three hearty-looking old gentlemen with white hair and beaming countenances? No second glance is required to tell us that they are thoroughly at home here, and that the number of their voyages can be counted by tens. They are old West Indians, on their way out to Jamaica; and we know, without asking, where their places at the table will be; so, quietly placing our card on a vacant plate at the purser's end, we feel that we are now sure of the quartet for evening whist, excellent company, capital stories, and a most enjoyable time while the voyage lasts.

There is one class of travellers, happily not a very common one, and indeed it would not exist, could those who comprise it see how ridiculous they make themselves in the eyes of sensible people. They have travelled a little, perhaps on the continent during the vacation; and on their return, affect a superior distaste for everything at home, and an exaggerated admiration for all things foreign; which is the more amusing from their mistaken impressions and hastily formed opinions, the result of a few weeks' residence. We once knew a youth who had spent a few weeks principally in the French capital, where he had acquired what he no doubt imagined was a thorough acquaintance with France and its people. On his return to his native town he affected *café au lait* in the morning on rising, and a ten o'clock breakfast in town, with claret instead of coffee as his beverage. His sisters Mary and Jane were 'Marie' and 'Jeanne' to him. He forsook the local paper and the *Times* for *Le Temps* and *Galignani*, and would insist on translating for the benefit of the home circle the news from Paris, which could have been more correctly obtained from the English journals of the previous day. The Englishman's 'I beg your pardon' found a substitute in the Frenchman's *pardon*; and in short he carried his affectation to such an extreme that he was voted a bore at home and laughed at by his friends.

Stay-at-home people may be long in the society of a man who has perhaps seen half the world, without their even suspecting it; and the reason is, that although travellers may write about their wanderings, they are averse to speaking of them to those who are unable to sympathise with them, or to enter into their feelings and into the spirit of old recollections. Only travellers are able to thoroughly appreciate travellers' stories. The necessity for explanation which constantly interrupts the relation of an incident, mars its effect, and takes away much of the interest. But let an old East or West Indian meet with one even of the younger generation who has been over the same ground, and watch the enthusiasm which brightens his face as experiences are compared and inquiries are made about the old places and the old life which he knew fifty years ago. Incident crowds on incident, and anecdote on anecdote, and for a

time the old traveller is again living in far-away lands. Though the veteran be seated round the funnel, or in the snug smoking-room of the gallant ocean-goer, the cigar he is smoking is being puffed away under the grateful shade of the broad veranda, with a cloudless sky overhead; or out in the cane-fields amid the rustling of the sea-breeze through the long leaves, and the shouting of the negro bullock-drivers as they goad on their slowly moving cattle. Or perhaps he is riding through the country, tall trees festooned with tangled creepers and clothed with parasites, shading his bridle-path, and the discordant screams of the parrots falling on his ear as he recalls and narrates an incident which occurred long ago, when the now gray hairs were brown and curly.

Where is there an old traveller who would not sympathise with the feelings of two old Anglo-Indians who have met for the first time in many years? There is no fear of either being bored by the other. Old campaigns are gone over again; and the hunt of 'that man-eater,' in which poor young Lieutenant Bungler lost his life, is as eagerly rehearsed as though it were an event of yesterday. And yet neither Colonel Dash nor Major Blank, who have long since retired on half-pay, disgusted with slow promotion and hard work, would care about talking over these old times with their military friends who have never seen India. The old Indian campaigner who is constantly pestering his friends with oft-repeated stories of his adventures at the storming of Suchabore, is, after all, oftener to be met with in novels than in real life.

Why is it that among a certain class of travellers there exists such a mania for rushing into print? Without the qualifications of a long residence in the country, and an acquaintance with the language, they will unhesitatingly give a description of the society, morals, and customs of a people, which is often little less than a libel on the place where they have met with so much hearty hospitality. This is neither fair nor just. In order to make their book readable, they caricature everything they see, and give it out as a faithful portrait of the country, in which they have probably passed but a few months. They describe habits and customs which to the English reader appear to be ridiculous in the extreme, but fail to shew how thoroughly they are adapted to the necessities of the country. Were they to do this, much would be made plain which is incomprehensible; and in spite of the many errors in the work, the reader would have a better if not altogether a correct idea of countries which are out of the beaten track of tourists. We know an author who, after making a trip lasting two or three months through a country as large as England, but without the same facilities for travelling which it possesses, actually wrote a good-sized volume as the result, and obtained for it a large sale in America. We never could understand why books of this class cannot be written entirely in English. Why should they be so interlarded with phrases in a foreign language, which are often left untranslated? To a certain extent it may be pardonable when French is used, since every one nowadays understands it more or less; but it is surely presuming too much and trying the patience of the reader too far when bad Spanish and Portuguese—or a

Creole jargon of both combined—are pressed into service.

One word to those about to travel. Try to remember, when you find yourselves elsewhere than in your native Britain, that your arrival is not going to cause a revolution in the customs of the country you are visiting. Nothing will be changed to suit your home tastes and home prejudices. Then, for your own sakes, study your own comfort, and gain the good-will of the people amongst whom you are a guest, by conforming as far as possible to their tastes, their customs, and especially to their prejudices. If you do this, you will meet with fewer annoyances and more enjoyment than usually fall to the lot of British travellers.

#### STORY OF PETER, THE TAME SEA-GULL.

No one ever knew exactly how the name 'Peter' came to be selected out of all the possible names that could have been chosen for a pet sea-gull; but 'Peter' was the name given to the tiny little creature which arrived one day in Falmouth from the Scilly Isles. And as time went on, Peter learned to know his name perfectly well, and answer to it in his own peculiar way whenever he was called. Until he got the use of his wings, his history was uneventful. He was well looked after in a house where pets of every description were received with special favour; and on a daily diet of fresh fish he grew to be a very fine bird. As it was altogether against our traditions to tolerate such things as cages, and as we were inclined to look upon cut wings as almost as bad as cut ears and docked tails, Peter was permitted to enjoy entire liberty. He soon discovered his privilege, and made good use of it.

At first his flights did not extend farther than the grounds in which his home was situated; but tempted most likely by the sight of the sea close by, he one day flew away, and enjoyed himself thoroughly in the bay and on the waters of the harbour. There was no anxiety about his absence. Firm faith in the power of kindness to animals made us feel certain that, if no accidents happened, Peter would return to his friends and his comfortable quarters. And return he did, generally announcing his arrival by shrill cries as he flew in circles over the house. These daily expeditions went on for some time, and no casualty occurred. At last one day Peter did not return after his morning swim in the sea. The afternoon wore away, and night came, but still Peter was absent. We then knew that something must have happened; and when days passed away without any signs of him, we came to the melancholy conclusion that our interesting pet was lost. Friends suggested that he had deserted us, and determined to live henceforth with his natural companions; and said that we could not expect to keep a bird which was allowed such liberty. We concluded, however, that he had in some way been killed.

A few weeks passed, and all hope of seeing Peter was gone, when some of the younger members of the family chanced to hear the cry of a gull coming from a cottage-garden not far from the harbour; and upon inquiry, there certainly was the truant! It transpired that he had been

captured in the harbour by some boys bathing. The poor bird suspecting no danger, and swimming close inshore, was thus easily taken prisoner.

After this episode it was decided to put a stop to Peter's flights and excursions to the sea. One of his wings, therefore, was cut just sufficiently to prevent his rising from the ground; but he was allowed to roam where he pleased in the extensive gardens surrounding the house. If he had been allowed to go away where he pleased, he would certainly have been either shot or captured again; for no pet of the kind is safe, unless most carefully guarded, as there are so many miserable people about who never lose a chance of capturing or destroying every living creature that they can attack with impunity.

Not long before Peter left Falmouth for a new home in Staffordshire, two young rooks were tamed, and fed daily in the same place where the gull took his food. These birds were never caged, nor was their liberty interfered with in any way. They lived in the trees with their feathered companions, but always came down when they were called, and were so tame that they would take food out of the hand of any one who offered it. Peter soon began to notice these frequent visits of the rooks, and with strong signs of disapproval. Whenever he got the chance, he attacked them, and did his best to shew them that he preferred their room to their company. A plate of food was often placed on a low wall for them; but if Peter was anywhere near, some one had to be present and keep guard while they took it; for if he found them at it alone, he at once chased them away; and in true 'dog-in-the-manger' fashion, remained close by to see that they did not return to enjoy it. However, shortly before we left Falmouth, the poor rooks disappeared. The probability is that in an expedition to the neighbouring fields they were shot; so Peter was no more troubled by their visits.

During the whole of the time that he lived at Falmouth, Peter was fed on fresh fish. He would eat nothing else; so on his removal into Staffordshire it became a serious question how to provide food for him. Fish it was impossible to get for his consumption every day; and he shewed the greatest aversion to meat or anything else with which we tried to tempt him. Nor did he seem to care about even the fish that was got for him, unless it was perfectly fresh. We were at last beginning to despair of keeping him alive, when a most fortunate discovery was made. There was at the time an unusual number of snails and slugs devouring the green-stuff in the garden. By way of experiment, a slug was given to Peter, when, to the great satisfaction of all his friends, he swallowed it with evident relish. This was his first change in diet; and as long as a slug or a snail could be found, Peter lived on the succulent food, when no fish could be got for him. But after having once learned to do for a time without fish, he soon became much less fastidious. Then, feeding him was a very simple matter. He took meat freely, did not object to a little chicken for his dinner, and soon displayed a decided partiality for mice. Every mouse that was caught in the house was at once given to Peter. If it was thrown to him alive, he killed it instantly by a sharp blow from his powerful bill. Then the dead mouse was carried off to the water to be prepared for

deglutition. It had often been noticed that Peter very seldom took his fish without first washing it in his pan of water. The snails he invariably treated in this way, as they always had some grit and dirt adhering to them. It was the same with the mice; but as they were hairy, and difficult to swallow, they were thoroughly soaked before they disappeared head-first down Peter's capacious throat. Sometimes he used to be seen standing for a few minutes with the tail of the partially swallowed mouse hanging out of his bill; he evidently had some little difficulty in accomplishing the process of swallowing.

With a constant eye to the main chance, our pet gull shewed the strongest attachment to the cook who always fed him. Whenever she called him, he invariably answered with his peculiar cry. Of other people's calls he took but little notice. One of the great objects of his life was to get into the kitchen and sit before the fire. If any one attempted to drive him out, he screamed and pecked vigorously, a blow from his beak being no joke. Shortly after he had been given the *entrée* to the kitchen, a couple of black kittens were brought to the house. Regarding them as interlopers, Peter at once displayed the same hostility towards them that he had previously shewn to the rooks. He would not allow them to sit on the hearth-rug under any circumstances. They might lie as close to it as they pleased, but not on it. The moment they ventured to place a paw on the appropriated rug, they were attacked, and compelled to retire; so that very often Peter was seen comfortably resting in the middle of the rug, while the two little black victims reposed behind him, with their noses close up to its edge. Sometimes he objected to the kittens amusing themselves in their own mild way. If one of them began to play, according to the manner of kittens, with a bit of stick or a piece of string, Peter solemnly marched up and took possession of the plaything, placing it where he could see that it was not again touched. On one occasion he bullied one of the kittens in a very curious way. Out in the yard there was a surface-drain terminating over a sink in a tolerably large red pipe. While Peter and the kittens were out there, one of the latter ran up into the pipe. Peter, always keenly observant, noticed this; and before the kitten had time to come out, he had taken up his position close to the mouth of the drain. The moment the kitten shewed its nose, it received a peck, admonishing it to retreat within the pipe again. There the kitten was kept prisoner. At last some one saw Peter, and little Puss was liberated; but no one ever knew how long it had been kept a prisoner in the drain-pipe.

Peter certainly had the bump of mischief largely developed; consequently it was necessary to exclude him from the kitchen-garden, for he pulled up everything that he had strength to drag from the ground. Sticks or labels stuck in the earth at the roots of plants, he invariably pulled up whenever he got the chance. One day he happened to be in the garden when the gardener was bedding out some young vegetables in long rows. Peter watched the performance with great interest; and as soon as the man's back was turned, went to the bed and worked away until he had taken up every single plant! After this performance, he was never permitted to remain in the kitchen-garden

alone, as such curiously directed energy was not appreciated by the gardener.

Until he arrived at his inland home, Peter had never seen ducks, so it was greatly hoped that when they arrived he would recognise them as near relatives, and give them the benefit of his society. But such hopes were disappointed; for when the ducks made their appearance on the ornamental water where Peter spent much of his time, no notice whatever was taken of them by the proud little gull. So the ducks enjoyed themselves after their usual fashion, while Peter looked on at their performances from a distance. But he never went near them, not even after he had long been accustomed to swim on the same water with them by day, and sleep in the same yard with them by night. Evidently he did not care for their society, though, curiously enough, he became very much attached to a large black dog. Peter was often to be seen lying close up beside his big black friend. Sometimes the dog submitted to have his dinner stolen, and to have his tail pecked every time he wagged it. This friendship between Peter and the dog was an instance of the curious intimacies that are sometimes witnessed between the most unlikely looking creatures. It would have been natural enough if the gull had fraternised with the ducks and taken no notice whatever of the dog. It was also remarkable that the dog should have consented to such an intimacy. But strange friendships are often heard of in the animal world, as all lovers of our dumb pets know.

One of Peter's peculiarities was a love of perching himself on anything higher than the ground. If a load of earth was shot down anywhere within sight, he was not long before he got to the top of it. This partiality of Peter's for perching himself on anything high was so noticeable, that a little pillar of bricks about three feet high was erected for him in the duck-house. On this pillar he went to sleep every night; and there was no doubt that Peter preferred his elevated and cold bed to the warm place in which the ducks spent their nights. So his fancy was respected, and no one was allowed to disturb or remove Peter's bed.

Of course his wings were kept cut, for if he had been allowed to fly about in the neighbourhood of a large town, he would certainly have been killed by some of the hedge-and-road 'sportsmen'; but nevertheless poor Peter was doomed to perish a victim to that miserable propensity which prompts a certain class of Englishmen to destroy the life of every bird that comes within range of their guns. Although Peter's wings were cut, he was allowed as much liberty as the ducks. He was free to roam about the grounds and fields in which his home was situated. But he seldom went far from the water, which was close to the house; and generally when he had had enough swimming and bathing, he used to remain in the back-yard near the door or the kitchen-window. However, he sometimes did wander about the fields; and on one of these occasions, while he was in a field near the road, the gardener of a neighbouring gentleman espied him, and deliberately shot him. It is proverbial that pets generally come to an unfortunate end, and such was the fate of our pet sea-gull. The sorrow and indignation of his friends may easily be imagined by all who are capable of becoming attached to such pets. Naturally, no one was more distressed about the occurrence than the

employer of the fellow who had so wantonly destroyed the bird. He offered to send for another gull to replace the one lost; but pets are not always to be replaced, and no one cared to have a stranger in the place of the one that was lost. We still deplore the unnecessary and cruel death of the graceful little bird, with its quaint ways and interesting habits.

It is exasperating to think that there are numbers of people whose only idea when they see or hear of a rare bird in the neighbourhood is to kill and stuff it. No rare bird coming to our shores has a chance of settling down and living unmolested. Some one is sure to shoot it as soon as he gets the chance. The pleasure of seeing the bird and letting it live, perhaps to breed on our inhospitable shores, men of this class never seem to understand. Their one degraded notion seems to be to kill.

### BRICKS AND BRICKMAKERS.

AGRICULTURAL labourers, who work out of doors, are not necessarily rough and savage, though often ignorant and rude-mannered; but from time immemorial, brickmakers have been credited with uncouthness, almost amounting to brutality. One reason of this probably is, that from the nature of their occupation, it is generally carried on in the most ugly and unattractive districts—districts so bare and marshy, that the agriculturist declines to have anything to do with them, and they are valuable therefore only for their beds of clay. Brick-fields, when of any size, are usually found on the flat banks of extensive rivers, such as the Thames and Medway, remote from the village populations, and consequently far from the moral supervision of the parson or the kindly visits of the Squire's family. Indeed, the only visitor, as a rule, is the policeman, in search of somebody 'wanted'; or of late years, the Factory Inspector, who is persistent in his endeavours to reclaim the little barbarians of the brick-fields, and to whom the undoubted improvement in their condition is due. But little is known by the outside world of many of our English trades, and still less of brickmakers; and I propose in this article to introduce them to my readers, that they may see what manner of men—and women—they are.

To look at a brick-field, whether in a country district or in the frowsy outskirts of a large town—to observe the kind of work—to hear the vernacular in which the conversation, usually very forcible, is carried on, one would scarcely imagine that woman had part or parcel in the matter, for she certainly seems out of place here. The brickmaker's wife and daughter, however, are very important items in the manufacturing brick community, although recent legislation has forbidden the services of the latter until they have attained a certain age, by which proceeding the master brickmaker considers himself very hardly used. Nevertheless, it was a happy thought of the legislature to include brick-fields under the Factory and Workshop Act, and thus be the means of rescuing so many young boys and girls from undue slavery.

For the ordinary building-brick, the principal districts are in Essex and Kent, by the sides of the

Thames, Swale, and Medway; Somersetshire in the vale of Parret, Norfolk near Thetford, and Bedfordshire in the flat valley of the Ouse. Poole and Wareham in Dorsetshire, with St Austell in Cornwall, are the chief repositories of the china-clay, the excavation and preparation of which form a special trade. Farther north again, when we get into the coal country, we have the clays which are required for fire-bricks and those for glass-making. Those who are anxious to study the habits of the common brickmakers on a large scale, should take a Chatham and Dover train to Faversham or Sittingbourne, the neighbourhoods of which are dotted for miles with the red fields and the huts or 'stools' in which brick-making is carried on. Uninviting as these great tawny flats are, they are worth exploring, if only to see what hard work young children are capable of performing.

The introduction of machinery into brick-making was in many places attended with violent contests; the men who had hitherto had a monopoly in making the bricks by hand, having united in bands to prevent the use of machinery in the trade. We have not lately heard of any such insurrectionary movements, and trust they are at an end, leaving the conviction in this as in other cases that in the long-run machinery increases the number of hands to be employed. But although machinery has been largely introduced, and has to a certain extent displaced some of the processes which required most physical strength and endurance, there are still plenty of places in England, and particularly in the Eastern Counties, where the machines have not penetrated, and probably never will; for in a small brick-field, the first expense would be too great; and the master-brickmaker, who is generally the owner of a family, would prefer seeing the family doing the work which otherwise the machine would be doing.

The first process in brickmaking is that of digging a quantity of clay from its bed, which is done by a workman called the 'temperer,' whose place it is to wheel it to the pug-mill, which is sometimes worked by steam, but more frequently by horse-power. Where the pug-mill is not used, the clay is trodden by children, who are kept at work tempering it from morning to night. Everybody knows what it is to have to walk through a deep country lane after wet weather, and how difficult it is to emerge with one's full complement of boots or shoes. We can fancy, therefore, the intense physical strain on the legs and feet of the wretched little urchins, who have not only to temper the clay by continually treading it, but also to load it in barrows and drag it off to the 'moulder' or master-brickmaker. One of the Factory Inspectors tells us that in Suffolk he found a child 'puny and half-fed, about nine years old; he had to load a barrow with stiff unworked clay, then wheel it to a grinding-machine; and so he went to and fro, harnessed like a donkey. The barrow was a heavy load even for a man; and this was admitted by the foreman.' In brick-fields where there is a pug-mill, the unnecessary cruelty is of course avoided; and as it is usually placed close to the moulder's stool and is self-delivering, there is no occasion for the pug-boy to carry the clay at all. The moulder then, having received the clay from the pug-mill

or boy, through the medium of an assistant called the 'walk-flatter,' who is usually his wife, and who gives a preliminary dab to the lump as it passes through his or her hands, empties it from his mould on to a pallet-board by his side called the 'page;' after which another child, the 'barrow-loader,' appears on the scene. These little helps were, like the pug-boys, fearfully overworked. The barrow holds some thirty bricks, or rather clay-moulds; and the weights which have to be lifted of wet sticky clay are very heavy. Twenty-five tons per day was an average estimate per child, who was as often as not a young girl; and if the weather had been wet, the weight and cohesiveness were of course increased.

It was an act of humanity when the legislature passed a law in 1871 that no child should work in a brick-field under ten years of age, and no girl under sixteen. A witness before the Children's Employment Commission in 1862, stated that from six to eight years was the usual age for this kind of employment; and mentioned the case of a little pug-boy who always went to his work at four or five in the morning, and never got home again till eight or nine P.M. and in the long days not until ten. Messrs Clayton and Bawden and other devisers of brickmaking machinery, have helped to lengthen the days of many an unfortunate child—and looked at in this light, have been, though unconsciously perhaps, true philanthropists. The greatest drudgery, however, is completed when the barrow-loader has delivered his tale; the next workman who takes it in charge being the 'off-bearer,' who places the bricks, or 'skintles' them in the 'backs' to dry. After that, they are taken to the kilns by the 'crowder,' who gives them over to the 'setter' to be burned.

It will be seen that even a simple building-brick—which is made in this country by thousands of millions every year—involves much treatment, and gives employment to at least half-a-dozen people during the short interval that intervenes between a lump of clay and a regular brick. It is impossible, of course, to arrive at any definite estimate of how many bricks are annually produced; but we are told of a single moulder in the Manchester district who turned out six hundred and twenty thousand bricks in the season, assisted only by his son, aged fourteen, who 'barrow-loaded,' and his daughter, aged seventeen, who 'walled' or 'set' them. He had, however, a third daughter, aged nineteen, who worked at another 'stool.' Twenty-four thousand bricks in a week of forty-five hours is considered an average—for it must be remembered that 'brickies' only work in fine weather. Go into a field on a wet day and it is deserted, the huts empty, the tools lying about, and not a living creature to be seen. Where are they all? Most probably in the public-house; for whatever other buildings are conspicuous by their absence, the beer-shop is sure not to be far off; and the moulder and his staff are probably engaged in drinking away the earnings of the last fine day.

No wonder, then, that brickmaking—though, it must be remembered, much improved—is still in a great measure a demoralised occupation. Within the last half-dozen years the testimony of an Inspector in the Eastern Counties described thus graphically the condition of these men: 'A most barbarous, semi-civilised, ignorant

set. Men and boys like Red Indians, the sand used in brickmaking being burned red, with which their bodies are covered, working bare-headed, bare-footed, with exposed breasts and wild looks. Drinking all day Sunday, Monday and Tuesday dog and man fighting, they resume work on Wednesdays, when the poor little unfortunates are made to toil away, stamping and carrying, and pressing a good fortnight's work into three or four days. One man, who last week earned in four days twenty-eight shillings, took his wife home a loaf of bread and sixpence.' Indeed, the Factory Inspector who has charge of these benighted districts deserves more than ordinary credit for his labour; for it must be remembered that he ventures single-handed and far from help amongst a set of the very rudest and roughest men in England. It is true that he comes backed by the Law, and so far would scarcely be exposed to maltreatment even by them; but the whole aim of the Inspector is to appeal to the common-sense and good-feeling of the brick-masters, and thus to win, when sternness and threats would only provoke bad blood; and by patiently pursuing this system, it is surprising how it softens the manners even of brickmakers, as any one may judge by reading the half-yearly Factory Reports.

Another great improvement was the prevention of the labour of girls under sixteen, though even for those above this age, the occupation is undeniably a bad one. But there is this favourable point about brickmaking—namely, that in most cases the work is a family one. The father may perhaps be a drunken fellow—the mother drunken too; while the girls and boys may be accustomed to strong language, coarse and rude. But at all events they are a family, and so far are free from the dangers of promiscuous companionship.

The class of children who always seem to be the most miserable and neglected, are those who are engaged in the brick-yards attached to the iron-works and collieries of the Black Country. Although in all practical points the process is the same, the surrounding circumstances are very different. Instead of working in a remote country district, where at all events the air is pure, the boys and girls live in an atmosphere black with smoke and reeking with foul odours. Of all the juvenile population that labour in the Midland Counties, the brickmakers are of the lowest grade, and the most difficult to supervise. There is here no family community of work; but the children come from all parts of the neighbourhood, and except during their actual occupation, are utterly without control. The girls are unsexed, alike in dress, manners, and language, and if possible, are ruder than the boys. But even here the presence of the Factory Inspector is making itself felt, though the difficulties are of a different kind from those of the country brick-fields.

So great is the anxiety to obtain employment for the children, that the law as to age is daily and hourly evaded; and the appearance of the Inspector—guarded against as well as may be by a system of scouts—is the signal for a general withdrawal and hiding of the delinquents. Indeed, Her Majesty's representative is obliged to be exceedingly wary in his proceedings; for he well knows that the moment he leaves the

railway station, every man's hand is against him and that he has nothing to expect in the way of active assistance. It is, however, cheering to learn that their success in the brick-fields of the county districts has already been most marked; not only has overwork been substantially checked, but great improvement has been shewn in the rough manners and defiant attitude of the workmen.

## HOW I GOT PROMOTED.

### A DETECTIVE'S STORY.

'Tom,' said the chief, 'there has been a rather mysterious robbery at Barrowtown, and it's likely to give the "locals" some trouble. So I wish you to go down as soon as possible.'

This order I received one hot day in August, or the day after the robbery had taken place. Of course I did not let much time pass before I was at the station and fairly started. Once there, Barrowtown is a quaint, picturesque little town, like many another in goodly England. It seemed almost too dull to be able to boast the doubtful honour of having had a full-grown robbery. Still I like the quiet little town, for it was there that I gained my first promotion. I was met at the station by the local inspector, a stout, pompous, excitable little man, who looked doubtful as to the prudence of the Scotland Yard authorities in sending down such an ordinary-looking mortal as myself.

'Oh,' he remarked at last; 'so it's you, young man, is it? I don't think we are likely to trouble you much this time. The fact is, ahem! we have caught the culprit ourselves.'

I merely bowed, and expressed a wish to see the prisoner; and we both set off for the county gaol, perhaps a mile or so away.

Well, it certainly seemed as plain as day to me that the unhappy wretch on whom Inspector Muggridge had laid his fell grasp, could easily have proved an *alibi*, had not that worthy officer continually interrupted him with: 'Better keep all that for your examination, my good fellow; or it'll all be brought up against you, my man, you know.'

I told him seriously, as soon as I could, in private, that the man he had arrested was no more guilty than I was; but he simply smiled incredulously, and asked who else could be the culprit, as this was the only really abandoned character of the town, and it was plainly the work of some one who knew the place. 'Besides,' he added, 'it isn't very likely that any one could beat me on my own ground, where I know everybody, you know; and if he didn't do it, who did?' With which really unanswerable argument he accompanied me to the scene of the robbery, where we were shewn over the premises by the mistress of the house.

When I saw the ground-floor window by which access had been gained to the house, I quite agreed with the worthy 'local,' that it was the work of a 'new hand;' and that from the fact that his footprints, wherever we could trace them, shewed no hesitation, but rather a thorough acquaintance with the grounds, the culprit, whoever he was, must have had some opportunity of visiting the scene of operations, and probably lived somewhere in the neighbourhood.

It seemed that the thief had entered the house

by a window in the rear, and carried off a small box of valuables from the room of the master of the house, who had been staying at a friend's on that night. Both these facts shewed an intimate knowledge of the premises on the part of the culprit, and strengthened our former belief. We were informed that the lost casket—an ordinary tin cash-box—had been almost filled with various articles of jewellery, and therefore the loss was rather heavy. Of course the knowledge that there would be a good reward for the recovery of the missing property did not abate my zeal. Still, in spite of my eagerness to discover the culprit, I could make but little of the case, and might even have come over to the opinion of the 'local,' but for one very important fact, namely, the foot-prints in the garden-bed were all smaller than those of the prisoner! Now, although a man may wear boots several sizes too large for him on occasion, yet he can hardly walk with comfort in shoes an inch or so too short.

Very much annoyed at my want of success, and dreading the chaff I would be sure to get when, compelled to give it up, I should return to town, I was not particularly delighted next morning to see Mr Muggridge coming up the road to the house, accompanied by the editor of the *Burrowtown Weekly Banner*, who had determined, he said, to write up the account of the robbery himself. But there was no escape; and so, prepared for a host of questions, I was walking slowly to meet them, when my eye was caught by something bright among the bushes by the roadside. Yes, there could be no doubt of it; there lay the lost box, empty of course. Without stopping, however, I walked as calmly as possible on to the inspector, and was introduced to Mr Shears the editor. It was simply wonderful how obliging I had become. I even, when Mr Muggridge hinted that he was pressed for time, volunteered myself to give Mr Shears the information he wished, and to go over the premises with him. Once left alone with the zealous representative of the press, I gave that gentleman all the points of the case, and a few more, as you shall see.

The next forenoon, as soon as a copy of the *Banner* came to the house where the robbery had occurred—I had for the last two days spent from the forenoon until dusk there—I turned to the end of the column devoted to the 'Great Robbery,' and read, with a chuckle, the announcement that 'the loss of the jewels would be less felt had there not been between the two bottoms of the box almost two hundred pounds in bank-notes, of which, unfortunately, the numbers had not been taken.'

Probably the intelligent reader sees my plan; but certainly I did not choose to explain it to Mr Muggridge, when, an hour later, that worthy but excitable gentleman rode, very hot and very red, up the shadeless road, to complain of my having 'made a confounded mess of the account, you know.' I simply advised him to wait for a very few days, and then I would be happy to explain everything.

That evening, as usual, I left the grounds at dusk, after spending most of the day in watching—though apparently engaged in something else—whether any one went near the spot, a few hundred yards from the grounds, where lay the box on which I especially depended as a bait to

hook the thief. By walking slowly, I managed to let the shades of evening close around me before I was far beyond the spot where I had made up my mind to watch and wait.

Eight! Nine! Were they never coming? and was my trap laid and baited in vain? Ten! Surely they should have come by this time. Still—Was that a sound on the road? Yes, and coming from the village too. There were evidently several of them, and I began to regret not having brought some help. Nearer they came, laughing and talking, as I cautiously drew farther back from the road. And now they were opposite the spot where the box lay hid. But—what! They've gone by; and in the hearty guffaw of the man farthest away of the three, I recognise Farmer Lobbins, an honest fellow, whose acquaintance I had made during my short stay. After this sell, I had almost given up, and was actually making up my mind to abandon the affair, when a faint sound from down the road made me crouch as low as possible once more. It was no hoax this time. A short thin man, whom I easily recognised as a man-of-all-work who had been helping the gardener that day, was creeping stealthily down the road, close to the bushes. As soon as he reached the spot where the box had been thrown, he lit a small lantern to aid him in his search. This time I felt sure; and so, when the man blew out the light, after securing the supposed treasure, the capture was made.

'Oh! why, yes,' observed the worthy Mr Muggridge, who was in the office when I brought in the prisoner that night, 'I thought as much; I've had my eye on that fellow all along.'

The man made confession; indeed, he was caught in the act, and could not deny it. The jewels were all recovered, and the reward proved very useful in helping me to marry and settle down quietly, when, one month later, I received my promotion.

#### MORE USES OF PAPER.

IN a former notice of the new uses to which paper has of late been applied, some allusion was made to the utilisation of this material as a lining for the garments of poorly clad persons in severe weather. We now hear that an invention has been patented for making bed-coverlets of paper. The difficulty, we are reminded, which has hitherto prevented the more general adoption of this simple but effective substitute for woollen blankets, has been the impossibility of free ventilation ensuing from the use of bed-coverings manufactured from paper. This objection, however, has, we are assured, been now successfully overcome in what are known as the 'Chartaline' blankets, patented and manufactured solely by one firm. When we are told that these new coverlets are light, cleanly, fully as warm as two pair of blankets, besides being comparatively cheap, it will be seen how admirably this invention is adapted to the purposes for which it was designed.

Mention has been made from time to time of bricks, planks, and various articles being manufactured from this useful material by ingenious inventors, so it is not surprising to hear that water and fire proof paper has been patented. According to the *Scientific American*, this is made by putting a mixture of ordinary pulp and asbestos reduced to

pulp, in the proportion of about two-thirds of the former to one-third of the latter, into a strong solution of common salt and alum. This mixture is put through the pulp 'engine;' and the paper thus made is run through a bath of gum-shellac dissolved in alcohol or other suitable volatile solvent of that gum. The effect of this strong solution is greatly to strengthen the paper and to increase its fire-resisting qualities. The shellac bath to which it is treated is said to cause the paper to become thoroughly permeated with the gum; so the paper becomes water-proof to such an extent that long boiling in water does not disintegrate it; and the presence of the gum in and upon the surface of the paper seems to present no obstacle to the proper and usual absorption of ink either in printing or writing. Thus, by the combination of the asbestos, salt, and alum in the paper, it is rendered so far fireproof that a direct exposure to an intense fire does not burn up the substance of the paper to an extent that interferes with safely handling it; and when exposed to great heat in books or between metallic plates, a number of sheets together, it is still less injured by fire. The addition of the gum-shellac to the paper makes it for all practical purposes water-proof; so that if account-books, bank-bills, and other valuable documents for which this paper is used, be subjected to the action of fire and water, either one or both, in a burning building, they will not be injured to such an extent as to destroy their value. Alluding to paper as a protector of documents, it may not be out of place to refer to a deed-envelope brought out not so long since for the convenience of the legal profession. It is lined with linen, and therefore nearly untearable; and is designed to contain a large packet of deeds, being capable of expansion according to the number required to be inclosed.

A possible rival to esparto grass, used so much in the manufacture of paper, has, it seems, been found in the red melac grass which grows in large quantities in parts of Ireland and Scotland. Straw is used in making millboard. A new use has been made of these straw-boards in America, which is worthy of notice in connection with our subject. Several sheets of these boards, such as are produced in paper-mills, are passed through a chemical solution, which softens the fibre and saturates it. They are then rolled, dried, and hardened; and emerge from the machine a compact block, closely resembling a hard wood, impervious to water, and capable of taking a polish. On sawing this material, it is said to be very difficult to distinguish it from real wood. This important innovation in the building-trade has attracted much attention, and is likely to relieve the great strain continually being made upon the American forests, extensive as they are. In San Francisco, kegs and pails are said to be made of this new material. As machines turn them out in hundreds daily, they can be purchased for the same price as wooden ones. How wood in its turn enters into the manufacture of pulp, is well known. This form of industry is shewn to have received a very rapid development in Norway, for instance, the wood-pulp manufactured for paper having increased from one hundred and ten tons annually to nineteen thousand tons in about eight years; twenty mills being, we are told, at work in that country on the preparation of this material.

As so much paper is made from wood-pulp, it is not a little curious hearing from time to time how the former material is used as a substitute for the latter. An attempt has been made, for example, in Germany, to substitute paper for wood in the manufacture of lead-pencils. The paper for this purpose is steeped in an adhesive liquid, and rolled round the core of lead to the required thickness. After drying, it is coloured, and resembles an ordinary cedar pencil. The pencils, it is said, are sold to retailers at about sixty-five cents a gross. But a more useful application of paper for general uses appears to be the invention of pasteboard window-shutters, for which a patent, we hear, has been taken out in Ohio. Panels made of this substitute for the ordinary material can be covered with coloured or stamped paper, so as to resemble any pattern of wood that the purchaser may desire. The advantages claimed by the inventor for shutters of this description are, that they are lighter and cheaper than wood, can easily be fitted to new positions, and are not liable to warp or split; an undoubted desirability in these days of so much scamped work in a certain class of buildings. Moreover, being susceptible of a great variety of patterns, says the inventor, they will contribute to an improvement in the appearance of cheap dwellings.

#### MY LOST LOVE.

'He ran and shouted Lost! Lost! Lost!'

WHEN I awake from heavy-lidded sleep,  
And through the sternest labour of the day,  
And when I watch the dying sun's last ray,  
And while my soul in fancy's dreams I steep—  
For ever ringing through my work or play,  
Those words, like a perpetual moan,  
Make to my life a constant undertone.

What have I lost,  
That such a murmur ever haunteth me?  
What sad enchantment hath my life so crost,  
And taught me such a minor melody?  
I will look back into the past and see  
If I can find why I so haunted be.

'This do I find:  
That I have lost a love—a love that seemed  
With such a passion to my own resigned,  
That I had deemed  
That love for ever mine; but Love hath wings,  
And soon departs, as do all happy things.

And yet I had not sought  
This love; it came unasked, a shivering bird,  
Half frightened lest in seeking me it erred;  
But I received that love with sorrow fraught,  
And my whole heart opened to give it room,  
And find for it a warm and friendly home.

It was a frail and weakly thing,  
That little Love—and I did strive  
Most anxiously to keep the thing alive;  
And so it lived all through the early spring.  
I did not know that when its wings were strong,  
My bird would fly and leave me.  
O Love! my love! whom I have loved so long,  
How couldest thou so grieve me?

MARTIN DANIELL.

## LEISURE-TIME STUDIES.

To have a pleasant and intelligent companion during a holiday or leisure-time, is one of the greatest advantages possible. If your friend be a zoologist, then the varied forms of animal life to be met with in field and forest, by lake and river, and along the sea-shore, will have a new interest for you. Even the ditch with its stagnant pools, or the horse-trough with its scum of green confervæ, will each be found teeming with living things after their kind, from the water-beetle in his changing armour of bronze and green and gold, to the lazy larvæ and other incipient forms of insect-life that sidle and creep among the mud at the bottom. Or if your friend be a botanist, you will find lesson-books everywhere around you—in the trees of the forest, in the heath on the hill-side, in the sedges that brighten the fen by the water's edge, and in the greenery growing at your feet. Or if he have studied geology, then every crag and quarry and exposed surface of rock will afford matter of interest and information. Even the stones which you dislodge as you climb the hill-side or scramble through the glen, will be ready to divulge their story, as they ever are, to whomsoever has the skill to read it. Not only your leisure-time, but also your recreations, may be brightened and improved by this observance of Nature, and instruction will thus come to you as naturally as the ozone you inhale. If there be any royal road to learning of this sort, surely it exists beneath the blue sky, beyond the bounds of the class-room, with a companion who knows quite enough regarding his subject to be fresh and interesting without boring you; telling and translating these wonders into the familiar language of daily life. Such a pleasant and interesting companion in book-form we find in a volume of *Leisure-time Studies*, by Dr Andrew Wilson (London: Chatto and Windus), which we intend to glance at for a little.

The book is the result of a collection of lectures and magazine articles—some of them for ourselves—written under various conditions, but all aiming at the popularising of science. These

articles, diverse though they be, are so graduated and arranged that a perusal of the whole might form a good popular introduction to biology, and an excellent field-companion to the thinking and observant yet non-scientific reader. The two introductory articles strongly advocate the necessity of science-culture amongst the people. Our author contends that the study of biology in the schools of the country is in the most unspecialised state in which it is possible for any study to exist. Many heads of schools have not yet awakened to the importance of the question in the education of their pupils. Science-teachers and science-teaching will never flourish until the study is looked upon as a necessary part of a liberal education, instead of being made a matter of chance.

The late Charles Kingsley was a powerful and successful exponent of popular science-teaching for the young, and we need not mention how fully he himself refreshed both body and brain while fishing amongst sea-side pools or wandering on the sea-shore. This early teaching need only include the general phenomena of plant and animal life. Good diagrams are a necessity of the case; and thus early may be taught the metamorphoses of insects, in which each young mind could draw upon its own observation of what it had seen regarding such familiar instances as silkworm eggs or common caterpillars. Perhaps the *lecture* is the best form in which a teacher can impart his knowledge to the pupil, imitating so far the style of Professor Huxley, who condenses 'the substance of the hour's discourse into a few dry propositions, which are read slowly and taken down from dictation; the reading of each being followed by a free commentary, expanding and illustrating the proposition, explaining terms, and removing any difficulties that may be attackable in that way, by diagrams made roughly, and seen to grow under the lecturer's hand.' Forty or forty-five minutes is a quite sufficient length for such a lecture; the remainder of the time might be well occupied in an oral examination on the subject.

Frequent note-taking will also be found beneficial; the notes copious in number, but short in individual extent.

In their universality of application, their suitability to students of both sexes, and through a longer period of life, our author contends that the natural sciences present means of wider application than are afforded in the study of exact science. Thomas Carlyle well expressed the need for science-culture amongst the masses when he said: 'For many years it has been one of my constant regrets that no schoolmaster of mine had a knowledge of natural history—so far at least as to have taught me the grasses that grow by the wayside, and the little winged or wingless neighbours that are continually meeting me with a salutation that I cannot answer as things are. . . . Why did not somebody teach me the constellations, and make me at home in the starry heavens which are always overhead, and which I don't half know to this day?' How many boys and girls have grown up into men and women, with the same question on their lips! All of us have not the force of character of Hugh Miller, Robert Dick, and Thomas Edward the Banff naturalist, who, with persevering enthusiasm, settled this matter for themselves.

Is it because journalists have had other things to think of, that we have heard so little of late as to the sea-serpent? This may be so; but whether or not, the subject is always interesting. Everybody professes to laugh at it, but everybody all the same reads about it. And few pages of Dr Wilson's book will be read with more interest than those in which he pleasantly gathers together the gossip on this subject, giving details of many of the ancient and modern legends current regarding the mysterious animal. The weight of collected evidence amounts to this—that most certainly appearances like huge serpentine forms have been repeatedly seen at sea by trustworthy observers. Science has never been able to say that the existence of such a marine serpent is an impossible thing. A dried ribbon or tape fish seen in the Newcastle Museum of Natural History, suggested to the author's mind that a giant development of such an animal might very well account for many of the sea-serpent tales. The specimen mentioned measured twelve feet three inches in length, the greatest depth being eleven and a quarter inches, and the greatest thickness only two and three-quarter inches. The body of these fishes is greatly compressed, the breast-fins small, the back-fin long, and the ventral fins spine-like. As an instance of the remarkable dimensions these fishes may attain, it might be mentioned that the smack *Sovereign* of Hull, forty tons burden, in trawling in the Firth of Forth for Lord Norbury—at that time resident in Fifeshire—captured during these operations a giant tape-fish. When extended, it stretched beyond the limits of the vessel at stem and stern, and in length must have measured at least sixty feet. The fish was ordered to be cut in pieces and thrown overboard. The trawlers stated that they had met with even a larger specimen. Without making our interpretation either too decided or too

general, we may accept in the ribbon-fish a probable explanation of many a sea-serpent story.

We can fancy nervous housekeepers reading the section on 'Parasites and their Development' with horror; a knowledge of the facts contained therein being very useful, however, in the economy of human life. It is a history of the hidden enemies and the poison-traps which beset humanity, as also the lower animals. The lesson taught by the history of parasites of certain kinds which space forbids us to mention is, to avoid uncooked or half-cooked animal food in any form; the same holding good regarding unwashed vegetables, which may also contain the embryos of numerous parasites.

Speaking of the 'Genesis of Life,' our author regards the Germ theory—which holds that lower forms of life, developed in infusions of organic matter, proceed from the germs originally contained in the fluid, or which have gained access thereto from the atmosphere—as fully proved. The narrative of the crucial experiments which lead to this conclusion is extremely interesting, the result of these experiments being that 'the present state of our knowledge furnishes us with no link between the living and the not living.'

In the 'Law of Likeness and its Working,' we have the very important truth expressed, that we do not come into the world like clean slates, upon which anything can be written; but that, in spite of ourselves, we are largely the product of past times; that the physical and mental constitution we inherit has been in a great measure wrought independently of us. It is interesting in this connection to note, in the words of Darwin, 'the wonderful fact that the child may depart from the type of both its parents, and resemble its grand-parents or ancestors removed by many generations.' Our mental, like our physical characteristics, often run in the blood. The offspring of parents of high moral and mental refinement, may be expected to shew some traces of their descent in their character; and in the same way the children of great criminals have a hereditary taint and natural impulse to crime. Moral infirmities, like moral sweetness, can thus be transmitted from one generation to another. Even genius may occasionally be but the gathering into one of many pre-existing shades of the same mental character; in much the same way as Sir Walter Scott became the voice which gave utterance to the latent poetry which had gathered round the lives of several generations of Border shepherds and yeomen.

We have all in our time suddenly lifted a stone and witnessed the fright of the tenant-ants beneath, as they raced to and fro in the wildest manner, until they recovered presence of mind sufficient to look after their eggs and other belongings. The common ants and their neighbours belong to the order of insects called Hymenoptera. The termites, or white ants of the tropics, do not, however, belong to this order, being more nearly related to that of the dragon-fly. The nests of these termites may attain a height of five feet, and when finished, have the appearance of conical hillocks. The ground in the neighbourhood of the nests is honeycombed with underground passages, along which the ants convey their building-material. The termites are small soft-bodied animals of a pale colour, and are of different

grades—males, females, and blind 'neuters.' The workers have a never-ceasing round of duties, building nests, making roads, training up the young ants, and attending the sovereign ant. The males and females form a class apart, and have wings, in order that they may move about and disseminate their kind. The soldiers and the workers are wanting in wings, and differ in the shape and armature of the head. While the mouth of the labourer-ant is adapted for the working of materials in hive-building, the head of the soldier is of very large size, and provided with horny processes resembling spikes, for offence and defence. The true parents of the colony are the king and queen, who are wingless, and of larger size than the others. When a disturbance occurs in a colony of termites, the ordinary workers disappear, and the soldier-ants appear ready to do battle in self-defence. The common ants also possess three grades of individuals, and more than those who come under the category of sluggard might be sent to witness their domestic economy.

Space compels us to limit our closing observations to but one more subject, namely 'A Summer's Day,' one of the most charming papers in the book before us. The history of a summer's day has all the brightness of the reality, and transports the reader to the brook-side, with its wealth of animal and vegetable life, and pleasantly records what is to be seen there. The locality the south of England, the brook a small tributary of the Thames. The greenness of the water-meadows, with the old mill standing out from a background of green foliage, and a side-setting of willows; the river beside it is innocent-looking now as it appears at its summer level, but in winter it submerges the haughs and undermines its banks, and sometimes deflects its course. Lazily dreaming by its banks, the author tells us what a medicine to mind and body he finds this utter quietude and greenness, surrounded alone by nature. The sight of a dragon-fly is suggestive of the history of that insect, which is given; a trout in the stream awakens a longing for a rod and memories of Izaak Walton, who speaks of 'anglers and honest men' in one breath. The harvest of wild-flowers and weeds; the duckweed, water-crowfoot, sweet-sedge, forget-me-not, butterwort, 'ragged-robin,' and others, all engage his attention, and are described in turn. Then the catching of eels is hinted at, closing with a sail in a punt down-stream to the Thames, amongst the gathering shadows of the night.

We cordially recommend this excellent book to the notice of all who would learn something of Nature in her most attractive moods.

## A LIFE'S ATONEMENT.

### CHAPTER XXVI.—AUTOBIOGRAPHY.

*'My delirium reached its height in the summer season.'*

THE first sign of manly down had appeared upon my chin, and since the Crimean War—closed a few years before with great glory if little profit—had left behind it the fashion of beards, I shaved assiduously, to promote the growth of that appanage to manhood. I have above my mantel-piece a portrait of myself taken at that time; and though I know it on good testimony to be accurate, there is in it a flat contradiction of my own remem-

brances. At eighteen I felt myself quite aged, and I used to look not without pride on incipient wrinkles. In the smooth face which looks upon me from the wall, I find nothing of that stern manhood on which I prided myself. Poor lad! I am not an old man yet, but I am too old to wish for age; though at eighteen I should have been glad to have pitchforked myself into the forties, had such a feat been possible. I wrote a prodigious deal of verse, much of which I remember at this day with an odd mixture of shame and affection. Most of it was addressed to Polly or in some way concerned her, and she was still my deity.

The time came when I should leave school. I think I feel the emotions proper to that hour more keenly in the remembrance than I did in reality. What a gap it made in life, had I but had the eyes to see it! How many with whom I had spent eight years or part of these in life's journey, faded out of life there and then, and now refuse to be summoned even as the thinnest shadows! It was not of the break in life I left behind, but of the opening to the world which lay before me, that I thought, as the train whirled me homewards. I was not so distinguished in the school as Gascoigne or Gregory had been before me in their last days; but I had done fairly well, and Uncle Ben was amply satisfied. It was not easily possible for Uncle Ben to be balder than he had been in my first knowledge of him; but he was grayer than of old, and his face was more deeply lined. He was always genial and good-tempered, and I have known few happier men. His ambitions were satisfied, even to the gradual formation of a relationship with the country magnates; though he confessed to me privately that he didn't want them for himself, but only for the good of the house; and that if it had not been for his sons and Maud and me, he would rather they had continued to stay away.

'But I'll tell you what it is, Johnny,' said the old man, with a twinkle in his eye. 'It's the golden bait as draws all them pretty fishes here. Don't you think now as I overvalue money. There's a lot o' things in the world as money can't buy, and they're mostly the things as are best worth havin'. But these nob's is a poverty-struck lot, and the poor Major's drove nearly off his head with invitations. There ain't a lord in the county as wouldn't jump at him for a son-in-law. But then you see I'm a weight to 'em. There's no more polish on me than there is on so much oak-bark. I begun too late, Johnny; and it ain't no use tryin' to train a tree when it's got stout and stiff—is it! Eh?' Therewith Uncle Ben would laugh and poke me in the ribs, and felicitate himself upon the polish which belonged to the Major and to Mr Horace St John, the Major's brother, and to Maud and me.

The time which came between the last of my school-days and the beginning of my career at college went smoothly, and held only one thing worth chronicling. At that time, a certain police

case was reported daily and at length in the London newspapers. An expert in handwriting gave the chief evidence in this case, and there were doubts expressed by some visitor at the breakfast-table as to the value of such testimony as the expert had to offer. The visitor, I remember, was an army-man, an old campaigning comrade of the Major's, and he pooh-poohed the whole business.

Uncle Ben broke in calmly. 'Well, I don't know as you can call it a science, but it's a knack. I've had to deal with more than one forgery in my time, sir, and I know a handwriting I've once seen. I don't care how good the disguise is; I can tell it. You may think you've drawn my signature stroke for stroke, and you may practise till you're black in the face if you like, but I'll pick my own out of a hundred; or yours, sir, if the cleverest forger as ever cheated the gallows spent a lifetime in copying it.—No, no, sir! Don't tell me,' said Uncle Ben, who was in some heat by this time. 'There's them as knows what time o' day it is about handwritings.'

'The gov'nah's quite right,' said Major Hartley. 'I've known him do it.'

'Don't you think there's a possibility of being mistaken?' asked the Major's friend.

'Not for a man as has the knack,' Uncle Ben protested stoutly. 'I ain't sticking up for the experts, mind you. They may be duffers and impostors. But the thing is to be done, and is done; and there's scores o' men about in business as wouldn't pass the forgery of a name as was known to 'em if they just so much as cast their eye on it.'

'M'm!' said the Major's friend, not yet convinced.

'Well,' said Uncle Ben, 'you get any clever feller to forge anybody's name on me, and see if I don't spot him.' There was a general laugh at this, and the subject dropped. It fell from my mind, until circumstances brought it back again, in a singularly unpleasant manner.

Uncle Ben accompanied me to Oxford, and put up at the *Mitre* until he had seen me fairly settled. I took the rooms of a man who had left his furniture and pictures to be sold at a valuation; but all these, at Uncle Ben's instigation, were cleared out, and he furnished me anew. I think he disapproved of the art decorations, which were probably a little too erotic for a quiet taste. When everything was arranged, he came up to the rooms and looked over them with much enjoyment; and finally we sat down together, and he gave me a great deal of advice, drawn from his knowledge of the world. 'I don't think,' he said, 'as you're the sort of feller, Johnny, to be stuck up because you've got a rich uncle; but if you don't think of that, there's them as will. Do you remember that feller Tasker coming to my place, three or four years ago?'—I nodded.—'Do you remember what I told you then about bills?'—I nodded again.—'Don't you disappoint me now,' he said with a show of feeling, which was rare in him. 'I shan't make you any reg'lar allowance, Johnny; but I shall trust you. Everybody'll know afore you've been here a week as you're the nevey of

old Hartley the great millionaire'—he grinned a little at that—'and they'll be on to you with offers of unlimited trust and credit. Now, I don't ask you to live stingy; but I ask you to be honest. Don't buy anything you can do without; but at the same time live like a gentleman. If you've got a head on your shoulders, you won't want to buy wine here. I'll send that to you from my own cellar, and you needn't spare it. Write to the butler when you want any. Don't bother me with that; but send me all your bills of whatever sort, and I'll pay 'em. I know what it is when a warm-hearted young chap makes friends, and one of 'em comes to him and says: "I'm in a bit of a hobble, I am. Just put your name on to a bit o' paper for me, will you?" Now this is my last serious word. If you get into a mess yourself, send me word. If you want money—no matter if you're ashamed of what you've come to want it for—send to me. If any one of your friends ever asks you to back his name, you tell him it's more than your income's worth to risk it. For that's the one thing I won't forgive; and now I've told you. If ever you put your name to a bill while I'm alive, I'll disown you. No, no, Johnny. I don't want to threaten you, my lad, and I don't mistrust you; but you must promise me.'

I gave the promise, and would have thanked him for all his countless kindnesses; but he stopped me. He gave me a cheque for such an amount that I should have been wasteful indeed had I exceeded it. 'Make it last as long as you can in reason, Johnny,' he said; and then, with a hearty shake of the hand and a slap on the shoulder, he went down-stairs, blowing his nose so violently that the hollow staircase echoed to the sound.

It is not within my scheme to relate the story of my college life. I fell amongst a wholesome set; and though I spent more time on the river and in the cricket-ground than I passed above my books, I contrived—considerably to my own surprise—to scratch through for a degree. Uncle Ben was greatly pleased at this, and prophesied that I should make a great man—seeming to regard the achievement of a B.A. degree as a thing till then unheard of. But it is not the life I led in Oxford which comes back to me most strongly when I recall that time. Mr Fairholt comes within the range of mental vision, for one. I do not think I read him too unkindly when I believe that he found a wide difference between the John Campbell who was cast a friendless orphan on his hands and the John Campbell who was acknowledged by his own rich neighbour. I do not think I read him too unkindly if I say that the money question made the whole difference. But when once Uncle Ben had, by sending me to college, made his responsibility for my future complete, Mr Fairholt made me a welcome guest at Island Hall. In spite of the enormous edifice Uncle Ben had built, I am fain to confess that Island Hall remained 'The Hall' to the country-people, as it had been time out of mind before Uncle Ben was heard of. Nor will I deny that apart from its one attraction for me, I liked it better than I liked the barbaric splendours of my uncle's palace. To me at that time it was a Bower for Beauty—nothing more or less. I was welcome there at all times; but I took an insane delight in wandering outside it, and making surreptitious sketches of it, as though

to go near it or to sketch it had been a thing forbidden. I used to rise at unearthly hours to ramble there; and I used to sketch her window with the Virginia creeper and the climbing roses about it until I could have almost drawn them with closed eyes, until closed eyes can summon them now at least and see them as clearly as if their fresh reality were before me. And the dreams I had! I would go into parliament, and become Prime-minister, though that went without saying if I once got there. Or I would go into the army, and distinguish myself in some tremendous campaign. Or I would go for authorship—in the poetic line—and write an epic, and be crowned with bays. But whatever I promised myself—and up to two-and-twenty one lives in the land of promises, if not in the Land of Promise—I never ventured to hope for a happy termination of the pangs of love. Nobody ever wrote more love-lorn verses. Nobody was ever more involved in a more hopeless passion. I used to go about in the moodiest fashion and watch the sunsets and the sunrises alone, and improvise verse, and declaim it in the silent lanes, to the great astonishment of the yokels, and my own shamefaced embarrassment when discovered. I confided my hopeless love to Gascoigne, who had a curacy hard by; and he used to smoke his pipe and listen to me with great forbearance. I confided it to Gregory, who accepted my belief in my own probable early death with marked composure, and undertook to provide an epitaph. Hawkins of Exeter and Bills of Wadham knew of my helpless and hopeless slavery. I think that in a gloomy way I was rather proud of it. In all the castles I ever built upon this cloud-foundation, there hung no picture of a happy union. I was going to be great, and then I was going to die; and Polly was to know how splendid a treasure she had cast aside. Yet I cannot remember that she treated me with anything but kindness, and I know she must have had a difficult task at times.

My delirium reached its height in the summer season which followed the close of my time at college. Polly had a paid companion, and Miss Hurd and I were great in friendship. I suppose Miss Hurd was thirty if she were a day; but we were kindred spirits, spite of this disparity of years. She had a fine deep melancholy-sounding contralto, and she used to sing in what I took to be a patent allusion to my own case:

Let us talk of love no more  
While the bat is flying;  
Fitter friendship's solemn lore  
When the day is dying.

Other ditties bearing on her own condition she sang, as though the lower octaves of an organ were concealed within her. She could not sing the old songs, and the like. Except for a general and uncultivated fondness for the art, I was not in any manner musical; but I used to shake my head at this, and murmur only that I could not sing the old songs either—a question as to which there existed no shadow of a doubt. I supposed that Miss Hurd was aware of my passion, until one evening when I came across the fields on horseback and found Polly absent. Miss Hurd sat at the piano and played *The Heart Bowed Down*, and I sitting at the window sighed as I thought of my own.

'You are not well, Mr Campbell,' said Miss Hurd.

There was a dusky light in the room, and the window was open, and the quiet scents and gently stealing sounds of the country mingled with it soothingly. I rose and crossed to the piano, and said with much solemnity that I was well enough—'In body,' I added with a sigh.

'Thou canst not minister,' said Miss Hurd in her lowest contralto tones, 'to a mind diseased.'

'No,' I answered, sighing again, and carried on the quotation, though when I reached the 'yesterday,' I thought it a little inappropriate.

'What is it, Mr Campbell?' said Miss Hurd. 'Confide in me.'

I seized Miss Hurd's passive hand as it lay upon the keys of the pianoforte, and I told her in sepulchral tones that my heart was breaking. I believe I quite believed it.

'With what?' asked Miss Hurd. But I returned no answer. She pressed my hand, and murmured again: 'With what, Mr Campbell? Confide in me.'

'With love!' I answered, not unconscious of a comic side to the whole episode, the mere hint of which in my own mind made me perhaps a trifle more morose and tragic than before.

'For whom?' said Miss Hurd with my hand in both of hers. I laid my melancholy head upon the cold smooth polish of the top of the piano, and murmured my divinity's name. Miss Hurd dropped my hand, and sat still in the dusk of the room and made no sign. How she left the room, I know not. Nor do I know how I left it; but when I came to myself, I was in the fields again in the moonlight, putting Bob at a fence. I screeched with demoniac laughter. Miss Hurd! In love with Miss Hurd! Could she have dreamed of it? Could Polly have thought it? Horror! And I laughed bitterly to myself as I said that this was Fate's last and cruellest burden, and I would endure no more.

'When a tooth aches,' I told myself, 'the best thing to do is to have it out at once.' I resolved that I would go over next day, and compel Polly to turn spiritual dentist; but when morning came, the thought of Miss Hurd daunted me; and I hung about the stables in a weak irresolute way until, to my self-worrying mind, the very stable-helpers could read my vacillation and its cause; and I rode away in self-defence. Miss Hurd daunted me, as I have said; but though she held me back from the house with the memory of last night's episode, she could not keep me, nor could I keep myself, away from its neighbourhood. And there, as those serio-comic Fates who rule the destinies of lovers would have it, I found Polly alone in the fresh green lanes, with a frond of fern in her little gauntleted hand, and a wreath of young oak-leaves twined about her hat. I dismounted, and walked by her side, in a foolish compound mood of ecstasy and misery. Prompted by those serio-comic Destinies, I must needs drift in mystic and bewildering speech about last evening's episode with Miss Hurd. I tried at first to assume a tone of banter, which failed me miserably. Had Polly, so I asked her, ever deigned in her own mind to associate me with the matrimonial condition? Had she ever contemplated the possibility or probability of my being some day married? She regarded me gravely and frankly, but without a

suspicion of humour or confusion. No, she said; she had never thought of me in that connection.

'But,' she added, standing still to speak, and shading her eyes with the fern, held lightly in both hands, and making the sweetest picture with beautiful unconsciousness, 'you are getting to be a man, Jack. And I suppose,' with her eyes opening just a thought wider at the fancy, 'that I am getting to be a woman. One is a woman at nineteen, I think. Do you know?'—she spoke as though this were altogether a discovery—'I think that a girl is more a woman at nineteen, than a boy is a man at twenty.'

In my bewildered compound mood, this hurt my feelings. It seemed to widen the space between us, and to make despair more despairing. Canon Kingsley's charming novel of *Two Years Ago* was new just then; and I asked Polly, who had read it recently, if she remembered a passage in which it is declared—apropos of a Mr Creed, who carried a warlike message to Tom Thurnall—that if a man is ever to be a man he will be one at twenty.

'O yes,' said Polly, holding to her colours; 'but I think a woman is more a woman at nineteen.'

But, I persisted, with an aching feeling that my head was growing empty—had she ever thought that I was in love? With—with anybody?

'No,' she answered, facing round again, with the fern still lightly balanced in both hands above her eyes. I felt that I had a hangdog guilty look, and beneath her glance I could feel that unpleasant aspect deepen. A little light of humour in her eyes ripened into a full smile of friendly mirth. 'O Jack,' she said, 'is this a confession?' Before I could answer or think of answering, her sudden question had so staggered and bewildered me, she dropped the fern, and clapped her hands together. 'It is Miss Hurd!' she said with a gravity as sudden as the gesture; and with the swift vivacity which was a part of her, and is still, she passed her arm through mine, and in a tone of cosy confidential friendship, she said: 'Tell me all about it.'

'O Polly,' I cried, not thinking how answerable I was for the situation, 'how could you think such a thing of me?'

'I don't know,' said Polly, with a little shrug. 'Miss Hurd is very nice, I'm sure.'

'I daresay,' I answered with Byronic bitterness of soul.

'I beg your pardon, I am sure,' said Polly, moving her arm a little to-and-fro in mine, as if to decide upon the most comfortable position there. 'And now,' she said, giving my arm a little hug, as if to emphasise her own satisfaction in the approaching confidence, 'tell me all about it.'

I said: 'Never mind,' darkly; and Polly said coaxingly: 'Yes; now do tell me all about it.'

I responded still darkly that she would know some day; and at that she was a little offended, and withdrew her arm. The empty aching of my head left me incapable of doing or saying anything to retrieve myself; but it left me the power to make myself feel still more hangdog and more desperate. Perhaps, I said, she did not care to know. It could make no difference to her.

'How can you say so?' she demanded with a little flash of her old childish petulance. Then with stately gravity: 'You are a stupid boy. You are undecided and self-contradictory, and—with a complete change of face and voice, she took my arm again—'I am sure that you are not happy; and if I can help you, you must let me do it.'

I was quite melted at this, and told her that I felt I was a villain; but I added that it had been my fate all my lifetime to appear before her in an unfavourable aspect.

'That is all vanity,' she said with calm decisiveness. 'You have always been a little too self-conscious. Fight against it.'

'No,' I said, feeling desperately that the tooth was coming out at last; 'I have been awkward and constrained before you all my life.'

'Before me?' she asked in a voice which told me she was wounded.

'Yes,' I answered; 'and before you only. Ever since I saw you first, when Aunt Bertha took me to the nursery, and introduced me to you as your cousin.'

I had thought she would know my meaning; but her tone convinced me that she was still ignorant of it. She answered only: 'You are very unkind and cross to-day.'

'Unkind to myself,' I responded fatuously; 'but not so unkind as I deserve.'

'You are incomprehensible,' she answered in a tone of pique; and we walked on in silence until we came to the gate of the drive, when she asked me smilingly if I would 'Come in and be good.' Baffled in my purpose, and being altogether wretched and forlorn, I shook my head, and gave her my hand in silence.

'Bring your Oedipus with you,' said Polly lightly, 'if you come again in so Sphinx-like a humour.'

'I will send him by the penny-post,' I answered, conscious of a lucid interval and a resolve.

'He shall be welcome,' said Polly with a laugh; and then with a nod and a bright 'Good day' she passed out of sight behind the curve of the trees.

I mounted Bob again, and in the tumult of my feelings, took him helter-skelter over the fields homeward. Arrived there, I sought the solitude of my chamber, and sat down to abuse myself for being so egregious an ass. I had said nothing I meant to say, and had said many things I had no right to say. I remembered my share in the whole conversation, and blushed over its inconsequence, its testiness, its want of purpose. I caught sight of my own face in the glass, and shook my head at myself savagely, announcing with perfect seriousness that if I could only get outside myself, I would kick myself from there to Land's End for an impracticable, disgraceful, unworthy idiot! I tried to write a letter to Polly, and made thirty or forty beginnings, and threw them all aside. So far as they went, I believe they all breathed unalterable devotion and a desire to die. I began one, I can remember, with: 'What am I, O pure and beautiful, that I should dare'—; 'Dear Polly' sounded too familiar; and 'Dearest Miss Fairholt'—apart from the distant coldness of the form—seemed to suggest that there were several Misses Fairholt—three at least. Why then, I thought, should I use any introductory phrase at all? Why not plunge in *medias res*, like 'some epic poets?' Whilst I sat thus bewildered, a message came from Uncle Ben, who

desired to see me; and having crammed the blotted and crumpled pile of unfinished notes into an escritoire and locked them there, I obeyed the summons.

Uncle Ben was strolling in the gardens, smoking a big porcelain German pipe. 'Have you got any notions, young un, about your future?' was the question with which he met me. I had within five minutes expressed the ideas I had upon that point, in writing; but feeling that Uncle Ben would scarcely care to know that I meditated an early death, and was quite indifferent as to what came before it, I contented myself by asking if he had thought about anything for me.

'I've thought about 'em all,' said Uncle Ben. 'Theer's the church, and theer's law, and theer's physic, and theer's th' army and navy. One, two three, four, five. Then theer's art, and theer's litterychewer. I take it for granted as you ain't got a special call to neither of them two.—I believed I had to each of them, but I kept silence.—'Well then, about the church?' he questioned, turning round upon me with a finger on a thumb in act to tell off the five.—I shook my head, having very serious and decided ideas on that matter.—'Very well. About the law? How should you like to be a barrister?'—I had but a mean idea of the legal profession, and I said so.—'Very well,' said my uncle, going on to the middle finger. 'Then theer's physic. Now, th' army and navy is only professions to them that's got a lot o' money, and don't want a profession. To anybody else they're slavery. How about physic?'

I thought I saw that 'physic' was what Uncle Ben most favoured, and I said 'Yes' tentatively.

'It's a h' honourable profession,' said my uncle, 'and it's a useful un. Now, what do you say to physic?'

I told him I thought I would say 'Yes' to physic; and he asked me then what I should say to Dr Brund.

'A real first-rate man, Johnny,' said Uncle Ben. 'Last time I was in town, I asked him if in a few years' time he'd be prepared to admit a smart feller into his place to look around him; and we had a bit of a talk about it; and he's willing to take you under his wing, my lad; and make a friend of you, and make a man of you. You'll see if you like it; and if you don't, you needn't stick to it. It's a great favour, mind you; but he'll look after you when you get up there, and you must cultivate him.'

It seemed all very easily settled; and Uncle Ben, who was always for striking whilst the iron was hot, advised me to go at once to London and spend a week there—see Dr Brund—walk through the hospitals, get a first general idea of things, and decide as soon as I could see my way to a decision.

'Look you,' said Uncle Ben, clapping me jovially on the shoulder, 'we'll go up to-morrer, and have a look round together. Eh, Johnny?'

That was settled at once. I made a fire of the blotted and crumpled fragments of notes, and sent a brief letter to Polly. Uncle Ben's proposal had cleared my wits a little, I suppose; for I wrote without overwhelming embarrassment that Oedipus and I were going up to town with Mr Hartley, that we all three hoped to be improved by the trip, and that it was probable that the journey would result in my adoption of a profession. And having

despatched this letter, I lay for a long time awake, a little excited by the prospect of life in London, and a good deal less disposed to an early death on desert shores. When I fell asleep, I dreamed that I was appointed Physician in Ordinary to the Queen, and that I was Sir John Campbell.

## ICE-MAKING.

WRITERS have always been fond of dilating on the contrasts that London presents, and some of them certainly are striking enough to an observant eye. It would, however, be difficult to find anything in the way of contrast more curious than that experienced by a parched and panting Londoner when he steps out of the heat and glare of a broiling day in July or August into an establishment in which one of the latest ice-making machines is at work—an establishment, for instance, such as may be found just by the side of the Thames, near the foot of Blackfriars Bridge. There, however hot it may be outside, winter reigns supreme. The van standing just within the entrance is being loaded with slabs of ice eight or ten inches thick, which have been dragged out from a glittering mass stowed away in an ice-house on the right. On the left-hand side as we enter, a roaring fire throws out intense heat, notwithstanding which the machinery in the place is patched here and there with hoarfrost and little tufts of what looks to be snow; while from several points are suspended glistening icicles—all genuine products of the more than wintry temperature which science has succeeded in producing and maintaining, in contempt of almanacs, and in defiance of dog-stars and noon-day suns.

This creation of a frosty temperature has long been a very simple matter. It is the result of the absorption of heat occasioned by the rapid conversion of a solid body into a liquid, or of a liquid into a vapour. When either of these changes takes place, the liquid or the vapour absorbs all the heat within its reach, and thus for the time being lowers the surrounding temperature. If in any way you can carry on the process so as to absorb so much of the surrounding heat as to reduce the air to thirty-two degrees, then your liquid will freeze and become solid. The temperature might in this manner be reduced far below freezing-point, even under the hottest of July suns. All this has long been understood, and scientific men have been able to produce any amount of ice. But to turn out the artificially made article at a moderate price has, till recently, been quite another matter. Now, however, the art has been brought to great perfection, and ice made by machinery can be sold at a very much lower figure than what we may term natural ice, taking cost of gathering, conveyance, and storage into account.

There were two things to be done in order to bring about these results—first, to discover the most efficient refrigerating agent; and secondly, to devise the apparatus by which it could be set to work in the freezing of water. Both problems have been solved with a completeness that seems to leave very little to be wished. The refrigerating agent adopted in the newest machines is ammonia. Everybody knows that different fluids will boil at different temperatures. Water boils at two

hundred and twelve degrees Fahrenheit; ether at ninety-five degrees; sulphurous acid boils at fifteen degrees, or seventeen degrees below the point at which water freezes; while ammonia in liquid form, and under the ordinary pressure of the atmosphere, will boil at twenty-eight degrees below zero, or sixty degrees below the freezing-point of water. It not only vaporises or boils, as we say, at a very low temperature, but the vapour has an immense capacity for latent heat. The keen eye of modern science had noted these peculiar characteristics of ammonia, and machinery has been devised to take advantage of them. It would be useless to attempt to describe it without illustrations, and without a good deal of technical detail, for which few of our readers would care. It looks a little complicated, but the whole contrivance has just two objects in view—first, to reduce a quantity of brine to a very low temperature; and secondly, to keep it circulating round the tanks in which water is to be frozen. The circulation is a simple matter of force-pumping, so we need not trouble ourselves with that part of the machinery. All the rest of it is merely an apparatus for changing the form of the ammonia from the liquid to the gaseous, and from the gaseous back to the liquid.

A certain amount of liquid ammonia is introduced into the machine; and assuming that there is no leakage or breakage, it will do permanent duty. It will start here, go through the apparatus, and come back, ready to do duty over again as often as required. Here it is a liquid; a little further on, it flies off into a gas; then it condenses into a liquid; and again a little further on becomes a gas, once more to settle into the liquid state towards the end of its journey at the original starting-point. Now, if the reader will bear in mind that liquid ammonia on changing into a gas absorbs an immense quantity of heat, and is bound to have it from somewhere or other, he will easily understand that just at the points in the machinery where the change takes place, there will be intense cold. The ammonia, as fast as it becomes a gas, must have caloric to generate, and it will suck what it requires out of the machinery and the surrounding air or anything else that happens to be near. It is at those points in the apparatus where this process is going on, that we find the icicles hanging and the little patches of snowy-looking ice and hoar-frost. Just at these points you may reduce temperature to almost any degree you please; and if you want to cool your brine, all you have to do is to pass it through a coil of pipe winding round the receptacle in which this heat-sucking process is going on; and if you choose, it may be made cold enough to freeze a tank of water in a baker's oven.

Most people know that ordinary brine, that is salt and water, requires a much greater degree of cold to freeze it than pure water. Hence salt cast upon ice or snow, melts it. A solution of chloride of lime, which constitutes the 'brine' in this machine, may be cooled down to fifty degrees below zero without freezing. In connection with the ice-making machine, it is not necessary to reduce the brine to such a temperature; but after passing through a spiral pipe in the 'cooler,' it issues in a frigid torrent which freezes water more rapidly than the severest winter's night ever experienced in this country.

We will now leave the machinery and pass into the adjacent apartment in which the actual ice-making is going on. Here is a huge tank, nearly fifteen feet square, and three feet and a half in depth. This is divided longitudinally into a number of troughs by hollow iron walls, through which the brine, at a temperature representing sixty degrees of frost, or thereabouts, is pumped in one continuous stream, circulating round these tanks and back again to the 'cooler.' The 'ice-making by machinery' being nothing more than the natural process of freezing, is of course very slow work even at the lowest of temperatures. As soon, however, as the brine begins to rush round the tanks, a thin covering of glassy ice may be detected all round the inside of their walls, and this glassy covering grows thicker and thicker until, at the end of four-and-twenty hours, there is one solid lining about eight inches thick, hard as rock, and looking as though no strength short of that which would destroy the tanks themselves could ever detach it from the iron walls. Nothing, however, can be more easily accomplished. The stream of brine is cut off, and water at the ordinary summer temperature turned on in its place. This may involve an increase of some one hundred and thirty degrees of temperature, and instantly we hear a crackling and splitting on all hands, as the ice becomes detached from the sides of the tank. It may afterwards be lifted in huge slabs and blocks—eight or ten tons of it as the produce of one day's work.

There is one very curious feature in the process as here carried on. It is characteristic of the best ice that it is clear and transparent—free from those white, milky streaks which are commonly attributed to air. This appearance is not, however, attributable to the presence of air, but to the irregular formation of the crystal, which, by shooting out in various directions, present a broken and irregular surface, from which the light is reflected, instead of being allowed to pass through. Now it has been found that a slight, oscillating motion of the water in the tanks will give uniformity to the direction in which the crystals shoot out from the iron walls. The sway of the water determines the direction in which they dart out, and causes them to present a smooth and even surface to the play of light upon them. By a simple arrangement, this stirring is effected by bars of wood, which gently sway to and fro in the middle of each tank while the ice is forming on the walls all round.

It may safely be affirmed that ice turned out by this process is better than that which is taken from lakes and rivers. It is so for the most part in respect to its purity and transparency. But what is of more importance is its increased density and hardness. The harder the frost, the denser and more durable the ice produced by it. Nevertheless there are some purposes for which very hard ice is not desirable. Where it is to be mixed with salt for freezing purposes, for instance, the more rapidly it liquefies the better, and the ice that 'has the most gravy in it' is preferred. For such purposes, therefore, ice from our own ponds and streams has generally been used rather than that from the more rigorous climate of Norway or America. English ice can be got cheaper too. For merely cooling purposes, however—for use in the larder, in fishmongers' shops, in the cooling of

liquids, &c.—the harder the ice and the longer it will last, the better; and the produce of the tanks, or 'ice-boxes,' with their fifty or sixty degrees of frost, is far superior to the ice yielded by either our own or foreign waters. Bearing this in mind, and considering also that our native or imported 'natural' ice fetches from three to eight pounds per ton in the market, our readers may judge of the revolution that is going on in the trade, when we state that by one of these machines—Reece's for instance—some ten tons of ice may be turned out per day at a cost, as we are assured, of five-and-sixpence a ton.

### A PERFECT TREASURE.

Two or three years ago, we lived in a lonely country-house at Dullenthorpe, a little hamlet twelve miles from the large seaport town of Liversedge. Being so far from a large town, was a great drawback in obtaining servants; and we had to pay high wages and put up with anything in the shape of 'help' that we could get. My mother had been wonderfully fortunate, and had retained her two good servants for nearly three years; so when our neighbours discussed their misfortunes, we listened with a feeling of superior pity. After my father's death, as she had four daughters at home, my mother no longer thought it right to keep two servants, considering that expense might be saved, and the extra work would keep us from moping. After several journeys up and down to different registry offices, I answered an advertisement that looked promising. Going down to Liversedge, a clean tidy-looking woman was presented to me by the name of Bridget Maloney. Her country was betrayed by feature and accent as well as by name. Her clothes, though very plainly made, were good in material; and there was a good-tempered and honest look in her dark-gray eyes that prepossessed me in her favour.

'Why did you leave your last place?' I said, after her capabilities in the cooking and washing line had been discussed, and both of which were satisfactory.

'Sure, Miss, there was a stepmother; and she used to bate the children of the first wife, and I couldn't stand it at all at all. Not but they was tiresome monkeys; and many a slap I've given them meself; but that's different to bating with a strap.'

I saw her last mistress, who gave her the character of being a 'thorough servant;' and I engaged her to come on the following day.

Bridget arrived while I was out; and on entering the parlour, my mother observed: 'That woman looks tidy and capable, Marian; but she is an awful talker. She nearly deafened me when she came, about the trouble she had to find the house; so, to get rid of her, I suggested it was five o'clock and she might like a cup of tea.'

Like most of her countrywomen, we found her wonderfully quick to understand when it suited her, and equally dense when it served her purpose to be stupid. However, as she was generally

willing and always good-tempered, her little eccentricities only amused us; and feeling quite comfortable about us, my mother and two sisters went off to pay a visit to some friends in the north, leaving Gwendolin and myself alone.

As one servant in a large house and in such a quiet country-place had a very lonely life of it, we talked more to Bridget than we should otherwise have done; and after a while it struck me she rather presumed on it. Her want of respect indeed amounted at times to an unaccountable mania.

It was now the end of November, and Gwen and I found the evenings very long and dull; therefore when the front-door bell rang about nine o'clock one night, though rather startled—for so quiet was Dullenthorpe, and so little given to visiting were its inhabitants, that we could generally account for every ring—it was with a feeling of pleasurable excitement we waited for the result. The bell rang again. As Bridget didn't attend to it, I pulled the one in the breakfast-room. She answered it in a great temper; and going to the front-door, pulled it open on the chain, and shouted out: 'Who's there?' so roughly, I was quite ashamed. As there was no answer, she opened the door; and then came in to say there was no one there. There was a large boys' school in the neighbourhood; so we decided one of the boys had done it for mischief. In about a quarter of an hour the bell rang again, with the same result; and Bridget retired, muttering sundry threats as to what she would treat the young spalpeens to, if she caught them. The next night the bell rung in the same way about six o'clock; but though annoyed, we resolved to take no notice, but let the boys tire themselves out.

About nine o'clock, Bridget appeared in great excitement. 'I was pickin' a chicken in the laundry, Miss, when a man with his head wrapped in a white cloth, came and pressed his face against the winder; and I want you to go round the garden with me and find him.'

'Is the back-door locked?' I asked.

'Troth, Miss. Don't I lock it every night when the milk comes.'

'Then put out the light in the laundry, and finish the chicken in the kitchen,' I said. I knew that if the back-door was locked, the house was safe; and our man, who was gardener and groom combined, was so careful, that I was certain the stables and outbuildings were quite secure. As we were not far from the station, where the natives congregated in the evening, and who were very fond of practical jokes, I was sure one of them had seen the light and had put his face to the window to startle her.

For several nights the bell-ringing went on with great regularity, always once or twice about six and nine o'clock. One afternoon, as I sat in the drawing-room, a violent peal echoed through the house. Now, our drawing-room had a large bow-window, commanding a full view of the drive and approach to the front-door. Resolved this time to see the provoking ringer, I moved to the window. At the same moment, Bridget opened the room-door and said very crossly: 'If it's the tea you're wanting, Miss Helyard, it will be in directly.'

'It was the front-door,' I said. 'See who is there.'

I heard her open the outer door ; it was now too cold to keep it open all day ; and a moment after she appeared in the drive, shaking her head. 'There was a man, Miss Helyard,' she called out ; 'and he ran first up to the stables, and when he found that door was locked, he ran down again, and jumped over the garden-wall ; and he called out he knew the place long before I did.'

'What was he like ?' I inquired breathlessly.

'Sure, Miss, he went past me like a streak of light, and I couldn't tell you at all at all.'

'But you must know what he was like,' I persisted.

'No, Miss ; indeed I can't tell you a bit. He ran like a hare.'

And that was all I could get out of her.

That night, the bell kept us on the constant start ; and I began to think of a gardener we had dismissed a year before, who had taken to drinking, and had lately, I fancied, favoured us with very black looks. The next day we concocted a scheme to catch the mysterious ringer. We tied a cord to the farthest arch of the veranda which covered the porch, so as to cross the step ; so that if it were taken in at the breakfast-room window, it could be jerked up when the bell rang, and no one could go down the steps without touching it. After half-an-hour's watch, without a crackle of the asphalt or a foot-fall on the step, the bell rang violently. For a second I sat paralysed, then I jerked up the cord. It remained tense in my hand without shock or jar. At the same moment Gwen suddenly opened the front-door. There was no one there ! We closed and double-locked both door and window with great celerity, and betook ourselves to the bright, well-lighted drawing-room, where we sat down to talk it over.

We were beginning to feel decidedly uncomfortable ; we had scarcely got over the shock of my father's sudden death ; the house that used to ring from morning to night with song and laughter, was now so quiet that every sound seemed to echo ; and for the last month the weather had been steadily wet and foggy. All these causes combined put us both in a nervous excitable state ; and after the discovery that the bell rang without hands, Gwendolin retired to bed with a racking headache. I remained in the drawing-room ; but at Gwen's special request, left the door open. I heard Bridget running up-stairs with the hot-water bottle for her feet, murmuring as she did so : 'Poor little girl ! poor little girl !'

The ringing still went on ; and unable to bear the strain, we told our neighbours ; and gentlemen for several nights patrolled the garden and road, but on these occasions—to our great mystification—we were left in peace. One afternoon a lady-friend came in ; and as we sat talking, a peal at the bell startled us all.

'Oh, Miss Helyard, let us sit in the breakfast-room and watch,' said Mrs Marsland. 'It must be some one ; and it is so light we shall be sure to see them.'

Accordingly, we adjourned to the next room. Within the shadow of the veranda, it was perfect darkness ; but against the white drive we could have seen the movement of the smallest animal. Gwendolin crept to the front-door and held the handle turned in her hand ready to jerk it open instantly. While we were watching, Bridget came

in. She seemed to be in a state of great excitement. 'And is it watching you are ?' she said. 'Let me stay with you.'

'If you don't speak a word, you may,' I said.

But she went on talking in the strangest manner, and wound up a disconnected harangue with : 'Sure, are you stopping for tea, Mrs Marsland ? Do stop to tea.'

Mrs Marsland looked amazed, as well she might ; and I said sternly : 'Leave the room, Bridget.'

She glared at me, and at last departed, muttering something very like a suppressed malediction.

A few seconds after, without a sound from outside, the bell pealed through the silence. Gwen jerked the door open, and shut it again with great precipitation. There was no one there, she said. We all turned a shade paler ; and Mrs Marsland besought us to escort her to the end of the drive. I did so, and did not linger on the way back. When I entered, I found Gwen still more terrified : the bell had rung while she stood in the doorway ! I went into the kitchen to reprove Bridget for her conduct to Mrs Marsland ; but finding the gardener there, began to give him some directions. Bridget interrupted me several times ; and at last I told her, in a peremptory tone, to take the tea-things into the drawing-room, and not to come into the kitchen again until I had finished talking to David.

As soon as she had gone, he said : 'I would like you to let me sit in the veranda, Miss. I am determined to find it out ; and won't I just break the head of the scoundrel that has troubled you so much !'

The night was terribly cold ; it was freezing hard ; and I was very loath to expose David, who was rather a delicate man, to its severity ; but he pressed so hard, I couldn't refuse him ; and it was arranged he should be supplied with plenty of warm wraps, and should sit in the veranda from half-past eight till after nine. I returned to the drawing-room, where Bridget was banging the cups and saucers about in a most vindictive manner.

'Bridget,' I observed with great dignity, 'once for all, you must learn to curb your tongue, or you leave this house !'

This was the signal for a burst of screaming and crying, during which she said that if I had scolded her for big things, she could have borne it ; but it was always for little things, that no one else would have noticed !

In the middle of the excitement, there was a knock with the hand at the front-door ; and feeling much ashamed of the noise, I opened it, and discovered Mrs Marsland, escorted by her housemaid. Leaving the girl in the passage, she came into the drawing-room, the door of which she carefully closed, then taking us quite to the far end of the room, she demanded in a low voice : 'Does your servant drink ?'

'O no,' I said. 'She can't get at anything ; and once when she was ill, I had great work to get her to take a little brandy.'

Then said our friend in a most impressive whisper : 'If she doesn't drink, she is mad ; and we have come to the conclusion it is she who rings the bells. And I don't like to leave you two girls in the house with a madwoman.'

I explained that, mad or not, I was much stronger than Bridget, and that if we felt uneasy, we would get David to sleep in the house. On which assurance, but only looking half-satisfied, our friend departed.

While sitting over our tea, Gwen and I discussed the new idea. Now we were both almost teetotalers; and since my mother's departure, except to take out a little sherry for a pudding, the cellaret had not even been opened.

'I am quite sure there were both whisky and brandy in the decanters,' said Gwendolin; 'and didn't you decant some sherry for mother to take with her?'

'But she couldn't be drunk for three weeks on that,' I said; 'and it is only about that time that she has been rather strange.'

She had certainly changed for the worse both in her dress and temper. We had noticed that the slightest things seemed to excite her; but this we had put down to Irish eccentricity, increased by nervousness at the mysterious ringing. That night, her conduct certainly justified Mrs Marsland's suspicions. About nine o'clock she appeared, and flinging wide open the drawing-room door, said with the air of a Duchess: 'Miss Helyard, I demand of you, is David in the veranda or no?'

'I really don't know if he has come yet,' I replied.

'If I can't get an answer out of you,' she said vehemently—'and it's just lies you're telling me—I must see for myself.' She rushed to the front-door, threw it open, and disappeared into the garden, where we heard her shrieking out frightful abuse. We followed to the door, being afraid she meant to admit thieves, and that her excitement was feigned, to frighten us into keeping to one room. In a short time she came in, exhausted by her violence, and went straight to bed—as I took care, without a light.

The next day, to our inexpressible joy our mother came home. 'Why, that woman is mad with drink,' she said, after seeing Bridget a minute. 'Where is the key of the wine-cellar?'

'In the cellaret,' I said; 'and I have had the keys of that quite safely.'

The next day, Bridget was informed she might have a holiday to see her friends. In her absence, we took the opportunity of making a thorough examination. The wine-cellar revealed a dreadful tale. A dozen bottles of my father's splendid old port, half-a-dozen sherry, and different bottles of rum, whisky, and gin—thirty bottles in all, made a dismal gap in the stores my mother had thought would last for years. How any woman could consume so much in less than five weeks, and yet have gone about her work, and how we could have been so blind as not to find her out, were alike mysteries to my mother.

An examination of the sideboard shewed how the key had been obtained. It was made of beautifully carved old oak; but its interior arrangements were very badly contrived. The bottom of the drawer formed also the top of the cellaret; and when the drawer was withdrawn, anything below could be easily fished up by a piece of wire or pair of tongs. Behind one of the kitchen-doors, which always stood open, was found a mop of tremendous length, meant for brushing lofty ceilings, and which could therefore be easily used

for reaching to where the bells were hung. Its proper place was the housemaid's closet up-stairs; so that accounted for our not thinking of it. The absence of any motive for such malicious conduct supplied a reason for our blindness in not connecting Bridget with the bell-ringing. It could only be accounted for as the freak of a woman mad with drink.

When she saw we had found her out, she came to my mother with a table-knife clenched in her hand; but a little quiet decision soon cowed her; and when she departed that night, she was evidently as glad to leave as we were to see the last of our 'Perfect Treasure.'

#### A FEW WORDS ABOUT HOBBIES.

A HOBBY is, according to the dictionary, 'an object of affection'; but this definition, if not altogether wrong, is very different from that generally ascribed to the word. It is really understood to mean every self-imposed task which is taken up as a pleasure, in contradistinction to those only pursued for profit. Hobbies are so varied in their nature, that it would be next to impossible to arrange them in a classified form. But a large number may be placed under the head of 'Collecting Hobbies.' Even in childhood this trait may often be detected. Who does not remember the heterogeneous mass of odds and ends which he or she so jealously guarded in days gone by? Again, what a strange mania possesses the boy who gathers together about a bushel of marbles? There is, however, some method in this form of madness; for marbles at school are to a certain extent legal tender for all kinds of small transactions in pocket-knives and other necessities of boyhood. Cherrystones, horse-chestnuts, buttons and knuckle-bones have also their claims on the regard of the young collector. Defaced postage-stamps were also affected by many long before the demand brought its natural supply of gaily bound albums in which to preserve them. It would be curious if it could be ascertained that those who in boyhood have given themselves up to these hobbies, carried out their destiny later in life by giving fabulous prices for scarce cups and saucers and bric-à-brac.

Another trait which shews itself in a very marked manner during childhood—and which is often afterwards developed into a hobby—is the natural love for the lower animals. This feeling, so general, should be surely encouraged in every way. The pets usually in vogue among little folk are fowls, rabbits, and guinea-pigs; for they are easily obtained, and can in great measure shift for themselves. But animals of a far more unpleasant nature occasionally engage the affections of youth, such as frogs, lizards, and toads. Hobbies such as these are the abhorrence of the careful housewife; but all the same they must not too readily be discouraged. There is a certain amount of good in them, which should not be sacrificed altogether to the love of order, which by the way is with many people a rampant hobby in itself. We have regarded such inconvenient pursuits as being not entirely destitute of good, because there is no doubt that very often habits of comparison and observation of natural things are thus implanted in the mind, which may afterwards bear good fruit in the shape of scientific research. The same may be said of the mania which possesses some

boys of trying everything in the shape of a chemical experiment—doubtless to their own satisfaction, but to the detriment of the household gods generally. It seems something like heresy to assert that boys should be encouraged in such amusements; but we do say it. For when we look around us and consider that every necessary we have, and every trade through which our wants are supplied, owes its present state of perfection in a great measure to the science of chemistry, we should not be too ready to discountenance, on the sole ground of minor inconveniences, the dawning love for such a splendid branch of study. In the present day, a good deal of attention is paid in our schools to natural philosophy; so it may be hoped that the rising generation will be a little more conversant than their parents with the phenomena which surround the daily actions of their lives. Ask any average middle-aged man in this nineteenth century the solution of such a simple problem as the composition of air or water, and in the generality of cases he will confess himself puzzled. But the best apology for permitting boys to flirt with chemistry, is the fact that our modern school of chemistry is founded upon discoveries hit upon by the students of old, who dabbled in the science in much the same spirit that possesses the boyhood of to-day.

Hobbies which bring pleasure and profit to others besides the promoter, should most certainly take a very high rank in our estimation. It is the peculiarity of many such occupations that while they bring good to others, they are usually fraught with expense and trouble to their originator; although of course in his case this trouble and expense are compensated for in seeing the results growing under his hands.

Of the various hobbies which engross men's minds, perhaps those connected with the arts are the most common. Music is now happily such a general accomplishment, that it can hardly be called a hobby. Still some people do make it one, and unfortunately many affect it who are incapable of securing any result save that of torturing the ears of their fellows. Putting aside vocal music as being of too ordinary a character to need notice, we will consider in a brief manner the instrumental part of the question. Unfortunately, the instrument which an amateur chooses for his first attempts is often of a very aggravating character. The flute in the hands of a learner is one of the most exasperating instruments to the enforced listener. It is so comparatively easy to tootle a melody on this instrument, that many amateurs adopt it. The cornet is even worse, and yet it is an instrument much affected by amateur musicians, to the inexpressible annoyance of those who are compelled to listen.

Stringed instruments offer so many difficulties to the aspirant to musical fame, that they are seldom meddled with, except by those who mean to take some pains to acquire proficiency. A moderately good player can always find a ready welcome to one of the numerous orchestras or quartet parties which are now common all over the kingdom. It is true that such orchestras do not always come up to a very high standard; still, they afford people the pleasure of working together in a friendly spirit towards one common end; and when a hobby takes this form, who can cavil at it!

The most usual fault of which amateur musical societies are guilty is the choice of work far beyond their powers of performance, and very often above the capacities of their hearers. People are apt to forget that the ear requires a certain education before it can distinguish good from bad. The dearth of this ear-education is exemplified in the enormous prices often paid for the copyright of wretched street songs, which spread over the entire country in a few days like a terrible epidemic; while it is a fact that competent musicians are told by publishers that it does not pay to produce works that are actually too good for the multitude to appreciate. This form of ignorance is by no means confined to our lower classes; it is more or less common to all.

From music to painting is an easy transition; indeed in very many instances the two arts have been successfully cultivated by one and the same person. It is certain that the love of the one is very likely to beget a fondness for the other. In painting, as in music, the common fault prevails of aiming too high at first, in forgetfulness of the axiom that one must creep before he can walk. The type of drawing-master, now happily almost extinct, is in great measure responsible for this; the necessity for making parents believe that their hopefuls have made rapid progress, by exhibiting to their partial eyes impossible landscapes duly furnished with impossible figures, being at the root of the evil. It is too much the custom to allow children to dabble with colours before they can describe a straight line with tolerable accuracy—under which circumstances the chances are that they will never master that essential element of art. Our art-schools have worked a healthy reform of late years; but it will be some time before their influence will make an inroad upon the false system of teaching which still prevails in many places, by shewing that servile copying from flat lithographic studies means egregious waste of time. The master who really means his pupils to shew advancement, will direct them to begin by sketching such solid objects as any household will afford—pots and pans and the like, such as the great Teniers was not too proud to introduce with such marvellous fidelity into the pictures which have handed down his name to posterity.

In the present day, there is too much affectation for what is called 'high' art; a kind of struggling after a vague ideal which has no counterpart in nature. It is the fashion to give this feeling encouragement, and in consequence a great deal of nonsense is talked about the decadence of art. The old masters, for whom we have the utmost veneration, are lauded beyond their deserts, and pictures cracked and generally disfigured, are called 'fine.' If they were painted nowadays by some obscure artist they would remain unobserved and neglected.

Another branch of art which many make a hobby, and which seems more perhaps than every other amusement to engross all the energies of its followers, is the histrionic. It would seem as though there was some subtle influence attached to a theatre against which some people find it very difficult to combat. The character of the stage-struck youth has again and again been introduced by old and modern dramatists as a subject for satire; and in real life it is by no means an uncommon one. In this particular, acting partakes

much of the nature, in its effect, of dancing. An inordinate love of the latter pastime is of course a trait immeasurably below that of acting, where the intellect is engaged, and where acquaintance is made with the works of standard authors. But still the time absorbed could certainly be better employed; to say nothing of the fact, that a dramatic club is usually a kind of mutual admiration society, and one therefore not likely to be of permanent value to its members.

In conclusion, we must readily admit that many of the hobbies we have mentioned are of great use to the community, as well as to the persons principally concerned. They give employment to many; they encourage trade in various ways; and they are in constant demand for benevolent purposes.

## MAX GORDON.

### IN SIX CHAPTERS.—PROLOGUE.

I HAVE spent to-night in the past—the past, which I fancied was safely buried beyond sight and resurrection. Not forgotten—ah, no!—but so far distant, so resolutely lived down, that it seems miserable a few old pages of faded writing should have power to ‘roll the stone from its grave away.’ It is lying open before me—the grave of a woman’s heart and hopes and happiness. And though the stern forms of Duty and Fate are sitting one at the head, the other at the feet, with the same smile on their pale faces that has hitherto been my only strength, I cannot look into their eyes to-night; I can but stoop yearningly over my buried treasures, and water them with unavailing tears.

Only a few pages of faded writing, found in an old desk, which two hours ago I opened for the first time in fifteen years. I am a proud woman, and a strong woman; and yet the written record of these few months of my life has swept away all the barriers raised by Time and resolute toil.

Let me copy the pages from Edith’s Diary and my own here; and consecrate this night at least to the loving memory of my dear sister—and others.

### CHAPTER I.—EDITH’S DIARY.

March 1, 1860.

An event is about to take place. I do not remember ever having had previous occasion to make such an interesting announcement as the above. The story of our lives from day to day is about as dull as it well can be; and therefore—though we are very happy, Papa, Katrine, and I—an event is an event to us, and we are excited accordingly. And yet the prospective circumstance, to any but such a doctor-ridden house as ours, would not probably be regarded as one of momentous interest. It is only that old Dr Rousby—who brought me into the world, and has been in frequent and lively anticipation of seeing me go prematurely out of it—is about to retire from practice, and that Dr Max Gordon is coming to succeed him.

It is vain to disguise a notable fact, and I may therefore mention here that such lamentable failures—from a sanitary point of view—as my father and myself, are it is to be hoped uncommon. We both of us ‘enjoy’ almost constant bad health, and expect to be waited upon by the family physician regularly as by the postman. A change like the

one impending is regarded by us, therefore, as a matter of no small moment; and the advent in our midst of a stranger—for he is almost that, so long is it since we saw him—thrills us with expectation, not unmingled with awe.

One only of our household can boast of her due allowance of strength, physical and mental. I see her coming up the approach as I write—my sister Katrine. The cold wind is blowing a soft pink into her pale pure cheeks; the velvet and dark furs shew off her glorious hair—‘yellow like ripe corn;’ great lustrous eyes of darkest gray look up to the window at me; whilst a loving smile parts the sweet, proud lips. (Are you truly—as in very truth you seem to me—faultless, O my sister? Or, even as those fathomless eyes give your face its one wanted touch of earth, is that regal pride of yours in like wise, the hall-mark of your spirit’s humanity?)

Our relation is deeper than even the deep one of ordinary sisterhood. Ever since I can remember, Katrine has been to me mother, sister, teacher, nurse, everything; and not for a single day during my recollection have we been separated. In truth, our travels have not been far or wide. Two visits to Scotland—five and three years ago—constitute our sole glimpses of the world lying beyond The Grove and its vicinity. The delicacy of Papa’s health and mine was always a sufficient barrier to our further peregrinations, and Katrine of course would not move without us.

Twelve years since, when Kate was nearly fourteen, and I was five, our mother died. I do not recall her well—though the dim image of a pale wasted face, and the sound of a hacking cough, haunt me sometimes when I look at myself in the glass. Katrine cannot speak of her even yet. Once after I had been ill, seized with a sudden anxiety as to the possible ravages left by disease in my small white countenance, I asked my sister to bring me the mirror. The sight of my thin face instantly revived more powerfully than ever the vision of that other one—perhaps because the likeness in my own to it was even more marked than usual.

‘Kate,’ I said, still contemplating my unenviable reflection, ‘you are like Papa, everybody says; am I like Mamma, then?’

My sister laid hands on the glass swiftly; and glancing at her, I saw her cheeks had turned as white as my own.

‘Am I, Kate?’ I repeated with the exacting pertinacity of convalescence.

‘Yes, darling,’ she answered, wrapping another shawl round my shoulders. ‘Too like, by far; I heard her sigh to herself as she turned quickly away.’

Aunt Mabel, who is staying with us just now, told me yesterday that the night Mamma died she called Katrine to her, and whispered: ‘I leave our Edith to you, dearest. For the sake of our fourteen years’ unbroken love and friendship, you will shield our delicate darling, Katrine?’

And Katrine, her pale lips on Mamma’s, promised: ‘With my life, mother.’

Strangely enough, only yesterday for the first time an idea presented itself to me, or rather was presented, which I suppose to most other girls of my age would have occurred often, and long ago. I was tired, and had fallen asleep on the drawing-

room sofa. Aunt Mabel was seated by the fire, and I suppose Katrine must have come in whilst I slept; for presently I was conscious of murmuring voices, and listened to them lazily in a dreamy half-awakened way.

'Well,' Aunt Mabel was saying, 'in my opinion it is quite a misdirection of the natural and fitting order of things, for a girl of your beauty and accomplishments, and the rest, to be buried alive here with two invalids, when you should be adorning quite a different position. Lord Haricourt'—

'I gave Lord Haricourt my ultimatum long ago,' Katrine put in rather contemptuously. (Here my semi-comatose state became one of lively interest.) 'I must say I can't conceive how my lot—with which I am perfectly satisfied—could possibly be bettered by uniting it with *his*.'

'I don't know what you 'would have,' Aunt Mabel replied calmly. 'Viscounts with fifteen thousand a year don't grow on every bush.'

'The beauty of Nature would scarcely be enhanced if they did, taking this one for a fair specimen,' remarked Katrine dryly. 'Dear Aunt,' she added with a little laugh, 'what would you have me marry that half-witted boy for?'

'He has been a very constant boy,' Aunt Mabel observed, ignoring the question.

'Is he still of the same mind, then?' returned Kate, with lazy indifference, evidently tired of the subject.

'He is; and is in very earnest hopes that time may have changed yours. It is ridiculous to make Edith your excuse, you know, Katrine. There is no reason why you should not have her to live with you, if you like.'

'And what is to become of poor Papa? My lord does not want to marry us *en famille*, I suppose?' Kate returned sleepily—the influence of fire and easy-chair being apparently more seductive than the aspirations of her suitor.

'Parents must lay their account with such things,' continued Aunt Mabel with quiet pertinacity. 'It is not with regard to this case alone that I regret to learn your decision. You will have other offers, no doubt; but I should be very sorry if you intended applying the same rule to all.'

'I have had no temptation to break it,' said Katrine, with a leaven of unconscious pride in her voice, and rising as she spoke. 'No man ever yet had power to make me waver in my duty, thank God!—I trust Edie has been asleep,' she added quickly, bringing a hot flush of tardy shame to my cheek. 'I should not like the child to be disturbed with'—

'I don't think she is such a child as you fancy,' said Aunt Mabel quietly. 'Those sensitive fragile natures often possess a prematurely developed faculty of perception and insight. They have a quiet logic of their own, that carries them further than all our boasted knowledge and experience.'

I had my back to them, so I could not see the effect of this speech on Katrine; but I guessed the wistful expression with which she looked over at me in the silence that followed. And then with a start—which she no doubt took for a waking one—I met my sister's loving eyes looking down into mine, as though she would fain reassure herself that her child was one still, and

her own. Ah, yes, ever your own, Katrine, child or woman!

But I have wandered far from the subject with which I started—Max Gordon's approaching arrival. As I said, he is almost a stranger to us; for though he used to visit the Rousbys sometimes—his father was their dearest friend—the last two occasions on which he was here happened to be during the very two summers Katrine and I spent in Scotland. Kate may remember him, I daresay; but to me he will have all the charm of novelty—a charm by no means to be despised, when one hardly sees a new face from year's end to year's end.

My sister regards the impending change with unqualified approval. She says the old doctor—valued friend though he be—is professionally antiquated; and she thinks it will be a great advantage for Papa and me to have 'the last discoveries of science' brought to bear upon us. Our new physician's fame has preceded him. He had a brilliant career at college, and has since been abroad, gaining fresh laurels at foreign universities. In fact, had it not been an ancient family arrangement between the Rousbys and the Gordons that Max was to step into the old doctor's shoes, I hardly fancy that the luck of securing his services would have fallen to Hatherton. For the rest, as we know all about him—that he is of good family, a gentleman, and a scholar—we would seem for once to be in the distinguished position of having got the right man in the right place.

#### ROCKING-STONES.

SCATTERED over certain portions of the British Isles, and here and there in other parts of the world, may be found masses of detached rock, often of great size, poised so nicely on a narrow base that they move to and fro under very slight pressure, and known in Great Britain by the name of 'Logan' or 'Rocking' Stones. In some cases the action of the wind alone is sufficient to set them in motion.

Formerly, these stones, from their peculiar characteristics, were considered to be the work of human hands, and were classed among 'Druidic remains'—the common belief being that they were connected with the religious rites and ceremonies of the Druids.

One of the absurd beliefs was that if a supposed culprit was brought to a rocking-stone, his guilt or innocence would be at once proclaimed—if guilty, the stone would vibrate on his approach by unseen power; while on the other hand his innocence would be proved by its remaining stationary. An opposite belief—that the stone would 'rock' at the slightest touch of those pure at heart, but would withstand even a giant's power when exerted by the guilty—is thus well expressed by the poet Mason:

Behold yon huge  
And unhewn sphere of living adamant,  
Which, poised by magic, rests its central weight  
On yonder pointed rock; firm as it seems,  
Such is its strange and virtuous property,  
It moves obsequious to the gentlest touch  
Of him whose heart is pure; but to a traitor,  
Though e'en a giant's prowess nerved his arm,  
It stands as fixed as Snowdon.

These beliefs, like many others connected with

so-called cromlechs and other remains, are, however, exploded, and it is now very generally agreed that rocking-stones are not works of art, but the result of natural causes.

There can be no doubt that in most cases the 'rocking' property of these masses of stone is entirely due to weathering; disintegration having been effected through countless ages by the action of wind and rain, and sometimes by sand blown by the wind upon the masses of jutting rock of which they are composed. In some instances too, there is little doubt the superincumbent mass has fallen or rolled from the rocks and heights above, and become accidentally poised on its present bed; and in others again, they may have been deposited in their position by glaciers or icebergs. In all cases, however, we shall be safe in attributing, in one way or other, their formation to natural agency. At one of the meetings of the British Association, this theory was clearly demonstrated by Mr Grove, who stated that by artificial attrition he had himself made several miniature rocking-stones; 'and thus he shewed how by the action of the atmosphere on their corners, many large masses of rock, which have a tendency to disintegrate into cubical or tabular blocks, might gradually become rounded into the rude spheroidal shape generally presented by the logan.'

There are a number of these singular formations in Devonshire, the most remarkable being known as the 'Nutcracker.' It is situated on a ridge near Instleigh Cleave, near Manaton, and is so delicately poised that it can be moved with the little finger. The stone is about five feet in length and breadth, 'and rests as it were upon a keel, so that a push rolls it from side to side, its progress at each vibration being arrested by a stone against which it knocks;' and a nut being placed at the point of contact is easily cracked; hence its name. Another rock, also known as the 'Nutcracker,' which formerly rocked, but is now immovable, stands on Heytor near Moreton; it is about sixteen feet in length, and is poised horizontally upon an upright rock, surrounded by a wild cluster of masses of granite. Another and larger mass of granite near it oscillates with considerable ease. The rocking-stone lying in the bed of the river at Drewsteigton, is about eighteen feet in length, and in some parts seven feet high. It could formerly be easily moved with one hand; but now—probably owing to the constant washing of sand into its bed—it is immovably fixed. It has evidently fallen from the hill above. A smaller one, but capable of being rocked with greater facility, is situated on the brow of a hill at Holy-street, in the parish of Chagford. One on East Down, named the 'Whooping Rock' from the noise it yielded in tempestuous weather, has also long ceased its functions. Two other rocking-stones, now however fixed—the one called 'Rugglestone,' measuring twenty-two feet in length, nineteen in breadth, and five feet in thickness, and the other about ten feet by nine—are near Widdacombe.

In the neighbouring county of Cornwall, rocking-stones are plentiful. A very notable one is the 'Logan Rock' at Treryn Castle in the parish of St Leven, between Penzance and the Land's End. It is a stupendous block of granite, poised on the crest of an immense pile of rocks that jut out into the sea. In size it is about seventeen

feet in length, and thirty-two and a half in circumference near its middle, and its weight is probably about sixty-five tons. The portion in contact with the under rock is of very small extent; and the whole mass is so nicely balanced, that the strength of a single man applied to it is sufficient to make it oscillate. A superstitious idea used to be current among the peasantry that although one person might rock the stone, yet no power whatever would prove enough to displace or overthrow it. On the 8th of April 1824, a young naval lieutenant named Goldsmith, who was at that time in command of a revenue-cutter stationed off the Cornish coast, resolved in a fit of wantonness to put this popular belief to the test. Accompanied by his crew, he soon proved the fallacy of the superstition, for in a very short time the united strength of the party was sufficient to 'log' or move the stone a short distance from its position; but an adjoining rock kept it from going over the cliff. Trifling as the alteration was, it destroyed the rocking property of the huge block; and the mischievous lieutenant found all the efforts of himself and men unavailing to restore it to the place which for ages it had occupied. His action so enraged the inhabitants of the district, that they complained to the authorities; and the result was, he received orders from the Admiralty to replace the rock. The task, on account of the peculiar position of the logan-stone and surrounding rocks, was a very difficult one; but at length, with the assistance of ropes and machinery from Plymouth dockyard, it was reinstated in its former resting-place. It now stands on a short iron bolt, but cannot be 'logged' nearly so easily as before it was so mischievously tampered with. There are a number of smaller logan-rocks in this district, the name 'logan' being taken from the Cornish 'logg' to move to and fro. One formerly in the parish of Constantine, between Penryn and Helston, was larger than the one last described; but the influence of the elements, which probably first caused its singular shape, has now robbed it of its facility of movement. At Sithney, four miles from Helston, is one called Mén-anber, the British word for the holy-stone. This used to be a fine logan, until it was thrown down by order of Shruballs, Oliver Cromwell's governor of Pendennis Castle, on account of the superstitious adoration with which it was regarded by the inhabitants of the neighbourhood. In the southern corner of the isthmus leading westward to Carn les Boel are several rocks resting one on another; the uppermost, fifteen feet long, six high, and seven broad, is so delicately poised that from one position a child can easily 'logg' it. Others occur also in various parts of the county, one notable example being at Zennor. Several rocking-stones occur in the Scilly Isles, notably one at St Agnes, very high, and nearly globular in shape.

About three miles from Monmouth and one from the Kymin occurs the 'Buckstone,' a logan which can be rocked with a moderate degree of strength. The brow of the hill on which the Buckstone is situated inclines at an angle of twenty-five degrees, and any small stone laid down by the visitor will immediately roll down the declivity; but the great rock, which is of pyramidal form, and nearly sixty feet in circumference, has kept its place for ages. In Camden's *Britannia*, 1722, men-

tion is made of what was known to the learned author as *Y maen Sigl*, or the rocking-stone, situated on a sea-cliff within half a mile of St Davids, Pembrokeshire. This, like the one at Sithney, was thrown down by the Puritan soldiers during the Commonwealth. On the western brink of a hill near Elwysilan, Glamorganshire, about midway between Merthyr and Cardiff, is another example, known to the natives by the name of *Y maen Chwyf*. The block is composed of rough sandstone, and its size has been estimated at about two hundred and fifty cubic feet. A moderate application of strength will give it considerable motion, which may easily be continued with one hand.

Near Llandudno, Caernarvonshire, is one called by the inhabitants *Crid Tudno*—that is, St Tudno's Cradle. Some mischief-loving person has thrown it off its balance; and now, instead of rocking to and fro as it used to do on the application of one finger, it lies fixed like any other of the blocks near it.

On a hill on Ashover Common in Derbyshire is a rocking-stone twenty-six feet in circumference, called '*Robin Hood's Mark*,' which oscillates with moderate force. On Hathersage Moor in the same county is one somewhat larger in size; and others also still exist in the same neighbourhood. Some small ones also occur at Stanton Moor; but the most notable examples are the '*Rowter*' or '*Roo-tor*' rocks at Birchover near Winster. The largest of these is about ten feet in height, and over thirty in circumference, and it rocks with great ease. On Whitsunday 1799, this fine stone was overthrown by a party of wild young fellows, by way of frolic, and although restored as near as may be to its original position, it has never rocked or '*roo'd*' (rolled) so well since. On another part of this stupendous mass of rocks is a second rocking-stone known as the '*Finger-stone*,' which although of considerable size, may with the most perfect ease be moved with one finger. On the Bradley Rocks close at hand, too, is a rocking-stone; and another of smaller size occurs on Winster Tor.

At Walton in Lancashire, five of these stones are situated so contiguous to each other that if one is touched, the motion is communicated to all the rest. Several interesting examples occur in Yorkshire. At Brimham Rocks, about a mile and a half from the Dacre Banks Station near Harrogate, is a remarkable group of three, composed of millstone grit, the centre stone being supposed to weigh a hundred tons.

At a short distance from these, the '*Boat*' rocking-stone, of about forty tons weight, is perched on the edge of a precipice, and can be moved with very slight pressure. At Brandrith Crag, nine miles from Harrogate, on the road to Bolton Priory, is one weighing upwards of twenty tons, and capable of being rocked with great facility. There is also one at Thornthwaite in that neighbourhood. Another, near Halifax, is ten and a half feet long, nine feet five inches broad, and five and a quarter feet thick. One or two cases occur amid the Cumberland hills; and in *A Tour through the Island of Great Britain*, by Defoe and Richardson (1769), we find mention of one near Balvaire, in Fife, the oscillating power of which was destroyed by the soldiers of Oliver Cromwell.

Grosé, in his *Antiquities of Scotland*, 1797, speaks of what he terms a *logan-stone* so poised as to

be movable with a small exertion of force. This huge stone, he says, stood near the summit of the Kell Rin Mountains in Galloway. It was known as the '*Mickle Lump*;' and was eight feet nine inches long, five feet one inch and a half in height, and in circumference twenty-two feet nine inches. On the summit of the wooded pyramidal hill, Craig-y-barns, which forms so remarkable a feature in the landscape at Dunkeld, is '*what used to be a wonderful rocking-stone, but the stone has been fastened by the insertion of wedges.*' In the Isle of Arran, an interesting example of rocking-stone may be seen near the shore at South Sannox.

Several instances occur in Ireland. Camden speaks of one at Clonmany, County Donegal, described to be of vast size and pyramidal form, and known by the name of *Magarl Fhin mhic Cuill*. At Brown's Bay, on the coast of Antrim, is a remarkably fine rocking-stone, well balanced on a projecting rock; it can be moved with great ease in one direction. On the side of a lofty hill in the Coom Dav or Black Valley, near the Upper Lake of Killarney, County Kerry, is the Balance Rock, spoken of by Mr and Mrs S. C. Hall in their elegant work on *Ireland*, as a '*Druidical*' memorial of great antiquity. This stone is likened by Moore to the poet's heart, which

The slightest touch alone sets moving.

But all earth's powers could not shake from its base.

On the side of Slieve Ban, near Rostrevor, is a large block of granite, probably deposited there, as so many have doubtless been, by ice, which formerly is said to have been easily rocked. Tradition affirms that the mass of granite '*was pitched there from the Carlingford Mountains by Fionn M'Comhal, who, having accepted a challenge from a celebrated Caledonian giant, travelled as far as Carlingford to meet him. Benandonner the Scotch giant having landed at Dundrum, came as far as Slieve Ban to meet his adversary Fionn. The latter, as a salutation or exhibition of his strength, is said to have taken this lump of granite from a gap—still shewn in the Carlingford Mountains—and heaved it across the lough. It fell at the feet of bold Benandonner, who was so much startled at the strength of Fionn, that he declined further competition, and returned at full speed to the quiet of his native Scottish hills.*' At Luggala, on the eastern side of the valley, a rocking-stone is said to have been thrown down by a party of military in 1800, and now lies immovable some yards from its original position. On the Three-Rock Mountains, County Dublin, culprits are said to have been '*placed under the stone, which was made to vibrate over their heads and threaten death at every instant.*'

It is unnecessary to prolong this list of examples of '*logan*' or '*rocking*' stones; those named being only a small proportion of what are known still to be in existence. They occur in most parts of the globe, and are associated in many ways with the beliefs, the superstitions, and the history, in some cases, of the localities where they occur; and are invariably of interest to tourists and others in quest of natural curiosities.

## SEA-SICKNESS.

BY A VICTIM.

MANY persons could have a much more pleasant and varied holiday if it were not for the suffering caused by sea-sickness. How real and how severe this suffering is, many readers will not in the least comprehend; while others understand it but too well. In the assured belief that it is possible to palliate its miseries, and sometimes to prevent it altogether, the following hints are submitted: several of them derived from personal experience.

In the first place, sea-sickness is mainly the result of the motion of the ship affecting the brain. This may be confirmed by observing that the motion of a swing, or even of a passenger-lift in an hotel, will affect many persons very unpleasantly. Hence it follows that persons of excitable temperament or susceptible nerves are the most likely to suffer at sea. In prospect of a voyage, persons liable to sea-sickness should keep themselves as calm as possible. If there is fuss and hurry and excitement up to the last moment before starting, the liability is much increased. It is also well to be specially careful of the diet and the general health for a few days before sailing, and particularly not to indulge in rich food. The marvellous connection between the brain and the stomach which causes sea-sickness may thus be turned to account in resisting it. Shortly before starting, a plain and nourishing but not heavy meal should be taken. This rule scarcely admits of any exception; on no account go to sea with an empty stomach. Even if it is perfectly certain that the meal will be thrown up shortly—if painful experience has convinced the traveller that he or she cannot possibly escape illness, it is most unwise, indeed it is somewhat dangerous, to encounter sea-sickness without food. Even between the paroxysms, something fluid may often be taken with advantage. Sailors say, avoid fruit in immediate prospect of a voyage; and the advice seems sound, for several reasons. At any-

rate, I have known free indulgence in fruit before starting to be severely punished ere very long.

The will and the imagination have much to do with this form of suffering. When mounted on a hard-trotting horse, and above all when leaping frequently in the hunting-field, the brain and stomach are rapidly agitated and in very active motion; yet no idea of being sick is entertained for a moment. Resolute resistance certainly has great power; while an apprehensive imagination can do much—as elsewhere and in other matters—to precipitate a crisis. It by no means follows, however, that the victim of sea-sickness is a coward. There may be no sense of personal danger, but even a high degree of intrepidity in the presence of danger, in persons who nevertheless will succumb to the unaccustomed sensations of a sea-voyage. But of course panic is most likely to aggravate these, and all that is possible should be done to reassure timid sufferers.

When the voyage is to be a long one, and the idea of altogether escaping can scarcely be entertained, it is best to go to your berth at once and remain there till the brain has got accustomed to the motion of the ship. Standing on deck and watching the receding shores of your native land may be very poetical, but it is often very injudicious, and incurs a heavy penalty. Better to lie down immediately, and take very light food for some time. On the Cunard boats—possibly on others—good beef-tea with oatmeal in it is supplied to the invalid passengers; and is in every way a suitable diet. Let the sufferer persevere in taking it at proper intervals, and by degrees more and more will be retained, till in time solid food may be attempted. Brandy is almost always a mistake, and in the majority of cases a very great mistake; it stimulates too strongly the already over-excited brain, and readily increases acidity in the stomach. Should it be given under medical orders—to relieve faintness, for instance—it is well to mix it with soda or potass water. The effervescence of the latter is often very welcome, and is considered helpful as

against the nausea, while the alkaline qualities may tend to relieve the acidity. If the state of the weather permits, plenty of fresh air should be admitted into the cabin.

But I wish to speak now of shorter trips—holidays—in which it is often so desirable to escape from sea-sickness. The first day or two of a short continental tour are sometimes rendered very uncomfortable by it; the prospect of the return sea-passage hangs like a dark cloud over the rest of the trip, and brings the traveller back fatigued and disgusted instead of being invigorated and charmed. No wonder that the idea of a submarine tunnel has been seriously entertained, for what with the 'chopping' sea and the small steamers necessitated by the very shallow tidal harbours, at Calais and Boulogne, the passage—short as it is—is often horribly miserable. Here, as for the longer voyage, I say, lie down as soon as possible. Secure a place on deck or below according to taste, and assume the horizontal position without loss of time. On no account look about you. To watch the motion of the ship or the waves is a luxury that must be dispensed with by those who are fighting against nausea. For those who can afford it, a draught of good champagne at starting is excellent; and one or two more while *en route* may not come amiss. But beware of cheap and bad champagne as of a dangerous enemy. Total abstainers may find good soda-water serve almost as well. One glass of old dry port wine at starting will be preferred by some to the champagne, and has the advantage that it can be easily carried in a pocket-flask. Do not attempt to talk, or even to listen too intently to conversation. A condition of contented stupidity should be your aim; and if you are so fortunate as to go to sleep, you will indeed have gained a victory over the demon of the sea. For myself, I am so bad a sailor that even writing this paper gives rise to some very uncomfortable sensations; but the plan I have recommended, with a resolute effort of will, has seen me through the difficulties of a crossing when the Channel was far too lively to be pleasant. Happily, large new harbours are now in course of construction at Calais and Boulogne, which will enable a better class of steamer to be employed, and thus the horrors of 'the middle passage'—as it has been spitefully termed—will be much abated. Possible sufferers should decline invitations to the bridge, however tempting the breeze; they are so much farther from the axis of movement when the vessel rolls, and therefore run the more risk. The minimum of motion is of course on the cabin-floor. Beware of getting too near to the engines; their warmth and the smell of hot grease which always surrounds them, are most undesirable. And avoid bad company, that is, the company of any one who is certain to be overcome, the proximity of whose sufferings will perhaps be the drop too much for you, the 'last straw' that will overburden your own endurance. It has happened to me to find myself suddenly surrounded with sea-sick fellow-passengers. Previously I had been getting on remarkably well; but in five minutes I was as bad as any of them. If you stay on deck, take great care to be warmly clad, and especially to be well protected between the shoulders and around the stomach; a chill in these regions, says Dr Chambers in his *Manual of Diet*, is

highly calculated to bring on an attack of sea-sickness.

Curious preventives are recommended, and used, by different people, and according to their own testimony with very satisfactory results. Munching 'captain's biscuit' seems to soothe the system in some cases, and is persevered in with great energy. I have been assured by a woman who had several times tried it, that strong peppermint-lozenges, eaten freely, protected her. Some persons have faith in lemon-juice for the same purpose. For great invalids, it may sometimes be desirable to use chloral, and thus avoid the strain on their exhausted systems; but this should never be done without consultation with their medical adviser; and the proper dose should be put up beforehand, to avoid the risk of any mistakes when on board. Such mistakes might easily occur amid the confusion of travelling, and an overdose is a serious matter. As the effect of chloral usually lasts about seven hours, no one travelling alone should venture to employ it, or he may be suspected of intoxication. Some special arrangements will of course be needful for the comfort of invalids who may be landed ere they have fully recovered from the narcotic; their appearance may happen to be a little alarming.

As a cure, not a preventive, certainly, one of the boldest suggestions comes from a temperance physician, who maintains that tepid water affords the most effectual relief to sufferers from sea-sickness. He has administered it, he publicly asserts, with complete success, to persons who were enduring extreme suffering from violent sea-sickness. Its first action was just what might have been expected; the stomach rejected it immediately, but seemed to be at once tranquillised. After an interval of rest, during which perfect relief from sickness was enjoyed, a glass of cold water rapidly restored the tone of the system, and the rest of the voyage—from Jersey to Southampton, in rough weather—was much enjoyed. If a wider experience should establish the general efficacy of this most simple and inexpensive remedy, its discoverer will be entitled to a high rank among the benefactors of mankind.

But it is remarkable that treatment which is of the greatest service to one individual sometimes appears to have but little effect upon another; differences of temperament and constitutional idiosyncrasies come into full play here. The homœopaths confidently recommend their preparation of petroleum as a remedy, with a wet compress round the abdomen in severe cases; for a preventive they advise *nux vomica* thrice daily for several days previous to embarkation. Finally, it is confidently asserted that broken ice in a long narrow bag applied to the spine, has the power of abating and in some cases of entirely preventing sea-sickness. But this treatment is obviously difficult of application, and therefore ill-adapted for general use in short voyages on crowded steamers.

Just a word to the fortunate individuals who are exempt from this most distressing form of suffering. They can scarcely understand how much they escape, and are sometimes in the best of spirits, and prone to make light of sufferings in which they do not share. But some of them are guilty of real unkindness at such times; will 'chaff' their unfortunate companions and offer them

unsuitable refreshments. All this is very cowardly, and deserves the strongest censure. Could they but realise for themselves what sea-sickness is, they would at least refrain from adding to the annoyances which it entails. The poor Irishman stated the case very neatly who said to his friend: 'O Mike, it's just awful! At first, you're afraid the ship will go down; but afterwards, you're afraid that she won't.' It is too often the case, however, that the victim of sea-sickness has to endure ridicule as well. The crowds that sometimes assemble at watering-places to watch the landing of the drenched and exhausted passengers, too often behave in a way that does little credit to the civilisation of the nineteenth century. And the selfishness of smokers is sometimes painfully apparent at sea. The proximity of pipe or cigar may be fatal to a neighbour's chances of escape; yet the request to remove it, or to cease smoking, often receives but a sullen compliance, and sometimes even a positive refusal. When we reflect that the voyage may be an invalid's quest after health, or the brief holiday of some overtaxed and careworn toiler, the infliction of any needless suffering is no ordinary wrong.

For those who can enjoy it, travelling by sea is among the greatest of pleasures. Inexpensive, at least as compared with other modes of journeying, restful and invigorating in the highest degree, it is to be wished that all were capable of enjoying its benefits without any painful drawback. If science should at any time thoroughly surmount the discomfort now too commonly attendant on sea-voyages, a new era in human progress will indeed have opened. Meantime, let those who are compelled to travel thus, or who choose to do so whether they suffer or escape, find as much consolation as they can in the reflection that doctors frequently declare that however unpleasant a bout of sea-sickness may be at the time, it is often very serviceable in its results, and greatly relieves the system, though at the cost of severe temporary disturbance.

## A LIFE'S ATONEMENT.

### CHAPTER XXVII.—HISTORY.

*'He could not guess that the lost friend had been so near to him.'*

DR BRAND was driving down Piccadilly, or rather was being carried along that thoroughfare, one blazing, glaring, dusty summer afternoon. He sat humping his back, with his elbows on his knees and his chin on his hands, looking straight before him and seeing nothing. The open carriage in which he rode and the pair of bays which drew it, were among the best of their kind; for Dr Brand was prospering greatly, and had a taste in equipages and horse-flesh, which he could afford to gratify. The turn-out was remarkably unprofessional, as might be expected in the case of a man so little conventional in all things. The Doctor was so deeply absorbed in the endeavour to solve the matter in his mind, that he did not notice a figure on horseback which came between him and the sunlight. The figure was that of a soldierly-looking bronzed young fellow who had lost an arm. The light-brown beard with some-

thing of a reddish tinge in it, and the close military cut of the hair, together with a certain set solidity of figure which had not of old belonged to him, might have made it necessary even for an old friend to look twice before he recognised Arthur Hastings. There was the same calm look of lazy and impudent humour in his eyes, though his bronzed skin made them seem curiously light in colour; and though his ancient jauntiness of carriage was subdued, it showed itself a little still. He rode on alongside, until the Doctor became aware of the figure between him and the sunlight, and gave it a cursory glance of no-recognition.

'Why,' said a voice, 'should Æsculapius drive like Jehu, son of Nimshi?'

The Doctor turning, rose in his carriage and held out a hand of cordial welcome.

Hastings shook his head, and nodded in the direction of his empty sleeve. 'Can't,' he said. 'If I loosed the reins'—indicating his horse by another nod—'he'd bolt. How d'ye do?'

The Doctor called to the coachman to bring the horses to a walk; and Hastings having subdued his horse's inclination to get into the carriage, went soberly alongside.

'When did you get back?' asked the Doctor.

'Day before yesterday,' said Hastings. 'Was just coming round when I saw you.'

'I never heard of *that*,' said the Doctor bluntly, nodding at the empty sleeve. 'When did you get it?'

'I got it,' said Hastings, 'if you mean the limb, very early in life indeed, and parted with it about three days after the last racket at the Malakoff.'

'Never heard of it,' said the Doctor; 'though I heard you did your duty there, sir.'

'Thank you,' said Hastings, simply and sincerely. Early in their knowledge of each other, the elder man had given a little lecture to the other, in which he had developed his own ideas of duty with straightforward plainness.

'Where do you come from now?' the Doctor asked.

'From roaming to and fro in the earth, and going up and down in it.'

'Doing something better, I hope,' said the Doctor, 'than quote Satan by the way?'

'Better at times, I think.—Are you busy?'

'I am always busy. Nobody has a right to be anything else.'

'Some men are born idle,' said Hastings; 'some achieve to idleness; and some have idleness thrust upon them.'

'Will you dine with me to-night?' asked the Doctor. 'Eight o'clock. Don't dress. I never dress for dinner. Absurd habit. Won't encourage it at my table. Will you come?'

'On wings swift as meditation or the thoughts of love,' responded Hastings; and the Doctor waving his hand, cried 'Good-bye' and 'Drive on' in a breath, and was gone in a cloud of dust of his own raising. With a parting nod, the young man turned back and rode up the blazing street, passing a dusky Smyrniote, who in the uniform of an English groom had followed him at orthodox distance, and now resumed his place, and came on soberly in true oriental indifference to the glances levelled at him by the curious. When Hastings reached the Doctor's house, a little before the appointed time, the Smyrniote accom-

panied him still, and took up his stand in the hall outside the dining-room door, where he startled Mrs Brand more than a little, as she passed him on her way up-stairs from an inspection of the kitchen. She made no remark about him, however; but the Doctor coming in a moment later with Major Hartley in his train, had no scruple of delicacy.

'Where did you pick up the nigger?' he asked.

'I picked up the nigger,' Hastings returned—'to copy your own ungraceful locution—on the tented field.'

'Why do you carry him about in England?' asked the Doctor ungraciously.

'Well, you see,' said Hastings, with a little flush upon his face, which nobody remarked, 'he took to carrying me about at first.'

'Now, that's not fayah, Hastings,' said Major Hartley, twirling his big moustaches with both hands.—'That's quaita unfayah, Mrs Brand, I ashaw yaw.' The longer the Major lived, the more he drawled, and the wilder grew his dandified distortions of his native tongue. The Doctor and his wife looked at Hastings, who blushed palpably, and had nerve enough to utter no more than 'Pooh!' The confusion of so fluent a person was too remarkable to go unnoticed, and both looked inquiringly at the Major. 'What an extraordinary fellah you are, Hastings, to be shaw!' said the Major.—'Now you'd really think, Mrs Brand, that a fellah would be proud of a thing like that.'

'Of a thing like what?' asked Mrs Brand.

'Don't be an ass, Hartley,' said Hastings in a low rapid tone, which was not intended for anybody but the Major, but was heard clearly by all three. The Major laughed pleasantly, with a look of mischief; and Hastings walked to the window with an abrupt and angry step.

'I insist on relating the incident,' said the Major; 'but in consideration of yaw feelings, I'll be brief. Hastings fetched the niggah out of a regulah storm of fiah one day, when the poor beggah was wounded by a fragment of a shell. Three months latah, the niggah retaliated, and fetched Hastings out of a storm of fiah, when he was lying quite helpless with a broken arm. And since then, they've been inseparables; and by Jove! Mrs Brand, I think they ought to be. Don't you, Madam, now, don't you?'

The Doctor strode across the room, and brought his hand down heavily on Hastings' shoulder with a loud cry of 'Bravo!' 'And,' said the Doctor, facing round with an air of serio-comedy, 'I'll knock the next man down, or woman either, who dares to say a word about it.'

An hour had passed, and dinner was nearly over before Hastings had recovered his equanimity; and for the first time in any man's knowledge of him, he was depressed at a scene which should have been festive. When the Doctor found him gradually recovering from the effects of the Major's exposure, he renewed his inquiries as to the movements Hastings had made since the close of the war.

'I come last,' he answered, 'from Basinto Land. I went from Hong-kong to Ceylon, and found a man with a steam-yacht who wanted to go to the Cape of Good Hope, and could get nobody to chum with him. So we cast in our lot together; but I

found him cantankerously inclined, and left him at the Cape, and rambled about alone.'

'What took you to Hong-kong?' asked the Doctor.

'Well,' said Hastings, 'I had some notions about going into the House at that time; and since a man must have a crotchet there of one sort or another, I thought the opium-trade would serve for mine, and went out there to look at it.'

'What made you change your mind?'

'I don't think I did change my mind,' he answered with a flippancy which was more a thing of habit than of feeling. 'I think my mind changed me. Anyhow, I came to the belief that there were things better worth doing than going into the House.'

'Ah!' said the Doctor. 'What are they?'

'I'll tell you one of them some of these days,' said Hastings calmly.

'By the way,' asked Dr Brand, 'do you remember Bolter's Rents?'

'Bolter? Bolter?' said Hastings questioningly. 'I had a horse of that name once, and he deserved it.' Then with perfect irrelevance, he quoted, 'For the blood-boltered Banquo smiles on me.'

'Bolter's Rents,' said the Doctor, 'is a haunt of thieves, and worse—a haunt of cadgers, tramps, crossing-sweepers, the riff-raff of the London streets; a tumble-down fever-den; a brick-and-mortar ulcer.'

'Ah! yes,' said Hastings; 'I remember. A place off Oxford Street. Mrs Brand was interested in some people there.'

'It's in the market,' said the Doctor.

'If I knew the owner,' said Hastings, with an approach to a smile, 'I might recommend him to somebody who would draw up a description of the place, and help him to sell it to some advantage.'

'I want to help him to sell it,' said the Doctor. 'But we can talk about that matter at another time.'

The talk drifted into other channels; and a little later than ten o'clock the Major took his leave, pleading an engagement at the Opera, which he had so far deserted for the pleasure of meeting Hastings.

'Now,' said the Doctor, settling himself easily in a deep arm-chair, 'light another cigar, fill your glass, and settle down to talk. I want you to do justice to yourself. You have heart and brains, and you mustn't waste them. Have you found a purpose yet?'

'Two or three,' said Hastings.

'I want to give you another,' said the Doctor, 'if your hands are not too full. That place I spoke of—Bolter's Rents—is one of the disgraces of London. If it got into the hands of a good man, it might be made a credit to any city. If it gets into the hands of an ordinary speculator, it will be pulled down, and its inhabitants will go all adrift into other places of its kind. If it came into the possession of a man who considered those poor wretches, it might be gradually rebuilt, and altogether purified, physically and morally. The poverty might live there still under cleanly conditions, and the scoundrelism be hunted out of it, or taught to behave itself; and the thing—though it could not yield an extraordinary profit—could be made to pay. I sha'n't apologise for suggesting this to you; for I believe it's just the sort of thing you want.'

'Don't you think the better course would be to pull the place down at once and build anew?' asked Hastings.

'No,' said the Doctor. 'There are a hundred people there who are half-civilised already, who would be scattered to the four winds in that way. If the place could be mended gradually, we could keep them together, and they would help under better circumstances to leaven the mass about them.'

'I will look into the matter,' said Hastings, 'and let you know what I think of it. Where is the place?'

The Doctor described it. An entry between two shops, numbered so-and-so, led to a court. There was no mistaking it. The name of the agent who had the sale of the property was noted; and shortly before midnight, Hastings took his leave with the faithful Smymote behind him. The Doctor's proposal went exactly with his own desires; and if the truth had been known, I am inclined to believe that it was chiefly with the idea of saving money for some such *coup* as this that Hastings had spent so much of his time in travel. Wishing to see the place at once, he turned into Oxford Street, and walked leisurely towards Bolter's Rents. The moon rode in a sky which was almost cloudless, and the street gleamed before him like a river. He reached the entrance to the court, and looked down its black perspective to the one dull lamp which twinkled at the bottom. 'Gel bounda, Ali,' said he to his servant; and the man came, and followed him closely down the fetid way, where nameless odours reminded him of the popular bath of his native land. They marched once or twice round the courtyard, Hastings looking up at the disreputable buildings, and the man following him in wonder. A door near at hand grated on the gritty floor of one of the ground-rooms, and a bearded man came out into the court with a basin, which he emptied upon the broken pavement. He looked up at Hastings and his servant and passed them by, leaving the door through which he had passed still open. The light of a candle shone through the doorway; and Hastings glancing in, saw a man tossing miserably on the quarried floor, upon a couch of straw and sackings. He had heard the murmur of a voice on passing the door in his first slow journey round the court, and knew it now for this sick man's moaning. Beckoning Ali to follow, he entered the room and looked about him; and it is not too much to say that he shook and sickened with pity and loathing. The man who lay upon the floor was muttering rapidly to himself in German, and tossing a weary head from side to side. Since we saw Hastings last, he had seen much of the world, and had looked on many of its worst troubles. But he had never dreamed of anything like the horror of this place being possible in England. I can only tell you of its desolation—not of its filth, for to set that down would be to make myself unreadable. The man himself, with his vast beard of matted black swaying to and fro across his half-naked chest, and his wild hair nearly a foot long straggling down to meet it, was terrible to look at. His eyes and his teeth gleamed as he rocked his head from side to side, and he moaned ever and always of trifles probably forgotten, until fever brought a stimulant

to memory before quenching it. Hastings, who spoke German better than most Englishmen, addressed the man in his own tongue, asking if he could be of use to him; but he received no answer, and stood sorrowfully helpless for the minute, until the man he had first seen returned with the basin balanced carefully in both hands. The new-comer called out in German in some cheering phrase as he entered, and did not at first observe the two intruders. He started a little when he saw them, but said nothing, and kneeling down, busied himself by administering to his patient the contents of the basin.

'Has this man been long in this condition?' Hastings asked in English.

The man still tended the other, and returned no answer, but started again visibly at the sound of the voice. Hastings put his question into German.

'Yes,' the nurse answered in the same tongue, with his voice muffled in his gray beard and his head bent above his patient.

'Is he a friend of yours?'

'No.'

'Do you live here?'

The man pointed upwards to the roof, but gave no other answer. Hastings stood silent for a moment, and then asked: 'Has the man no other nurse?'

'No,' was the answer, still muffled by the beard.

'Can you not remove him to a hospital?'

'He will go to-morrow,' said the man, still assiduously bending over his patient.

Hastings' accustomed ear caught the sound of an accent foreign to the language in which the man spoke. 'You are not a German,' he said. 'What are you?'

The man returned no answer; and Hastings, thinking that the fellow's nationality was no business of his if he chose to conceal it, stood for a little while and watched the feeding of the patient. By-and-by he asked what the sick man was suffering from.

'Fever,' said the nurse briefly.

'Is the disease contagious?'

'Yes.'

'Are you not afraid of catching it?'

'No.'

'How long have you tended the man?'

'To-night only.'

'Has any one else attended him?'

'No.'

'If I give you a little money, will you expend it on him, and send him comfortably to the hospital?'

'I have given notice, and he will be sent for to-morrow.'

'Then you do not want money.'

'No.'

'How do you live?'

'I work.'

'At what?—No answer.—'Is there much sickness here? Are you often employed in this way?'

'Sometimes.'

'Who summoned you here to take care of this man? Who told you he was ill?'

'Nobody.'

Hastings crossed over to the patient, who lay quieter now; and the nurse walked away and looked out through the open door. Ali stood by,

and marvelled at it all, but said nothing. He had implicit confidence in his master, and believed that all he did was right. 'What is there in that face I know?' his master was thinking to himself as he bent above the fever-stricken wretch on the floor. 'Is it a fancy? Have I seen the face in the street? Whose is it?' He could find no answer in his thoughts, though he called scores of faces to remembrance. 'I have seen this man somewhere before,' he said aloud. 'Do you know who he is?' He received no answer; and turning round, he saw that the nurse had disappeared. After standing irresolute for a moment, he left the place, and walked back into Oxford Street, where he went on until he saw the red lamp of a surgeon, whom he summoned. The medical man did not care to enter Bolter's Rents at that time of night without a policeman, and indeed flatly refused to do so; but an officer was soon found, and he, happy in the *douceur* Hastings gave, led the way with an air of protection.

'I cannot help thinking,' said Hastings to the surgeon, as the latter knelt down to feel the patient's wrist, 'that I have seen the man before somewhere.'

The patient was murmuring still in German; but when Hastings spoke thus, he paused and seemed to listen. When he began again, he spoke in nasal English, and Hastings fancied he heard his own name amidst the murmurings. Stooping lower, he heard distinctly. It was of no use, the man was saying; he really couldn't do it. Money was very tight *zhoost* now.

'Tasker?' cried the listener suddenly, in a voice of amazement. The sick man made a motion to rise, but fell back again. For a moment, at the cry, his eyes took an aspect of intelligence; but the unearthly brightness of fever returned, and Tasker—for it was he—went back to his German murmurings.

'This man was a money-lender in the City six or seven years ago,' said Hastings, in answer to the look of astonishment and inquiry with which the surgeon regarded him. 'I had dealings with him in my nonage. He was almost scoundrel enough to deserve even this; but I was amazed to find him here. Where is the man who was tending him?'

The bearded man was just outside the door, and had heard the talk and the cry of recognition. Hastings stepping to the door, called after him as he drew off in the shadow of the great overhanging wall. The policeman who was posturing at the door with a set of knuckles at his ribs in the region of his waist belt, inquired if his honour wanted that man. Hastings, scarcely knowing why, said 'Yes;'; and the policeman went after him and brought him back. He came submissively with downcast looks.

'Why do you want me?' he asked in German. 'Let me go. I trouble nobody.'

'Take that,' said Hastings with a sudden impulse, slipping a sovereign into the hand which waved towards him in appeal. 'Good-night.'

With bent head he drew back into the shadow, and the deeper shade of the doorway seemed to absorb him as he entered it.

'Curious character that, sir,' said the officer, stiffly posturing like a model for a comic sculptor. 'Quite the gentleman to speak to. Name of Jones. Had a quarter of a millying o' money,

and lost it all on three Derbies. Calls him the Dook round about here and at the Docks where he works.'

'Indeed!' said Hastings, beginning to wonder whether all the residents of Bolter's Rents were broken men of substance. 'Have you known him long?'

'Hever since he come to grief, sir. I was at the Heast-end of town for several 'ears, and knewed him at the Docks. Quiet, hinoffensive feller, sir, as ever lived.'

Why was it, Hastings asked himself as he walked to his hotel, with Ali in his place behind him, that the image of a dead friend who fell before Sebastopol should be so closely with him? An echo of Frank Fairholt's voice was in his ear; in his mind's eye he saw the friendly candid eyes and the handsome wilful face, and in his heart he repented of the evil of his youth, and his spirit was sorely troubled.

'It was my fault mainly,' he confessed, 'that poor Frank went wrong at all. But time is merciful; and most of the griefs his loss created have been healed. And he is at rest, poor Frank, at least.' He saw the little round of palisades which marked the spot behind the trenches where the dead soldier lay, and the black knolls here and there which covered his old comrades. He could not guess—how should he?—that the lost friend had been so near to him. How could he dream that Frank Fairholt was kneeling lonely in that dark fever-den, praying God for patience that 'he might bear his burden to the end!'

### SOMNAMBULISM.

'NIGHT is the time for sleep,' sings the poet, and assuredly with truth. The hush of darkness lures us to repose, as naturally as the morning sun impresses on us the necessity to be up and about our labours. Nor is this state of things confined to the human system. At close of day, quiet settles on all things, and a cessation of activity and motion is to be observed in creation. Action is succeeded by listlessness, energy by languor, and the desire of exertion by the inclination for repose. But it is not by mere repose from action that our wasted powers can be recruited or our nervous energy restored. Oblivion of feeling and imagination is essential to sleep, and in a great measure a constituent part of slumber. The sensorial power must cease to be in an active condition; and it is only when the nervous system gets exhausted, that the sensibility and energy displayed by this power decline, and fall at last into a state of torpor or sleep.

But while this is so, it by no means follows that during sleep all the divisions of the nervous system are equally quiescent—that thought, sensation, feeling, and movement are alike suspended. In our waking moments, when the mental faculties are intensely occupied, we are in a great measure insensible to external impressions; thus Newton in a fit of intense thought placed his watch in the saucepan to boil, while he held the egg in his hand. So with us in sleep; one set of organs may be active, while the others are dormant; and

*vice versa*. Hence the phenomenon of somnambulism. Dreaming originates in a similar condition of the nervous functions, and consequently bears an intimate relation to somnambulism, the latter not infrequently arising out of the former. Thus if, during sleep, the clothes chance to fall off us, we are liable to suppose that some person has taken off our clothing, perhaps as we walk the street; and we feel all the shame and inconvenience we are thereby put to. We rush to hide ourselves in some place of refuge under this ideal misfortune, while everything is depicted with the force of reality. Or we hear perhaps the noise of a railway train in motion, while our sleep is still incomplete, and we believe that we are being pursued by some monster.

We have in these columns, on more than one occasion, given remarkable instances of persons who, while under the influence of somnambulism, have done strange things. The following cases will be found equally curious:

In the summer of 1877 the writer took a young friend to a sea-side town in order to enjoy a month's bathing. The boy—for he was only a boy of sixteen—had been travelling by steamer, railway, or coach from six o'clock on Sunday evening to four P.M. on Monday without cessation, and had slept scarcely or not at all during the night's journey. We retired to rest at ten P.M., my room being next to his, both being on the drawing-room floor. I had just lain down and was dozing off to sleep, when I heard a loud crash of glass, followed by hysterical cries, which seemed to come from some person at the foot of the staircase leading to the corridor, which opened on our respective bedrooms. Rushing to the head of the stairs, I demanded what was the matter; and with difficulty understood that some person had jumped through the window. Knowing that my friend was a somnambulist, I at once flew to his room, to find the window open, the bed empty, and the boy gone. Dressing myself hurriedly, I descended the staircase, and issued forth with the landlord to look for my friend. For some time no trace could we find of him; but at last, on turning a corner of the road leading to the cliffs, we beheld a white figure, to all appearance utterly inanimate, supported by two sailors, who fortunately happened to be there at the time. I soon recognised my friend; and happily found I had more reason to be frightened than alarmed.

He had been wounded, but on getting him back his wounds were dressed, and he was at last able to tell the cause of his well-nigh fatal accident. On going to bed, fatigue caused him to fall into a state of semi-sleep only, in which he had imagined himself in a large field. Suddenly he thought he saw an infuriated bull rush wildly at him; and catching hold of a tree, as he believed, which grew beside the hedge, he swung himself over and ran for his life. In reality, what he conceived to be a hedge was the window, which opened from the top, and which was at the time let down as low as it could go; while the seeming tree was the long white hangings which stretched down the length of the window. Having thus swung himself

down to the lower window-sill, he then jumped off—a height of only two feet—and ran along barefooted on the cut stones, which caused his wounds, but which confined him to his bed for fully a month afterwards. It was in jumping from the lower window that he struck the glass with his heel, thus causing the crash which awoke me. Here was a case in which so strong an impression had been made on the individual as to enable him to relate his thoughts and imaginations while under the influence of somnambulism.

But cases of an opposite character have also arisen, where the impressions were of so transient a nature as not to leave upon memory the slightest recollection of anything that occurred. A female servant in Scarborough surprised the family at four o'clock one morning by walking down a flight of stairs in her sleep and rapping at her mistress's bedroom door. When asked what she wanted, she replied in her usual tone of voice, that she had torn her dress, and hoped her mistress would forgive her, and let her have some cotton to mend it; at the same time bursting into tears. She then returned to her room; and a light having been procured, she was found groping for her workbox, from which she was offered an empty reel; but she refused it; and taking up her gown, she pointed to two holes, which she said she wanted to mend. To quiet her, her fellow-servant threaded a needle, but with black cotton; which she indignantly refused, saying she wanted brown. Another person then spoke, when she immediately said: 'That is my mistress;' which was not the case—thus clearly shewing that in this instance she did not discern the voice, while she could see the object before her, her eyes being wide open. With some difficulty she was at last persuaded to lie down until the usual hour of rising, those around her thinking that she might then awake in her accustomed manner. This failing in effect, her mistress went up to her room, and rather angrily ordered her to get up and go to her work, as it was now six o'clock. This she refused to do, saying that she would not rise at two o'clock, and pointed to the window as she spoke. She was then shaken violently, and awoke. She now rose; and seeing the cotton box disturbed, asked why it had been meddled with. In the course of the day, several questions were put to her, in order to try her recollection; but she had no remembrance whatever of her sleep-walking, or of anything that had occurred during the previous night.

The next case exhibits a dormant state of the sense of hearing, while sight appears to have been in active operation throughout. In the summer of 1870, a young man named Johns, who worked at Cardrew, near Redruth, being asleep in the sump-house of that mine, was observed by two boys to rise and go to the door, against which he leaned. Shortly quitting this position, he walked to the engine-shaft, and safely descended to the depth of twenty fathoms, where he was found by his comrades soon after, sound asleep, with his back resting on the ladder. They called to him to warn him of the perilous situation in which he was; but he did not hear them; and they were obliged to shake him roughly to awake him, when he appeared totally at a loss to account for his being so situated.

Morrison, in his *Medicine no Mystery*, speaks of a

clergyman who used to get up in the night, light his candle, write sermons, correct them with interlineations, and retire to bed again; being all the time fast asleep. A similar story, which the writer has every reason to believe authentic, is told of one of the most popular Dissenting preachers of the present day. He had been perplexed and baffled for some days in the treatment of a subject which he had chosen for his discourse on the following Sunday; and on Saturday night, still dissatisfied, he mentioned to his wife, on retiring to rest, the difficulty he had experienced. She advised him to clear his mind of it for that night, and go to sleep. In the course of the night his wife was awaked by her husband sitting up in bed and preparing himself as if to preach; which he accordingly proceeded to do, taking for his subject the text which had hitherto so perplexed him. When done, he lay down and slept as before. In the morning, he was still thinking about the discourse which he had to deliver that day; when his wife, without informing him of the source of her ideas, suggested to him a mode of treating the subject, going carefully over the chief points in the sermon he had delivered during the night. He was overjoyed by her suggestions, which were just what he was in search of, and proceeded at once to put them into proper form. Afterwards, when informed by his wife of how she came by her information, he was greatly surprised, having not the slightest recollection of the occurrence.

So extraordinary are some of the stories told of sleep-walkers, that were they not supported by the most incontrovertible evidence, they would seem fictitious in the highest degree. Guided by a certain portion of intellect, many a somnambulist pursues with safety his wild perambulations; while others driven on by the impulse of will—the reasoning faculties being locked up for the time in utter stupor—rush into dangers of every kind. It is a well-known fact that in the retreat of Sir John Moore, many of the soldiers fell asleep, yet continued to march on with their comrades. Nor is it always safe or advisable to waken a sleep-walker, and many cases of the fatal effects of doing so are on record. Even those of strong nerves might be violently agitated by awaking in a situation so different from that in which they went to bed. Cases are mentioned where the results have been most lamentably fatal; where the somnambulist has met with the accident which deprived him of life, through want of presence of mind and discretion on the part of the waking individual who gave the alarm. Too much care cannot be taken with individuals addicted to this unhappy affection. In all cases, care should be taken not to arouse the patient suddenly, however dangerous a position he or she may be in.

To prevent a recurrence of the malady—which somnambulism is—the cause which gave rise to it, as far as we know must be removed. Should it proceed from a disordered state of the stomach or biliary system, we must make use of the proper medicines in such cases. Above all things, sleep-walkers should take plenty, but not too much outdoor exercise, avoid late hours, excitement of all kinds, too much study, or giving way to fretfulness or irritability of temper. Whatever disease can be pointed out as directly or indirectly tending to somnambulism, or even dreaming, requires to be obviated in the first instance; and

its departure will follow as a matter of necessity. The worst of it is, that often we can find no reason for sleep-walking, and can refer it to no complaint whatever. In this case, the only thing to be done is to keep the individual from running in the way of any accident; and the knowledge even of being watched will often act as a cure, by impressing the fact so carefully on the mind as to make it be always present in the attack.

With an extraordinary instance of combined sleep-talking and somnambulism, narrated in the first volume of the *Lancet*—at a time when people were bled for almost any ailment—we conclude this article. 'It occurred on a Sunday evening, to a lad sixteen years and a half old, in the service of a butcher in Lambeth. At about twenty minutes after nine o'clock, the lad bent forward in his chair, and rested his forehead on his hands, and in ten minutes started up, went for his whip, put on one spur, and went thence to the stable. Not finding his own saddle in the proper place, he returned to the house and asked for it. Being asked what he wanted with it, he replied, to go his rounds. He went back to the stable, got on the horse without the saddle, and was proceeding to leave the place. With much difficulty, owing to his great strength, he was removed from the horse, and it was by great efforts that he was brought indoors. His master coming home at this time, sent for an eminent practitioner who lived near at hand, and who stood by him for a quarter of an hour, during which time the lad considered himself as stopped at the turnpike gate, and took sixpence out of his pocket to be changed. Holding out his hand for the change, the sixpence was returned to him. He immediately observed: "None of your nonsense—that is the sixpence again; give me my change." When twopence-halfpenny was given him, he counted it over and said: "That is not right; I want a penny more;" making the threepence-halfpenny which was his proper change. He then said: "Give me my castor"—meaning his hat, which slang term he had been in the habit of using; and then began to whip and spur to get his horse to go. His pulse was at this time one hundred and thirty-six, full and hard. No change of countenance could be observed, nor any spasmodic affection of the muscles, the eyes remaining closed the whole of the time. His coat was taken off his arm, his shirt sleeves tucked up, and he was bled to thirty-two ounces. No alteration had taken place in him during the first part of the time the blood was flowing. At about twenty-four ounces the pulse began to decrease, and when the full quantity named had been taken, it was eighty—a slight perspiration appearing on the forehead. After the arm was tied up, he unlaced one boot, and said he would go to bed. In three minutes from this time he awoke, got up, and asked what was the matter—having then been one hour in the trance—and without the slightest recollection of anything that had passed; and wondered at his arm being tied up, and at the blood, &c. A strong aperient medicine was then administered; he went to bed, slept well, and next day appeared in his usual health, excepting debility from the bleeding and operation of the medicine, and had no recollection whatever of what had taken place. None of his family or himself was ever affected in this way before.'

An easy mind, a good digestion, and plenty of

exercise in the open air, are the grand conduces to sound sleep; and accordingly, every man whose repose is indifferent should endeavour to make them his own as soon as possible.

MAX GORDON.

IN SIX CHAPTERS.—CHAP. II.

EDIT'S DIARY (Continued).

March 14, 186—.

THE 'event' is a matter of history. Dr Max Gordon dined here last night with the Rousbys. My evil star being of course on the ascendant, I rose in the morning with a wretched headache, which in spite of nursing and dosing, grew nothing better but rather worse as evening advanced. Katrine implored me not to think of leaving my room; but curiosity overcame prudence, and I descended as the gong sounded, fervently hoping that no one would look as if they noticed my dilapidated appearance.

'O goodness!' I thought to myself, stopping a moment to steady my nerves before opening the drawing-room door—'I do trust he won't look as that man did who came during the doctor's holiday last summer! A calm professional joy beamed in his weasel-like countenance at the very first glimpse of me. What an aggravation of the ills of life it is to be "an interesting case!"'

I am always shy—when I have a headache, agonisingly so; and it was with smothered resentment that I endured Miss Rousby's sympathetic stroking of my hand, and melancholy gaze at my suffering visage. The old doctor was as bad; he seemed annoyed, and ordered me to bed immediately after dinner. And then, as I was presented to him, I flashed a quick glance at Dr Gordon's face, having the memory of the weasel-man lively within me. Triumph! For all the awakened interest of his answering look, I might have been any ordinary person; and neither then nor afterwards during the evening did he give sign of suspecting me to be in any other than excellent 'form.'

To his various good qualities, the new-comer adds yet that of being uncommonly good to look at. On reflection, I may say he is the handsomest man I ever saw. To be sure, they have not been many. Lord Haricourt—whom I have hated retrospectively for a fortnight—was singularly plain, and squinted; and the others we met in Scotland were all, to the best of my recollection, ordinary. But sitting opposite Dr Gordon at dinner last night, I had to own him handsome exceedingly—in a big, Saxon, King Olaf kind of way. He has fair curly hair, dark fearless blue eyes, and a beautiful long tawny moustache. (It is almost a pity to hide such magnificent teeth, I think.) His foreign travels have bronzed him, which, as I dislike men with complexions, I observe with approval. He sat next Katrine; and I looked from one to the other with my aching eyes, thinking how pleasant they both

were to contemplate. My sister in her black velvet dress, with rare old lace, looked as she always does, an uncrowned queen, with marvellous deep eyes that saddened ever and anon as they rested on my flushed weary face.

I did not want to go to bed till Kate could go with me; so after dinner I sat on a low stool, with my head on her knee, and her mesmeric touch on my hair, till the gentlemen joined us. Then, dull and stupid with pain, I got a seat in the shade of the window-curtains, and prepared to watch in a dazed way what went on in the room. And the strange scene which enacted itself before me, I am half inclined now to dismiss from my mind as a dream.

I saw my sister rise and go to the pianoforte. I like when I have the chance to mark the effect on strangers of Katrine's singing; and now, though suffering too much to take more than a passive interest in anything, I turned my regards on the face of our new guest as the first rich mournful notes of Mozart's *Addio* flooded the room. He was standing by the fire, leaning his arm on the mantel-piece. Aunt Mabel, to whom he had been talking, rose and crossed over beside Miss Rousby as the music began, leaving the line of sight clear between fire and pianoforte. And Gordon, raising his eyes, fixed them on Katrine's face steadily, and kept them there.

I turned mechanically to my sister to note if she were conscious of being watched. No; though she was singing without notes, and there was therefore no intervening barrier, she sang on as she alone can sing, their long silky lashes veiling her eyes the while. I closed mine—drinking in the infinite tenderness, the infinite sadness of the voice I loved so well. I had never heard Kate sing as she sang to-night. The great master had surely found an adequate interpreter of his rare music at last, I thought. But the third verse broke on my ears with an intensity of feeling that was almost inartistic; and I looked wonderingly up at my sister. This is what I saw. Her gaze was riveted on that one opposite her, and as the last broken notes of eternal farewell dropped from her lips with an indescribable reality of woe, her eyes were dark with anguish, fear, appeal; and her face grew paler and paler, till I almost expected to see her faint.

I glanced hastily at the others—they were at the far end of the room looking at some albums. And then I turned to Max Gordon. The last *Addio* died away in a sob, and now only did he move his eyes from my sister's face. A hot flush rose under his bronze; and he bit his lip with an expression I could not define, as he crossed to Katrine and picked up a bracelet she had dropped in rising. Once again I saw their eyes meet—and this time she distinctly shivered.

In a moment recovering herself, she raised her proud head more proudly than ever, and thanked him calmly; then coming to me, she passed her white hands—they were still trembling—over my

hair, and murmured some loving words of sympathy. I was dazed, perplexed, and weary; and without saying good-night to anybody, I went off to bed.

Later, when the pain was so bad I could not sleep, my sister came to me, as she had so often done before when I was sick or vexed. Lying down by my side, she took me in her warm arms, and hushed me with caressing words into quiet, as though I were a child again. In the early morning hours I woke from a dream, crying to Kate not to leave me; and the loving arms folded me closer, as she murmured: 'Never, never, darling!'

### CHAPTER III.

#### KATRINE'S DIARY.

May 14, 1890.

This house must be quite invaluable to a young man desiring experience. We unite within ourselves all the advantages of a hospital, and are constantly prepared to offer both medical and surgical cases in every variety. Six weeks ago, Aunt Mabel coming down-stairs in the dusk with her glasses on, slipped and fell, breaking one of the ankle-bones and dislocating her right shoulder; and ten days afterwards, Papa took one of those inflammatory attacks which with his delicate chest are so alarming. Both are still unable to be out of bed; and as they have now reached the trying stage of extreme self-commiseration, Edie's task and mine is by no means yet a lightened one.

But I do not know at all how we should have got on without Max Gordon. Papa's illnesses, with Dr Rousby in attendance, have been for the last ten years the bugbear of my life. Old friends from boyhood, loving each other heartily, each with the highest possible estimate of the other's character and attainments—in no one point are they able to agree, on no one subject will they own to be of the same mind and opinion; and that the doctor should prescribe a special course of treatment, was ever an adequate reason for my father's adopting the contrary, even though leading to the most disastrous issues. It has been invariably a case of the Irishman and his pig. On receiving the private instructions of our physician, I have always regarded myself as justified in recommending the adverse course to my parent's notice, and in general with a satisfactory result.

But we have changed all that at last. With unqualified amazement do I find myself carrying out the orders of our new doctor without encountering the slightest opposition; and more than once I have been chidden for deviating in some particular from his commands. My father has found his master, and seems to rejoice in the fact. Already, though not well yet, he is looking brighter and better than I have seen him for years. Changes are lightsome; and the strong health and vitality of his new friend are infectious. And Edie—carefully and fearfully as I have watched her through the trying time of nursing that we have had—is in no whit the worse, thank God! The lovely spiritual face has grown less fragile in its beauty of late, I think; and the new *régime* has given a proof of being adequate to her management as well as Papa's, which has lifted quite a load from my heart.

One day when our invalids were just past their

worst, I was called up from some household duties to my father's room in urgent haste. Passing the drawing-room door, I looked in, and found Edie lying face downwards on the sofa, vainly struggling, poor darling, with an unconquerable fit of hysterical crying, the result of anxiety and overstrain. A second summons called me unwillingly away from her; and I was half-way up-stairs when I met Dr Gordon coming down.

'It is twenty-five minutes to post-time,' he said, laughing; 'and your father is in an agony of impatience to have some letters written.'

I stopped a moment, irresolute, with my hand on the balusters. He had little time at his disposal doubtless, and had two patients in the house already—but my poor little weary sister, crying her heart out all alone! And as, standing a few steps above, I looked down at him in momentary hesitation, the smile died out of his answering gaze, and my heart began beating uncomfortably—the consequence of coming up-stairs so fast, I supposed.

'Say on,' he observed quietly. 'Don't try to persuade yourself you are not sure about telling me.'

'Have you time to spare for Edie?' I said then, my face flushing—for what reason on earth I cannot tell. 'She is quite worn out, poor child, and'—

Renewed evidence of excitement on the part of Papa above, from whom—upon hastening to his room—I received a long string of instructions.

Half an hour after, escaping to the drawing-room, I found doctor and patient in the greatest jubilation and comfort, drinking tea—each with a sofa drawn close to the fire.

'Edie wishes to go for a ride with me to-morrow, if you have no objection, Miss Percy,' said Max, giving me his sofa, and pouring out more tea. 'I should think Leila must be quite unmanageable after her long seclusion.' (Leila is the meekest and mildest of the equine race, and a contemporary of my own.)

'I shall be too glad,' I answered, rather doubtfully; 'if you think she is strong enough.'

'Oh, I am quite strong!' cried my sister with eager eyes. 'It is so long since I had a ride, and the mornings are so fresh and lovely just now!'

'Very well; that is settled,' responded Dr Gordon. 'And now I think I have had as much tea as is good for me, so I'll remove myself out of the way of temptation.'

Why, as he looked at me in saying the last words, did I shiver again with the nameless dread that struck me cold that night two months ago?

More than the mornings were fresh and lovely, I thought next day, as Edie sprang like a bird into the saddle. Max, before he mounts, turns to me, standing a little anxious on the steps: 'You know you can trust your child to me, Miss Percy.' He looks straight into my eyes as he says it; and I cannot choose but answer: 'Yes; I know.'

I am a very proud woman—proud even for a race whose pride has been their bane; and yet I am unresentingly being read and ruled like any child. Where does this man get his power, I wonder?

Yesterday he said to me suddenly: 'Do you

know you give yourself a great deal of unnecessary anxiety about your sister? Believe me, she is stronger than you think; and so long as she is happy and at peace, there is nothing to fear.'

'Ah, yes!' I said, glad the ice was broken at last on the subject nearest my heart. 'But who can answer for the happiness of even the most loved and cared for? And with her sensitive organisation and twofold hereditary tendency, if trouble of any kind came near my darling, she would die!'

'The danger lies there, certainly,' he replied gently. 'But so far as human power can do so, she is safely guarded; and we must not be "over-exquisite,"' he added with his sunny smile, "'to cast the fashion of uncertain evils."'

No; and she, as are all of us, is most happy in the possession of a true and faithful friend, who makes our fears and cares his own, as Max Gordon does. He is very hard-worked just now. There has been an outbreak of fever in the village, which Miss Rousby says is spreading fast. Happily, it is a mile from us, so I trust we are safe. Edie and Dr Gordon have had to give up their rides of late; duty before pleasure, he tells her.

#### CHAPTER IV.

##### KATRINE'S DIARY (*Continued*).

June 1, 186-.

I suppose everybody standing still and looking back can remember some of them—those single days into which a whole lifetime of feeling seems compressed—days which, 'crowning moments with the weight of ages,' act upon us as a decade of ordinary experience has not power to do. Days of unutterable pain, most of them—pain mingled perhaps in some cases with unutterable joy; but days which, after the lapse of years, stand out on our retrospective horizon with a vividness that yesterday has not; and on which, even whilst we shudder as we look, our eyes dwell longest and most frequently. Such a one is now ending for me; unspeakable has been the pain of it, ineffable the bliss.

Let me begin at the beginning; and since Edie is at last asleep—moaning and restless, poor child—let me try to narrate as calmly as may be what has happened.

Soon after breakfast, my darling, armed with a bunch of roses and a small basket, came to me and said: 'Katrine, will you go with me to see poor Mrs Frater? She will think we have forgotten her.'

I had no objections; so I took the basket—which contained some little dainties—and we set out. The morning, the first one of summer heat we have had, was perfect, with the soft scent-laden atmosphere peculiar in our part of the world to May and June. A sun grown fierce and fiery had not yet availed to rob the grass of its first tender greenness, and the flowers and woods of the newness of their charm. What a spirit of hope pervaded life this early summer morning! Everything was young about me; everything was fresh and untarnished by the wear and tear, the dust and storm of an existence of which they were yet but on the threshold. Every opening flower-bud, every leaf deepening to its richer green; the babbling of the 'hidden brook;' the liquid notes of a thrush, which seemed

to accompany us, and which sang as I never heard bird sing before: all united with my own glad heart in the assurance that earth was beautiful, that life was good, and that God was smiling on us all!

Will summer ever more be glad to me, I wonder? When the long years have rolled away, shall I know again some time the joy it is to be alive?

Gaily we went on, my darling and I—pausing ever and anon to add a wild-flower to Edith's bouquet, or to rest upon some mossy hillock; not that we were weary, but somehow I was fain to linger, without knowing why. The distance was not great, however; and in spite of much dallying by the way, we at last reached the cottage inhabited by Edith's protégée. She is an old Scotchwoman, very poor, very deaf, and very original; and my sister, whose sweet tender nature had been touched by her loneliness, often carries her some dainty from our table, or some flowers to decorate her best room. She now accordingly went into the latter to arrange her roses in an old vase, whilst I sought the society of our hostess in the kitchen.

'How do you do, Mrs Frater?' I said in clarion accents, as I proceeded to extract from the basket a nice bit of jam-tart.

'Eh, but it looks a wee bit hard,' she observed, eyeing it with doubtful approval. (She never by any chance fails to misunderstand what I say.) 'But though I've nae teeth, I've raal willin' gums—so thank ye kindly, Miss.'

I had no comment to offer on this illustration of the compensatory order of nature's laws, so changed the subject, and inquired after the health of her daughter and family.

'The lassie Jessie's bidin' wi' me the noo,' she responded. 'She's no been weel for a while; but she's that bad the last twa days, that I'm thinkin' it'll be the fever.'

'Where is she?' I said hastily, stricken with a sudden fear.

'Ben the hoose,' the old woman replied, with a wave of the hand towards the room where my sister was.

'Edith!' I cried sharply, and rising as I spoke, met her on the threshold.

'Katrine,' she began, 'there is a girl'—

But I forced her out into the little garden that bordered on the road, and re-entered the house alone.

'I've been aye lookin' for the doctor to catch him on his way to The Grove,' said the old woman, standing at the kitchen door as I passed into the other room.

The child was lying on a low bed in the corner; and her grandmother's shawl hung upon two chairs before her to serve the purpose of a curtain, had, I suppose, prevented Edie from at first seeing her. Sure enough, it looked like the fever. Heavy eyes, laboured breathing, flushed cheeks, all told the same tale. She seemed to be half asleep; and—my one thought to get my darling away as soon as possible—I had turned from the bed, when a loud piercing scream broke the stillness, and Edith with a face like death rushed into my arms, crying: 'Max, Max! Oh, where is he? Look, Katrine; oh, look!' and she dragged me to the door.

Clattering hoofs drowned her voice; and there, past us on the road—foam-flaked and at hard

gallop—tore Max Gordon's black horse Sultan, riderless!

I carried my fainting sister back in my arms to the old woman's bed, and laid her there, my heart dully beating the echo of her cry. We unfastened her dress and bathed her face; but consciousness in the meantime had fled—and I thanked God it was so. Then I sent Mrs Frater to the door to watch for news, and laid down my head beside my unconscious darling.

What had come over the glad music of this morning? Would it be possible ever again to work into harmony the discord involved by this 'startling change of key'?

I did not try to reduce to order the storm of conflicting fears and emotions that had so unexpectedly besieged me; but after one moment's relinquishment to their overwhelming force, I raised my head, and—faithful yet at least to old habit and the supremacy of my life's chief interest—took Edie's hand in mine and gazed anxiously into the pale sweet face. A new fear seized me that the delicate lips were becoming whiter, the hand I held colder; and I was about to summon the old woman's aid in applying fresh restoratives, when I hear Max's voice without; and with such a rush of joy, such a revulsion of feeling, that my lips are sealed; and I can but open the door silently and motion to him to enter.

For one moment he looks bewildered; then a quick glance of comprehension, sympathy, and something else comes into his face, as he crosses to the bed and raises Edie's head upon his arm.

'Why will you frighten yourself so needlessly?' he says to me half tenderly, half in reproach, a minute after, as I stand by the window feigning to look out, and in truth with my eyes bent most miserably within. 'She is coming round already—see!'

But it was enough for me to know he said so; and I would not turn to him a face which I felt was more death-like than the one lying on his arm.

'Come to her now,' he said quietly, a few minutes after. 'She had better not see me just yet after the fright she has had. You can tell her it was a groundless one; whilst I seek for traces of the runaway.' Without looking at me, he quietly left the room.

And I was glad. For in the next few minutes, first the wild terror of returning consciousness, and then the glad passionate burst of thankful tears, robbed me of my last lingering doubt, and brought the certainty that my child, my darling, was a woman now, with all a woman's sorrows—and please God, joys as well—before her!

But everything else was meanwhile swallowed up in a great peaceful gratitude for Max's safety; and as soon as she was calm, I called him in, and resumed my position at the window. Edie was very quiet; the tears were still too near the surface for her to say much. I heard Max telling her how the accident had happened—the horse had bolted from a cottage door, where a boy was holding him; and then he made her laugh by the account of Mrs Frater's greeting to him on what she apparently supposed was his resurrection. 'Eh, losh me, but ye're a sprightly corp!'

Max's presence had its usual soothing effect; and by the time the carriage he had sent for came,

she was well enough to be carried into it and taken home. He remained behind to see the sick girl; but promised to look in at The Grove on his way, to see that we had arrived without further misadventure.

### THE LOST CITIES OF SYRIA.

THE grand ruins of Palmyra have for centuries past attracted the adventurous traveller; but the desert country which surrounds it has up to the present time been an unknown land. Some years ago, the well-known French politician M. Waddington, in company with the Count de Vogué, undertook to explore this region, which they denominated Central Syria. There they found ruins of no ordinary kind; the wonders of Pompeii seemed to be renewed. From the distant East they brought back sketches of towns, with their houses, streets, tombs, and churches. A lost civilisation is brought before us, and the unknown epoch of Christian art from the first to the seventh century rescued from oblivion. The country is one whose name appears in the oldest histories. It lies near to Nineveh, Babylon, Judea, and Egypt, the most ancient monarchies in the world, which have each in turn disputed for its possession. Here have passed the flocks of Abraham and the warriors of Sesostris and Nebuchadnezzar; but nothing remains of that distant period; the architecture and the inscriptions date only to the earliest Christian era.

Syria may be divided into three distinct regions. The narrow tract between the sea shore and the streams of the Orontes and the Jordan contains some of the most celebrated cities in the world—Antioch, Tyre, and Jerusalem. At the opposite extremity stretch immense uncultivated plains up to the Euphrates and the Persian Gulf. Between these is the central region, now almost depopulated, but once a rich, happy land, which has preserved the fine remains of its ancient prosperity. It participates in the nature of the other two districts, formed of mountains running parallel to the sea and of fertile plains. Its inhabitants are sedentary as well as wandering—farmers and shepherds, independent or conquered, according to the alternatives of peace and anarchy, strength or weakness, on the part of the government, and fear or boldness of the Arabs of the desert. When, owing to the feebleness of the Turkish pachas, the tribes invade the cultivated portions, the abandoned villages fall into ruins, the fields are covered with parasitic vegetation, and the desert steals a march. Some day, when a stronger power shall have the administration, the desert will withdraw to its own limits.

This part of Syria belonged to the dynasty of Herod, a family who tried to reconcile the Jews to the rest of the world. The oldest writing which M. Waddington has discovered is an edict of Herod Agrippa. There is unfortunately but a short fragment, in which the king exhorts his subjects to renounce their savage life, no longer to take refuge in caverns like wild beasts, but to build for themselves suitable dwellings. He probably set them the example, for here was found a temple dedicated to Baalsamin. It is the work of Eastern architects, prodigal in ornamentation even to exaggeration, but yet skilful and original. Workmen were employed to dig out

the pedestals of the façade, which were found to be covered with Greek and Nabatean inscriptions, and intended for statues of important personages. On one of them was the name of Herod; and the travellers hoped to find the statue among the rubbish; but alas! only the wreck remained. It had been torn violently from the base, to which one of the feet was still attached, and broken to pieces. Perhaps some Christian hand had done it in the early days of the Church's triumph, to revenge the massacre of the innocents.

It was in the time of this king that Palmyra became prosperous, and enchanted with Greek art, built on that model the temples and avenues which are so much admired. Thirteen Aramean inscriptions had been found; but M. Vogué brought back a hundred and thirty-four new ones, in honour of rich and powerful citizens. From thence the caravans were wont to set out to the Euphrates, to purchase the merchandise of Persia and India. It was a great business to collect provisions necessary for so large a number of persons during two months' journey. Some powerful chief undertook the arrangement. If he led the troop with skill, and shewed generosity to the poor, a statue was erected to him in the most public part of the town on the pedestal of which his name was inscribed, with the thanks of his travelling companions. These statues are unfortunately destroyed, but the inscriptions are still legible.

On the frontier of the desert, the Romans established intrenched camps with vigilant soldiers, so that Syria felt itself protected. The fields were cultivated, and large buildings erected in the time of Cornelius Palma the first governor who occupied his troops in bringing down the mountain streams over the arid plain of the Hauran, and inscriptions still exist stating that the canal was dug in honour of the Emperor Trajan. Riches brought about the taste for comfort, and large stone houses replaced the huts and cave-dwellings of earlier days. At Bostra the travellers found the remains of theatres, finer and larger than any hitherto known. The flights of steps are still perfect; the stage is adorned with the monumental gates which were used by the actors. Many of the columns on the higher gallery where the women sat are still standing, the only ones now existing.

Remains of baths, basilicas, and palaces appear in M. Vogué's drawings. One of them at Chagga has several perfect halls. The Arabs still designate it by its ancient name of Quaisarieh (Cæsareum). At Phœna was found a handsome Hall of Justice, built in honour of Marcus Aurelius, under the direction of a centurion of the third legion. In form it closely resembles the ancient basilica; the arches, boldly thrown from one wall to the other, rest on elegant pillars; whilst the sides are adorned with console tables, to support the statues of the officers of the Roman legions. An inscription which we translate, shews the vigilance of the government in repressing any abuse of power: 'Julius Saturninus to the citizens of Phœna. If any soldier or passing stranger offers you violence, fail not to write to me, that he may be punished, for you owe them no contribution. From the time that you have opened a public hotel, you are no longer obliged to receive any one into your houses. Let this notice be posted in some well-known part of

the town, that no guilty person may plead ignorance.'

But the private houses offer a more interesting study than even the monuments of state. Not only have isolated houses been discovered, but the streets and squares of a complete town, shewing what an amount of luxury and comfort prevailed in these now desolate regions. According to ancient custom, the homes of the dead preceded those of the living, and an immense necropolis surrounds each town. To reach the first houses, many rows of tombs must be traversed, built with great care, the form varying with the country. Here they are hollowed out of the rock, with a wide staircase leading to basaltic doors ornamented with mouldings and sculptures. The rich have raised above these subterranean chambers small porticoes or double columns, which indicate the place of interment. In other districts the tomb is above-ground, a kind of pyramid with small shelves at the corners. These were destined to hold lamps; for the illumination of tombs on certain days is a part of oriental ritual. There are also high towers; the lower stories containing sarcophagi, the higher, a dove-cot; so that, as a Greek epitaph says, 'they shelter life and death at the same time.'

Beyond the tombs the city begins in its wonderful state of preservation. The entrance is through narrow streets, with handsome houses on each side. The earthquakes, so common in this country, have shaken off the roofs; but in general the walls are standing, and some retain their three stories intact. In plains without rivers, without verdure, without shade, the houses are grand but sad. Wood being rare, or even absent in Central Syria, stone had to replace it, even to the doors and window-shutters. Thus a monotonous and stiff magnificence is the dominant idea of the clever stone-cutters, which the architects of those days must have been.

In the northern parts, near to the Greek cities of the coast, a more elegant style prevails; the façade of the house is adorned with a double row of porticoes, resting on columns. The apartments communicate with these exterior galleries, which afford shade as well as fresh air. But ornaments and galleries alike disappear in the interior of the country. The East of the present day is seen in the high walls, destitute of windows or any opening into the street but a narrow door, within which domestic life is so rigorously confined. In the interior is the large hall, which nearly fills the ground-floor, used for family meetings and the reception of strangers. A stone staircase leads up to the bedrooms, which contain deep recesses in the walls for beds and closets. Some of these houses are inhabited at the present day, though built eighteen centuries ago. The sheik of a small village in the Hauran received the travellers in his hall to supper, where the large bowl of stew was set on the ground, by the light of a clay lamp fed with butter. Around this all the sheiks of the neighbourhood squatted to enjoy the strangers' society. The carpets and cushions were spread against the walls for the night's repose.

Under the houses, a kitchen is cut out of the solid rock; a hollowed stone forms the fireplace; and a hole in the ceiling above admits the light and allows the smoke to issue. All around are rings and niches, to which were hung in olden

Since the cooking utensils. At a short distance, in another wing, are the stables, with stone troughs for the horses, and holes in the pillars to which they were fastened. Then come the cellars and presses for oil and wine. One of these, which was found at El-Barra, has a sort of barrel placed outside the house, into which the grape-gatherers poured the fruit which was afterwards trodden down in the cellar. Above this the proprietor had inscribed two Latin verses, celebrating the presents of Bacchus when the vine is ripened by the burning rays of the sun, and telling us that his grapes produced a liquor equalling the nectar of the gods. The produce of the El-Barra vineyards was celebrated through the East in those days; and the Emperor Elagabalus, who appreciated them highly, had them brought to Rome at great expense.

If we imagine all these fallen walls and overthrown arches changed into towns full of animation and life, we can understand the effect they would have on the wandering Arabs who occasionally approached them. Attracted by Roman civilisation, many of their tribes submitted themselves to it. Rome did not fail to profit by the opportunity, and formed them into bands of soldiers, who were among her bravest legions. One, who was the son of a robber, reached the highest position in the empire; and in spite of his low birth, was chosen emperor. Not forgetting his country, he founded a city on the spot where he was born, called it by his name, and raised altars to his father, whom he made into a god. M. Waddington has found the ruins of Philipopolis, which Philip, who reigned only six years, had no time to finish. It was a singular chance that the thousandth anniversary of the foundation of Rome occurred in his reign, when he gave magnificent spectacles for many days; and yet the imperial Cæsar was an Arab of the lowest extraction.

Christianity was during this period making rapid progress; and it is in Syria that we find the earliest remains of Christian architecture. Few have been spared in Europe by the hordes of barbarians; but there is a regular succession of churches in Syria from the fourth century. As monotheism advanced, the altars were dedicated to a nameless god, who was called the Good or the Merciful. The pagan fancied he was addressing Baal or Jupiter; whilst the Jew or the Christian could at the same time invoke the God of Israel. One, built in the year 135 A.D., was dedicated 'To Him who is blest through all eternity,' by Salmon, son of Nesa, for his own salvation and that of his children. Two sides of it are engraved with letters resembling the monogram of Christ. The lintel over the door of a church which no longer exists bears the inscription: 'Synagogue of the Marcionists of the town of Lebada, built to the Lord and Saviour Jesus by Paul the priest.' There are, however, numerous churches still standing, almost all containing such inscriptions as: 'Remember, O Lord, the Christian who built this, and whose name Thou knowest'—'Lord, help this house and those who worship in it'—'If God be for us, who shall be against us?'—At the side of these Christian symbols, the monogram and the cross are found in profusion on the walls above the columns, and amidst the sculptures on the friezes.

Not unfrequently have pagan temples been changed into churches. At Ezra may be read the following on the door of the church: 'The house of devils has become the house of the Lord; the lamp of salvation lights up the darkness; idolatrous sacrifices are replaced by the choirs of angels; where the orgies of a false god were celebrated, the praises of God are sung. A man who loves Christ, John, son of Diomed, has offered this magnificent monument out of his wealth, in which he has placed the precious relic of the holy martyr George.' This building was finished in 515, and is still used for worship.

One of the buildings most resembling our cathedrals of the middle ages is the celebrated convent of Saint Simeon, situated between Antioch and Aleppo, to the north of Central Syria. Who has not heard of this saint, who imposed on himself the strange penance of remaining on a pillar for thirty-seven years! His disciples raised him a column on a mountain, with a small cell at the top, around which multitudes crowded to hear his preaching. When he died, his body was buried with great pomp at Antioch; but the pilgrims for long afterwards persisted in visiting the place where he had lived, and hotels were built to lodge the visitors, one of which remains, and bears the date of 479 A.D.; whilst a magnificent church was raised around the column of the Stylites.

This church M. Vogue has discovered. It stands on a hill, with a distant view of the Lake of Antioch, and surrounded by a wall flanked with towers, through which you enter by a well-preserved triumphal arch. Within is a large monastery on one side, with cells, chapel, and superior's house; on the other is the church, which from what remains must have been one of the finest in Syria. The form is that of an immense Latin cross, of which the central part was ornamented with marvellous art; but it has suffered more than any other part, and is now choked with heaps of stones. The column of St Simeon, which stood in the middle, has been overthrown and broken by earthquakes.

It would appear that visitors came until the end of the sixth century; after which their visits ceased, and the country was no longer prosperous. Indeed, from this period Central Syria disappears from history, when civilisation and life abandoned it. Houses were no longer built; and in after-years, when the Mohammedans had overpread the country, it was changed into a desert, and barbarism re-established. When we read about these beautiful cities, and admire the works which this civilisation had produced, it is difficult to forgive those who destroyed and knew not how to replace.

#### UNCOMMON PLEAS.

LAW is not so much a matter of hair-splitting as it once was; but lawyers have yet plenty of scope for displaying their ingenuity in devising plausible pleas of defence, when placed in the unpleasant predicament of having really no case to go upon.

On a voyage from San Francisco to London, the *Kate Kelloch* encountered a heavy gale of several days' duration, during which time the management of the ship devolved upon the first-officer; the captain betaking himself to the cabin, where

he remained praying until all danger was past, when he resumed the command. He was arraigned for neglecting his duty, and could not deny the impeachment; but his lawyer urged that the charge could not be maintained, as in all probability, had it not been for the captain praying so devoutly, the ship would have been lost. The Commissioner, however, inclined to credit the mate's seamanship rather than his superior's stout praying, with the salvation of the ship, and adjudged the latter to have proved himself utterly unfit for his post; but as his conduct did not appear to have contributed to the ship's peril, he had no power to cancel his certificate.—The cowardly skipper did not shew such good cause for his misbehaviour as the seaman who refused to go to sea after signing articles, although he had no fault to find with the ship, the officers, or the food; but justified the non-fulfilment of his engagement on the ground that he had dreamed the vessel was lost; and having once before had similar warning, and been shipwrecked through paying no heed to it, no money would induce him to try such a venture a second time.

A man was once tried in Illinois for horse-stealing, upon evidence sufficiently conclusive to satisfy even his own counsel that conviction was inevitable. Still that worthy was in no way daunted, but rising for the defence, said he should not attempt to controvert the evidence before the court, but would put in a plea of matrimonial insanity.

'Matrimonial insanity!' exclaimed Judge Wilkinson—mated as everybody knew to a most unamiable woman. 'That is a novel defence; but let us hear the evidence.'

A witness was soon in the box who had known the prisoner for ten years, and deposed that in that time the delinquent had married half-a-dozen times, and was living with his sixth wife when arrested.

'Well,' said the witness, 'if any of them was better than the others I am not aware of it; they were all a sorry lot; they kept the man constantly in hot-water by their peevish, scolding, quarrelsome dispositions.'

'Are you aware of the character, manners, and habits of the ladies he married?' asked the counsel.

Other witnesses having confirmed this account of the prisoner's matrimonial mistakes, his counsel addressed the court, dilating upon the cunning way in which women drew men into matrimony; and the wondrous change that came over them when the victim was ensnared; finishing up by contending that his client could not be held a responsible agent after being galled by such Xanthippes for ten years. This skilful 'touch of nature' was sufficient for the judge, whose charge ended thus: 'This court has had a certain amount of matrimonial experience with one female, and such experience has not been altogether of a satisfactory character. But here is a man who has been so blind, imbecile, and idiotic as to marry in ten years six horrible scolds and shrews. For so doing I class him as a natural fool; and even if he possessed any intelligence, the dwelling with these women must have destroyed it. The plea of the counsel for the defence is sound in law and equity, and I charge you to bring in a verdict of acquittal.' The jury did as they were bid.

The Illinois horse-stealer is not the only rogue by many who has escaped his deserts thanks to legal ingenuity. A man borrowing a ladder from a neighbour, refused to let the owner have it again, and was thereupon sued for its value. The borrower's lawyer pleaded that the ladder was lent on the express condition that it was to be returned as soon as his client had done with it; he had not yet done with it, and therefore could not be called upon to give it up. His argument prevailed; and the owner of the ladder was left lamenting his neighbourly kindness.—A tax-collector at Naples ran away with a large sum of public money, was caught, brought back, and put on his trial. His counsel admitted the facts, but contended that the collector was one of the people, the money was the people's money, and it would be monstrous to convict a man of stealing what was his own; and the jury being of the same mind, acquitted the thief.

A barrister retained to defend an unhappy man charged with purloining a duck, found himself embarrassed in consequence of the rogue having exercised his invention over-freely, and volunteered several explanations of the matter. First he said he did not steal the duck—he had found it; then he said somebody had given him the duck; then that his dog had picked it up; and lastly, that a malicious policeman had put the duck in his pocket unknown to him. Putting the case to the jury, his counsel left the gentlemen to take their choice, saying: 'My unfortunate client has told half-a-dozen different stories as to how he became possessed of the duck. I don't ask you to believe all the stories, but I will ask you to take any one of them.' Which story they took, the advocate never knew, *but the man got off!*

One plea, if it be a good one, is quite enough; and in certain cases, there is none so good as that of infancy. The law is very tender of 'infants,' going great lengths to protect them against themselves. It does nothing to prevent an infant going into business on the biggest of scales; but should the venture prove unfortunate, it steps in to save him at the expense of those who have trusted him without first ascertaining the date of his birth. Not long ago a young man, who had been trading as a Baltic merchant, suddenly departed for Australia well provided with funds; but being brought back to England, was duly tried, and duly convicted of having defrauded his creditors. Against this conviction he appealed, on the ground that it was impossible he could have taken any money which belonged to or ought to have been divided among his creditors; since, being a minor, he could not contract trade debts, and consequently had not—in law—any creditors among whom the property ought to be divided; and this apparently monstrous plea held with the Court of Appeal.

Infancy has its privileges elsewhere. A woman was arrested in Presburg, Hungary, for receiving stolen goods. She was by birth a Jewess; but six months previous to her detection, had been baptised into the Roman Catholic Church. When put upon her trial, she pleaded that she was an infant, and could not therefore be held answerable for what she had done—the date of birth in Hungary running according to the date of baptism—and after serious cogitation, the tribunal declared the defence a good one; and that she, a woman of forty, was legally but six months old, with a score

of years before her which she might turn to dishonest account with impunity.

Like the wife-beater who averred that his help-mate commenced hostilities by throwing water and other combustibles at him, offenders often boldly take the bull by the horns, and justify their wrong-doing. A woman brought before the magistrates at Weston-super-Mare for stabbing an aged damé, proclaimed that the prosecutrix was an old witch, who had 'harrided' her and her husband for two years, coming to her house and groaning at her, till she could not stand or do anything. Pressed as to whether she saw the witch anywhere near when she was taken that way, she confessed that the old woman was not always present at such times; 'at least not bodily, but she came in a nasty spiritual way, making a nasty noise;' but since she had 'scratched' her, she had not troubled her much. The plea, extraordinary as it was, so far availed that the witch-scratcher got off with a shilling fine.—A more impudent plea was that put forward by an Irish tramp for robbing a miser. 'Shure, your Worship,' said he, 'an' we're tould in the Bible that the way for a man to get to heaven is to sell all he has an' give the money to the poor; an' this mean old ciatur 'ud never have done that of his own accord. So I just helped him on the good road meself, an' sould all I took, an' gave the money to the poor according. Anyhow, I gave it to meself, ye see; an' faith, I'm as poor as a starved-out robin.'

More frank than prudent was Patrick Murphy, who appeared at the Dublin police court in consequence of taking the liberty of clearing a grocer's till of its contents without the owner's permission. He looked so dejected, that the magistrate, thinking he had a repentant subject before him, resolved to improve the occasion; and the following edifying colloquy ensued. 'It's a sad thing to see a young man of your age fall into evil ways. Haven't you a family to look after you?'

'The praties thim-selves are not more numerous.'

'And had you any employment?'

'Shure ivvery hour was illegantly divarted.'

'And I presume you had prospects, and hoped to rise in the world?'

'Thrne for ye, your Honour. I expicted to lave ivvery mother's son benathe me.'

'And now,' said the magistrate, 'you've lost character, prospects, everything, and all for five-pence-farthing.'

'Shure now, your Honour, that wasn't my fault at all at all,' said the victim of circumstances.

'It wasn't?' queried the magistrate.

'No, your Honour. How was I to consave that there'd be only a dhirty foivepence-farthing? Shure, an' didn't I clane out ivvery blissed cunt I could foind!'

Transgressors unable to pretend innocence, sometimes put forth strange pleas of extenuation. A farm-labourer declared he bore no malice towards the owner of the wheat-stacks he had fired; but having been badly treated by his sweetheart, he had done what he had done, lest he might have done something worse.—Another vainly tried to enlist magisterial sympathy by the following pathetic appeal: 'I am an honest man, sir; poor, as you see, but striving to get a virtuous livelihood. But the cruelty and indifference of my fellow-men embitter my existence. For the

last six months I have been singing about town some of the finest songs in the English language. I have sung for two hours at a time before the mansions of the rich and noble, and then perhaps they have given me twopence. Is it not brutal that people dwelling in style and elegance should listen to a vocalist for two hours and then give him two coppers? There must be something wrong when a man like me, capable of giving expression to the music of the best composers, has his feelings agonised as mine have been by the coldness and contempt of the world. In the best streets and squares of London I have sung as many as a hundred songs for eighteenpence. But the people have no ear; the taste for music has degenerated, and I am the victim.'

Singularly well acquainted with his legal rights was an old offender convicted of an attempt to steal a purse, and sentenced to five years' penal servitude. 'What! five years for an attempt?' exclaimed he. 'It ought only to be two years.' He was passed to the cells below the court; but was subsequently placed again in the dock, and informed by the judge that he found he had no power to pass a sentence of five years, and therefore ordered him to be imprisoned and kept to hard labour for two years. 'I told you so!' was the triumphant comment of the knowing one as the warder handed him down.

#### BEFORE AND AFTER.

A STILLNESS wraps in calm the summer day,  
Unbroken by a sound, save when the breeze  
A moment rustles through the parched trees,  
Then leaves them motionless. The sultry air—  
Hot as the breath of fevered patient—seems  
Conscious of coming storm: the cattle crowd  
With low-bowed heads beneath the elm-clumps, awed  
By some dread instinct of they know not what,  
Save, that 'tis all impending. All the sky  
With thickly gathering clouds is overcast,  
Dark leaden clouds, their edges tinged with red,  
All ominous of storm; the quick, big drops  
Of rain begin to fall—a rumbling peal  
Of distant thunder, low reverberates  
Along the hills: more thickly fall the drops,  
Comes down a deluge—and the lightning gleams  
In quick, successive flashes; louder still,  
And louder roars the thunder—till gives rein  
The tempest to its fury; awing man  
And beast alike by its sublimity.  
Its wrath at length the storm begins to bate,  
A wrath too fierce to last; the thunder grows  
Fainter and fainter, and the lightnings cease;  
The rain-drops patter feebly through the leaves,  
Till they at last are spent; bright diamonds,  
Of Heaven's purest water, glittering hang  
On leaf, and blade, and flower; once more the birds  
Resume their for a while suspended song;  
The cattle leave the shelter of the boughs,  
And seek again the pastures; all the air  
Is filled with fragrance sweet, the cooling gift  
Of storm beneficent; and once again  
From her enforced torpor wakes the Earth!

## SWIMMING.

MANY concurrent circumstances shew the desirability of encouraging the art of swimming among young persons of both sexes. The liberal manner in which the London Swimming Club offers to aid towards the attainment of this most desirable end, we shall speak of presently: the necessity itself requires some preliminary notice. Whether pleasure or business takes people on the water, the urgency is nearly the same. It was grievously lamentable to read and to know, for instance, about two years back, how many hundreds of hapless persons suddenly found a watery grave by the great disaster on the Thames. Innocently going forth to enjoy a day's pleasure on a bright summer day, they crowded the much overlaid holiday steamer *Princess Alice*: women and children greatly predominating over men. A sudden catastrophe overwhelmed all alike; and the dwellers in the metropolis will never forget that day which plunged so many families into sorrow and misery. Scores of lives might have been saved, had even a little knowledge of swimming been more generally diffused. Shipwrecks in all parts of the world teach the same lesson; English sailors are deplorably deficient in this art, much to the discredit of the authorities; while passengers in ocean-going ships are obviously in similar plight. Sea and river bathing, in like manner, would be rendered more enjoyable if the bathers could have a little hope that they could swim even a few yards in cases of peril.

Besides these considerations, personal cleanliness would be promoted by an occasional plunge into the water. The late Canon Kingsley animadverted in his own original way on our woful deficiency in facilities for personal ablution: 'I have often amused myself by fancying one question which an old Roman Emperor would ask were he to rise from his grave and visit the sights of London under the guidance of some Minister of State. The august shade would doubtless admire our bridges and railways, our cathedrals and our public parks, and much more of which we need

not be ashamed. But after a while I think he would look round, whether in London or in any other of our great cities, for one class of buildings which in his empire was wont to be almost as conspicuous and as splendid as the basilicas and temples. "And where," he would ask, "are your public baths?" The Minister of State who was his guide might possibly reply: "O great Cæsar, I really do not know."

Since Kingsley wrote these pungent words, the building of public baths and wash-houses has done some small amount of good. Much might be said on this matter; but our present subject is more especially confined to the encouragement of swimming as a most valuable art.

Many women and girls entertain a belief that swimming is scarcely a feminine art, that it is slightly wanting in delicacy. This is a mistake; decorum can be easily observed by those who choose to observe it. Miss J. R. Powers a few years ago published a small useful pamphlet under the title, *Why do not Women Swim?* She was Honorary Secretary of a Ladies' Sanitary Association in operation at the time, and warmly advocated swimming both on sanitary grounds and as an aid towards saving human life. She left unanswered the question why women do not learn to swim, but adduced many arguments to shew that they ought to do so. It is well known that at our numerous watering-places very few women swim; they may float and splash about, but only an insignificant proportion of them can really swim. Miss Powers remarks: 'The greater part of the danger to water-traffic would be surmounted if every person could swim. In the majority of shipwrecks and other accidents on the waters, an expert swimmer could either reach land or keep afloat till help came. There is a method of floating which requires very little exertion, and by which even a weak woman may sustain herself on the surface of the water for several hours. Now, on the contrary, when an accident happens even a dozen yards from land, women can do nothing but cling in helpless groups to some brave man who risks his own life to save theirs; and the result is

that all sink in one miserable heap.' The truth of this picture is unhappily borne out by numerous recorded facts.

'Long' swims have attracted a good deal of attention in the last few years; that is, swims occupying several hours at a stretch. They are not of such paramount utility as some persons suppose; because there is only a limited number of circumstances under which such swims are likely to be brought into requisition. Nevertheless they are worthy of being borne in mind, as shewing what can be done not only by strong and active men, but also by young women, in keeping themselves afloat for hours together—far eclipsing the famous classical achievement of Leander swimming across the Hellespont to meet his beloved Hero. Let us just touch on a few of the long swims, leaving the reader to fill up details from his own-reading of the daily journals.

Somewhat over forty years ago, a seaman belonging to H.M.S. *Orestes* threw himself overboard, as a means of escaping punishment for some offence; he was picked up by a fishing-boat seven hours afterwards off the coast of Spain, and stated that he had been swimming towards the land all the time. About the same period, two men swam up the river Mersey from Liverpool to Runcorn; they accomplished the distance in something less than four hours. Passing over a long interval, during which many swims were recorded of a few hours' duration, we come to the more recent exploits of Captain Webb, certainly the most remarkable swimmer of whom we have authentic record. After some notable achievements in the Irish Sea, he undertook the astonishing feat of swimming across the whole breadth of the English Channel despite its very rough sea. On the first attempt he could only reach part of the way, and was for safety brought back by an attendant steamer. His second attempt, in 1875, was quite successful; he swam for nearly *twenty-two* hours continuously, from Dover to the French coast near Calais; he was supplied occasionally with refreshments by persons near at hand, but he never touched boat or ground during this prolonged interval. In the same year a young damsel, Miss Agnes Beckwith, daughter of Beckwith the teacher of swimming, gave clear proof that the weaker sex is strong enough to achieve remarkable results in this art; she swam down the Thames from London Bridge to Greenwich, amid the crowded shipping of that part of the river. In a spirit of emulation, Emily Parker, daughter of another professional swimmer, slightly exceeded Agnes Beckwith's distance by swimming from London Bridge to Blackwall. Cavill, another swimming-master, accomplished the distance from Dover to Ramsgate; he was six hours and a half doing the feat, but was more distressed with the heat of the sun beating down upon his head and the sunshine glaring into his eyes than with fatigue. Quite recently the London public have been astonished by proofs of the great length of time that persons can remain floating with or without swimming. At the Westminster Aquarium is a large tank constructed for the temporary reception of a live whale; in this tank Agnes Beckwith remained afloat for *thirty* hours, without touching ground or sides of the tank, singing a little and occasionally reading a newspaper to pass away the dreary monotony,

and taking refreshments handed to her; the water had a strong infusion of salt thrown in it, to increase its buoyancy. Since that time, Captain Webb has eclipsed everything else of the kind known; in the recent month of May he remained in the whale-tank no less than *sixty* hours continuously, floating all the time, and never touching sides or bottom.

Miss Beckwith frequently exhibits the art of swimming in some of our larger buildings, with useful hints as to the modes in which some may save themselves and help to save others from drowning.

Three or four years ago, at the Marylebone Swimming Bath, Mr R. H. Wallace-Dunlop gave a brief address on Swimming and Swimmers. His purpose was in part to introduce a new system of *plate-swimming*, to lessen some of the mechanical or muscular exertion required in the ordinary method. These plates, and another contrivance called *flippers*, are secondary in importance, however, to the fact that persons can certainly learn ordinary swimming very easily, without any other apparatus than their own arms and legs. Mr Dunlop, commenting on the sad neglect of the art in this country, said: 'The armies of Germany, under the system introduced by General Pfuhl, are taught swimming as part of the necessary drill instruction. The armies of France, Italy, and other nations, taught under Bernardi's system, which is called "walking under water," are all made competent to cross rivers and canals. In the armies of Great Britain, on the contrary, if there is any system at all in this respect, it is the system of neglect. Our soldiers and—strange to say—sailors are never taught to swim. Britannia may rule the waves, but it is more than our soldiers and sailors can do individually for themselves.' Mr Dunlop drew attention to the disasters of the *Franconia*, the *Strathclyde*, the *Vanquard*, and the *Iron Duke*, as shewing how many valuable lives might have been saved had the persons on board known a little about swimming.

The London Swimming Club has made a very liberal offer in connection with such matters. Mr Garratt Elliott, the Honorary Secretary, draws the attention of the public to the subject from time to time through the medium of the newspapers. The Club has no swimming-bath to lend—indeed the great city of London is sadly deficient in them. The Club will assist learners gratuitously, or for a small payment in some cases. More especially the boys in large establishments are thought about. Mr Elliott in one of his communications says: 'Why any moderate-sized boarding-school is without a plunge-bath (even so small as those at Endell Street), I cannot imagine; in the winter season it could be used as a covered playground or lecture-room. If the expense be too heavy, a tuition-tank could be constructed for about fifty pounds, in which every child could be taught in the routine of school.' So far as the City of London Club is concerned, instruction, as we have said, is given either gratuitously or for payment, according to circumstances.

An interesting display took place in the month of April last, tending to shew what can be done if committees and managers of large establishments choose to do it. The Orphan Working School at Haverstock Hill, the Emanuel Hospital

School at Westminster, the Royal Caledonian Asylum at Holloway, the Commercial Travellers' School near Watford, the Spurgeon Orphanage at Stockwell, all possess swimming-baths, superintended and kindly aided by the London Swimming Club. At one of them, the Orphan Working School, none of the boys had any knowledge of swimming when the baths were commenced a few years ago; now they can all swim, some of them for considerable distances. On the occasion adverted to, many of the boys competed for the Club's certificates at the Floating Baths just outside the Thames Embankment near Charing Cross. Some of the best of them shewed not only how to save their own lives from drowning, but also how they may aid in saving others in time of peril.

Our scanty supply of swimming-baths is, as we have implied, a sad drawback to the learning and practising of this most salutary art. Liverpool, however, celebrated among our provincial cities for the grand scale on which the municipal authorities carry into effect public works, to be paid for out of rates and dues, has reason to be proud of her public baths, distributed as they are in six different parts of the city and suburbs, and constructed at an aggregate cost exceeding one hundred thousand pounds. Besides small ablutionary baths, there are twelve swimming-baths of ample dimensions. In the metropolis, the best supplied district or parish is Marylebone; the public baths and wash-houses here established comprise four swimming-baths averaging seventy feet in length; while the adjoining parish of Paddington possesses one reaching ninety feet in length.

Amongst the numerous subjects which are now taught to boys and girls, the art of swimming certainly should not be neglected.

## A LIFE'S ATONEMENT.

### CHAPTER XXVIII.—AUTOBIOGRAPHY.

*'I suppose you don't know of nothing as has took place, do you?'*

I WENT up to town next day with Uncle Ben, according to arrangement. I found Dr Brand a trifle brusque and dictatorial, I thought; but learning that years must elapse before he would undertake to do more than take a friendly interest in me, I thought I should manage to get along with him very nicely. In the great school of medicine and surgery in which I presently found myself a pupil, Dr Brand was regarded with profound respect. One of the first things pointed out to me in the hospital museum was a dissection of the human arm, in which every nerve and vein and artery and muscle was displayed in most delicate and exquisite network. That was Dr Brand's doing; and it was looked on as something next to a miracle of dexterity and art. I saw him in the operating theatre, where he stood almost unrivalled. At first, his perfect calm, the insouciance with which he went to the most terrible performances, shocked and disgusted me, and I thought him a monster of no-feeling. But in a week or two I began to be better able to understand and value his quiet mastery; and in a month he was my special hero.

It has been a problem to many, how it comes about that the orderly and gentlemanly men who make up the rank-and-file of medicine and surgery in these islands are evolved from the disorderly and rowdy youth who make up the staple of our medical-student supply. I confess myself the more unable to solve this problem because I have been intimate with the embryonic and with the complete surgeon, and have known and noted the marvellous space which severs them. In Oxford, I had known reading sets, and boating sets, and drinking and gambling sets, and sets of all sorts. But though I found men here given over to the same variety of pursuits, they went about them for the most part in so different a manner, and were themselves of so different an order, that I seemed to be thrown into quite an unfamiliar life among them. I had been so accustomed to the control of money, that town-life offered me no new temptations to extravagance. Of all the keen things Balzac has written, there is none keener than that passage in which he declares of an extravagant woman that she was reckless in the profligacy of her waste *because* she had known a time when a sou's worth of fried potatoes would have been a luxury to her. But it never occurred to me to do less than spend what Uncle Ben allowed me, and I found my society sought by some for whom I had little affection. How it fared with Uncle Ben's sons, my cousins, I can only conjecture; but I know that my relationship to the great millionaire was converted into one of the miseries of my life, by the adulation it secured me, and the prominence it occasionally gave me. Mr Wickamby, senior demonstrator, was marvellously fond of me, and undertook to introduce me to scientific society in London. I went to an assemblage of ladies and gentlemen in his company at one time, and was finding an innocent interest in the display of divers new inventions, when a whisper from Wickamby—'The nephew of Hartley—Hartley Hall, you know—the great millionaire'—came in upon my quiet, and my night was spoiled. There was a gilt pasteboard erection of cubic form at one end of the room, which was supposed to represent the exact amount of gold in circulation in the British Islands; and whilst I regarded this, and thought how small a sum of money it represented per head for the population, Mr Wickamby came up and laughed, and said in the voice of a public lecturer, that my uncle, Mr Hartley of Hartley Hall, 'could shew a considerable slice of that if he desired to—eh? Ha! ha!' The baleful whisper followed me into remote corners: 'Nephew of Hartley—great millionaire—Hartley. Quite a self-made man.'

There was a Doctor of Divinity there who was most ponderously polite to me, and who took the keenest interest in my uncle and my welfare. He delivered a little oration to me on the dangers and advantages of wealth; and whenever anybody passed the corner in which he had me penned, he would interrupt the current of his speech to

summon the passer-by, and would ask to be permitted to introduce Mr Campbell, 'nephew of Mr Hartley, the distinguished millionaire.' The coarse greed with which I found myself surrounded, not for money, but for leave to talk about it, would have been matter for laughter, if I had not been the centre of it. As it was, however, it became unbearable, and I withdrew myself stealthily. I had rooms in Clement's Inn, light airy chambers, looking out upon a square of green, bordered by fine trees. The rooms look now upon the New Law Courts, which have been so long a-building, and the grass is still there before them, and the trees yet flourish. I was mightily proud of those chambers at the first, and was perhaps happier in them than I have ever been elsewhere. 'What more felicitie,' asks the poet, 'can fall to creature, Than to enjoye delighte with libertie?' Mr Wickamby, the senior demonstrator, would sometimes visit me of an afternoon and take a glass of Burgundy and a cigar. He was a man who smiled, a comfortable man, with a saponaceous manner. He had little set forms of speech for all manner of circumstances and contingencies, which he used by rote, as though they were formulæ out of the Pharmacopœia. One of these was that it really seemed absurd to say it, but if ever at any moment I found myself in want of funds, I was to apply to him, and consider him my banker. It was so easy, he would add, to run out of coin in town. At first, it crossed me that this was the prelude to a request for a loan; but Mr Wickamby never tried my regard in that way; and he used to utter his formula so heartily, that I grew positively grateful to him for his benevolence.

But there were pleasanter visitors than Mr Wickamby at my chambers in Clement's Inn, and among the pleasantest were Gascoigne and Æsop. Gascoigne's clerical duties held him hard and fast in the country all the year, with the exception of one fortnight, which he spent with me. I met him at the railway station, and brought him home in great glee, and enthroned him in an armchair.

'What prospects?' I asked him. 'When are you going to be a Bishop?'

'I don't know,' he answered laughingly. But he added more gravely, and as I thought with a touch of regretfulness: 'I ought to have stayed on at college, Jack, and taken a fellowship. But I should never have had the living which is to be mine unless I had put my neck into the yoke of this curacy. The patron insists on having a working man, and I am working. One of the ameliorations,' he said, laughing again, 'is that they don't consider cricket wicked in our part of the world.'

I said somewhat hotly at this, that the servants of the Church were surrounded by foolish restrictions, and that none seemed more absurd to me than the denial of harmless outdoor sports. I could see a reason against perhaps hunting; but there were a dozen other things which I enumerated in which, as I believed, there lay harm neither for a clergyman nor for his flock.

'You are wrong, Jack,' said Gascoigne seriously. 'But the drawback in the Church of England is that the influence secured is not commensurate with the sacrifice ordained. The true sacerdotal

power is not wielded by any man in our Church, even though he may make all the concessions which should secure it. The power of the Church at large is great; but the openings to individual ambition are few. There is an open avenue to fame and power in the Church of Rome; and though you may not think it, there is a way as broad and certain among the great schismatic sects—Congregational and Wesleyan. Amongst us, the individual withers, and the Church is more and more. Spurgeon is more of a personality than even the Archbishop of Canterbury.'

'Then,' I asked, 'you are not satisfied?'

'Which of us,' he quoted, "'is satisfied in this world? Which of us has his desire?'"

'But,' I urged, 'there is surely some joy in fighting a good cause, even as one of the rank-and-file?'

'Ay,' said Gascoigne; 'surely. But there would be more joy perhaps in leading the combatants.'

'In what direction?' I asked him.

He laughed, and threw his hands abroad with a careless gesture. 'Perhaps one might see,' he answered, 'a little farther on horseback.'

I loved him so sincerely and admired him so much, that this seeming flippancy grieved me, and I let the subject go. 'Æsop will be here directly,' I told him. 'I have asked him especially to come this evening; but I have not told him that you will be here. I kept that for a surprise.'

There was a little constraint upon me as I said this; for I did not wish it to appear that I dissented seriously from any mood of his. Lest he should observe this, I arose as I spoke, and seizing one of his portmanteaus, dragged it into his bedroom. It was a little surprising that he returned no answer for a minute. But he called out after that pause, as he followed with the other portmanteau: 'Æsop coming! Jolly!' And then in a changed tone he said suddenly: 'How very unfortunate.'

I turned round and faced him as he sat upon the bed, and asked him what was unfortunate.

'At what time did you ask Æsop to be here?' he queried.

'Eight o'clock,' I answered.

'What a pity,' he said in an eager bustling way. 'I have an appointment I ought to have kept at once on coming into town.' He laid his hands on my shoulders, and put me away from him laughingly. 'The pleasure of seeing you, Old Jack, sent it out of my head; but I must keep it. I am a quarter of an hour late already,' he went on, looking at his watch. 'Let me write a line to Gregory, lest he should think I ran away from him.'

I gave him pen, ink, and paper, and he scrawled a hasty note. 'Read that,' he said, as he threw it in an open envelope towards me. 'I shall be back in an hour and a half at latest.' He seized his hat, and was hurrying from the room, when I called after him.

'How about dinner?'

'Ah! dinner!' he said, turning with a hand upon the door. 'Put it off till nine. Is that possible? Or dine without me to-night. Never mind, Old Jack. Better luck next time.' With that he went out; and I heard him leaping downstairs, two steps at a time.

He had not gone long when Gregory came in.

Gascoigne's sudden departure had left me a little dull, and I was all the more rejoiced to see Æsop. He and I chatted indifferently for a minute or two, until he said: 'You sent for me particularly. Anything up?' I handed him Gascoigne's letter, thinking how pleasant it would be by-and-by for all three of us to be together in my rooms. It was growing dusk; and he took it to the window to read it. He seemed a long time getting through it, I thought, especially since Gascoigne had spent so little time in writing it. I asked at last if he did not find it legible. 'Yes,' he answered; 'legible enough. But it's very unlucky. I can't wait for him.'

'Can't wait for him?' I asked piteously. 'You take it very quietly, the two of you, spoiling my night in this way.'

'Ah, well,' said Æsop, with an air of philosophy; 'life's full of disappointments, and we must school ourselves to bear 'em.'

'Well, you'll come to-morrow, won't you? And we'll spend the day together.'

'Well, I'm not sure about to-morrow,' said Æsop, with an air of some constraint; 'but I'll write and tell you about it. Meantime, give the traveller drink; and I'll take a cigar. I've only half an hour to spare.'

Nothing remained but to make the best of it. I should have Gascoigne back directly, and a pleasant fortnight lay before me. Yet the rose-coloured bloom seemed somehow to be rubbed off that near future, and I felt quite chilled and unhappy. Gregory smoked his cigar almost in silence; and I went out with him and saw him into a cab; and thereafter went back to my chambers in a disconsolate and gloomy mood, and awaited Gascoigne.

When he returned, he heard of Gregory's departure with so singular an absence of concern in manner, though he said fluently enough what a pity it was to miss Æsop, that I asked him outright if he did not care to meet him. He blushed a little, and said that all our youthful friendships could scarcely be expected to last as firmly as that between us two. He was so embarrassed whilst he said this, beneath the lightness of manner he assumed, that before I had well thought it, I called out: 'You don't care for Gregory. Did you leave me to avoid him?'

He turned quite red in his distress. 'Jack,' he said appealingly, 'who has put such a notion into your head? Has Gregory hinted anything of the kind?'

'No,' I cried; 'nothing. It was only a fancy of mine. But I thought—you were both so calm about missing each other—that you had quarrelled, and did not wish me to know it. You were not very much with each other at Uncle Ben's place when you were down last, and I have never seen you since, except apart.'

I thought he seemed relieved, though I could not conjecture why. He made no answer except to ask me if I had read his note to Gregory. When I said 'No,' he took it from the table where Gregory had left it, and handed it to me. It began, 'My dear Æsop,' and ended with, 'Yours always;' and there was no hint of anything but friendship in the few hearty lines which expressed his regret for keeping Gregory waiting.

There was no news from Gregory for four days; and I was so wounded at this, that it alto-

gether dashed the triumph and pleasure of having Gascoigne to myself in my own London chambers; a matter which had seemed too pleasant to be real in the contemplation of it. On the morning of the fifth day, a letter came bearing the Paris post-mark, and expressing Æsop's regrets at his enforced absence. This cleared the cloud; for it explained that unexpected private business had sent him abroad. 'Assure Gascoigne of my best wishes,' said the letter at its close. 'There is no need to tell either of you how happy the *réunion* you planned would have made me, had it been possible for me to share in it.' So that there was no fear of any breach between them, I cared less for the absence of one of them.

Gregory did not return to town until Gascoigne had gone back to his curacy. I told him of the fears I had entertained about the possible decadence of their friendship; and he listened to all I had to say with a solemnity very unusual with him. He spoke in answer with a sort of rough tenderness. 'You nurse illusions, young un. Heave 'em overboard; but be sure you don't let your generous impulses go with 'em.'

He spoke so seriously, that I concluded he had a meaning; though why the loss of any generous impulse should be involved in my ceasing to believe that he and Gascoigne had quarrelled, I could not divine. A sudden sound of footsteps on the staircase and a determined hammering at my outer door prevented the continuation of our talk; and my visitors being admitted, made instant demands for drink, and stated that they had come with a proposal. They were amiable young people, with strong social leanings, and were supposed by their parents to be reading for the Bar. The proposal was that a convivial society should be formed, meeting in rotation at the chambers of the men who belonged to it; and Gregory being voted to the chair, an initial committee meeting was held. Bills of Wadham had come prepared with a suggestion that the society should be known as 'The Associated Order of Rum-Pum-Pahs and Royal Brotherhood of Frolicsome Fellows;' and this imposing title being by acclamation adopted, the rules and regulations of the society were straightway framed. Jeans, late of Exeter, and now of the Middle Temple, barrister-at-law, called to that high profession the week before last, was already glorious in the possession of the services of a clerk, to whom the task of engrossing the rules of the new society was intrusted. We went for all this genial nonsense with a certain solemnity which became it well, and discussed laws and by-laws with a business-like gravity which left upon me a sense of having been hard at work. The first meeting took place at my chambers, and was attended by the consumption of much liquid refreshment and a great number of cigars. On this occasion I was formally installed as Royal Fellow; and Gregory was created Deputy Royal Fellow. A vast number of other offices were created, one of the chief objects of the society being to include none who did not hold office within its ranks.

Thereafter, regular weekly meetings were held at the chambers of the various members; and the society lived a flourishing and on the whole a very jovial and harmless life, which gave delight and hurt not. It reached an untimely finish in

the rooms in which it first came into being. The hour of midnight approached, and we were singing an absurd chorus :

From Wimbledon to Wombledon is seventeen miles ;  
From Wombledon to Wimbledon is seventeen miles ;  
From Wimbledon to Wombledon—  
From Wombledon to Wimbledon—  
From Wimbledon to Wombledon is seventeen miles.

I had thought, in the pauses of this topographical record, that I could hear a knocking at the door ; and any doubt I might have had upon the point was set at rest when the end of the chorus came. Blows were dealt upon the door in a perfect shower, apparently by a heavy stick ; and one of my companions answering this noisy summons, reported the advent of 'an elderly Bloke in sportive raiment.' This announcement being made in a voice which must have been audible without, I went to greet my visitor, whoever he might be, with some reasonable dread that he might consider himself insulted. To my surprise, the visitor was no other than my Uncle Ben ; and before his eye caught mine, I could see both trouble and anger on his face.

'Come in, uncle,' I said, but with some awkwardness. 'I have a few friends here. I have told you about the Club in my letters, and it meets here to-night.'

He pushed by me without answer, and standing in the centre of the room, surveyed the assembly for a moment. Then nodding to Gregory, he removed his hat, and sat down in the chair I had occupied. 'Don't let me disturb your amusements,' he said gruffly ; but his angry countenance perturbed the young fellows, and they sat in silence, or talked to one another in subdued tones and formal phrases. In a little space one rose to go. Another followed him ; and in less than a quarter of an hour after Uncle Ben's arrival, the room was cleared. I had made an awkward presentation of my uncle to the assembly, and had tried to enter into talk with him ; but his manner, so different from anything I had hitherto observed in him, froze all geniality, and his answers were all a gloomy 'Yes' or 'No.' When at last the guests were all gone, he drank a tumbler of Burgundy, and rising, took his stand upon the hearthrug.

'What is the matter, uncle ?' I asked, after a moment's pause, in which he had looked at me as if about to speak. 'Is any one ill at home ? Is Maud'—

'I suppose,' he said, regarding me with a look of mingled grief and rage which, while it staggered, baffled me to understand—'I suppose you don't know of nothing as has took place, do you ?'

'No,' I stammered—'unless it were the'—

'The what ?' he asked me, with an almost fierce anxiety.

'The meeting here to-night, and the noise we were making when you came.'

He held his hat in his hand, and to my intense surprise, he dashed it, at this answer, on the floor, and broke into an execration. I regarded him with both amazement and fear ; for the mood in which I saw him was so foreign to his nature, that I could only think him mad. Quite apart from the fact that he always drank with extreme moderation, I could tell that he was sober now. He glared at me for full a minute

with his face inflamed by rage ; but he fought hard for self-control, and at last secured it.

'Anybody to look at you,' he said, 'ud think as you was wonder-struck.'

'I am indeed,' I answered. 'Pray, tell me what has happened.'

'Oh !' he said, shaking his head at me with an expression of bitter sorrow, 'you deceiver ! Oh ! you deceiver !'

'Uncle,' I cried, 'in what have I ever deceived you ? What have I done ?'

'You shall have a chance,' he said with a broken voice, whilst tears made their way to his eyes. 'I'll give you a opportunity. Make a clean breast of it, an' I'll overlook it.'

His appeal cut me to the quick ; for I could read such a pathetic earnestness in his broken speech and his rugged homely face as I had never seen or heard elsewhere. But I had no answer. I was half giddy with surprise, and my mind was filled with quick-darting conjectures. All my guesses left me bewildered ; for though I had a boyish fault and folly here and there set down in the books of conscience, I could think of nothing I had ever done or contemplated which seemed worthy of a tithe's tithe of his emotion.

'You shall have a chance,' he said. 'Tell me you done it. Tell me what you done it for. Promise me, on your sacred oath, as you'll never do it again, and this once I'll overlook it. Don't send your Uncle Ben off broken-hearted. Make a clean breast, an' I'll forgive you.' The tears were coursing down his face, and he spoke with a broken voice.

I think the love and sorrow which I felt for him steadied me. I answered then. 'Uncle, whatever suspicion you may harbour against me, I am innocent of having done one thing or thought one thought against your peace of mind. Tell me what you believe against me, and I will clear myself.'

'You're hardened,' he answered with returning anger ; 'but my sister's blood's in you, and though your father was a rogue before you, I can't get over it. I can't believe,' he went on, softening again, 'as Bella's child's gone quite to the bad so young. Look here, Johnny. I took you for your mother's sake ; an' I kep' you, an' I had you bred up like a gentleman, an' I did my best to make a man of you. If I seem to be stern with you, it's for your good. I can't overlook it, not without a full confession ; an' even then, it'll take 'ears an' 'ears to overgrow it. But you clean your breast, an' I'll forgive you.'

'You quite bewilder me,' I answered earnestly. 'I know of nothing—I have done nothing, which could cause you such grief. Believe me, uncle, I would sooner die than even seem ungrateful.' In the eagerness of my protestation I approached him and laid a hand upon his arm ; and he looked at me fixedly, whilst I could see sorrow again giving way to rage. Perhaps this alteration in his mood worked some change in mine ; for I added with more firmness than I had been able hitherto to shew, that I had a right to hear his accusation, and that it was impossible that I could clear myself until I knew of what I was suspected.

'Oh, you innocent, persecuted, wrong-suspected creature,' he cried with a bitter sneer. 'You haven't done nothin' mean, have you ? You haven't done nothin' low an' base, an' blackguardly,

an' criminal, have you now? Law bless us, no; he wouldn't.'

'I have not,' I cried, with mounting anger at the obstinacy of his accusation, and his refusal to put it before me plainly. 'And whoever charges such a thing against me, lies.'

'What?' he said again. 'You've made your mind up to brave it out, an' swear black's white?'

'Neither your past tenderness to me,' I answered, 'nor your relationship, nor your age, give you a right to speak so. If you have any charge to bring, speak it out. If you will give me no chance to clear myself, I will not listen to your accusations.' Those were the last words I spoke to him; for he broke out with a wild exclamation, and struck me across the face so heavily that I fell and lay unconscious for a time. When I awoke, dizzily and painfully, there was already a gray light peering through the windows, and I was alone. The interview with Uncle Ben seemed at first like a miserable dream; but as it cleared itself to my memory, nothing but wounded pride withheld my tears.

#### TEA-PLANTING IN ASSAM.

IN our issue of August 9, 1879, we gave our readers a sketch of the lives of Indian coolies who had emigrated to British Guiana. We have been favoured by a contributor, who has special knowledge on the subject, with a few remarks upon the employment of the same class of people by English capitalists in India. His narration is as follows:

'The population of the province of Assam is too small, and the people much too indolent, to meet the labour requirements of the great industry which has grown up in the last forty years, and which is rapidly increasing and extending to other districts of India. It has consequently become necessary to import labour to the province; and the over-crowded rural districts of Bengal offer a large and satisfactory field for obtaining that which, in addition to the generally believed all-powerful capital, is indispensable to success—namely, labour.

'Into districts such as these, East and West India planters have sent their agents to obtain labour, and to the mutual benefit of employer and employé. A recent official return gave the number of labourers imported into Assam alone at one hundred and ninety thousand. There are many other districts engaged in tea-planting, although Assam stands most in need of imported labour. This province in the past has come in for a fair share of calumny—planters have treated their labourers as cattle, underpaid, overworked, badly housed, half-starved, mercilessly beaten them, and so on. Parliamentary debaters on the "cat" uphold the fact that troublesome members are to be found in every community, and that in some cases, severity alone can keep the command in the proper hands; and thus exceptionally severe measures have undoubtedly sometimes been used by the Indian planter. On the other hand, a conscientious and right-thinking body of men comprise the planting community at

the present time, and a labourer is too valuable to be badly treated. In making new estates, the home comforts of the coolies are secured even before those of the European. Wells and tanks are dug to secure a supply of wholesome water; and houses—erected at no small cost—are abandoned if considered unhealthy, and a new site chosen.

'The government of India does away with the remote chance of the Indian emigrant being badly off. Planters' agents in the recruiting districts have to be armed with a license signed by the magistrate of the district they leave, and countersigned by a like official in the place where they wish to recruit. When the labourers are prevailed upon to seek a living in distant districts, instead of dragging out an existence in their own country, they have to be taken before a magistrate and express their willingness to go with the recruiter, so as to satisfy justice—that is, the government of India—that they are not coerced into leaving. The first term of service is for three years, although planters are agitating for an extension of the period of service. All expenses come directly upon the importer; and it costs from sixty to a hundred rupees a head to bring suitable coolies from their homes to Assam. When their agreements expire, they are free to renew or leave; but the planter does not have to provide them a passage home. The daily working hours are nine, with one day's rest in seven. Rice has to be supplied to coolies at a given rate, and for several years past planters have sustained a very heavy and serious loss under this head, being forced to supply rice to coolies at nearly half the original cost. A blanket too has to be given to each agreement coolie every year, and a good house and medical attendance provided gratuitously.

'Imported labourers in the tea districts of India are very well off. The men are engaged at four, five, and six rupees per month, and the women at three, four, and five rupees. Every child above five years of age works and is paid; and people with large families, if provident, are able to save no inconsiderable sums of money. For these rates, certain tasks are given; but they seldom occupy even half the time of industrious labourers. Men hoeing not infrequently do three or four extra tasks in a day, and the writer has seen them returning home with their day's work done—that is, the regulation task—at nine o'clock in the morning. Women are able to earn still better wages at certain seasons of the year. A woman under agreement for five rupees a month would have a daily wage of about ten pice (threepence three-farthings). In good growing weather, when there has been a great pressure of leaf, I have known women take ten annas (one shilling and threepence) extra pay in the evening, for a day's work over the task. It was a woman's own fault if she did not treble and quadruple her ten pice a day. There was the leaf growing so fast as to make the planter very anxious indeed to get it off the bushes, and the women who earned good pay were always encouraged by the manager, who only wished that a few more would take the same amount. An estate coolie can live very well indeed upon six pice a day, as he gets his rice at a reduced rate. Now, even when he does his task only, he receives ten or twelve pice daily, and so has a good proportionate balance at the end of the

month. Clothing costs but little, and the item of soap does not involve a ruinous expenditure.

'The people are enjoying a state of prosperity which they could not have imagined possible when struggling for an existence in their own homes. A coolie has only to be industrious and careful, and he is bound to save money. If sick, he is fed; if well, is made to work, and is paid. Good workmen are seen after a few years in the country in possession of cows, goats, and poultry, and occasionally a pony or two. They give their wives and children silver ornaments; and not infrequently adorn their own waists with neat silver chains, representing a sum of money which I question whether they could have realised as their own possession, when at home. Many prefer to keep on the estates where work, pay, and good treatment, if sick, are certain. Others open shops, or take up patches of land and turn farmers on their own account; not as the drudges of usurers, as they were in their own country. Many of the people accumulate wealth which would give an English artisan a very good standing indeed in the workshop; and such a sum represents infinitely more to a man who can live well upon six pice (twopennee-farthing) per diem, than to the Englishman who needs beef and beer to maintain an existence. Sometimes when factory remittances are delayed, money is borrowed for a few days from the coolies. Indeed, it is not infrequently a matter for remark upon the satisfactory position gained by good work, that it actually enables them to lend money to the Sahib! As a contrast, the people when living at home had to work hard year after year just to keep life in their bodies.

'Mental and physical improvement is noticeable in the people who take advantage of the work and pay offered, and are provident with their earnings, and an unqualified blessing has accrued to those who have immigrated into new districts. The government of India has acted wisely and well in thus protecting the labourer, because with his substance he gets a little sense; and a few generations hence, when sensible natives are enjoying the position started by their coolie ancestors, they will doubtless recognise the fact that their improved standing is due to the government of the British power in India.'

From a correspondent who signs himself *Chota-wallah* we have the following notes, which may be of interest to those who contemplate trying their fortunes in Assam as 'Assistants' on tea plantations. 'No young fellow,' says Chota-wallah, 'should leave home on the chance of finding employment when he gets out, for many have had to regret coming out on "spee" to spend weeks or even months in an expensive hotel, and in some cases, when all their money was spent, having to seek work elsewhere.

'The ordinary terms on which assistants are engaged are: that they pay their own passage out to the garden, and agree to serve for three years, receiving as salary one hundred rupees, or say ten pounds, per month during the first—one hundred and fifty rupees per month for the second—and two hundred rupees for the third year. For India this seems small pay for even a beginner; but up-country fowls and ducks—which take the place of butcher-meat during the greater part of

the year—are very cheap; and the tea-garden assistant, if he does not live with some senior man during his first year, and pay him a moderate sum for mess, has a bungalow provided, so that he has no rent to pay; a horse kept for him, and the wages of a groom (syce), watchman (chowkedar), water-carrier (pani-wallah), and a gardener (malee), paid by the estate. Most new hands get one man at say ten or twelve rupees per month, who will cook and also wait at table till they can afford more. Thus the only wages the young assistant has to pay for the first year or two are—his khansama's ten or twelve rupees, six rupees to the washerman, and say two rupees out of his own pocket to make the chowkedar look to his clothes a little. Although a native will both cook and wait at table for a man just out, they do not like the duties being combined, and look on one who can afford two employing but one as mean and not Sahib-like; so that you may almost say a man has to increase the number, or at all events the pay of his personal servants as his own salary is increased. The following is something like a list of men attached as personal servants to a European in charge of a Garden: one cook, one table-servant, one bearer, one washerman, one punkah-wallah—often dispensed with—one syce, one grass-cutter, one man to bring firewood, one water-carrier, and one dāk-wallah, or letter-carrier; of whom the first five are private servants, the others being provided by the estate.

'To return to the fresh assistant. He pays, as we have seen, twenty rupees per month for servants, and has eighty rupees left to keep him; and on this, with care—as he will have brought a stock of clothes with him—he may live quite comfortably, if he does not drink beer—a costly item in a planter's house account—which a healthy young fellow just out from home cannot really require. In his second year, he will be able to afford a bottle of beer or pint of claret with his breakfast or dinner, which will do him no harm. In a climate like Assam, where there is so much wear and tear on the constitution, a little stimulant, after a man has been two or three years in the country, is beneficial; while the man who drinks to excess will soon suffer both in health and pocket; for proprietors will soon get rid of a man who neglects their work, as one who exceeds must. Men in coming out first, usually leave home about October, and get up to Assam during December, when the weather is delightfully cool, in fact superior to a fine English summer; for we have fires at night and in the early morning from November to the end of February. Coming at this season, besides getting accustomed to the heat as it comes on gradually, the new arrival sees the first steps in the making of a tea-garden; for it is during the months from October to April that we clear and plant; and before the cold season comes round again, he will have a good idea of a planter's life and work at the present day, without having to experience the hardships and privations which the planters of a dozen years ago had to endure. Whereas their predecessors had to travel about in the jungles looking for land, and while clearing it when found, had to live in wretched huts, often twenty or thirty miles from any other European, and quite out of the way of obtaining stores regularly; the assistant nowadays walks into a comfortable bungalow on a settled garden, with good

communication with the Brahmapootra and with his neighbours, who, now that there are so many gardens in the province, are seldom very distant. But though decidedly better than it was a few years ago, and steadily improving, let no young fellow suppose he is coming to an Eldorado where, in three or four years, he is sure to have made enough to enable him to retire. In Assam, we have a very bad climate, and what money is made is accumulated only by those who work hard and attend to their business, and doubtless at the cost of a certain number of years of life. Although there is nothing like the former amount of jungle-fever, there are very few who do not suffer at intervals from fever and ague; and to many this sticks even after they leave the country for good.

'Now that I have satisfied the "would-be" planter that there are drawbacks to a life in the jungle, it will be as well to give him some notion of the work. Suppose we begin at say six o'clock on a "rains" morning, when having had his cup of tea and toast, the assistant will take a turn round the "lines," to see that the people are going out to work; then a look into his leaf-house, to see whether the "green-leaf" plucked the previous day be ready for rolling or not; and then, if he has no native doctor, he returns to the bungalow, in front of which will be ranged all the sick people waiting for medicine. A man always knows when to give a dose of castor-oil or one of chlorodyne, and generally to prescribe for any simple ailment; and a manager always does well to be careful of the health of his people. The writer has often been ill in Assam, and has found his native servants most attentive nurses, and consequently cannot sympathise with those who talk of the "nigger" as so much our inferior as to be insensible of kindness. Fortunately, self-interest prevents the natives being ill-treated to any extent by the few who might be inclined to use them ill, for coolies are not slaves, and will not remain where they are not well treated. The sick people seen to, the planter goes through the garden to see that the coolies are plucking and hoeing properly; and will probably stay among them till 10.30; when he will have another look, to see that all is going on right in the tea-house, before returning to the bungalow for a bath and breakfast. Between breakfast and four P.M. he will pay frequent visits to the tea-house, and also get through any writing he may have to do. After four o'clock, it will be cool enough for another turn round the garden, to see what has been done during the day, and also what he will put his people to do on the morrow. In the evening, he will pay his coolies for extra work done during the day—for regular work they are paid monthly. About seven he will dine; and then a couple of pipes and an hour's reading generally fit him for bed. Men living alone rarely sit up late; the day's work is fairly heavy, and there are few amusements. In the cold weather, there is no tea-house work; but pruning, clearing, planting and transplanting, building and road-making, fully occupy the European's attention.

'To break the monotony of his life, the planter runs away for a day or two occasionally, to visit his neighbours; or they come to him. And in the cold season, shooting-parties are got up, when as many planters as can get together join, and bring

their elephants to go after tiger, buffalo, rhinoceros, deer, and whatever else comes in the way, or in places have snipe and floricane shooting; so that with fair health, a man manages to get through a few years tolerably pleasantly, sometimes even very happily—always looking forward to the time when he will be able to go home, first for a while, and by-and-by for good.'

## MAX GORDON.

IN SIX CHAPTERS.—CHAPTER V.

KATRINE'S DIARY (*Continued*).

PAPA and Aunt Mabel were naturally in a great state of excitement and curiosity; but Edie was still so weak that I stopped all questions and took her at once to bed. Her head was scarcely on the pillow when she fell into a quiet sleep, which seemed likely to last for hours. Then I called her old nurse to sit with her, and slipped out by the garden door. I ran down the shrubbery till I came to its darkest end, where the trees grow so thickly as almost to exclude the sunshine—the blessed sunshine, which I loved so this morning, and which is so hateful to me now! There, flinging myself on the ground, with my head on a fallen trunk, I wept such tears as never man or woman weeps twice on earth. 'What is this that has come to me? What does it mean? What am I to do?'—moaned in broken sentences.

For as in a lightning-flash the knowledge had broken on my brain, that for me, Kate Percy, life's supreme moment had arrived: the moment when there is a silence in both earth and heaven, to hear the voice calling for the decision of a soul: 'Choose ye whom ye will serve.'

'Entbehren sollst du—sollst entbehren!' Every bird's throat seems charged with the message; the scent of the pines is heavy with it; it is throbbing in the earth's heart beneath my own. And I—I have no answer ready. See! the words will scarcely frame themselves upon my lips: 'Yes; I renounce!' Oh, give me but breathing-space and I will answer them more fully; let me live over again only one month, one week, one day—

'The spirits of darkness have *their* day.' At this moment on my ear fell a quick decided step; and I had barely time to rise to my feet before Max Gordon stood beside me.

'They told me you were out, and sent me to seek you,' he began. Then quickly: 'What is it, Katrine?'

I did not dare to look at him; but I shivered at the sudden anxious change of tone. It was useless to struggle yet, unnerved as I was by the excitement of the last few hours; and with one despairing glance at his pitiful face, I broke again into helpless sobs and tears. Max muttered something under his breath, and then he drew me closer—closer—into his strong kind arms; whispering me to 'cry there—it was my proper place.'

Ah! it will not be counted to me for sin, I fancy, that brief blessed minute, in which I forgot vow, sister, everything, and knew in very truth

what hope, happiness, and heaven all mean! Forgive me, mother, that for one moment I lost sight of the bleak empty future that must be mine—the aching hopeless void that is my portion from this hour!

‘Oh, my queen, how I love you! Katrine, say you care a little—for never woman was more beloved!’

I hear, with his lips on my cheek. And then, thank God, some strength returns, and that mad moment has passed for ever.

‘Let me sit down—I am tired,’ I say stupidly; and we sit down on the fallen tree.

There is silence for a while. Max holds my hand firmly, and says nothing. In his absolute comprehension, in his unerring knowledge of how to deal with me, in the perfection of our sympathy, he lets me rest for a little before he speaks, and then it is very gentle. ‘What was vexing my darling so terribly when I found her?’

And I gather myself together, and answer irrelevantly in broken phrases: ‘It is a mistake—is it not? You did not mean that you really care for me?’

He laughs a little. ‘‘Care for you’’ is rather a mild way to put it, I think.’ Then changing his tone quickly—‘My queen,’ he says, ‘you know it so well—what is the use of asking, Katrine?—that from the first hour we met—the night you sang *L’Addio*, sweet—I have loved you as a man only loves once in his life! Tell me now, Katrine—tell me when you will be my wife!’

Then I rose in my agony and stood up, gazing stonily down the long green vista, of which every leaf, as it sparkled in the sunshine of this first glorious day of ‘the leafy month,’ will be graven on my memory to my dying hour.

I am twenty-five; I have probably some forty odd years to spend yet on earth; and in that moment, God helping me, I gave up everything that would make these forty years endurable in this most miserable world... And yet, amid it all, I can still be thankful that it has been laid on me, who am strong, to suffer for her, who is weak; and through the blackness of darkness surrounding me, some faint glimpses of the glory are even already coming—the glory that has even been theirs to whom

The high Fates gave  
Grace to be sacrificed and save.

Only, if it might be possible, that the sacrifice should avail for *him* also!...

I turned to Max. Something in my face must have warned him; he grew paler, and a look that was almost fear came into his eyes—those brave dauntless eyes!

‘Max,’ I said, ‘as clearly as my dry lips would allow me, ‘try to bear it as well as you are able. I can never be your wife, or any one’s. My life was settled long ago. At my mother’s deathbed, I promised to live for my sister; and God helping me, I will keep my vow!’

And then came the answer I foresaw and dreaded. ‘But, my darling, the two things are not incompatible! You need never part with Edith because you are my wife. [How lovingly, lingeringly, the word fell!] Katrine, you do not think I would ask the sacrifice? Only say you love me a little. Ah, you have never told me that yet!’

‘And I never *will*,’ fell from my parched lips—cruel in my pain. ‘I can never be your wife, Max Gordon—never!’

And then I went through yet another of these ordeals which seem to repeat themselves to-day in endless monotony. He pled well, eloquent with the consciousness of reason on his side; whilst with him went my hungry heart, and all the youth and life within me, that shrank and quivered at the prospect of a future that was to be empty of him.

It was a bitter task, in very truth, coldly to refuse him the only boon he ever asked me—I, who there and then would have died for him gladly!

At last, finding argument and entreaty were alike useless, he knelt down at my feet, and taking my two hands in his, he spoke, with solemn eyes on mine. ‘Beloved, you do not fancy you can deceive me? Ah, Katrine, a thousand vows could not make my certainty more sure, my faith more perfect! “Our spirits rushed together” when your eyes met mine that night nearly three months ago; and nothing either of us can do will be able to dis sever them again. But I know you too well, and reverence you too highly, to doubt that your motive is an adequate and worthy one, and as such I will honour it. So if I may neither know it nor the cause of your tears—such tears, poor child!—at least promise me one thing. Should, now or afterwards, there be anything I can do to help you, however hard, *try* me, Katrine! My love is good for something, I assure you’—with a dreary smile. ‘And if, please heaven, things, or your view of them, change—oh, tell me quickly, sweetheart!’ He bent his head over my hands and kissed them passionately. ‘Now go, my darling, go!’ But still he held me. ‘Kate, kiss me once. It may be the only time!’ I lowered my head for a moment. And then a broken whispered ‘Addio!’—and he was gone.

O my mother, were you near your first-born to-day?

#### CHAPTER VI.

##### KATRINE’S DIARY (*Recontinued*).

September 10, 1886.

When I last wrote in this book, summer sunshine was gladdening the earth; now we are in the fall of the leaf, and everything is bleak and dreary. Edie has been very ill. She caught the fever that day in the cottage, and for long weeks was laid low. Although never in actual danger, she has not made nearly such a good recovery as she should have done, and is still unable to leave the sofa. She is very thin and fragile, and there is a wistfulness in the great velvety eyes sometimes which goes to my heart like a knife. Still she is gaining a little strength those last two weeks, and to-day is looking almost like her old self again. Max was quite pleased with the improvement this morning, and says she will do well now.

He has been to us throughout what he always is, and more I cannot say. I hear them talk of his looking fagged and ill, and they speculate as to his overworking himself. But I alone see, as others cannot, *how* changed he is these last few months. There is a shadow lying deep in his

eyes that never used to be there, and the old glad smile is a very rare and weary one now.

September 13, 1886.

Even I, strong as I am, do not know how I have lived through the last two days.

Max came over earlier than usual yesterday morning. I heard him go up directly to Papa; and—Edie sleeping and not wanting me—I slipped out of her room quietly, and went down-stairs to the drawing-room, thinking to wait there till he should be gone again. But just as I had taken some flowers out of the vases, and was preparing to re-arrange them by way of employment, the door opened suddenly, and Max entered, shutting it behind him. He crossed over to me, and said hurriedly: 'Listen, Katrine; I want to speak to you.' And he told me in quick short sentences that he could bear it no longer; that if there was still no hope, he was going away—to India, where a friend of his father's had offered him an appointment. And then he took my hands in his, and gazing down into my eyes with infinite love in his own, he said: 'Kate, shall I go?'

I stood and shivered under his touch, powerless to take my eyes from his or to utter one single word; while in my heart went up an exceeding great and bitter cry. My burden was at last heavier than I could bear. Staggering backwards to the sofa, I laid down my miserable head among the cushions, and gazed mutely at him in anguish.

Max stood beside me, stroking my hair and asking no more questions; till by-and-by a torrent of tears came to ease me and answer him.

Then he said quietly: 'It is still hopeless, then, Katrine? This fatal secret stands between us yet?'

I bowed my head.

'To-night, then, I may write and accept Howard's offer. It must be to-night, because he wishes me to start immediately.—And now, dear,' he added wearily, 'I suppose I may go up and see Edie.'

A new and awful fear seized my heart like a vice, and brought back utterance to my tongue. 'Max!' I almost screamed, starting up and catching his hand in a temporary forgetfulness that I was alone in my unhappy knowledge. 'Who is to tell Edie?'

He looked a little surprised.

'Why, you, I should think. She won't mind much, will she?'

'I cannot do it,' I said, in breathless gasps. 'You have more power over her—than any one. You—you—manage her best when she is ill. You must break it to her; and for God's sake, gently, gently!'

'Very well, I will,' he answered, in a soothing way. 'But I am sure you are exciting yourself unnecessarily, Katrine. Why should *she* care?—why should anybody care—but you and me?—You and me,' he repeated with something like a sob; and left me.

Left me lying there on my face, in a sort of stupor; from which in a while I was roused by the furious ringing of my sister's bell. I rushed up-stairs to find her speechless and senseless and—as I thought—dying. For hours her life hung in the balance, and after that we trembled for her brain. With the return of consciousness came wild

despairing cries to Max not to leave her—if he left her, she should die or go mad; and then she clung to me and prayed me to forgive her if it were wrong in her to love him so; but she could not help it—could not help it!

My innocent little darling, there was no need to tell me that!

This evening, when Edith was at last sleeping under a strong sedative, Max sent me down-stairs to take some food. Nobody ever dreams of disputing his commands; so I went, and was listlessly trying to warm my hands—which *will* not warm—at the drawing-room fire, when he came in. He leant his elbow on the chimney-piece, and looked down on me. 'Kate, look at me,' he said suddenly.

I raised my eyes—careless now that my soul lay before him like an open book. Let him read it; who has a better right? And he does—with a long sad gaze of as perfect love and understanding as was ever born but to perish purposelessly in this world of incompleteness.

'O wondrous, fathomless eyes, with your "grand possibilities,"' I heard him murmur under his breath; 'but it is hard to give you up!' Then in a little: 'I have learnt your secret now, Katrine' (he flushed hotly as he said it); 'and if it is any solace to you to know that you possess the most unbounded admiration, the profoundest reverence of which a man is capable, you may take that comfort home!'

'Is there any chance for Edie?' I said hoarsely. 'Max, is she going to die?'

He shook his head sadly, and flushed again. 'Her health depends so much on her peace of mind,' he said slowly, 'that'—

'I cannot see her die,' I interrupted, calm with the calmness of despair. 'Max, you once said you would do anything to help me that I asked you, however hard. Will you take Edie with you to India?'

He looked at me uncomprehendingly. 'With me—to India?' Then a great horror rose slowly in his eyes, and his face grew pale as death, while he gasped: 'I un—derstand. Oh! I cannot! It is too hard, Katrine!' He sinks into a chair at the table, and lays his head down on his arms.

'It is her only chance,' I mutter doggedly. Silence.

'O my love!' he moans, in a little, 'I may be able to live without you—men do such things, I believe'—with the first bitterness I had ever heard in his voice; 'but put any other in your place—I can not!'

'She is only an innocent child,' I murmur monotonously, 'and would never know'—

There is a long silence. The clock ticking above me is the only sound I hear; and I wonder stupidly how many moments there are in forty years, and begin a mental calculation to discover. But labouredly picturing them up from days to weeks, from weeks to months, from months to years, my soul sickens at the tremendous total, and I let it go; whilst all the remaining strength within me—it is ebbing fast—focuses itself into one supreme longing. That I might first endow her with all the life and health that is such an intolerable burden to me, then lay my head down in some quiet place to die!

From behind the black drifting clouds without, a pale disk of autumn moon breaks through the uncurtained windows, and falling on the mirror behind him, reflects a saint-like halo round yonder prostrate head. Ah, my own love—is it not rather the martyr's crown!

I am brought to my senses by Max raising his head and looking at me. There are great hot tears in his eyes, but he is very quiet. 'With such an example before me, I should be unworthy indeed, Katrine, did I not hold to my promise. So, as you accepted your mother's charge, I now accept yours; and will fulfil it to the best of my power—so help me God!'

I stagger over to him, and dumbly hold out my hand. He takes it, and lays his head down on it again; whilst with the other I stroke his bright curly hair.

'O my darling,' he whispers, in a little, 'you will ever have the consciousness of how grandly you have done your part—but what will be left to me?'

'If,' I say brokenly, 'it is any comfort to you to possess one woman's boundless reverence and infinite admiration'—

'No!' he said, raising his head, and fixing his eyes hungrily on my face. 'It is not enough. Go on, Katrine!'

'And measureless love!' my lips moved to, though they could not speak, as I fell on my knees beside him with weary arms about his neck. And Max took me for the last time to his breaking heart, and kissed my lips with a last long kiss—symbol at once of the loftiest heights of Love's perfection, and the deepest depths of its despair. And then a great merciful darkness came over me; and when I awakened, I was alone.

April 2, 186—.

This is the last entry I shall make in this book. As soon as Edie was strong enough, they sailed; and my sister writes that she is well and happy.

I have little more to add. Two years afterwards, my father went to his rest; and five years after that, my sister came home—ordered to her native air. Six months only was I able to keep her, and then she died in my arms, the same loving child as ever. Nursing had always been my work, and seemed the one for which I was best fitted somehow; so, after Edith's death I came here—I write from one of our largest city hospitals—where I have been for some time now superintendent of the nursing staff. So, though I am alone, I have but little time to feel lonely; and the occasions are but rare and brief when, as to-night, I can call up the old faces and hear again the old tones; and when I have time to acknowledge to myself that even yet, now and again, my heart faints within me in its weary longing

For the touch of a vanished hand,  
And the sound of a voice that is still.

And now, dear reader, should my story have passed for you an idle or a weary hour, will you forgive me if in a word more I crave your future indulgence for one of God's beaten battalions—my sisters in celibacy, the old maids? I know they are a time-honoured subject of jest,

that is often more scornful than kindly; but, O friend, so many of them—not all, of course, but how many I never knew till I came to this place—have only come to where they now stand through much buffeting of the billows of great tribulations; and, arriving on the hither shore, it is with hands nerveless and hearts riven that they have had to

Take up the burden of Life again,  
Saying only, 'It might have been.'

Soured, dissatisfied, over-occupied with the affairs of others, some of them perhaps—and these I have no wish to justify; but nevertheless it is the result of my experience that nowhere is pure philanthropy carried to a higher perfection in its divine work of lightening Humanity's burdens than amongst the unappreciated class of the 'old maids.' And apart from all this, I do greatly honour them, that with the high and holy consciousness that in every true life one love only is possible, they are contented to abide by its issues.

## TOURISTS AND SPORTSMEN IN SCOTLAND.

WE have before us a remarkable publication—*The Sportsman's and Tourist's Guide to the Rivers, Lochs, Moors, and Deer Forests of Scotland*—which serves to illustrate the importance attached in most parts of Scotland to the summer and autumn season. The editor, Mr Lyall—who is also its proprietor and publisher—has for some few years past prepared successive editions of the work, and the amount and variety of information given are packed into some four hundred pages of small close type. The topographical details are so full, that nothing we know of except regular Gazetteers and Cyclopædias equals it; while the excellent map of Scotland prefixed gives it additional value. The alphabetical list of hotels available for tourists and sportsmen forms an introduction to the other contents of the work. The list extends to something like two hundred hotels, from Wick and Thurso in the extreme north to the English border on the extreme south. Many a name among them smacks strongly of Gaelic—such as Ardenadam, Auchnasheen, Ballachulish, Sealasaig, Cuilfail, Eriocht, Aftaric, Drumnadoch, Portsonachan, Taychreggin, Kyleakin, Sligachan, and Lochmorar. In many of these hotels, mine hostess announces her-self as the proprietrix; and we are not aware that guests are less comfortably treated than when the host is of the sterner sex.

Before going to other matters, let us peep into these establishments. The tourist hotel—we speak only of Scotland on the present occasion—is an institution quite unique, and such are being augmented in number every year. They all pretty nearly agree in this characteristic—that their condition during four or five summer months strikingly differs from that which they present in the other seven or eight. If not shut up altogether during the ungenial portions of the year, they are simply maintained on a small scale as taps for the supply of the local inhabitants or an occasional passing traveller. The white-cravated waiters, with table-napkins and soft shoes, are gone—we are not told whither. In bright and warm summer they again make

their appearance, ready to attend to any number of guests, and to manifest patient forbearance towards grumblers. If the hotel is full to overflowing, the landlord and his family, with waiters and servants, surrender their bedrooms, and sleep 'here and there and everywhere.' As to the functionary generally known as *Boots*, a problem arises whether he ever sleeps at all during the season; the earliest guests to depart find him ready to attend to them; the latest to arrive never find him wanting; while the information picked up by this remarkable servitor is just of the kind most useful to visitors—seeing that he knows the times of all the railway trains, steamers, coaches, and 'buses, and can give advice touching short-cuts along by-paths and over moors and mountain-passes. Nor are the guests themselves without curious experiences. If an influx of visitors takes place at one particular time, beds may be woefully deficient and makeshifts unavoidable. We know a tourist who, some years ago, before excursion trains and steamers led to the opening of so many hotels, found himself one Saturday at a small watering-place on the western coast of Scotland. Soon there came in a steamer with 'Saturday to Monday' Glasgow folk; while another contingent of visitors came down *via* the Caledonian Canal. It was literally 'first come first served'; the available beds were eagerly engaged, and the other applicants had to fare as best they could. Our friend slept on the floor of the coffee-room in one of the few hotels—head in a cupboard and feet outwards—after the other guests had retired for the night. Since that year the hotels in that town have become much more numerous.

A *shooting* has rather a special meaning in Scotland. It denotes an area of field, 'forest,' or moor over which gentlemen armed with deadly weapons bring down various kinds of game, estimating their booty not by any monetary standard, but by the pleasure of proving themselves to be crack-shots. Many of these shootings are very valuable, and are advertised to be let for the season or for a term of years, with the same publicity as houses and other buildings are elsewhere. We are told, for instance, of one shooting of twenty-five thousand acres, well stored with grouse, black-game, partridge, roedeer, hare, wild-duck, woodcock, pheasant, and rabbit; and having a shooting-box or lodge conveniently located and handsomely furnished. Another advertisement points to the fact that there are an Episcopal Church and a doctor near at hand; while the proprietor supplies the tenant with housekeeper, gamekeeper, &c. Another dwells on the advantage that a well-horsed stage-coach or a steamboat passes at no great distance from the lodge. Whether these shootings are rented for a single season, or on lease for a term of years, is a matter of agreement. The rents named range between very wide limits, forty or fifty pounds per annum up to two or three thousand pounds, or even higher. Let us notice one instance, without exactly specifying the name, locality, or date. The lodge is a fine handsome house, elegantly furnished; has four dining and sitting rooms, thirteen principal bedrooms, nine servants' bedrooms; the kitchen department replete with every appliance; hot and cold water apparatus; coachhouse, stabling for twelve horses, rooms for coachman, groom, gamekeeper, gillies, and

gardener. There are twenty thousand acres of well-stored grouse and low-country shooting, and ten thousand acres of deer-forest. There is a right of salmon-fishing on several miles of a famous Highland river, and good trout-fishing on small lochs and streams. The lodge is within two miles of a post-office and a railway station. A grand affair this, which none but a man of ample means could afford, seeing that the annual rental named is very heavy indeed.

The distribution of shootings here and there all over Scotland is well shewn in an alphabetical list in the book now under notice. All the counties are taken in regular order, from Aberdeen to Wigtown, and all the shootings in separate alphabets for each and every county. Thus we find the shootings in Aberdeen county ranging from Aberdour to Wythan, in Perth county from Abercairny to Woodside, and so on. To each is appended the name of the nearest post-town, with the names of the proprietor, his factor, and the present tenant or occupier. Her Majesty does not fail to occupy a place in the list as proprietrix and occupier of Balmoral, and as tenant of Abergeldie; while the Prince of Wales figures as proprietor of Birkhall, near Ballater. We soon find, on looking down the list, that the Southron keenly enjoys the scenery and shootings of the north, and has a keen eye towards grouse and partridge, pheasant, woodcock and blackcock, water-fowl, hare and rabbit, besides the lordly stag. Here, for instance, is one whom we recognise as a wealthy manufacturer in the county of Durham, and who pays six or seven hundred a year to a Scottish laird as rental for a shooting and its cosy lodge. Here we have an English banker renting one such spot, and two Kentish gentlemen sharing the rental of another. A London physician, a publisher, a merchant hailing from Liverpool, a silk-manufacturer, a shipowner, a shipbuilder, a great railway contractor, a cotton-spinner, a world-renowned ale brewer—all are to be found among the renters of shootings in North Britain.

*Fishings*, so far as concerns the information afforded to us, are still more remarkable than shootings. Let sportsmen decide the relative merits of the gun and the rod, the relative pleasures of sticking a hook in the gills of a fish and lodging a pellet in the body of a bird, or a bullet in that of a quadruped; tastes differ and always will do so. The compiler and editor of the plump little book before us, has managed to compress into it a vast amount of permanently valuable topographical information, not merely relating to touring, shooting, and fishing, but also to the physical and picturesque characteristics of nearly every part of Scotland. It is not arranged under the headings of fishings, but under the names of lochs, rivers, and streams. All the lochs are in one alphabet for each county, all the rivers and streams in another. We have spoken of the strong infusion of Gaelic in the names of moors and mountains; and certainly it is not less so in those of lochs and streams.

Let us take the case of the tiny river Cluny, to shew in what manner it is treated by our author: 'The Cluny rises on the Cairnwell Hill, and after a course of about two miles falls into the Dee near Braemar. Colonel Farquharson of Invercauld is the proprietor of the whole river, with the exception of about a mile near its junction with the

Dee, where the Earl of Fife is proprietor of the western bank. It contains trout and salmon; best months for the former are June to August; for the latter, August and the beginning of September. The part near Braemar belonging to the Earl of Fife is not strictly preserved; and for almost two miles further up the landlord of the *Invercauld Arms* at Braemar can give permission. Anglers wishing to go to the upper reaches must apply to Mr Foggo, factor, Invercauld, or to the lessee of the deer forest at Glencluny Lodge. Hotels and lodgings at Braemar. The Cluny passes through beautiful scenery. On its eastern bank are the ruins of the old castle of Kindrochet, once a hunting-seat of the old kings of Scotland. Some years ago a parchment charter, of date Robert II., was dug out of the ruins; it is now in the possession of the Spalding Club. Near the junction of the river with the Dee is Mar Castle, once a hunting-seat of the Earls of Mar, and afterwards a government fortress. Rod season from February 11 to October 31. *Route*—by rail to Ballater; thence by coach to Braemar, eighteen miles, where fishing may be commenced; or hire to Glencluny Lodge, seven miles further.

From the little river Cluny we will pass to the noble Loch Tay, one of the finest in Scotland. As the ample budget of information concerning it is too long to be quoted *verbatim*, we will content ourselves with a rapid summary. Loch Tay is surpassed by none for salmon-fishing, for which the season lasts from the 5th of February to the end of May or the beginning of June. The merits of the fish and the lovely scenery on the banks render this one of the most favourite spots in Scotland. Salmon as heavy as over fifty pounds have been here caught with the rod, and thirty-five pounds is by no means an uncommon fish. Mr Lyall tells us that in one recent year, by the permission of the Earl of Breadalbane, he fished the lower part of Loch Tay the first week of the season, and took in six days twenty-six salmon, weighing in the aggregate five hundred and fifty-one pounds. The loch, which is about sixteen miles long by three in breadth, has several hotels on its banks, by sojourning at which anglers can obtain permission to fish it. The net-fishings might be let at large rentals, but the Earl discourages them in order to keep up the very high character of the rod-fishings. The scenery of Loch Tay is as fine as anything of the kind in Scotland. The west or Killin end is grand and wild, the mountains rising to a great height, and serrated in many places into jagged and fantastic sky-lines. The river Lochy, which falls into the Loch near Killin, admits boats right up to the door of Auchmore House, a seat of the Earl of Breadalbane; and on the opposite side, a little further up, is the very old and picturesque burial-ground of the family, with the ivy-covered ruins of Finlarig Castle, one of the oldest seats of the barons of Breadalbane, adjacent to it. About midway down the loch, on the north side, Ben Lawers (the third highest mountain in Scotland) throws up its giant form. Many visitors ascend the mountain in summer, for which guides can be obtained at the Ben Lawers Inn, and also at Killin and Kenmore Hotels. The lower or Kenmore end of the loch is softer and more sylvan in its beauty than the upper or Killin end; and near it is the noble deer-frequented Hill of Drummond, wooded

to its very summit. The beautiful river Tay, emerging from the lower end of the loch, winds through the deer-park and round the princely Taymouth Castle. All the hotels on the loch-side possess boats, for which the following regulations are made: Each boat to accommodate only two rod-anglers, at a charge of five pounds per week or twenty-five shillings per diem; if two are in one boat, thirty shillings per day. All fish caught become the property of the angler. Two boatmen are necessary; they are paid four shillings a day each, the angler supplying them with luncheon. There are fourteen of these boats on the loch; and each hotel-keeper, by permission of the Earl, has control over a certain beat or length of loch—a profitable privilege to mine lost during the season. It may be added that the Loch Tay salmon are taken in nearly every instance by trolling, not by fly. Such is the substance of the varied information given concerning the finest loch or lake in one of the finest counties in Scotland, Perthshire; and this may be taken as a sample of the spirit in which all the Scottish lochs are treated.

Even the remote Shetland, the *Ultima Thule* of Britain, comes in for a brief notice, in regard to small lochs and streams containing trout, three or four small but comfortable hostelrys, and the grand cliff scenery that awaits the tourist and the artist.

For finding one's way to all parts of Scotland during the season, the great English Railway Companies furnish the primary aid, by means of *Tourists' Tickets*, two or three or more Companies sharing among them the fare charged for each ticket. The smaller Scottish Companies do the like, preparing plans for trips shorter in distance and in duration, and including other modes of conveyance subsidiary to the rail.

Steamers of course do not neglect the opportunity. From the principal ports on the east and west coasts of England, to nearly all the ports of Scotland, well appointed steamboats or steamships ply, and carry good loads in the summer. Still more notable are the river and coast steamers, especially those established by the enterprising Messrs Hutchison of Glasgow, and by Messrs D. McBrayne and Co. These have rendered essentially good service to Scotland. They mark out routes of conveyance to a multitude of places—some beautiful, some grand—which would otherwise remain almost unknown to Southrons, and even to Edinburgh and Glasgow folk; bringing money where money is naturally scarce, and giving pleasure alike to visitors and to the inhabitants of the small towns visited. In this way, too, commerce is encouraged; for cargo steamers, following in the wake of those for passengers, exchange the commodities of the several districts for British, foreign, and colonial produce and manufactures.

The tourist coach is quite a feature in the general system. It is usually owned by three or four hotel-keepers along the line of route, who share among them the expense of coach, well-appointed teams of horses, and all the necessary trappings. The coach starts, say, about ten in the morning from an hotel where some of the passengers have probably passed the night; it changes horses along the road at well-determined places; it makes a longer mid-day stoppage, to enable the wayfarers to partake of luncheon; and

it arrives at the end of its journey at six o'clock or so, where mine host naturally expects many of the passengers to dine, sup, sleep, and breakfast next morning. Some of the most tempting scenery in Scotland is laid open by these coaches. It may be worth mentioning too that most of the drivers are superior in intelligence to the Old Weller class of men among the stage-coach drivers of England, being acquainted with the history and traditions of most of the buildings and spots rendered memorable by past events; and many of them able to give characteristic emphasis to snatches of song from Robert Burns and Walter Scott.

### BY CHANCE.

DESIRING to give a new zest to social gatherings, the Americans not long ago hit upon the device of Wristlet parties—so called from each lady invited being required to furnish a pair of wristlets, duly numbered, for the occasion; one of which she retained for her own use, its fellow being forwarded to the party committee. On the evening appointed for the gathering, each gentleman-guest before entering the room selected a wristlet from a basket outside; and then proceeded to look up the lady wearing its fellow, upon whom he was bound to dance attendance until the party broke up.

It is not unlikely that the idea was suggested through its originator bethinking himself or herself that in old days it was customary for every one whether married or single, to take a valentine by chance not choice; the names of the parties to the fanciful lottery being written on paper, rolled up and drawn, so that all concerned had two valentines—the one they drew, and the one who drew them. 'I find,' writes Mr Pepys in 1667, 'that Mrs Pierce's little girl is my valentine, she having drawn me; which I am not sorry for, it easing me of something more than I must have given to others. But I do here observe first the fashion of drawing mottoes as well as names, so that Pierce, who drew my wife, did draw also a motto; and this girl drew another for me. What mine was, I have forgot; but my wife's was, "Most courteous and most fair;" which as it may be used, or an anagram made on each name, might be very pretty.' What Mr Pepys escaped by being valentine to a child may be seen by a later entry in the Diary, running: 'I am this year my wife's valentine, and it will cost me five pounds; but that I must have laid out if we had not been valentines.'

Even nowadays men have still faith in Fortune, and willingly let Chance decide matters more momentous than partnerships for a night or a year and a day. In the Albemarle Memoirs we read: 'Up to the year 1770, Lord Albemarle and his brothers the Admiral and the General, were unmarried, and had no intention of changing their, to them, state of single-blessedness. Their younger brother Frederick, Bishop of Exeter, was the only Benedict of the family; and he had a son Frederick, ten years old, by his wife, Horace Walpole's niece. Unfortunately for the boy, he inherited his mother's waywardness of temper; and gave such offence to her bachelor brothers-in-law that they tossed up which of them should marry, with a view to cut out the lad, who was looked upon as heir-presumptive to the title.

Lord Albemarle won the toss; proposed to and was accepted by Anne, daughter of Sir John Miller of Froyle Place, Hants; whom two years after he left a widow; and had by her a son and successor, born the 14th of May 1772, and at his father's death a boy five months old.' This boy on arriving at the age of twenty, took to himself a sixteen-year-old bride, and became the father of so numerous a progeny as utterly to extinguish any hope the once heir-expectant might have cherished of enjoying the inheritance he had lost by his temper and the toss of a coin.

If Lord Albemarle thought it an ill chance that compelled him to sacrifice himself on the hymeneal altar, he had only his own rashness to blame for the misfortune, and at the worst he was free to choose the fair for whom he surrendered his liberty. That consolation was denied to Sir Walter Scott's cousin Watty. A middy-in the royal navy, he went ashore at Portsmouth with some messmates, and there made merry until the funds were exhausted and a long bill run up at a tavern at the Point. The signal was made for all hands on board; but when the careless middies would have obeyed it, the landlady intervened, vowing they should not leave the house until the reckoning was paid; and called in a bailiff and his men to shew she was in earnest.

The youngsters threatened and entreated all to no purpose. The obdurate woman reminded them they would be irretrievably ruined if the fleet sailed without them, and pronounced her ultimatum. Said she to her horrified debtors: 'I will give you all a chance. I am so circumstanced here that I cannot very well carry on my business as a single-woman, and I must contrive somehow to get a husband; or at all events be able to produce a marriage certificate. Now the only terms upon which I will set you free are that one of you marries me. I don't care a snap which it is; but one of you I will have for a husband, or else to jail you all go, and your ship sails without you.'

Finding the vixen immovable, the unhappy midshipmen cast lots; and Watty drew the fatal slip. The lady procured a license, and the knot was tied; after which she bade them, husband included, good-bye, intimating that she did not want to see him again, the marriage lines being all she wanted; and these were safe in her possession.

The ship sailed, the middies keeping their strange doings at the Point a strict secret, as they had sworn to do before drawing lots. Twelve months later, when the ship was at Jamaica, a batch of English papers reached the midshipmen's berth. Glancing over them, Watty was attracted by an account of a robbery and murder at Portsmouth and the execution of the culprits. Suddenly leaping to his feet, he waved the welcome newspaper above his head, shouting: 'Thank heaven, my wife's hanged!'

'There is nothing,' says Lord Shaftesbury, 'which is so merely fortune and more committed to the power of blind chance, than marriage.' A curious illustration of his meaning comes to us from the staid old town of Franklin, Massachusetts. At an evening-party there, a gentleman challenged a charming young widow to try her fortune at Bassino. She accepted the challenge, playfully proposing that they should play for a

wager; and he agreeing, asked her to name the stake. Seeing she was at a loss to respond, the host laughingly said: 'His hand against yours.' The lady demurred, and was turning away from the table; when the challenger interposed with: 'My hand for yours if I win; or at your disposal for any young lady of respectability, her consent being attainable, if I lose.' The wager was accepted; and the amused company gathered round the board. The lady led off and made forty-five, her adversary failing to score in return; but improving in his play as the game progressed, reached two hundred and fifteen to the widow's one hundred and sixty-four. Growing nervous, she played worse and worse, and finally left off the loser by two hundred and forty-seven points. Then the hostess advanced, took the fair one's feebly resisting hand, and placed it in that of the exultant winner, who begged permission to keep the mace with which he had won the match and a wife.

The early Wesleyans did not question the propriety of seeking guidance by opening the Bible at random, and taking what enlightenment they could from the verse on which they put their finger, in unwitting imitation of the *Sortes Virgilianæ*, once in high repute as a method of divination, and tried with such prophetic results by Charles I. and Lord Falkland in the Bodleian Library; Falkland opening on the lines, thus translated by Dryden:

I warned thee, but in vain, for well I knew  
What perils youthful ardour would pursue.  
That boiling blood would carry thee too far,  
Young as thou wert in dangers, raw in war.  
O curst essay of arms! disastrous doom!  
Prelude of bloody fields and fights to come!

While to his royal master fell:

Torn from his subjects' and his son's embrace,  
First let him see his friends in battle slain,  
And their untimely fate lament in vain:  
And when at length the cruel war shall cease,  
On hard conditions may he buy his peace.  
Nor let him then enjoy supreme command;  
But fall untimely by some hostile hand,  
And lie unburied on the barren sand!

Shipwrecked men have often been driven to the horrible resource of drawing

Lots for flesh and blood,  
And who should die to be his fellow's food;

but in such cases the participators in the lottery have been so nearly dead already as to care very little how the chances might go. To men in full life and vigour such an ordeal is a trying one. In 1842, when Santa Anna ruled Mexico with a rod of iron, some three hundred Texans crossed the Rio Grande and attacked the little town of Meir, but were badly beaten by the garrison under General Anpudia, and two hundred of them taken prisoners. A month later saw them at Hacienda Salado, on their way to Matamoras. Rising upon their guards, after a sharp fight in which twenty-four of them went down, the Texans managed to escape, and struck for the mountains; but ere they could gain them were surrounded by a detachment of Mexican cavalry and forced to surrender. They were taken back to the Hacienda to await instructions from Santa Anna. He ordered that one man in ten should be shot immediately. As there were a hundred and seventy-six prisoners, this decree condemned seventeen to

death; and the Texans wondered how the victims would be selected. They had not to wait long to learn. On the 25th of March 1843, they were brought out of prison, and drawn up, fettered in pairs, in front of a stone wall. Then the Mexican commander, producing a small pitcher, dropped into it one hundred and seventy-six beans, of which seventeen were black; and grimly informed the Texans they must step forward in turn and draw a bean, those taking a black one being doomed to death.

The first to advance was Captain Cameron, a fearless Scotchman, who had led the attack on the guard. Thrusting his hand into the pitcher, held at arm's-length by an orderly, so that the interior could not be seen, Cameron, to the disappointment of the Mexicans, drew forth a white bean. Captain Wilson, shackled to Cameron, made the second draw, and was equally fortunate, as were the two next comers; but the fifth, Captain Eastland, on opening his hand disclosed the first fatal bean. So the drawing went on to the end. On its completion, the shackles were stricken from the limbs of the seventeen doomed men, and they were at once separated from their luckier comrades. As the sun was setting behind the lofty ridges of the Sierra Madre, the prison-doors swung back, and the seventeen Texans were led out, tied together in pairs, and made to sit down on the prostrate trunk of a tree, with their faces to the wall, and their backs to the firing-party. The word was given; there was an explosion as of a single weapon, and the tragedy was ended.

A cruel piece of business truly; but execution by lot is a thing not unknown even in England. In 1640, the parson of St Andrew's Church, Newcastle-on-Tyne, made this entry in the register: 'Two soters, for denying the King's pay, was by a council of war appoynted to be shott att, and a pare of gallos set up before Thomas Malaber's dore, in the Byg Market. They caste lotes which should dy, and the lote did fall of one Mr Anthone Vicars, and he was set against a wall, and shott att by six light horsemen, and was buried in our churchyard in the same day, May 16 day.'

Such are a few examples taken by Chance, a subject which is endless.

### THE OLD NURSERY STORY.

FROM THE LOW-GERMAN.

SHE was like a dolly, so bonny and wee;  
And oft at the gloamin' she'd sit on my knee.  
I'd pat her soft cheek while my hand she would hold,  
And always the old nursery story I told:

'There once was a Princess; gold, gold was her hair;  
She sat in her bower, and pined in despair;  
Till by came a Prince, and the fair one he spied  
And he was the king then, and she was the bride.'

The years have sped onward, and now she's grown up;  
But still at the gloamin' she sits in my lap;  
She presses my hand, while I kiss her soft cheek,  
And still of the old nursery story we speak:

'There once was a Princess; gold, gold was her hair;  
She sat in her bower, and pined in despair;  
Till by came a Prince, and the fair one he spied;  
And I am the king now, and thou art the bride.'

## FESTIVE DEMORALISATION.

It is a pity, we think, that social intercourse in our festivities should continue to be disfigured by the absurd old usage of drinking toasts. In nothing do men of good education and repute make themselves so ridiculous as when at the word of command they impulsively rise in a body, and with glasses of liquor in their hands, frantically, like so many lunatics, drink the health of some one, following up the ceremony by uproarious shouts and other manifestations of delight, at having done what they consider to be a great and good action. Such is what is called toasting with all the honours. The practice is no doubt ancient. It is identified with national traditions, it is fashionable, and it is acknowledged to be expressive of good feeling. But for all that, it is very irrational, and very much of a sham. Certainly, it is an encouragement to waste and intemperance.

In private life, toasting has almost entirely disappeared. A hundred years ago and less, it was rife in the extreme. Half-a-dozen men could not sit down to dinner without drinking toasts. In the event of any great victory, there was no end of toasting. The nation was for a time half insane in drinking the health of Nelson, Wellington, or other successful commanders by sea and land. It was part of a young man's education to get familiar with a few toasts, which he could bring out when 'called upon' in turn at evening entertainments. At the ripe age of fifty, he had become so hackneyed in toasting as never to be at a loss for a hero, or for a sentiment suitable to the character of the company. At the very least, he could give 'The rising generation,' 'All ships at sea,' or 'May the wings of friendship never lose a feather.' Curious and not a little melancholy to think what vast numbers of worthy people now gone to their rest habitually killed time in soaking and trying to amuse themselves over this kind of drivelling nonsense. As yet, the popular mind had not been roused to inquiry on a variety of important questions. A great part of life was

consumed in dawdling and drinking, as is still the case among certain classes in small country towns.

Discountenanced in general society, complimentary toasting holds its ground in public festivities. There, the libations are observedly as copious, as provocative of oratorical display, and as much attended with senseless uproar, as ever. Corporation dinners, charity dinners, reception and farewell dinners, are all alike in these respects. Every toast must be prefaced by a drink all round. The quantity of champagne consumed on some occasions is immense. The removal of a wagon-load of empty bottles not at all unusual. What may be the different degrees of intoxication, we shall not attempt to specify. One would not like to be too severe on a matter admitting of many extenuations. At the same time, we may be permitted to say that the example set at these festive demonstrations is not quite in accordance with the solemn counsels ordinarily uttered on the evils of intemperance. Men in high position who are nimble at toasting at grand dinners, do not seem to perceive that they are acting inconsistently in holding out a bad example to the poor, whom they are constantly lecturing on the terrible consequences of misexpenditure on drink.

Legislators are getting demented on the liquor traffic. The world is stupefied with schemes for lessening drunkenness. Advice on the propriety of reducing the number of public-houses occasionally comes from quarters where there might be judicious silence on the subject; for what is a well-replenished private cellar, or a club, but a public-house in disguise? There is an old injunction to the effect that we should correct our own errors before trying to correct those of our neighbours. Unfortunately admonitions of this sort are always forgotten exactly when they should be remembered. We do not expect much good from legislating on the liquor traffic. A rigorous Act of parliament to restrain drunkenness in England at the middle of last century, proved a complete failure, and had to be rescinded; for the cure, a sharp attack on

public-houses, proved to be worse than the disease. Neglectful of this and other lessons taught by history, there has latterly been too great a readiness in trying to supersede moral discipline by statutory enactments. In some cases, attempted legislation on various topics has been little better than quackery.

The special and potent remedy for intemperance, as it appears to us, lies in voluntary appliances and good example. We remember hearing a worthy judge, now deceased, say that in his young days, which would be about 1800 A.D., no man was esteemed a gentleman who did not enter a theatre or a ball-room half drunk. To be tipsy on certain occasions was the symbol of respectability. No such notions are now entertained. In ordinary circumstances, the higher and middle orders shrink from the social degradation of being classed with drunkards. We all know that this measure of reform has been brought about spontaneously through the progress of taste, without the agency of Acts of parliament. And if so with these orders, why not with those reckoned to be beneath them in the social scale? The success of temperance societies of one kind or other, now spread over the whole country, offers a proof of what can be achieved by united and well-directed effort.

Strangely, indeed, with all our advances in education and taste, certain drinking usages, patronised by persons of respectable character reputedly abstemious, continue to draw out a lingering existence, and so far are a scandal and matter for reproach. On this account, we venture with deference to recommend that an end should be put to all drinking usages whatsoever by general concurrence of feeling. That conspicuous and antiquated usage, toasting at public entertainments, should at all events cease. No doubt, there may be difficulties to overcome. Inveterate prejudices stand in the way, as they always do, when the reform of any kind of abuse is suggested. On the other hand, we are inclined to think that many who complain of the tediousness and absurdity of the toasting system at public banquets would be glad to see something more simple and rational substituted. To take the thing quietly, the first step in reform might consist in getting rid of the bellowing toast-master who acts as fagman to the ceremonies. The next and more important step would be to drop 'the honours'—that is to say, the blatant shouting, hurrahing, clapping of hands, and stamping of feet. Last of all, the practice of *wishing* instead of *drinking* healths might be introduced, along with such complimentary remarks as are called for in the circumstances.

Evidently, the present usage cannot be continued without invoking the contempt of the classes who are preached to on their intemperate habits; and contempt is a serious obstacle to reform. How those wretched ne'er-do-weels, glad to seize an excuse, must derisively laugh at admonitions to abstain from drink, when they read of a titled chairman at a public festivity saying in a lively manner to a select company: 'Fill your glasses, gentlemen, to the next toast which I have to give—The navy, army, and reserved forces—with all the honours, if you please.' And then follow the drinking and boisterous applause. We ask all who have participated in such saturnalia, if they have not in responding to the toast felt

somewhat ashamed of themselves at the figure which they cut? Grave statesmen, reverend divines, learned professionals, and sound men of business, taking part in a buffoonery which could only be excused in a parcel of children! Independently of this abasement, the participators must on consideration feel that they have contributed a very bad example to intemperates, who doubtless make unceremonious remarks on the subject: 'Here have we been reprimanded and sent to prison by these magistrates and fine folks for taking a glass, while they swill no end of glasses in drinking toasts at these grand dinners of theirs.' The subject is too painful to pursue, and we leave it to others. Surely, it would be possible, as we have hinted, to indulge in sentiments of loyalty and personal esteem without anything like Festive Demoralisation. W. C.

## A LIFE'S ATONEMENT.

### CHAPTER XXIX.—HISTORY.

*'He had no change in her remembrance.'*

AN English novelist of great genius says, in taking leave of the chief female figure of his story: 'Such women are not the spice of fiction, but they are the salt of real life.' That phrase expresses so exactly what I feel and desire to say of Maud, that I should probably have used it originally, if Charles Reade had not forestalled me. Did it ever occur to you to think that the especial charm and beauty of some women is—that they have suffered? The esteem and liking with which you regard them, even in your days of strangerhood, and before the usages of friendship have endeared them, is instinctive. The chivalry of the manly heart is awakened at the thought of such unmerited troubles as the faces of many good women unconsciously tell of. There is a look almost angelic in such faces; the gentle eyes that would fain smile kindly on all things, have been made familiar with tears; yet they still smile, a little wistfully maybe, but tenderly—the very twilight of a smile—no garish brilliance that blinds and dazzles, but a sad and gentle light, which soothes the soul as an autumn evening sky will, and disposes the heart to a quiet and reverent peace.

If old Time, whom we figure with scythe and hour-glass, had but a real personality, how should we sing his praises, how tell our thanks to him? Good old FATHER Time, who dost bear us all in fatherly arms away from sorrows, away from all sorrows in a while, if we will but have a little patience!

Maud in these days dwelt in peace. I have no skill to tell how the peace came down, and settled round about her like strong sunshine, until at last she would scarcely for her own sake have recalled her sorrow. Had that harrowing mystery which had first belonged to her lover's fate still seemed to hang over it, things might have gone otherwise with her, and peace might at least have been delayed. But she had learned that he was dead, and that his unknown griefs were over; and it came to pass that poor Frank's best hopes were justified, and she found rest. She did not forget him, and will not, though she should live to be old, cease to remember her first lover with infinite sad sweetness of remembrance and tender

pity. The cares which a good woman can lay upon herself for the cares of other people, soothed and gladdened her, and she moved among the poor like a ministering angel. Poor rural folk are not so susceptible to gratitude as it might be wished they should be; but she took root in the shallow hearts of her old women, who grumbled to her over their rheumatics and their old men and the hardness of the parish, 'which ud only give 'em a loaf a week an' times that hard.' These bent old creatures used to talk of her to each other, and though they knew little enough of her trouble, would say 'Poor dear!' when they mentioned her, by a sort of pitying instinct, which perhaps her eyes inspired.

Will Fairholt, though touched always by that casuist fear which he had long since expressed to Hastings, found the definite news of his brother's death a relief to him. It was a great grief; for as we have seen, he had a sincere love for Frank; but he felt, when the first wound of loss was healed, happier and more at ease than he had done for many and many a week before the news reached him. I have not time to tell the whole story of his healing; but as even in a river on its hurrying way to the sea you may find a quiet back-water here and there where foam of haste and voice of ripple are not, so my story, which serves a less important use than any river, may pause awhile, and we may suffer ourselves to fall into that calm bay in which the lives of these two, after much tempestuous tossing to and fro, have found shelter.

'My life has been but a poor business, Maud,' said Will one day as he walked by her side in the gardens at Hartley Hall. Before them was the gate at which she and Frank had stood together years ago when they parted as pledged lovers. The day was warm and bright and drowsy, and the shadows were growing long towards the east. 'My life has been but a poor business. For I have spent years out of the world idly, which should have been spent within it busily. I have never dared to name the purpose which has kept me here, and I have been living in a fool's paradise for years.'

'How?' she said, looking up at him, frankly and openly, with questioning eyes.

'I have no right,' he said, 'to trap you into such a question. And I did not mean it.' She understood him then, and almost knew everything he had yet to say. 'Do you remember when you first came here, and poor Frank and I first saw you?'

'I remember well,' she answered softly.

'I can remember,' he went on, 'no hour since then in which you have not been the centre of my life. Did you ever guess that?'

'I knew it,' she said softly; 'and I was very sorry.'

'You know it now,' he continued, bending over her. 'Are you still sorry?'—She gave no answer, but hung her head a little.—'I have loved you nearly all my life. Maud, can you give me a little hope?'

'I am very sorry,' she began, and his heart failed within him; but her voice went on tremulously, 'that you have'—And there she paused again.

'That I have spoken?' he asked.

'That you have suffered so,' she answered more

boldly, lifting her head and meeting his eyes with hers. As she faced him thus, a tender blush stole over the delicate pallor of her countenance, and it was not easy to endure the ardent question of his eyes.

He stretched out his hands and took both of hers unresisting. 'I have thought,' he said, 'I have hoped that our partnership in a common grief might bring us nearer to each other; though if I know my heart, I schooled myself to see your happiness, and to live apart from you without repining.'

'Will,' she said, as if entreating him, 'I knew it all—I knew it all.'

'But I have waited,' he went on, 'hoping against hope that time might heal your grief, and make a standing-place for me beside you. I have waited long Maud, long, long! But have I waited long enough? May I speak now?'

Her eyes faltered downward whilst he spoke; but she raised them again and looked him bravely in the face, though they were dim with tears. He saw that no further speech was needed then, and folded her to his heart.

They were middle-aged people, and the passionate raptures and delights of young love were out of reach. But as I have known the delirious happiness of youth breed a sort of heart-vertigo, so I have seen courtship in a man of forty and a woman of four-and-thirty full of very solid happiness. As for Maud, it was not the young love, but it was enough for happiness; for she pitied, and esteemed her lover, and had had the most constant and tender friendship for him for many years. And there was this singular factor in the case, as a matter of distinct feeling, although as a thing of course one conscious thought would have ousted it—that whereas she had passed the first bloom of her womanhood, Frank was still and for ever and always a bright, handsome, wilful lad. He had no change in her remembrance. She grew towards middle age; but his figure was no sturdier, his open brow took no corroding wrinkles, his voice had the ring of joyous youth in it. The deep maternal instinct in the heart of an old maid awoke, and she claimed this perennial youth for her child, not her lover. How should he be her lover, the bright, dandified, clever young fellow, who had grown no older this sixteen years; whilst grief had wasted her bloom, and time had reconciled her! Infinitely sad and sweet and tender were these memories, like a mother's remembrances of her child. For, ah! the dead who die young are always young, until we, who cherish their memory, follow them.

Will was quietly contented. There was no great excitement in his joy. As we near forty, most of us are disposed to take the delights of life soberly. Your 'wild and wanton colts, fetching mad bounds, neighing and bellowing,' are pleasant to look at, typifying youth and high spirits; but the trained steed who finds himself fetlock-deep in sweet grass, has a placid rest and ease in the sense that his burden is away, which are perhaps as satisfactory to him as the more demonstrative joys of colthood used to be. Will had borne his burden manfully, waited his time with patience, and accepted his happiness with a glad solemnity of thanksgiving.

Neither she nor he felt any wish to talk just then. They strayed slowly on to the gate to-

gether, and looked out over the park, where the peaceful sunlight lay among the trees, and the distance shimmered a little, as though the air were alive between and breathed gently in the heat. Then they turned and strolled back in happy silence to the house, and parted there; and Will strayed down to the arbour behind the rhododendron walk, where Mr Hartley mostly loved to take his ease with dignity. The old man was asleep, with a yellow bandana handkerchief over his head; and his hands were peacefully folded over his waistcoat, which was a little more bulkily projected than it had used to be. Will sat down and lit a cigar, and waited until the old boy should awake. He had pleasant thoughts for his companions, and was in no hurry; but a sound of yawning made itself heard from under the yellow bandana: one hand went lazily up and removed the silken screen; and Benjamin Hartley observing his companion, nodded at him idly and good-humouredly, closed his eyes for a few more seconds, yawned again, reopened his eyes, smoothed his legs with his hands, and said finally in a voice of lazy comfort: 'Well, Mr William, how goes it?'

'It goes very well indeed,' said Will, smiling; 'and only needs your hand to push it into smooth water.'

'Eh?' said Mr Hartley, sitting up with a bewildered face.

'Maud and I, Mr Hartley'—Will began in explanation.

'Ah!' said Mr Hartley with an appreciative grin.

'Have made up our minds that we care for each other. But there is a Wicked Uncle in the case, as there has been in the stories of many young people' [Mr Hartley's smile, appreciative of the situation, grew wider]—'and it is necessary to soothe him, and obtain his sanction.'

'He's a hard old beast that there uncle, Mr William,' said Mr Hartley with a joyful wink. 'But if you was to go at him together, I think you'd manage him.'

'I think we should,' Will answered. 'But I want to pave the way by which we must approach him.'

'You come along of me,' said the Wicked Uncle; and Will throwing away his cigar, walked with him to the house, where the old man went in search of Maud; and having found her, brought her on his arm. 'Mr William,' he said, not without dignity, 'I've known you, good man and true English gentleman, for twenty year. I never knowed a thing about you as could make you unworthy of my girl; and as I find her willin', I give her to you with all my heart. And she knows what I think about her—don't you, my dear?' With that he kissed her heartily, and then put her hand in Will's; and posing in high glee with both hands aloft, said: 'Bless you, my children!' in a manner so jovially pompous and absurd, that even Maud laughed. Mr Hartley for his part shouted with a somewhat suspicious hilarity. 'Bless your heart, my dear,' he said to Maud, 'do you know as I've took to novel-reading in my old age, and plays, and them sort o' things? I know all the proper sentimental dodges now.—Stop to dinner, Mr William?—No? All right—as you like. I'm a-going back to the arbour, I am, to finish the nap as you two young uns broke into with your love-making.' The good

old heathen rolled back to his arbour a little sadly, and sat there a long time lonely, until Will had taken leave and Maud came out to join him.

'You will be lonely when I am gone,' she said, after an affectionate talk.

'No,' the old man answered stoutly; 'I shan't be nothing of the sort. An' you'll come and live here, half the year at least. That I *do* expect.' He stroked her hair, as he had used to do when she was a child, and patted her cheek.

'You are a good unselfish uncle,' she answered fondly.

He stroked her hair still, and answered: 'If I was one of them book-writing fellers, my dear, I'd write a tale.'

'Yes,' said she; 'and what would it be, uncle?'

'It ud be about two different people; an' I'd make one of 'em a grinding, selfish blackguard, don't you see; and I'd make th' other a man as'd act fair even if he lost by it. An' I should shew folks as the man as allays tried to be happy was miserable; an' I should shew 'em as the man as acted fair an' generous was happy in the long-run, even when he lost. Supposing I'd ha' said: "No; stop with me," you'd ha' stopped—wouldn't you?'

'Yes,' she answered; 'I should have stayed.'

'Now, look there!' he said. 'What a conscience I should ha' carried! You'd ha' seen me a-going about like a regular Misery. I know you'd ha' stayed, my dear. I know you would. An' I should ha' brought my own gray hairs down with sorrow to the grave. Not as there's many of 'em,' said the good old fellow, polishing his baldness with his handkerchief, 'nor hasn't been this many a 'ear. No, no, no, my dear,' he went on, answering his own thoughts. 'It's old age's happiness to see them as they love happy. I'm a very happy man, my darlin'—a very happy man. Everythin's prospered with me wonderful. I've got a lot to be thankful for, an' happy over. Theer's the Major—he's a credit to me; ain't he now? Theer's 'Orace—he's a credit to me. Feller of his college, an' as stately a gentleman as ever was. Makes me half afraid to look at him; but he's a good son, Maud, an' never caused me a day's trouble in his life. Then, theer's Johnny. He's a good lad, my dear; ain't he now? No harm in him. A quiet, upright, honourable lad. Then theer's you, a-going to be happy. Why, bless my soul,' said Mr Hartley, with a melancholy effort to be genial, 'wheer is there a happier man than me?' With that he kissed her; and she felt his tears warm upon her face. But she knew that there was no more bitterness in them than in her own; and when he had unaffectedly dried his eyes with the yellow handkerchief and kissed her once more, they rose together, and walked towards the house in a tranquil and tender peace, which I feel it no sin to envy.

It had been Will Fairholt's intention to lay his purpose before his father at once; but the old gentleman was in so irritable and testy a mood, that he deemed it wise to postpone his revelation till the morrow. So, on a sunny morning, when Mr Fairholt was strolling slowly and with difficulty up and down his favourite walk in the shrubbery, Will joined him, and began: 'I think it my duty, sir, to ask your consent in a matter of great importance.'

'What is that?'

'I hope shortly to be married, and'—

'You ought to have married long ago,' Mr Fairholt said testily. 'It's a hard thing for a man to feel that he is the last but one of his house, in the male line. Who is it? Is it that girl of Hartley's?'

'It is Mr Hartley's niece,' said Will simply. He was used to his father's manner, and made large allowances for him, thinking how much he had suffered.

'I thought so,' the old man answered, resenting an injury as usual. 'You will please yourself, of course. The estate's entailed, and goes to you; and I have neither part nor lot, nor influence either, for that matter, in the whole affair.'

'I have never crossed you knowingly, father,' Will said gently.

'No,' said Mr Fairholt captiously; 'you've been a good son to me, Will, a good son. And I've no fault to find with the girl. A girl she's not any longer; but you're not a boy any longer, and I have no fault to find. Her uncle is vulgar—vulgar to his finger-ends; but she has a well-bred look and manner. I don't care to approach the fellow again; but I suppose I shall have to see him now. That sort of man is vulgar in soul, Will, that self-made, money-grubbing sort of man. I have met people of no family—when I was younger, and mixed with the world—whose manners had no trace of polish, and who were yet not intolerable. That fellow Hartley is a bear. The man's heart is wrong, and the vileness of his manner is a natural consequence. His son is a parvenu; that—that army fellow, quite a bad imitation of a gentleman. I don't know much about the girl; but people speak well of her. Young Borroleigh, Chesterwood's son, wanted to marry her, I remember, nearly a dozen years ago. Money, I suppose; though he ought to have enough of it. Chesterwood has been stingy enough these thirty years. I'm told that poor Frank was attached to her. Yes, yes; you have my consent, if you want it. Let me be alone a little while now. I am tired of talking.' And he fell to wondering, as he paced feebly up and down the shrubby walk in the morning sunshine, how much the millionaire would give his niece. 'I'll see him about it,' he said—'I'll see him about it. Will's quite a fool in money matters—quite a fool. Zounds, he shall gild the pill, anyway!' And he laughed a little at that comfortable reflection.

It was perhaps not a remarkable thing that at the same moment Benjamin Hartley should have been thinking in the same strain—with a reverse of persons. 'I shall have to gild the pill,' he said to himself, 'an' gild it pretty thick too, into the bargain, to get old Fairholt to swallow it without makin' a wry face. Well, well; it'll only be a flea-bite out o' the Major's share an' Orace's. I suppose I could buy the proud old rascal up, an' scarcely know I'd done it.' So that it seemed fairly probable that Mr Fairholt's desire to have the pill gilded would not be difficult of fulfilment.

It was decided that the marriage should not be long delayed; and the negotiations between family pride and Mammon were conducted without hitch or hindrance. But a week or two before the wedding, Fate dealt Benjamin Hartley a terrible blow. There came into his hands a cheque bearing the endorsement of his sister's son, John Campbell, and a forged copy of his own signature, so close

that he himself was almost deceived by it. 'Pay John Campbell, Esq. or Order, Two Hundred Pounds.' His mingled grief and rage almost drove him mad. He had treated the boy with fatherly tenderness and generosity; and the inexplicable baseness and ingratitude of this return bade fair to break his heart. He went up to town, where the young man was studying, and after a stormy scene, struck him down and left him. He went heart-brokenly to his solicitors next day, and conferred with the leading partner, to whom he told the story.

'What do you propose to do?' asked the lawyer. 'Shall you prosecute?'

Mr Hartley glared at him with indignation; almost with contempt. 'No!' he said; 'I shan't prosecute; and I shan't plunge the miserable young scoundrel into crime. I want you to send for him, and to tell him what I know; for though I tried last night, I couldn't bring myself to frame the words and say 'em to him. Tell him that you've got my instructions to invest five thousand pounds for him. That'll go to buy a practice when he's got a diploma, and meantime it can bear interest at five per cent., and he can live on the interest. It ain't what I meant to do by him; but it's more than he deserves.'

'Much more,' said the lawyer. 'If I might advise'—

'You needn't,' said Mr Hartley, with a sort of weary anger. 'If he's got any debts, pay 'em. Tell him if he writes to me I shall send his letters back unopened. Tell him I've done with him, beyond this, for good and all. Here,' he added suddenly, drawing the forged cheque from his pocket-book; 'shew him that.' He threw it on the table, whence it fell to the floor. The lawyer stooped and picked it up; and the millionaire said drearily: 'Don't you say nothing about me, except as these is my instructions. But I wouldn't ha' had it done by him, Bilton, not if I'd lost every penny I'm worth. Good-bye, Bilton. You've got my will. Make the necessary alterations in it; and send somebody down with it for me to sign. And be quick about it; for I don't think, Bilton, as I shall last much longer.'

'For many a year, I hope,' said the lawyer; but Benjamin Hartley, shaking his head sadly, went away with his hopes all dashed. He carried a heavy heart into the country; and was for a long time so ailing that Maud's marriage was deferred; and where everything had lately been so happy, all was turned to gloom.

(To be continued.)

## THE WRECK OF THE *BORUSSIA*.

NARRATED BY W. STUART LECKY, THE SHIP'S SURGEON.

THE terrible disaster which happened to this vessel in the end of last year, while on her voyage between Liverpool and New Orleans, will be still fresh in the memories of many. Before proceeding to speak of the foundering of the ship and the fate of those on board, it may not be out of place to give a few particulars of the ship herself.

The *Borussia* originally belonged to the Hamburg-American Packet Company, and was built for them in the year 1855. She was purchased by the Mississippi and Dominion Steam Shipping Company about five years ago, and had run on the routes to

New Orleans via Corunna, and to Quebec and Montreal. Her registered tonnage was one thousand three hundred and twenty; gross, two thousand and seventy. She was barque-rigged, and had compound surface condensing engines, constructed for her by Messrs Day & Co. of Glasgow about seven years ago. Her donkey-engine was in the engine-room, below, with the other engines, and not on deck, as is sometimes the case. Her length was about three hundred feet, beam about twenty-five, and she was built in airtight compartments. Her crew for the last voyage numbered fifty-five hands all told, including captain, officers, &c. The *Borussia* sailed from the Mersey at three p.m. on the 20th November, with sixty-three passengers, of whom one was a saloon passenger, the remainder being steerage. Her cargo consisted of some pig-iron and general goods.

We made an unusually fast passage to Corunna (sixty-seven hours), arriving on Sunday morning at ten o'clock; the wind, though very high, as was also the sea, having been favourable. During this time, the ship rolled much more than I had seen her do before, and more than the state of the weather would account for. We remained at Corunna till Tuesday the 25th, taking in over sixty passengers, all Spanish—fourteen or fifteen being saloon—and some general cargo. At seven on Tuesday evening we steamed out of Corunna harbour, the weather at that time being very fair, and continuing moderate till the following Friday (28th), when it came on to blow 'great-guns'; the ship going eleven knots an hour, as the wind was 'fair after her.' On Saturday morning it moderated somewhat, and we sighted and passed the islands of St George, Terceira, and St Michael's, belonging to the group called by sailors the Western Islands, but popularly the Azores. On Saturday night the weather commenced to get dirty, and continued to increase in violence, till on Sunday morning, at nine o'clock, the fore-topsails were blown to pieces. All Sunday, the sea was very high, so much so, that it was impossible to stand or walk on deck without support, the decks being very slippery from the seas breaking over the ship, and the vessel rocking so heavily, that the master, John Roberts, gave orders that she should be hoisted to, which order was executed; and we lay-to for two hours, when we steamed on again. The ship during this time rolled so much that she dipped her ports under the sea; her maindeck was consequently always under water, and the officers' rooms on the maindeck flooded. Still, little or no alarm was felt, or at least expressed, by any one on board. During Sunday night it was impossible to sleep, the rolling, straining, and noise were so incessant. When an unusually huge sea struck the ship, she would bend over and shake convulsively, the sensation being communicated to those on board like a sudden shock.

At four o'clock on Monday morning, December 1, it was reported to the Master by the engineers that there was water to the amount of four feet in the engine-room, and that it appeared to be increasing, the pumps not lessening the amount. On an investigation, it was the opinion of the officers and engineers that the ship had sprung a leak in the central or engine-room compartment. The main-pumps being choked, were useless; so the donkey pump was connected; but failed to reduce the water, and eventually became useless,

owing to the fires being extinguished by the water, which rose over all the furnaces. Owing, therefore, to the want of steam, we were now at the mercy of the waves, the vessel tossing and rolling about as helpless as a log, the angry seas leaping over her bows and sweeping the decks. A sharp look-out was ordered by the captain to be kept for any passing vessel that might be signalled to come to our assistance.

At five p.m., being on the bridge with the chief-officer Richard Lanthorn, the second-mate being there too, I asked the former what he thought of our position, and he replied: 'Well, doctor, I have very little hope; we are in a dreadful plight.' Nearly all day I remained on the bridge, straining my eyes in scanning the horizon with a powerful glass, to try and discover some passing ship which might come and rescue us from our awful position. But no such good fortune was to be ours. Night closed in, and as the darkness deepened, hope died away.

Not till nine p.m. on Monday, December 1, did the passengers begin to realise their danger. True, many had been anxious, and wondered at the unwonted cessation of the monotonous clang of the ship's engines; but no idea of the actual state of affairs had been present to their minds, none of them having been informed of the crisis, lest becoming terrified, they might not be amenable to discipline, and might obstruct the crew in the discharge of their duties. I should have before mentioned that at four p.m. of this day the Master had given orders to 'wear ship and make for Fayal,' one of the Azores, then distant about four hundred miles. But, with the most important sails gone, no steam, and consequently no steerage-way, it was found impossible to execute the manoeuvre of turning the ship. At nine o'clock on Monday night I went to my cabin, and lay on the settee, endeavouring to realise the situation. At forty-five minutes past ten, my attention was attracted by a peculiar noise, and on going on deck, I found it was caused by the hand-pumps, two of which—one on each side of the ship—had been manned by both passengers and crew, and were kept incessantly worked till about eight o'clock on Tuesday morning. Gangs of men were also told off to bail out the water by means of buckets passed up from the engine room. Now, and not till now, did the hard reality of our position flash across my mind, and make my heart sink and grow cold. The monotonous noise of the pumps; the unwonted appearance of the decks, crowded at night with men whose haggard anxious faces too well expressed their feelings; the water flowing in huge volumes in all directions, the howling of the wind, and the roaring of the sea—a scene illuminated alone by the dim light of a few lanterns, and never to be recalled without inexpressible awe—was one that might strike terror into the stoutest heart.

At eight on Tuesday morning the pumps were abandoned, as they were drawing little or no water; and it was evident that unless Providence sent us succour, we had nothing to hope. Here I cannot refrain from expressing in unqualified terms my admiration of the conduct of the passengers during this awful night. To say that they worked like heroes, indomitably, unceasingly, like men of iron, is no mere simile, no exaggeration; all

the time with a laugh and cheery smile, to reassure and comfort their unfortunate wives and children. No meals were now cooked; nor was time any longer kept by the familiar sound of the bell; little knots of men might be seen here and there, with eager anxious faces, discussing the chances of escape. The women and children remained in their quarters in the centre of the ship. In the saloon there was a scene of indescribable confusion. The Spanish passengers having become aware of their danger, had, in view of a voyage in the boats, made up packages of rugs, blankets, clothing, the valuables they possessed, as well as any provisions they could lay their hands on. One fierce-looking fellow had a revolver, which he conspicuously displayed, as if to shew that he was not to be trifled with, but must have a place in the boats, come what might. At ten o'clock on Tuesday morning, December 2, a number of the sailors went in a body to the Master, and asked him to give orders to have the boats lowered immediately. This he refused to do, but gave them to understand that he should take every precaution to have the boats ready for lowering when the proper time arrived. Our position was now this: the ship with about ten feet of water in her, and slowly perhaps, but surely sinking; a raging sea all around us; land at the least four hundred miles off; and little or no chance of being seen by passing ships, as we were out of the course of most lines of steamers. About half-past ten I observed the stewards, assisted by both passengers and seamen, commencing to provision the boats, putting into each a large quantity of sea-biscuit, a dozen or more tins of preserved meat, milk, and vegetables; and most important of all, one or two small casks—according to the size of the boat—of fresh water. This occupied some time; and about noon, as well as I can remember, the order was given by the Master to 'swing the boats;' which means, to raise them from their position on deck by means of the davits, hoist them up, and lower them over the side.

I have omitted to mention that the *Borussia* was equipped with seven boats, two built of wood—one of which was the captain's gig—and five made of metal. The operation of lowering the boats was attended with the greatest difficulty and danger, for this reason, that the boat being raised and suspended from the davits, acquired a tremendous swing from the great rolling motion of the ship, at one time being projected horizontally over the side, the next moment returning either against the ship's side or on deck with a velocity sufficient to stave in its timbers, or to inflict serious injury on any one who stood in the way. The crew, assisted by the able-bodied passengers, were now engaged in seeing to the safety of the boats. The first boat lowered was one of those made of metal, placed next the bow on the starboard side; the second boat lowered, the one next the first; and so on down one side and then the other. As each boat was lowered, two men were put in charge of her, and she was hauled down to the stern, and floated at a considerable distance from the ship, being attached by a long rope to the bulwarks of the latter. The second boat was tied to the first, a considerable interval between the two; and so on till a long string of boats was waiting behind the ship. That this method of operation was necessary, is evident from the fact that if the

boats had been kept alongside or near the ship, they would undoubtedly have been dashed to pieces against the vessel's side by the tremendous seas.

The Spanish passengers all this time were in a state of frantic terror, and were trying to make rafts on the quarter-deck, tearing down planks, and nailing and tying them together; but were unable to construct anything like a raft, or indeed anything that could hold together for five minutes in such a raging sea as surrounded us. The vessel was gradually sinking, and the carpenter, who had just sounded the holds, reported eleven feet of water in the engine-room, and seven feet in the after-compartment; and said it was his opinion that the ship would founder within two hours. When the first of the boats on the port-side was being lowered, I was standing on the poop, waiting to get orders from the captain as to what boat I was to go in, when I heard a shout and a loud cry for 'the doctor.' I hurried forward, and saw the second steward, James Cutcheon, lying on the deck, insensible, bleeding profusely, his clothes saturated with water. I proceeded to examine him; and found that nearly the entire scalp had been torn off, giving rise to great hemorrhage, and that he had sustained other serious injuries to his face. Whilst adopting the requisite measures for arresting the bleeding, and dressing the wounds, I ascertained that his injuries were the result of the fall of some iron-work which had struck and precipitated the poor fellow into the sea, from which he had been dragged half-dead by his comrades. I remember very well that, while attending to his wound, the thought struck me that there was little use in trying to save a life so soon to be lost, as then seemed inevitable. Having done all that I could to make the poor fellow comfortable, and having seen that consciousness had returned, I went on deck, and found, to my dismay and horror, that the boat in which was my assigned place had gone without me, while I was below attending to the wounded man. I rushed to the ship's side, and could see the chief-officer's boat, in which I should have been, at a distance of about a quarter or half a mile. I signalled and shouted to those in the boat to return for me; but it was evidently too late, for they did not come. This boat was the first to leave the ship, and had taken off some women and children. And the heart-rending scenes which afterwards followed when it came to the turn of others to essay the descent to the boats allotted to them, baffle description. So great was the difficulty and danger of getting into the boats, and so meagre was the chance that the boats should live, even for a short time, in such a sea, that the majority of the passengers and many of the crew were unwilling to risk the boats, stating that they preferred to remain on board the ship, in the hope that some passing vessel might be sighted and come to their assistance, before she foundered. Their fear of trusting themselves in the boats was not lessened by the sight of one of the latter being swamped, happily with no loss of life, as the men who were in her were rescued by a boat which was near.

All this time the captain was at his post, as cool and collected as if on shore, but grave, and with a look on his face as if the bitterness of death had

entered into his soul. The officers were all at their posts, working as hard as their men, and cheering and encouraging everybody. The order and discipline on board were simply wonderful. The poor steerage passengers had congregated in the saloon, like frightened sheep; the women were weeping, some quietly, others in a demonstrative way. With but scant success did I endeavour to reassure and comfort these poor women, telling them that there was room for all in the boats, and any other circumstance which seemed to afford a gleam of hope; but, God knows, I was little fit to comfort any one, for my own heart was sad enough, as I thought of the loved ones at home, and dreaded to realise that I should never look on those dear faces again. I saw no hope; my boat had gone without me; the ship was doomed, and it was only left to me to say: 'God's will be done.'

The second-mate, with whom I was consulting, told me that he was determined 'to stick to the ship,' as the boats had no chance. Just then the boat in charge of which was the third-mate was leaving the ship, being the last boat lowered. There were fourteen or sixteen souls in her; and as she was pushing off, some sudden unaccountable impulse urged me to go in her. I cried aloud to the officer in charge of her: 'Mr Doolittle, I will go with you.' He replied: 'Come on, doctor; jump in for your life.' The men who were near tried to dissuade me from going, as the boat was one of the smallest and seemed pretty full. However, on the third-officer again calling, I got on to the rope-ladder, made a spring towards the heaving rolling boat, and just managed to get dragged into her. As soon as I got my footing, I seized an oar, and helped to fend the boat off from the ship's side, as she was in imminent danger of being crushed to pieces. Having succeeded in getting clear of the ship, the oars were got out, the men made to sit so as to balance the boat, and the bags of biscuit, &c. properly stowed. While drifting off, we perceived the captain signalling us to row away to leeward and bring back a large wooden boat, which had got adrift with two men in her, who were being rapidly drifted away by the wind and sea. This boat had received serious damage to her bows whilst being launched. There were at this time in the boat in which I was, and which I shall call No. 1, the third-mate, fourth-engineer, the boatswain, two stewards, a quartermaster, three seamen, and some Spanish passengers—in all about sixteen. She was certainly heavily laden, her gunwale being very near the water; moreover, she often shipped heavy seas, and bailing had to be incessantly carried on.

After some time we got within speaking distance of boat No. 2, hailed the men in her; and after three attempts, got a rope thrown to them, which they made fast round one of the seats. We then tried to tow this boat back to the ship; but our boat, being small, and badly manned, was quite unable to do so. It was then proposed to transfer a portion of our crew into No. 2, and then each boat could proceed back to the vessel for a further complement of human beings. The rope connecting the boats was gradually shortened, and thus they were brought near each other. When an interval of but a few feet divided them, I sprang from the bows towards No. 2; but

at the moment of my spring a wave jerked the boat from under my feet, and left me struggling in the water. Fortunately, No. 1 boat was near; and after swimming a stroke or two, I was hauled in. Again I jumped, and this time more successfully, being followed by the third-mate and six others. Eight in all were thus transferred from No. 1 to No. 2, in which were previously two men; making ten souls now in the boat in which I was, and about eight in that which I had just left. The two boats were still connected by the rope, and we now tried to row back to the ship. We worked hard, but seemed to make no way. Suddenly, a huge breaker burst over both boats, and half-filled ours. The third-officer roared out: 'Off with your boots, and bail her out.' There were two tin dishes for the purpose; but every effort was necessary to reduce the water in the boat, lest another wave should come and fill her. We had just succeeded in getting the greater part of this sea cleared out, when another great wave came and nearly swamped us. It was then evident that the other boat was dragging ours very heavily, and preventing our boat from riding over the seas, in fact dragging her under the sea. It was decided, consequently, to let go the rope connecting the two boats; which was done, and orders given to boat No. 1 to try and get back to the ship, as we endeavoured to do also.

It was now getting dark, and at times only could the ship be seen—a sad sight, sinking deeper and deeper, pitching, tossing, and rolling in a way fearful to witness; so different from that ship which but a few days ago had steamed out of Corunna harbour full of life and full of power. We soon lost sight of No. 1 boat; and about five minutes after doing so, a great breaker washed over us and nearly sent ours to the bottom. With frantic haste, we bailed her out, and while doing so, heard agonising shrieks and cries somewhere to windward of us; and straining our eyes, were able for one moment to see the boat we had just left evidently sinking. We were unable to give any assistance; we could do nothing but sit there listening to those dreadful screams, gradually growing fainter and fainter, till all were hushed. The agony of mind I endured at this time was fearful; to know that so many of my fellow-creatures were perishing almost beside me, to be unable in any way to help them, and to know that we had nothing better to expect for ourselves, was almost too much for my fevered brain. At this time I think the bitterness of death was past for me. I had so long—for thirty long hours—been trying to realise that eternity was at hand, that my brain seemed stunned, my heart turned to stone.

It now became apparent that it was impossible to get back to the ship, as we were unable to make any way against the gale or to keep the boat's head to the seas. The third-mate therefore determined to run before the wind. There were oars in the boat, but no sails; and the waves being so high, rendered it useless and impossible to row. All that long weary night, drenched by the spray and waves, and shivering with cold, we drifted wherever the wind blew us. Morning broke, a morning which not one of us ever expected to have seen. The boatswain exclaimed as the sun rose: 'Thank God that we have been spared to see the blessed sun once more.' The wind

increased in violence. With terror we looked up at the huge waves towering over us, literally like mountains. At about nine A.M. some food was given out—one sea-biscuit and half a pint of water to each man. We subsisted on this till evening, when another biscuit—this time covered with tinned meat—and a little water, not more than a wine-glassful, were given to each man. Nothing occurred to break the monotony. Water and huge waves all around us; anxious, haggard, hungry faces to gaze at in the boat. The third-mate divided us into watches, each man to be on watch three hours, and off three hours; during his watch, to bail out the water that constantly flowed into the boat from the breach in her bows, and to keep a look-out for ships. Night closed in; and at the unanimous request of the men, fervent thanks for our safety so far, and earnest prayers for our future delivery, were offered up to Him who holds the winds in the hollow of his hand, to Him who said, 'Peace be still.'

The night wore on, oh! how slowly; it seemed a week of mental suffering. Sleep was impossible, both by reason of our cramped position and the cold. Another morn was hailed with joy and thanksgiving; but the sea was high, and no vessels to be seen. The third-mate said too, that we were out of the course of any ships. There was a compass in the boat, and the mate had put a

stant in his bag, which enabled us to take an observation; and as well as could be ascertained, we were three or four hundred miles from the nearest land one of the Azores. But alas! the wind changed, and blew us in a contrary direction. Since the first morning in the boat, we had had a little sail, made out of the canvas of the mate's bag. It was not larger than a good-sized towel, but was of the greatest assistance in rendering the boat buoyant and helping her to ride over the waves. On Thursday evening it fell a dead calm—worse for us than a gale. The sea was now like glass, and the water was very warm, much warmer than the air, and from the presence in large quantities of 'Gulf-weed,' we perceived that we were in or near the Gulf-stream. While scanning the horizon with tired anxious eyes, one of the men observed a huge turtle quite close to the boat; but on attempting to capture it, it lazily sunk to the bottom. Another night set in, and our hearts and hopes were low. The provisions might last for a week, but the water could not hold out for half that time. Oh! how we prayed for rain; and when a few drops did fall, some of the poor fellows tried to catch them on their tongues. Nectar cannot have been sweeter to the gods than was our meagre allowance of water, mixed with a little condensed milk, to us. I would not have exchanged that little pannikin of fluid for the costliest wine that ever graced an emperor's table. Night closed in; and nothing occurred, except that a tiny flying-fish jumped into the boat, and some birds on the wing passed us.

Friday, December 5—the most memorable day in my life—at last arrived, and with it a fresh breeze, which was, however, unfavourable, blowing us away from, instead of towards the Azores. The day passed slowly and wearily, when at about two P.M. every one in the boat was electrified by the man in the bows shouting, yelling, screaming: 'A ship, a ship!' At first, we could not believe that

it was true; but after a minute or two we saw a noble ship directly in front of us, about three or four miles distant. Oh, how we thanked God for that blessed sight! Some of our poor fellows were so overcome that they wept for joy. As for me, the ship seemed so far off, that I was in terror lest she might not see our tiny red flag—a pocket-handkerchief on the top of our little mast. However, the mate said that it was impossible that she should pass without seeing us. We got out the four oars, put two men at each, and rowed and sailed towards the ship. They shewed no sign of seeing us for some time; but after about half an hour, we saw, by her letting the sails go and the ship heaving-to, that we were hailed; and knew that we were saved. In half an hour more we pulled under that good ship's stern, and read the name *Mallordale*, a name that I shall never forget as long as I live. We climbed on board by means of a rope-ladder, took anything valuable out of the boat that had saved us, pulled out the plug, and allowed her to fill and sink, lest she might deceive other ships, if left floating.

I am unable to describe my feelings when I put my foot on the deck. It was so wonderful to be on a ship once more, and to be out of the trough of the sea. I introduced myself to Captain Dornan, gave him an account of the loss of the ship and how we had escaped. He treated us very kindly, and at once had a hearty meal prepared for us; and if ever a man enjoyed water, I was that man.

On the Sunday following our rescue, we experienced a terrific hurricane. The waves were so high and the ship rolled so heavily, that her cargo (rice) shifted—that is, went all to one side, and for twelve hours we were in great anxiety and danger. One huge sea broke right over the ship and carried away the captain's gig, besides doing other damage. Fortunately, none of the crew were on deck at the time, or they would surely have been swept overboard. The ship was heeled over to one side; her deck was covered with water to the depth of four feet on the inclined side, and the vessel laboured very heavily. The sailors shook their heads and looked very grave; but the good ship, handled so well by the skilful captain, weathered it out; and from that time till our arrival in Queenstown on the 23d December, the weather was moderate. On our arrival there I proceeded to the agent's office, and dictated a telegram to the owners; and in twenty-four hours the news of the catastrophe, the news that the steamer *Borussia* and many lives had been lost, was flashed like lightning over the United Kingdom.

I have not yet referred to the fate of the other boats. Two of them were picked up, one on the same day that ours was, and the other the day after. In one of these were eleven, and in the other five souls; making a total of twenty-six saved out of one hundred and eighty-six. None of the other boats have since been heard of; which has been accounted for by the awful weather that followed the foundering of the ship. At the Board of Trade inquiry held in Liverpool last February, the general opinion was that the cause of the foundering of the ship was the starting of some of the plates in the central compartment.

I shall conclude this narrative by paying my tribute of admiration for the conduct of the captain, officers, and crew of the screw steamer

*Borussia*, who during a time of fearful danger and difficulty behaved with a fortitude, presence of mind, and discipline that cannot be too highly spoken of, and who met their deaths like British sailors.

### OUR FIRST DAY IN THE CANADIAN BUSH.

IN the year 1870, my brother, aged eighteen and your humble servant, aged twenty, set sail from Liverpool on board the good ship *Sarmatian*, of the Allan Royal Mail Line, bound for Quebec, whence we intended travelling into Western Canada, where, like most other young, ardent, and untried spirits, we fully expected to amass fabulous wealth in the shortest possible space of time.

I will not touch upon our sensations on arriving at Quebec; nor speak of the railway journey from Quebec to Toronto. From the latter place we, after a short stay, proceeded north to hunt up a location; and eventually, after much wandering to and fro, pitched upon a 'lot' at no great distance from the Georgian Bay. Oh, with what pride we—standing in a small clearing of about twenty yards by ten, made probably by some lumber-man—that is, wood-cutter—surveyed as far as we could through the thick forest, Our Farm! What stores of hidden wealth we pictured as ready to burst forth at our command! Ay, out of the coarse woof of reality, what silken raiment of romance did we not weave, when—

'Hulloa! strangers; guess ye ain't lost; air ye?'

We turned; and seated straddle of a log on the edge of the clearing—how he had got there without our hearing him, or how long he had been there, I know not—we beheld a tall lank figure, habited in a slouch-hat much the worse of wear, flannel-shirt ditto, and dirty jean continuations ditto ditto, long coarse boots, and holding in his hand an axe; and who having thrust a 'sliver' of pine into his mouth, sat stolidly looking at us without uttering a word.

Surprised, and angry too at having my visions of wealth so rudely dispelled, I drew myself up, and throwing as much hauteur into my voice as I could, I said: 'Sir—did you a—address me?'

Leisurely rolling himself about on his log, and looking round him in a most tantalising way, he expectorated, and replied: 'Wal, boss, I guess there's nairy another two-footed critter, barrin' yer friend, within call, anyhow.'

'Well, sir, then allow me to inform you that we are *not* lost. We have come to look at our new Farm lot'—this was said with a grand air of proprietorship.

'Farm—lot,' he drawled out, as he looked round him into the bush. 'Wal, you *air* green. Say, Mister, can you handle an axe?'

'No,' I hotly replied; 'I cannot handle an axe; but I suppose I can learn. And let me tell you, sir, that I don't know what you mean by bothering me with questions in this manner. We are busy

looking out a site for a house.' Saying this, I moved away.

Before, however, I got ten paces, he was beside me; and placing a huge hand on my shoulder, he half turned me round: 'Now say, Mister, don't get into one of your old-country tantrums. Just hearken a bit. I have a snug bit of cleared [with emphasis on the cleared]—of cleared farm a mile or two from here. I seed you two fellows in Wakosh last night; and seeing as how my old man [father] was from the old country—though I was born and bred in the States—I guessed I'd give you a hand, if so be as you were willing.'

In spite of my irritation, there was such a bluff, open heartiness and good-nature in the way he said this, that, after a look at my brother, who was almost choking with suppressed mirth, I held out my hand, saying: 'I am much obliged to you, sir, for your kindness; but I hardly think you can be of much use, as when we have pitched upon a site, we shall have a man out from Wakosh to build our shanty.'

'Wal, now, Mister, an old residerter can most generally be use to folks coming in fresh, 'specially green hands.—Now, don't get riled at my calling you green hands' [I had involuntarily drawn myself up at the repetition of the obnoxious word], 'because you *air* green, both of ye; there's no mistake in that!'

Angry as I was becoming, the downright convinced manner in which he jerked out the last sentence, and the whole appearance of the man, made me almost laugh. My brother, who never had a proper notion of maintaining his dignity, laughed outright; and after a hard struggle to keep up a proper reserve, I followed suit. This broke the ice; and in an incredibly short space of time, and in a way that on looking back afterwards seemed like magic, our new friend, by a string of leading questions, totally untrammelled by the faintest suspicion of delicacy, had drawn from us our names, ages, place of birth, Christian names of father and mother, our prospects, amount of ready-money we possessed—and would probably have found out how often we individually and collectively had suffered the pains of toothache, had not my answer to the following question caused him to pause with an expression of countenance which no mere words at my command can describe. He had asked me who was to build the shanty for us, what size it was to be, whether shingled or boarded on the roof, and what it was to cost, in his usual self-collected way.

I answered him with my usual deliberation. Isaiah Lucy was the builder *in prospectu*, as we had not actually finished the bargain; that it was to be twenty-four feet long, seven feet high at the fall-side, and twelve feet wide; the roof to be shingled throughout; and that he wanted sixty dollars (twelve pounds sterling); but that I had offered him fifty dollars (ten pounds sterling).

Never before had I seen a few quietly spoken words produce such an effect. When I said that I had offered fifty dollars, his face suddenly assumed a mixed expression of wonder, semi-incredulity, and pity, ending in one of unutterable contempt. 'Fifty dollars!' Jumping up, he drove his axe into the log between us within three inches of my leg, with a force that made me dart back. 'Fifty dollars!' he repeated. 'Wal, my old man was from Ireland, and I've often heer'd him

say as the grass there was the greenest in the world—"inerald," he called it; but—and here his voice took a mingled expression of petulance and sorrow—"there ain't no shade or shadow of a green colour on the hull universal airth as can match you. Fifty dollars!" Here he sank into a fit of musing, utterly unmindful of the angry expression of my face. Some of his disjointed utterances reached me as follows: "Old country bloods! Green! Shame! Fifty! Do it for twenty—better than any one else." Suddenly springing up, he expectorated savagely, and pausing for a moment, he turned to me and said: "Look here, boss! I've kinder cottoned to you fellows. Ye're young; and ye've a mighty heap to learn afore ye get your "Farn" working for ye! But I'm not a-goin' to see you imposed on at first start. Say now, I'll do the job for you for twenty-five dollars, and give you a day's hauling with my oxen to boot.—How did you come out? Did you sock it or buggy it?"

For the benefit of the uninitiated, I may here remark that he meant did we walk or drive. I had a very hazy idea of his meaning, but answered haphazard that we had walked.

"Wal, I guess you can't make Wakosh this night; so tote along o' me, and my old woman'll give us some fixins to eat; and to-morrow ye can get to Wakosh and tell Ike Lucy as Patrick Abiram Flynn'll build yer shanty for five-and-twenty dollars, and a good one at that."

We agreed to his proposal; and on our way to his house, which by the way proved to be a frame-building of some pretensions, I—being struck by the singularity of his name, or rather names—asked him how he came by his second name of Abiram; with this result.

"Wal, you see, boss, when my old man came out nigh fifty year ago, he squatted first in Connecticut State. After a while he fell to sparking a young gal, a orphan, a regular downright Methody kind—as they mostly are down east. Wal, they got spliced; and after quite a spell I come along. The old man was regular crazy, I've heer'd tell, with downright delight when he catched my first squall. They do say he pinched me black and blue, making me howl, to be sure it was me—and I could yell, you bet. Wal, after a while I was to be named. Now his name was Patrick; and nothing but Patrick would do him for me. But the old woman said "No." Says she: "One such mislandish name in the family is enough." She had the most trouble with me, she said, and she guessed she'd give me a decent name. Nathan Abiram, or Elijah Dathan, or Ephraim Nebuchadnāzaur, or some other sensible name. Wal, the old man was pretty considerable riled, I reckon. "Call him Pontius Pilate at once!" says he. But at long last, they split the trade. He threw in Patrick, and the old woman shoved on Abiram. And I reckon neither o' them spoilt the block in the naming.' Here he looked at his jean continuations and boots with evident pride and satisfaction.

By the time we had finished laughing at this curious baptismal oration, we had reached the house, where Mrs Flynn, a tidy and young, though faded-looking woman, gave us a hearty supper of fried pork, hot cakes, slap-jacks—pancakes of maize meal—apple-pie, and strong green tea; after which a little more talk about house-building

and a couple of pipes, we tumbled into a clean if tolerably hard bed, and soon were in the land of dreams. So ended Our First and perhaps our most eventful day in the Canadian Bush.

## RECOLLECTIONS OF AN EQUESTRIAN MANAGER.

BY C. W. MONTAGUE.

### SEVENTH PAPER.

I HAVE now to deal with an episode in my life upon which I shall always look back with the greatest pleasure and not a little pride. The centenary celebration of the birth of Sir Walter Scott was about to be observed, as an event of national importance for Scotland. Very properly indeed, the celebration was promoted by Scotchmen; and with a twofold fitness, it was held in Edinburgh, the birthplace of the great novelist and poet. A Committee was formed, and a great banquet arranged, at which not only might Scotchmen do honour to the memory of their famous countryman, but literary celebrities from other lands as well might assemble to pay homage to his great genius. The Earl of Dalkeith was elected Chairman of the Committee, and of the banquet also; while for Vice-chairmen there were the Lord Provost of Edinburgh, the Lord Justice-General, Lord Jerviswoode, and Sir William Stirling-Maxwell. Mr T. Usher acted as Hon. Secretary, and Mr George Scott as Hon. Treasurer. The Committee sat daily during the preparations for the coming event.

In addition to the proposed banquet, the various places of amusement had made arrangements to observe the day in an appropriate manner; the theatres, for instance, producing dramatised versions of some of Sir Walter's tales. But the Committee soon found themselves face to face with an unforeseen difficulty, one with which they were quite unable to grapple. It arose in this way. Not only was the event to be celebrated abroad by the great writer's admirers in every civilised country throughout the world; but it soon appeared that from these same countries, far and near—more especially from our colonies and the United States—Scotchmen were coming by shoals to visit the capital of their country and take part in the national festivities. But what festivities were there for them when they should arrive? There was the banquet—there were the theatres; but what were they among so many? This was the difficulty that presented itself; and the grave question, what was to be done to entertain the expected guests? was seriously discussed by the Committee, by the press, and by the public in general. The nearest approach to a solution of the question was the suggestion of a Trades Procession through the streets of Edinburgh. But the celebration happening at the holiday season of the year, added to some other difficulties or objections, prevented the idea from being adopted.

At the period with which I am dealing, Mr Newsome's circus had already been performing for some time in the town of Edinburgh, when my services were engaged as Manager; and I—being at the time in London—immediately started for the north. On my arrival, I heard of the 'fix' in which

the Centenary Committee found themselves, after the Trades Procession had been abandoned; and I immediately pondered over the matter, in the hope that some scheme would occur to me. The idea of a procession of some sort seemed good; and turning the matter over in my mind, it was not long before a definite programme suggested itself to me. Keeping my intentions to myself, I repaired to the rooms where the Committee held their daily sittings. Having sent in my card, I was shortly ushered into the presence of the half-dozen notables mentioned above, who received me very politely, and requested me to make known my business. Without any beating about the bush, I at once stated that I had heard that the Committee were in a dilemma in connection with the approaching celebration; and that if my information were correct, I had a suggestion to submit to them. The Chairman said that I had been rightly informed that they were in a dilemma, and that any suggestion I might make would receive their full consideration. I then unfolded to them my plan. My proposition was to organise a grand procession composed entirely of characters drawn from one or more of Sir Walter Scott's novels, dressed in appropriate costumes, and in every way representative of the period chosen. My suggestion was well received by the Committee; and Mr Ballantine the poet, who happened to be present, was so pleased with the proposition, that he started up and shook me warmly by the hand, declaring his conviction that I must be a Scotchman myself.

The main principle of my plan being thus accepted, I went at once to Mr Newsome, to communicate my ideas to him and talk the matter over. Having sketched out a programme together, I returned to the Committee to lay a definite offer before them. *Kenilworth* was the work chosen for the occasion; the particular episode we intended to illustrate being a visit of state made by Queen Elizabeth to the castle which gives its name to the novel. The Maiden Monarch herself was to be accompanied by all her courtiers, a hundred beef-eaters, and a host of other retainers, with flags, banners, and music—all in exact accordance with the period represented. The Committee were delighted with the programme, and expressed their entire approval of the proposed arrangements. The subject of payment was then mooted by the Chairman; and that gentleman having explained that the funds at his disposal were limited, and the extent of his outlay rather uncertain, I at once proffered our services to the town free of cost, knowing full well that Mr Newsome would readily indorse my action in that respect.

A telegram was at once forwarded to Messrs May, the London theatrical *costumiers*, to send down to us with all speed the necessary costumes for the characters, together with complete outfits for one hundred beef-eaters. One hundred supernumeraries were engaged and drilled for the occasion; and when the beef-eater costumes arrived, a full-dress rehearsal of the procession was held on the day before the celebration, in and about the circus buildings at Low Broughton. After the rehearsal, each man having brought with him, by my instructions, a large handkerchief or wrapper, folded his clothes up carefully, made them into a bundle, and placed them where he might find them on the following morning;

thus avoiding any cause of confusion and delay in attiring for the procession.

The eventful morning dawned brightly over Modern Athens, and every one was early astir to prepare for the day's work. Her Majesty (Madame Newsome) and her courtiers were already on the spot; the beef-eaters and others arrived in good time; and our preparations made rapid progress. It was announced in the morning papers that the procession would start at eleven; and when that hour arrived, we were in readiness. At the head went the full strength of our band, attired in sixteenth-century costumes, and playing airs of an antique martial character; these were followed by a portion of the beef-eaters and other retainers; the remainder of whom brought up the rear. The most attractive part of the procession was the long array of noble lords and ladies—forty in all—attired in their handsome and characteristic costumes, mounted on gaily caparisoned steeds, and surrounding their beloved sovereign, Her Most Gracious Majesty Queen Elizabeth, who, for splendour of attire and queenly presence, was done ample justice to in the person of Madame Newsome. Her Majesty was mounted on a superb cream horse, of pure Spanish breed, named Tavernaro, led by two grooms in the costumes of pages, one on each side. (The noble animal was so full of spirit and life, that the foam from his mouth and flanks ruined the costly robe in which Madame Newsome was attired—a contretemps which was certainly not in the programme!)

Thus formed, the pageant procession started, and wended its way slowly through the winding picturesque streets of the quaint old town; the band heading it and filling the air with the lively clangour of clarion and trumpet; while the gay, bright-coloured dresses of the retainers, the banners and streamers floating overhead, and the splendid costumes of the mounted courtiers, rendered the entire scene a most brilliant and heart-stirring spectacle to look upon. A gentleman who had witnessed the progress of the procession from a good position on the Castle Hill, told me afterwards that the appearance of the cavalcade as it wound along through the crowded streets in the bright sunshine, was romantic in the extreme. He had felt as though carried back three hundred years in a dream, to find himself surrounded with all the delightful realities of bygone days.

To sum up: the procession not only met with very kindly praise and glowing descriptions in the London and provincial papers; but even across the Atlantic, the press gave us credit for the result of our labours. Nor was this our only reward, as the sequel will shew.

Three years had passed since the incident just related, and again I was in Edinburgh, making arrangements for the advent of our circus for a long stay there. As I passed through the centre of the town, I observed a large vacant space where some houses had been pulled down, in Chambers Street, just opposite the Museum and College; the finest position in the town for our tent. Upon making inquiries, I learned that all the leading circus proprietors had applied for this site and been refused; as it was too central and, I suppose, too select to be used for such purposes. However, I went to the Chairman of the Streets Improvement Committee, in whose hands the matter lay,

and applied for the site. He was very sorry, but it was impossible to oblige me; the site had been refused to all other circus proprietors, and he could make no exception in our case. I then ventured to remind him of our services to the town three years before, by which the community was enabled to do fitting justice to the memory of the great novelist. 'We gave our services gratuitously,' I added, 'and spared neither trouble nor expense to insure success. I think, therefore, that we have some little claim upon the town.'

The Chairman recollected the circumstances perfectly, and admitted that what I had urged did certainly alter the case. He would bring the matter before the Improvement Committee, and let me know the result.

It was not long before I was informed that the Committee, 'bearing in mind the great services which Mr Newsome had rendered to the town at the celebration of the Scott Centenary, had great pleasure in placing the piece of ground at his disposal;' subject of course to certain conditions, already agreed upon at my interview with the Chairman. I wish to record here, that in granting us this site, Edinburgh repaid us well for past trouble and expense. The excellent situation added materially to the success of our season there, and altogether Scotland's grand metropolis used us very kindly.

One more point. The reader is aware that we obtained the site through having done honour in his own 'romantic town' to Sir Walter Scott. Well, I afterwards discovered that on that very site once stood the house wherein Sir Walter Scott was born!

### THE MONTH. SCIENCE AND ARTS.

THE meeting of the British Association is to be held at Swansea on August 25th; and thus will be repeated the annual opportunity for scientific men to make known their theories, inventions, and discoveries during the holiday-time of the learned societies, who, after a busy session, are indulging in well-deserved repose. Meanwhile, there is something to be said about what they did at their closing meetings; and to commence with that venerable institution, Greenwich Observatory, we find Sir George Airy, the Astronomer-royal, stating in his annual Report to the Board of Visitors concerning books added to the library, that 'fundamental astronomy advances slowly; magnetism is almost stationary; geodesy progresses; photography and spectroscopy increase very fast; and meteorology the most rapidly of all;—by which may be seen evidence that the study of the weather has become popular. Between May 1879 and May 1880, photographs of the sun were taken at the Observatory on one hundred and forty-five days; and on sixty-four of those days there was a complete absence of sunspots. The minimum of spots occurred about the beginning of 1879; since October last, their number has largely increased. The mean temperature of 1879 was a little more than three below the average of the preceding thirty-eight years. Each month too, was below the average. The highest temperature was 80°6 on July 30, and the lowest 13°7 on December 7. The mean

daily movement of the air throughout the year was two hundred and sixty-eight miles; being eleven miles less than the average. The greatest movement, seven hundred and five miles, occurred December 30; and the least was thirty-two miles, on October 12. The vane of the anemometer made during the year thirty-five complete revolutions from north through east, south, west, round again to north. No wonder that 1879 is known as a cold and dismal year; for the number of hours of bright sunshine recorded at Greenwich was not more than nine hundred and eighty-three. How could a year be genial with a daily average of less than three hours of sunshine?

The Astronomer-royal has read a paper to the Astronomical Society on the preparations to be made for observation of the transit of Venus on December 6, 1882. He points out suitable stations, prescribes the instruments that should be used, and recommends intending observers to study the history of former transits, in which they will find mention of the ring of light that puzzled them so much in 1874. The cost of the last transit was more than twenty thousand pounds; from which it is feared that the Treasury will be shy of aiding in future.

There has been for some years a discussion as to whether the planet Jupiter shines by his own light to any perceptible extent, or whether the illumination is altogether derived from the sun. Some facts seem to point to the conclusion that it is not improbable that Jupiter is still hot enough to give out light, though perhaps only in a periodic or eruptive manner. Taking up the question here, Dr H. Draper (United States) remarks: 'If the light of Jupiter is in large part the result of his own incandescence, it is certain that the spectrum must differ from that of the sun, unless the improbable hypothesis is advanced that the same elements, in the same proportions, and under the same physical conditions, are present in both bodies.' He has taken many photographs of the spectrum of Jupiter, and these he believes answer the question decidedly; for they 'indicate that under average circumstances of observation, almost all the light coming to the earth from Jupiter must be merely reflected light originating in the sun.' But on one occasion (Sept. 1879), Dr Draper took a photograph which shewed evidence of intrinsic light from Jupiter. Should this be periodic, as above suggested, it may be verified by further observation.

In a paper read before the Royal Society of Edinburgh, Professor G. Forbes discourses about Comets and Ultra-Neptunian planets, and shews reasons for believing that there are two planets somewhere beyond the orbit of Neptune. As is well known, astronomical discoveries have been made by observing the disturbing effect of stellar bodies on each other. In some instances the disturbing body is unknown, but its effects are seen; and Professor Forbes explains that the whole of his research is founded on the theory of the introduction of comets as permanent members of the solar system. There are six comets associated with Neptune. The behaviour of certain comets observed in recent years has led to investigation, and the conclusion has been come to that 'we may feel very confident that these two planets do exist. The light of the sun must take fifteen hours to reach the nearest of the two, and forty-

five hours to reach the outer one. Considering the probably enormous mass of the stars, it is nearly certain that they must influence the motion of these two planets; and if we have the good fortune to observe either of them, a new field wherein to test the extent to which the law of gravitation holds good will be immediately opened to astronomers. Our ideas of time,' adds Professor Forbes, 'are in the same way extended when we think of these two planets revolving in periods—the one of one thousand, and the other of five thousand years, and of the comets introduced by the most distant of the two, as having been influenced by that planet tens of thousands of years ago.'

Most people in England are so ignorant on the subject of lightning conductors that they ought to welcome Mr Anderson's book entitled *Lightning Conductors, their History, Nature, and Mode of Application*. (E. & F. N. Spon, 46 Charing Cross, London.) The author is a member of the Society of Telegraph Engineers, and speaks with the authority conferred by practical knowledge, and with the advantage that it would be difficult to find any other trustworthy book treating of all parts of the subject. As Mr Anderson remarks: 'For architects, clergymen, municipal officials, and all those in charge of large and lofty buildings, it would be impossible to over-estimate the importance of the subject. Year by year an enormous amount of property is destroyed merely because the simplest precautions have not been taken to guard churches and other large buildings from the effects of thunder-storms.' They will find in this book clear instructions on the setting-up and maintenance in proper condition of lightning conductors.

In America, a locomotive has been constructed which is intended to run from Philadelphia to New York, ninety miles in ninety minutes. This engine weighs nearly forty tons, and is so arranged that, by an alteration of fulcrum-points, additional weight can be thrown on the driving-wheels at starting. Its performance is such, that a sanguine member of the engineering fraternity has predicted that within five years the journey of ninety miles will be accomplished in one hour.

In answer to inquiries for further particulars of movable teeth for saws, we state that inserted saw-teeth came into use about 1840. The teeth are fitted in rectangular sockets, and held in place by a V tongue and groove. The teeth may be hard or soft, according to the quality of the timber to be sawn. One kind, known as 'Emer-on bits,' are tempered to scratch glass, and weigh one-sixth of an ounce each; and we are informed that 'one file will go as far in keeping a good inserted tooth-saw in order as ten with a solid saw.' As an instance of what can be done with a saw described as the 'Hoe chisel bit-saw,' we mention that, at a well-known mill, 5,661,385 feet board measure were sawn in one hundred and sixty-two days. The number of 'bits' used during the work was four thousand. The practice is to start in the morning with new teeth, in hard pine or red-wood, and run till noon. Then a new set of teeth is put in, and these are run till night, when a new set is put in by the watchman; and so on. The saws are made from twelve inches to seventy-two inches diameter; and the makers of 'patent circular saws with latest

improved teeth,' are Henry Disston and Sons, of Philadelphia.

We are informed that one of the best materials for keeping a ship's bottom clean on a long voyage is a coating of chromate of mercury. This is an excellent yellow pigment; and has been tried, so says report, with satisfactory results on some of the government guardships. And better still, we have heard of a ship which having been painted with this chromate, came home clean from a voyage round the world. The invention of Mr J. B. Humay, Sword Street, Glasgow, the substance is, we believe, manufactured in that town, and can be heard of at Dick and Co's, 101 Leadenhall Street, London.

A new filtering material, named *carferal*, has been subjected to experiment at the Army Medical School, Netley. The name is composed of the first syllables of the words carbon, ferrum, alumina, and thus denotes the constituents of the substance in question. Different kinds of filters were tried; and it is stated in a printed Report that 'carferal has the advantage over spongy iron in that it is all filtering material; whereas part of the filter where spongy iron is used is occupied by a second medium, intended to arrest the iron yielded to the water.' Another advantage is, that carferal does not spoil when stored, and does not appear to be materially injured by exposure to wet. The experiments were made under the superintendence of Dr François de Chammont, F.R.S., Professor of Hygiene in the Army Medical School. They are to be continued, with a view to decisive results.

A little mild excitement prevails among naturalists over the discovery, in the water-bily tank at the Royal Botanic Gardens, Regent's Park, of a medusa—that is, a jelly-fish. A fresh-water jelly-fish has never before been heard of; but many people know that jelly-fishes are plentiful enough in the sea. Of course there will be much speculation as to how the creature got into the tank, and where all its numerous companions came from; and observers will set to work, and give us descriptive details. The name proposed for this novel medusa, by Dr Allman, President of the Linnean Society, is *Linnocodium*.

The phenomenon known to astronomers as the 'zodiacal light,' is shown by Mr J. W. Redhouse, a member of the Royal Asiatic Society, to be identical with the 'false dawn,' as it is called by the Mussulmans and other Eastern peoples, who have been familiar therewith, as with the Milky-way, from remote antiquity. On the other hand, the zodiacal light has not been known in Europe more than about two centuries. From these facts, Mr Redhouse draws a curious conclusion. It is clear, he says, that our forefathers 'could never have come from that central point of Asia so dear to modern Sanskritists, whence they would fain make the Aryan race to radiate, that is, from the snowy table-land of Pamir (behind the Himalaya). The zodiacal light must have been as well known to the shepherds of that plateau as it is to the wandering tribes of Arabia and Mesopotamia. It must *always* have been well known to them; and once known to a people, such a phenomenon could never be totally forgotten in latitudes where it was visible. Our Aryan race came not, then, from Pamir as their radiating centre. Ethnologists may well weigh this pregnant indication.'

The suggestion in a former *Month* (*ante*, p. 272),

that exploration of certain islands in the Persian Gulf would perhaps bring to light relics interesting to anthropologists, has been verified, as may be seen in the extracts from Captain Durand's Report on the Islands and Antiquities of Bahrein, published in the *Journal of the Royal Asiatic Society*. The Captain found many remains of old tombs, old wells, old inscriptions, and old tumuli. These mounds cover the country for 'miles upon miles,' representing, if they are graves, a cemetery of extraordinary dimensions. On opening some of them by digging, long-buried vaults and passages of massive architecture were discovered, favouring the conclusion that there lay a promising field for further exploration. One highly important prize was a black stone which had long been built into the wall of a mosque, which bears an inscription partly cuneiform, partly hieroglyphs, commonly known as Hieratic Babylonian. It records the name of the owner or occupant of a palace who was a 'servant of Mercury,' and is thus an evidence of Sun-worship. By whom was that inscription cut? is the next question. Did they come from India or Egypt? As yet, the Assyriologists cannot give a satisfactory answer. It is important to remember that whereas Babylonia was mainly instrumental in imparting civilisation to Western Asia, the Babylonians themselves admitted having received all their knowledge from the mysterious islanders of the Persian Gulf. Sir Henry Rawlinson in discussing this interesting subject, puts the question, 'Who were these primitive fathers of knowledge, who first civilised the settlers on the Tigris and Euphrates, and whose memory was perhaps preserved in the legend of the Garden of Eden and the tree of knowledge?' From many circumstances, he judges that 'they were a dark race, the ancestors of the black heads of the inscriptions, and possibly the same as the Adamites of Genesis.' Sir Henry supports his views by learned arguments which are well worth consideration; and he points out that the early traders would prefer the Persian Gulf to the south coast of Arabia or the Red Sea, because the Gulf with its varying winds was more favourable for inexperienced navigators than the Red Sea, where the wind blew nine months in one direction and three months in the other. Comparison of different forms of place-names leads to the supposition that the Biblical Ophir was in the neighbourhood of Bahrein; but this as well as other questions await further investigation, towards the expenses of which the Trustees of the British Museum have allotted one hundred pounds. According to Captain Durand, the climate of the islands is delightful from October to April; and according to the natives, 'the land is silver, and the sea is pearl.'

Readers who know anything of Central America—Yucatan, part of Mexico, and Guatemala, and the wonderful ruins of temples and towns built in ages long, long ago—will hear with pleasure that a scientific and archaeological expedition is to be sent, under the authority of France and of the United States, to make further explorations in that mysterious country. The chief promoter of the expedition is Mr Peter Lorillard of New York, by whom the greater part of the cost will be borne. In numbers and equipment, nothing will be lacking: casts of important bas-reliefs and inscriptions will be taken, whereby scholars in all parts of the world will be enabled to study relics

of civilisation not less interesting than the old monuments of Egypt and Assyria. From what is already known, it is supposed that the builders of those ancient temples had intimate relations with Cambodia and Java, if they were not actually emigrants from those countries. Interesting affinities have been made out by linguistic students, some of whom believe that the table-land of Peru, and not that of Asia, was the cradle of the human race; and that the Hittites of Scripture during their wanderings settled in Peru, and erected the buildings which now excite our astonishment. Hence it will be understood that something may be discovered which will throw light on primeval history. The hill-country of Yucatan is almost unknown. It is reported that the inhabitants—a fierce tribe named Mayas—'have reconstructed the old towns, with their forts and temples, and revived many of the customs, laws, and idolatrous rites of their forefathers.' The explorers will visit these people, and also endeavour to find traces of the tribes that preceded the Aztecs.

Signor Alberto B. Bach, we learn from a contemporary, has invented an instrument for the purpose of increasing the volume of sound produced in singing. The 'Resonator,' as it is called, 'operates upon the principle of enhancing the efficiency of the sounding-board which nature has provided in the human palate. It consists of a gold plate fitted to the roof of the mouth, close above the upper teeth, and having attached to it another gold plate which is convex downwards in both directions. A hollow sounding-board is thus formed, which increases the power of the voice without any additional expenditure of breath. Professors Tyndall and Tait have testified to the efficiency of the instrument; the former expressing himself surprised at the smoothness and power of the sounds produced; the latter remarking that, while the intensity of the voice was very greatly increased, this was effected, so far as he could judge, without any perceptible deterioration in the quality of the sound. With the help of such an invention, a public singer will clearly be enabled to make his voice tell over a larger area; while conductors, we are told, will find select choirs capable of producing the effect of something like double their actual numbers.'

A French journal describes a kind of paper which is fire-proof and water-proof. It is made of a mixture of asbestos fibre, paper paste, and a solution of common salt and alum: is passed through a bath of dissolved gum-lac, and then goes to the finishing rollers. The strength and fire-resisting capability are increased by the alum and salt; and the lac renders the paper impermeable to moisture, without producing unsuitability for ink.

Those who are interested in Celluloid, and especially in its connection with stereotyping and electrotyping, will get information by applying to Mr A. Saurée, 22 Parliament Street, Westminster, S.W.

In reply to various correspondents, we have to state that Fleuss's Diving Helmet and Noxious Gas Apparatus are now manufactured at 110 Cannon Street, London, E.C.

We learn that portable oil-stoves for cooking, similar to those in the United States, are used and to be had in England, a fact which some months ago we were not aware of.

### EDUCATION BY POST.

In this *Journal* for 25th October 1879 we gave an account of the system of Education by Post carried on under the auspices of the Glasgow Association for the Higher Education of Women. The number of our readers in all parts of the country who have availed themselves of the opportunities offered by this Association, and the interest which always attaches to a fresh start in the great problem of education, encourages us again to draw attention to the system. For an explanation of the working of the system we refer our readers to the above number of the *Journal*. In our present notice we shall briefly refer to the aims of the directors of the institution.

It is perhaps not too much to say that for the most part the system at present pursued in girls' schools makes little or no preparation in early life for subsequent intellectual pursuits. When the school-days are over, a young woman's education is said to be 'complete!' Now and again, some gifted and resolute female mind has fought her own solitary way into the higher grounds of knowledge, and has felt that she had her reward. But she is an exception; and even she, because she has advanced into this region without guides, must have had no small amount of her energy dissipated in misdirected efforts. In the majority of the cases where the effort has been made, the result has been a feeling of despair, a sense of powers unevoked, and capacities that have failed to find an object. Hence has arisen the cry that the present system of education is an injustice to women. It is the object of this Association to do what it can to remove the ground of complaint, to open up to women—no matter how far they may live from headquarters—certain definite courses of study which they may pursue with minds approaching to maturity; to place before them subjects worthy of their capacities, and to afford to them all needful guidance, assistance, and encouragement in following out these subjects. It desires to promote study which finds its end not in some competitive examination, but rather study which is only begun now, and which is to be continued afterwards, and is to produce fruits both in happiness and utility, throughout life.

The lesson-course of the Association embraces the ordinary subjects of a school education, the subjects included in a Faculty of Arts—the general and most essential part of a University education, and the less technical subjects of a Faculty of Medicine. The Association thus offers general cultivation; and this as implying an improved judgment, a trained power of attention and application, and an intelligence awakened and brought into sympathetic connection with an extended range of human interests, is no mean gift to offer. From the Reports of the tutors, and from acknowledgments received from all parts of Britain, the Association has reason to know that it has already done good service, by giving to many a new interest and pleasure in life; and it looks forward to carry on in future years the work it has so successfully begun.

Last year, the Association opened its classes to

young men also, and this year it has determined to continue the same.

Information with regard to the classes may be had from the Honorary Secretary for the Correspondence Classes, Miss Jane S. Macarthur, 4 Buckingham Street, Hillhead, Glasgow.

### SUMMER TWILIGHT.

Ah! what an hour of ecstasy is this!  
When all of Nature in our view is shrinking  
From the too ardent sun's retiring kiss,  
And fast in twilight's clasp her hand is linking.

When from the joyous wood comes thrilling out,  
Tossed on the air—that drowsily is hearkening—  
A storm of melody, a silver rout  
Of gorgeous sounds—no sombre touches darkening.

The gay, clear tones at intervals that gush  
From blackbird's throat, so limpid, pure, and thrilling;  
The wild, bewitching prayer-notes of the thrush,  
Now trembling low, now high in quavers trilling.

The tiny, rippling warble of the wren;  
The chaffinch's short, swiftly-tuned gladness;  
The muffled call of cuckoos from the glen;  
The wood-dove's shadowy, far-off coo of sadness.

While 'neath the eye, to the horizon spread,  
Circled by hills, are gem-encrusted meadows  
Heaped with seeming gold-dust, thickly shed  
By sprinkling fingers, hid by nearing shadows.

The gallant knights that guard the western plains  
Of the sun's kingdom, send their amber lances  
Quivering across the sky, till Night restrains  
Their pastime, and her screening wing advances.

Swaying the solemn heads of mighty trees,  
The zephyrs round them sweep with restless sighing;  
The timorous aspen shivers in the breeze,  
Its lack of rest a legend quaint supplying.

It is, that chosen from all else, its wood  
In ages past to form the Cross was taken,  
That shuddering and apart it since has stood,  
With wild regret from leaf to fibre shaken.

To the wild roses at its base, that gleam  
So wan and pale from out their dusky setting,  
It whispers: 'Fear not, soon again shall beam  
Your heads amid the sunlight's golden netting.'

Now to the north the keen and vivid sky  
Doth hold upon its lap a gleaming jewel;  
Gnats croon their vespers, and Night hovering nigh,  
Bids labour cease till dawn demands renewal.

SUSAN SORREL.

The Conductors of CHAMBERS'S JOURNAL beg to direct the attention of CONTRIBUTORS to the following notice:

- 1st. All communications should be addressed to the Editor, 339 High Street, Edinburgh.
- 2d. To insure return in case of ineligibility, postage-stamps should accompany every manuscript.
- 3d. MANUSCRIPTS should bear the author's full Christian name, surname, and address, legibly written; and should be written on one side of the leaf only.
- 4th. Poetical offerings should be accompanied by an envelope, stamped and directed.

Unless Contributors comply with the above rules, the Editor cannot undertake to return ineligible papers.

## POPULATION!

AT the commencement of his pleasant history, the Vicar of Wakefield confidently gives it as his opinion, that 'the honest man who married and brought up a large family, did more service than he who continued single and only talked of population.' Accordingly, to make good his word, the Vicar married, and in due course of time was blessed with a tolerably large family. We learn that he experienced sundry vicissitudes, and that the family were sometimes at a pinch, but that things came all right at last. In the end of the day he was as well off as if he had remained single and spent everything on himself. Goldsmith, the author of this charming fiction, was not always sound in his political economy. He sometimes allowed his feelings to get the better of his judgment. But he was sound in representing that the Vicar, acting under a high sense of responsibility, did quite right in marrying a woman who made a good and affectionate wife, and contributed a fair share of children to the general population.

It needs no philosophy to tell us that population is the basis of national wealth in every well-ordered community; for if the numbers of the people are not increased by the births exceeding the deaths, the nation with all its pomp and power must decline, and at length sink to a nonentity. Mr Malthus, a worthy clergyman, but rather too much of a theorist, at the beginning of the present century took fright at the notion that population increases immensely faster than the production of food; so that if something were not done to check the number of births, the country would by-and-by get over-peopled, and disastrous famines would be the consequence. It is very curious to think that sixty years ago, this fanciful notion caused considerable alarm, and was discussed by learned men as a wonderful discovery. How to keep down the number of people was a subject of grave inquiry. Some thought there should be fewer marriages; but that for various reasons would not answer, and was never so much as attempted. The Reviews and

Magazines of the period had a great deal to say about Malthus. His theory was a splendid subject to worry upon, as good as Dean Swift, who has been a bone of contention in literature for the last hundred years. As people went on marrying, notwithstanding the apprehensions thrown out by Malthus and his adherents, and as the new families that came into the world got their food somehow, the bugbear of universal starvation gradually vanished. We do not now hear anything about it. Mankind go on in the old way, marrying and giving in marriage, and it is to be hoped will do so to the end of the chapter. The truth is, Mr Malthus took too microscopic a view of affairs. He failed to make proper allowance for the deadly effects of vice, overcrowding, and luxury; neither did he make due account of emigration to new unpeopled countries, or to the free importation of food in exchange for articles produced by industrial enterprise. Had he lived until 1880, he would probably have somewhat modified his agonising theory.

It would be quite in vain for any one nowadays to try to frighten society with the Malthusian idea. In our own country and its magnificent colonies, as also in the United States, public opinion is all the other way. The man who marries and rears a family by his skill and industry is a benefactor, and merits our approbation. He who through parsimony, vicious inclination, or some ridiculous crotchet, dedicates himself to celibacy, is pronounced to be a poor creature, for he fails to obey the primordial injunction, to 'be fruitful, and multiply, and replenish the earth, and subdue it.' Were all on some plea or other to follow his example, the greatness of England would pretty soon come to an end. Within a century the nation would be extinct. There are instances of men living to be old bachelors, in consequence of some unfortunate circumstance. They have met with a saddening disappointment, or have devoted themselves to the support of widowed sisters or nieces. In such cases there is a reasonable excuse for celibacy. The bachelors we specially refer to as an excres-

once have through mere parsimony, whim, or indecision, let the marrying time of life pass, and become cynically indifferent to matrimony.

A likely man in good circumstances, who has reached middle life in a state of celibacy, may be heard to say apologetically: 'I don't care for marrying; let others do so if they like.' We tell him, on the contrary, that he deserts his duty in not marrying. By living only for himself, he is deranging the balance of the sexes—sufficiently deranged already by soldiering and accidental calamities. He is, in fact, depriving some deserving spinster of her proper destiny, crowding her perhaps into the workhouse or worse. 'He does not care!' Well, he will care by-and-by. We must remind him that when he disappears from the face of creation, as he must do some day, there will be none to mourn his loss. His heir-looms will be scattered, and his wealth given to others. He will drop out of the catalogue of humanity as if he had never existed. He will no more be missed than the old withered stump by the wayside, that has been cut down and carried off for firewood. His memory will be less cherished than that of the faithful dog who in his dying moments affectionately licks the hand of his master. Such is the doom of the persistent cynical bachelor.

The subject admits of pleasanter considerations than the fate of unhappy celibates. If the higher and luxurious orders fail in perpetuating their lineage, it cannot be said there is usually any shortcoming in this respect among the middle and more particularly the wage-receiving classes. Artisans and rural labourers, at least in this country, excel in maintaining the birth-rate, being only matched by the colonists of New Zealand, who seem to possess a very clear idea of the Divine injunction, as well as of that singularly expressive passage in the Psalms: 'Children are an heritage of the Lord... As arrows are in the hand of a mighty man, so are children of the youth. Happy is the man that hath his quiver full of them.' Some poor fellow who has the luck to 'fall into a family' earlier than he had anticipated, may possibly think that his quiver has been slightly overstocked, but mark his gentle resignation. He will live to have his reward. Shall we picture him in one of our experiences? Yes. We take a mental photograph of him on a Sunday afternoon.

The sun shines brightly, and everything is pleasant for a quiet walk out with his belongings. We have been at church, and are looking casually out of window. Various people are passing—some fast, as if too late for an appointment; some slow, as if they had a difficulty in consuming the time. Our attention is fixed on a family party going out to breathe the fresh air in the environs of the crowded city, and to enjoy the look of the trees coming into leaf, the wild-flowers by the wayside, and to hear if possible the chirruping and notes of the birds now building their nests and singing to each other in early summer. As

for the party who are proceeding on this simple excursion, they are unmistakable. The head of the family, who, when at home, takes the arm-chair, is to all appearance a decent mechanic. He may be skilled in steam-engines; he may be a joiner or a compositor. Anyway, he is a respectable man. We know that by the look of him. He is plainly but well dressed. There cannot be a doubt that he reads the papers; has a shelf of a few books, and stands well with his fellows and his employers. It is not unlikely that he has a wage of thirty shillings a week. Out of this, from his frugality, he pays his rent, his society-money, and his water-rates, feeds and clothes himself and his wife and children, pays school-fees for the two elder. That is our belief, and it stands to reason. Had he been a drunken wretch who misspends his earnings, he would not have sallied forth in the honourable way he has done on this memorable Sunday afternoon. He is not ashamed of carrying baby, not he. The little creature, seemingly about twelve months old, just into its first short frock of white calico, is carried on his left arm, and its little fingers seem to be playing with his beard and whiskers. We observe he is trying to amuse the child by pointing to a pretty little dog that is trotting along the pavement. What his name may be is of no consequence. We call him Jim.

The other members of the modest party are in keeping. Besides the wife, a cheery little woman, there are three children in a row, rising in height like the steps of a stair. In the phraseology of the Psalmist, these are Jim's 'arrows;' and there can be no doubt his 'quiver' is destined to be about as full as Job could boast of after coming through his misfortunes. It is tolerably obvious, as in such cases, the wife has a somewhat heavy handful. She has, of course, no domestic help. Has all things to do, until the eldest girl grows up. But what, then? She is happy in her sphere, is contented with her lot, and like all good wives, thinks highly of her husband, whom she views as sovereign of the establishment; and so he is, 'looking like a king when seated in his arm-chair,' as was said by the wife of the Corn-law Rhymers. While Jim is king, his dutiful helpmate is head of the administration, sends the children to school, pays the weekly bills, takes a shilling now and then to the Savings-bank, and declares that if Jim's wages were raised to five-and-thirty a week, she would 'think herself a lady.' We shall not extend the picture. All that need be done is to ask whether Jim with his belongings is not a more useful and noble character than the miserly stick of a bachelor who has come under our notice?

Here, possibly, we are pulled up by a discouraging remark on the vast number of imprudent marriages, and the provoking superfluity of deserted or half-starved children, whose parents have either gone on the tramp, or are seen lounging

idly about with pipes in their mouths and coats out at the elbows. But a state of things like that is very much a result of neglected education, and, if we must speak plainly, the blundering of philanthropists in pampering and encouraging the worthless. 'Too many people, and more children would only make matters worse.' That is what you will hear said, and it is said in ignorance. There are not too many people. Half the world is crying for people to come and replenish it. Dirt is only wealth out of its place. Put it in its right place, and you produce fertility. So is it with hosts of idlers. Teach and encourage them to go where they are wanted. A sharper system of police would go far towards clearing them out.

One of the finer features of the Matrimonial, as formerly stated, is the inspiring of motives to exertion. The childless are apt to take things easily. The many-childed are forced to be active. When the Hon. Thomas Erskine, who afterwards became Lord Chancellor, appeared at the bar to speak on his first brief, he astonished every one by the fervour of his eloquence, which happily gained his cause, and at once made him famous. Afterwards, on being asked what had so singularly inspired his energies, he said, 'he felt his children tugging at his gown;' which metaphorically signified that the wants of his family had impelled him to put forth powers which he hardly knew he possessed. The biographies of great men are full of incidents of this kind. To make a provision for children is an animating cause of much that we see in professional enterprise and well-doing. By what may be called universal sympathetic feeling, the many-childed usually have the best chance of being preferred in case of competition for offices of trust. There is a lurking jealousy of celibates; they have no proper anchorage—here to-day and away to-morrow. 'Spriggins for Beadle: Ten small children (two of them twins) and a wife!' is one of Dickens' best hits.

Laying aside exceptional cases, the standard by which we are to judge whether a nation is advancing or retrograding is, as formerly hinted, the ratio of births to the number of deaths. To make sure that there is an overplus, there ought to be on an average not fewer than five births to each marriage. The reason why is simple. Two children will replace the father and mother at their decease, and leave the population as it is. Two of the remaining three die, or one dies and the other perhaps goes abroad. That disposes of four. The fifth lives to be married and constitutes the overplus, or permanent addition to the population. A family of six would give a better chance of a reasonable increase, though even with six there are instances where all disappear without leaving more than one to represent the two parents, perhaps not that. In England, there are on an average five and a fraction to a marriage. The increase consequently goes on at a moderate rate. As regards France, there are some very extraordinary disclosures that are eminently suggestive of a defective state of affairs.

At the French Revolution, when all sorts of crotchets were ventilated, there arose a clamour about equality and the division of property. Those who clamoured meant well; but well-meaning people without proper foresight often commit grievous errors. In obedience to the popular craze, a law of succession to property was

enacted, by which, with some reservation, all that parents left was to be equally divided among their children. The parents had no choice. We shall now see how this precious law has worked. The legislators had taken no account of the fact that people might abstain from marrying, and that if they did marry, they might restrict the number of their offspring. Operating along with the law of equal succession, divorces are not allowed in France; wherefore men are reluctant to enter the married state, lest they should be tortured all their days with a wife who has misconducted herself. Marriage is even directly restricted by the obligation of procuring the consent of parents. The first effect of these laws may be briefly comprehended in the word Profligacy. In some of the larger towns, about half the number of children born are foundlings, and brought up in hospitals, with no acknowledged father or mother.\* As regards marriage, the average number of births in a family are three and a fraction all over France; and except in Brittany and some other departments, the average is continually dwindling. It has lately been stated that 'in the class composed of petty tradesmen or the well-to-do peasants, there is seldom more than one child per marriage; and in one of the rural communes in Picardy, the number of children of the best-off of the peasants is thirty-seven children for thirty-five families.' What a revelation! Thirty-five families have among them only thirty-seven children, or little more than one apiece. According to the English ratio, they should be more than a hundred. The chief reason why the number of births to a marriage in France is so few, is that parents do not wish that their miserably small property should be any further subdivided.

From whatever cause, the small number of births in proportion to deaths does not keep up the rural population. The increase in cities is partly by the immigration of strangers. A result is, that the population of France generally has so small an annual increase, that the nation is falling relatively behind England and some other European countries. Grave results are accordingly entertained for the future. 'In the ministerial Report accompanying the census of 1876, it was stated that the decrease of population in nearly one-fourth of the departments of France was due to a decline in the number of marriages, and excess of deaths over births.'† As the circumstances now related are largely traceable to that unfortunate law of succession, we see how much mischief may be wrought in a country by interfering with moral and social obligations. In their frenzied notions of equality, the French did worse than upset a monarchy, for that is recoverable in some shape or other. They uprooted the fundamental relations of life that had been sanctioned by the experience and wisdom of ages, and are based on the higher feelings of our nature. The deed, we suppose, could not be undone, unless by a formidable political convulsion. Behold the consequences. An excessive subdivision of property in the hands of peasant proprietors, many of whom live in a style unbefitting members of a civilised community. Ingrained

\* Some curious statistics on this subject will be found in Alison's 'History of Europe,' vol. xx.

† The Statesman's Year Book for 1879, by Frederick Martin.

profligacy of manners. Nearly half the number of children in cities are foundlings in hospitals without any known parents. And to crown the appalling result, a steadily decreasing population, relatively to the advance in other countries less favourably situated.

W. C.

## A LIFE'S ATONEMENT.

BY D. CHRISTIE MURRAY.

### CHAPTER XXII.—AUTOBIOGRAPHY.

*'Shall we make a compact to be always friends?'*

ONE fine day in summer, Sally took me by the hand, and walked with me down the avenue, through the great gates and into the village. The place was for the most part new, like the Hall of which it was a sort of appanage and out-growth; but there were one or two very old houses in it, stone-built and sturdy, with red-tiled roofs which set off bravely the green of the surrounding trees. Before one of these, mellow with lichen, my companion stopped, and with many nods and smiles, and some blushing, drew out a big key from her pocket, opened the door, and entered. We came first upon a sort of parlour, where a tall and rigid clothes-press, reaching nearly to the ceiling, mounted guard over the inferior furniture. There was a brilliant carpet, the pattern of which was made up of a set of bouquets in vases, of so enormous a size, that four of them covered the floor. There were two lithographed German priests upon the walls, shewing a number of absurdly wooden children at their lessons and at play. Two diamonded windows let light upon this apartment, and at each hung a pair of imitation lace curtains. I have no doubt that to Sally's eyes the room seemed palatial. I know for my own part, although I was but indifferently impressed with it at first, that when Sally turned round upon me beaming, and said: 'This is my 'ome, my precious,' I was at once unfeignedly charmed with it.

When we came to the back-room, Sally hung purposely behind to see what impression it made upon me. It came upon me almost with a shock, for I seemed to have walked at one childish step clean out of this west-country village into that old cottage kitchen with which my most intimate childish memories were associated. From the eight-day clock, whose fatuous and familiar face again stared out upon me, to the black-leaded cast-iron lion and unicorn, who pranced at each other across the intervening space of mantel-shelf, everything was there as I remembered it. The room lent itself to the deception; the clock was once more accommodated with a well to stand in, and down to the minutest detail the resemblance to the old place seemed complete. Sally stood enjoying my surprise, and when I turned round upon her she absolutely frisked for joy, and brought both hands together. 'You'll come here sometimes, won't you, Johnny,' said the good soul, with both arms round me as she knelt upon the floor, 'and play at being poor again?' I promised heartily I would; and Sally having kissed me, led me out at the back-door, and shewed me a new-built shed, in which was a carpenter's bench, with one or two vices attached to it, and an instrument which I had not seen the like of before, beside it. This, Sally told me, was a lathe. Bob, she said, had turned to be

a turner; and now, she added, with the only attempt at a joke I ever heard from her, he was a Turner by name and a Turner by nature. Emboldened by the success of this experiment, Sally amplified the jest, remarking that she was going to turn and be a Turner likewise; after which she blushed intensely, and led me indoors again. We sat down in the kitchen; and she went off into a series of spasmodic reminiscences of our old life, beginning each with a burst of: 'And oh! don't you remember, Johnny?' Her good heart—and I have met with many friendships and affections in my time, but none more tender or more faithful—was filled with the thought of those old days; and when she told me how forlorn and friendless I had been at my father's death, and how little hope there seemed for me, she was moved to tears by the remembrance; and I cried for company. Then we registered a solemn promise that if ever I were in trouble, I should come to my old friend. 'For,' said Sally, 'it ain't money, and it ain't rich friends, as 'll save you from trouble, my poor lamb. But a loving 'art 'll make it light, Johnny; an' come it weal or come it woe, you 'll find no change in me, dear.'

Though Bob had himself expressly stipulated that he and Sally should wait to see what success his venture on new ground achieved, he had no sooner established himself than he gave notice to the clergyman of the parish to put up the banns. I heard them 'cried,' as Sally phrased it, on three successive Sundays—Robert Turner, bachelor, and Sarah Troman, spinster—the definitions of their several estates sounding quite respectful on the parson's part, I felt. Bob, I discovered, was experimenting on a mother-in-law before matrimony, inasmuch as both his own mother and Sally's had taken up their abode in the cottage. I discovered also that Bob regarded his own mother as a sufficient antidote against Sally's; and that Sally had the same sort of theory with regard to the Dowager Troman's restraining influence over the Dowager Turner. Whether the theory were a sound one on both sides, and can be so recommended to the multitude, I cannot venture to say; but I know that they all four dwelt together in great peace and contentment. The two old bodies began by-and-by to live in a state of continual soap-suds; for the washing from the Hall fell to their share; and Bob with his own hands erected a wooden wash-house, and even built up the brick-work for the boiler.

Up to the time of Sally's marriage, my goings-out and comings-in had been pretty strictly regulated; but now an enormous flunkie being deputed to my service, I summoned that gorgeous menial when I would—apart from my hours for lessons—and was by him accompanied to my old nurse's cottage, to the great admiration of the whole village. I was not at that time of a self-assertive turn; and since my association with the gorgeous menial inevitably made a public show of me, and was provocative of public comment, I would willingly have dispensed with his society. I was always happy to escape from the shadow of his grandeur into the quiet of Sally's kitchen or Bob's workshop. Under Bob's tuition I became a tolerable carpenter, and a book-shelf of my sole manufacture hangs in his cottage to this day.

While these halcyon times sped smoothly on, the war in the Crimea was raging, and news of victory

or defeat reached us now and again. When I went to visit Sally, my attendant used to carry yesterday's *Times* with him; and I read to Bob the impressive letters of that father of special correspondents who chronicled the war for Jupiter Tonans. Sometimes letters came from Uncle Ben's son 'the Lieutenant,' the third announcing that he had won his troop; but these contained sparse news of the war, though he took a gallant part in it. Once or twice, a letter came to Maud from Cousin Will; and although she read these in private, and never spoke of them, it was plainly to be seen that they discouraged and disheartened her. The allied troops had settled down before Sevastopol; and I had just returned from a visit to the village, when I saw Cousin Will alighting from his horse at the Hall door! I had been reading aloud the first description of the trenches, and had so clearly in my own mind pictured Cousin Will there, that I was quite amazed to see him. He shook hands with me, and patted me on the shoulder in his old pleasant way; but he looked sad and tired. He was very deeply tanned, and had grown a rich brown beard, which became him handsomely. I learned afterwards that the only news he brought related to an unavailing search, and that he had returned in consequence of an alarming message about his father. Mr Fairholt was well again, and was desirous that Will should return and carry on the inquiry he had begun. I knew at the time that the search had led to nothing, for I could read that in Maud's eyes. Will announced that his stay would last a week only; but on the day before that on which he should have started, he came, not to say farewell, but to bring a letter he had just received from his friend Mr Hastings. I have that letter in my possession now—it will appear in its own place how it came into my hands—and I transcribe it here. It bore date 'Camp before Sevastopol,' and ran thus:

'MY DEAR WILL—The worst has happened. Forgive this cruel abruptness, but I feel it best to tell you all at once. Poor Frank has met a soldier's death, and whatever trouble drove him from you, is over now. He was in Findlay's company in the —nd. I had news of him the night before the assault on the fourth, but I could not possibly get away to see him. When I went down after the fight, he was missing, and only to-day he was buried. Everybody speaks highly of him. I know you would not like to think of him as being buried with a hundred others, so I took out some of my men and ordered them to make a grave behind the last parallel. The place shall be marked by an inscription, and railings are now being set about it. God comfort you, old friend. I have not the heart to write more just now.—Yours always,

ARTHUR HASTINGS.'

By what means Captain Hastings believed himself to have identified the dead man as Frank Fairholt, I never knew. But I know now that all the tender offices he performed were done for a stranger. That the stranger was at least a gentleman seems to have been amply proved by the testimony of officers and men. But it is a common thing that family sorrows should have that end in time of war, and many an Englishman well-born and gently nurtured fought in a private's uniform in that campaign, and met an unchronicled death,

and lies in an unknown grave there. They wore no mourning at Island Hall. Will went out again to the Crimea, this time with a commission. He and his father and Maud accepted Hastings' statement as the end of hope. The matter was never talked about, and the country-people, who had almost forgotten to gossip about Frank Fairholt's disappearance, did not hear of the supposed end of the tragedy. The true close of that tragic story was deferred for many years; but it has always seemed to me a most merciful and happy thing that they who loved him believed him to be dead. There were but a few who shared in that belief who lived to know that it was false. But I am mixing new memories and old.

Uncle Ben sent for me one day, and told me that it was time I should go to school; and I begged him to send me to that to which Gascoigne had been removed. He promised to think it over; and my wish was granted. I met my friend once more, and was just as happy with him as I had ever been. If I have seemed to leave him for a long space in this chronicle, it is not because he was out of my heart, but because he was out of my life for the time. I had written a letter to say that I was coming, and he received me as kindly and as gladly as I could have hoped. Was I ever happier in my life than when he put his arm round my shoulders and said: 'Well, old Jack,' as we crossed the cricket-field together? I think not. He was all admirable; and looking back upon him as he was, I cannot wonder at my worship of him. He was studious and ambitious now, and worked hard; but there was nobody more popular in the school than he. It was a large school; and there were great fellows in it with incipient beards, who drank foreign wines under the rose in their bedrooms, and gave and took the odds upon the Derby. Rightly or wrongly, fagging and the other devices for making life unbearable which flourish at many large schools, were strictly forbidden here; but there was a good deal of concealed bullying, as there always will be in assemblies of boys. From much of this, which would otherwise have fallen to my share, Gascoigne protected me; and in other matters his friendship made life smooth for me.

'Old Jack,' he said one day as we sat together under the shade of a big tree, 'what's your idea about friendship?'

I answered lightly and lazily—for it was a blazing day, and the air beyond the shadow of the tree took a wavy trembling motion in the heat—that I had no ideas about anything.

'I've been thinking, Old Jack,' said Gascoigne, laying a serious hand upon my shoulder, 'that it's quite an awful thing.'

'What's an awful thing?' I asked languidly.

'Friendship,' said Gascoigne, throwing himself full length upon the grass.

'Why?' I questioned languidly again.

'Because,' said Gascoigne, propping himself up on his elbow, and regarding me with great earnestness, 'it entails one of the greatest responsibilities in the world. Because two people who are friends make themselves responsible for each other. If I had a friend, and he went to the bad, and I met him in rags and poverty and disgrace, and if it ruined me to owe him and help him, I should have to do it. If two fellows are really friends,

nothing can come between them. And if one has any power or influence over the other, he doubles his responsibility. And apart from all those things, Old Jack, there's something very wonderful and sacred in real friendship which isn't easy to talk about.'

'But we are friends,' I said; though it seemed to me a most presumptuous thing a moment later.

'Well, you see, Old Jack,' said Gascoigne biting at a flower-stalk he held, 'we are friends; but who can tell where we shall be in twenty years' time? We shall grow up; and you will go one way, and I shall go another.'

I can remember now how those words chilled and disheartened me, and what a shadow they seemed to cast upon the prospect of my life. He was so much older and wiser and cleverer than I; and I had come to have so implicit a faith in him, that anything he might say had greater weight than if anybody else had spoken it. But I rebelled against this fiat altogether; and I determined that whatever change might overshadow his regard for me, mine for him would always be as warm and bright as then. There was a coldness which froze any response in me at the time in the calm way in which he spoke of the possible breach in our knowledge of each other and our care for each other; and I could make no answer. And it seemed altogether too bold and impudent a thing to beg the friendship which had been hitherto so freely given by one so much above me.

He must have seen how my countenance clouded, for he laid a hand upon me and said smilingly: 'Never mind, Old Jack. Perhaps I am playing at Cassandra for nothing. Have you come across Cassandra yet? She was a lady whose business it was to foretell disagreeable things. Her sayings used to come true; and mine won't, most likely. Shall we make a compact to be always friends?'

As I recall the tones in which he spoke, I seem to read a certain mixture of cynicism with the light, kindly patronage of his voice and manner. I can but poorly express the fancy, but there was something there which made me feel that he put the question in a sort of mockery of my discomfiture, and yet that he meant it not unkindly. Shall I say rather that he spoke the words to soothe me, and had at the same time within himself a gay and careless disbelief in the compact he offered? No such disbelief clouded my mind for a second.

'Will you promise, Gascoigne?' I asked him eagerly.

He laughed and brought his hand into mine with a swing. 'Yes,' he said; 'it's a bargain.' But his face grew serious a moment later, and a shadow seemed to fall upon us both.

There was a certain stiffly-built, bullet-headed youth in the school, who was known as Gregory minor. He was very fair by nature; but his skin looked quite yellow at this time by reason of the freckles with which it was almost covered. He was a youth of considerable humour, and the world is by this time beginning to be persuaded that Gregory minor—though the world knows him under another name—can write a comedy. He was a dull dog at his lessons; but though he nearly always went under the weight of added impositions, he was a general favourite with the masters

as well as with the boys. Above all things he was fertile in nicknames, and he had conferred upon Gascoigne the cognomen 'Miss Aureole,' in recognition of the golden brightness of his plentiful hair. There was in the near neighbourhood of the school, as there used to be in that of the Royal Castle at Elsinore, if we may trust the statement of the Queen of Denmark, a spot where a gnarled willow grew aslant a brook. This willow had been denuded of its branches; and I, being at that time deep in the history of Don Quixote de la Mancha, and having discovered that the crown of the sloping tree made a most comfortable seat, used to go and sit there as often as I could, under the shade of a glorious old elm, and read. Against this habit of mine, which I count now as being one of the pleasantest I ever contracted, a great number of my school-fellows arose in protest. I never knew why, and—unless it be that school-boys, like men, resist and resent anything approaching to eccentricity, especially when it takes shape in withdrawal or self-banishment—I cannot tell now. But I found before long that my place of retirement had become perhaps the most public spot in the neighbourhood, and that, steal as quietly as I would to my retreat, I was always chivied from it without mercy, by a roaring crowd of my co-equals. Gascoigne came once by accident that way, and dispersed the intruding association; but they came back with an elder faction added, and dispossessed us both. In memory of this lolly perch, Gregory minor had dubbed me St Simeon of the Pillar, and this being brought down in the first instance to Stylites, came afterwards but very speedily to Sty-lights; but later on, to Sty or Lights indifferently; so that before I left the school, but was surrounded by a new generation, the names meant nothing, and were but mauled survivals of an olden time, like many other names which the teeth of the Old Man with the scythe have mauled for the bewilderment of learned philologists. In like manner, Gascoigne's nickname became first Miss Aury—an obvious contraction—and then Missoni—a palpable corruption—so that a legend got somehow abroad that he came from the banks of that mighty river, and that his grandfather or great-grandfather had taken the stream, or done something with it, in the time of the War of Independence. Upon Gregory minor, in disdainful return, Gascoigne had set the name of Æsop's Frog, in part allusion to a supposed bumpiness of manner, and in part allusion to the froglike freckles with which Gregory minor's hands and face were marked. This designation receiving general approval, and becoming current, was abbreviated into Æsop, and stayed there.

One day, whilst the second eleven of our school were engaged in a match with an eleven from a private school in the neighbourhood, Gascoigne strolled towards me under the beeches which lined the ground on the eastern side. From where I lay, I had a very good view of the game. My hero had played an innings of three-and-twenty, and I was satisfied. He came to me now, and threw himself on the turf beside me; and we watched the match together. The afternoon was already growing into evening, and facing us a city of cloud was built up in the sky. I do not remember to have seen a more wonderful sunset. The interest in the match was over, for the opposing team were hopelessly beaten; and when

Gascoigne stretched out his hand and called out: 'Look there, Old Jack!' I forgot everything else, and watched the skyey palaces as the soft hand of the wind built them into marvellous forms, and the dying sun baptised them with his light, and made them glorious with all imaginable splendours of colour.

Gascoigne, lying beside me with his eyes upon the sunset, began to repeat verses to himself, and gradually growing clearer in utterance as he became more absorbed and unconscious, broke out with this:

The sun goes down to his rest  
Through the high-arched western gate,  
And crowds of servants, gorgeously dressed,  
Marshal him thither in state;  
And curtains of amber and ruby  
Loop over him fold on fold;  
And far-off eyes of silver peep  
Through gates of dusky gold.

Softly fades the evening glow;  
Evening breezes whisper low;  
Thoughts, like shadows, come and go.

The lines seemed to me then, whatever I may think of them now, completely beautiful.

'Who wrote that, Gascoigne?' I asked, turning upon him eagerly.

'I did,' he answered, still looking at the sunset like one who saw beyond it.

The voice of Gregory minor broke upon us from behind the nearest tree. 'The young woman,' said Æsop's Frog, 'has took to poetry.'

I do not remember having felt more disgusted in my time at any incongruity of speech than I felt then. There had been a feud for many months, as I knew, though I had seen but little of it, between Gascoigne and Æsop; and I was not surprised, but only a little frightened, when my friend sprang to his feet and struck the satirist. A blow was regarded as a challenge to a fight, by etiquette, apart from natural instinct.

'All right,' said Æsop accepting the situation, and marched away calmly with his hat at the back of his head, Gascoigne following, and I bringing up the rear in much agitation. The intending combatants paused behind a haystack, having made their way through a gap in the hedge into another field. 'Will this do?' asked Æsop. Gascoigne nodded, and the two having taken off their jackets and waistcoats, shook hands, and stood up before each other, and the fight began. It went all in Gascoigne's favour at the beginning, for he was the more active, and the more scientific; but after a time the sturdy strength of Gregory minor began to tell. Old Æsop cared nothing for his punishment; and I began to see that the victory must go with him when things reached a sudden crisis. The combatants came to a hug, and after a brief wrestle in which Gascoigne's science was nowhere when compared with the other's stolid resistance, they came down heavily together, and Gregory minor was on top.

'Is that enough?' asked Old Æsop with a boy's brutal disregard of the courtesies of war.

'No,' said Gascoigne. But he had to sit down again after scrambling to his feet, and in the next round he went down almost without the power to make a struggle.

'That's enough, I think,' said Old Æsop with a smile which a swollen lip and discoloured eye

made somewhat grim. Gascoigne returned no answer this time; and his late opponent approached him tendering his hand. 'We've had it out now; and we both wanted to have it out, you know; and I don't mind saying that I thought those verses thundering good uns, old fellow.' Gascoigne took his hand a little unwillingly. 'Look here, you know,' Old Æsop added; 'a joke's only a joke, after all; and I don't see that life'd be worth much if a man couldn't grin at something.' So saying, he put on his waistcoat and coat, and went calmly back again, leaving me disconsolately agaze at Gascoigne.

## A FEW WORDS ABOUT FOOD REFORM.

WHAT to eat, drink, and avoid has been to many persons the study of their lifetime, although they have not always proved fortunate in discovering the dietary which best agrees with them. That thousands in their search after food-knowledge should go astray, and seeking to avoid one error, fall into another, is natural enough under the circumstances. The advocacy of vegetarianism is at present being industriously prosecuted—the use of cereals and other vegetables being recommended as affording to men and women all they can possibly desire in the shape of food. As for drink, 'vegetists' do not require such large supplies of liquid substances as the eaters of flesh-meats; and the drink of the vegetarian may be set down as cold water, very little even of that chief necessary of life being required. Food reformers have of late become more than usually active, and vegetarianism is visibly making progress. In London, Manchester, and other large cities of the kingdom, there have been established restaurants for the sale of cooked vegetable food only; while shops for the sale of a reformed dietary material have been opened in most important centres of population. Many advocate the use of lentils, and confidently point to themselves as good examples of men improved in appearance and endowed with additional strength, by the frequent use of beans and peas and oatmeal porridge; and not, it must be confessed, without good reason.

There is, however, another phase of food reform which is well worthy of attention, and which is embraced in the homely words, 'We all eat and drink too much.' Over-eating indeed is a sin of the age, of which nearly all men are guilty in a greater or lesser degree. The dinners of modern society seem to have been devised in order to tempt men to partake of food in an excessive degree; and it is only those careful and prudent persons who are able to bridle their appetite that escape the consequences which assuredly result from over-indulgence in the pleasures of the table. The never-ceasing recurrence of soup, fish, and *entrées* which form a characteristic of modern dining, not to mention the lavish offerings of joint, game, ham, poultry, and sweets, tempt many to tax their digestive organs far beyond their powers; the result being indigestion, or some one of the numerous forms of dyspepsia. Many more ounces of solid foods and of liquids are unwittingly partaken of at our luxuriously furnished tables than can well be computed; and as most men sit down to several meals every day, a great deal of mischief to our bodily health undoubtedly ensues. It would not be an exaggeration to say of the average

'diner-out' that he eats and drinks every day from a half to a fourth more food and liquor than would amply suffice to nourish his body and invigorate his mind. Taking it as a rough estimate that each of these persons consumes at least one-third more food and liquor than he requires, it becomes a curious question to determine what the result would be if such persons would consent to a restricted scale of dietary.

M. Soyer, who in his lifetime gained so much fame as a cook and a food economist, made a calculation as to how much of the finer wines and meats were consumed by a professed *bon-vivant* in the course of his lifetime. This curious feat of calculation is based on a lifetime extending over sixty years; the life of a *bon-vivant* is estimated as enduring for threescore years and ten; but—though he might have extended the number—the first ten years are not taken into account, as during that period the boy is not allowed to consume anything but what is placed before him. Taking the round figures of the accumulated 'services of meat and drink,' it appears, by M. Soyer's calculation, that a professor of good living will consume in the sixty years allotted to him, about sixty tons of viands, which he probably washes down with a hundred hogshheads of wines and liqueurs of various kinds. The following are the materials which, according to Soyer, compose the daily dinner of the average epicure—namely, half a pint of soup, four ounces of fish, eight ounces of meat, four ounces of poultry, four ounces of savoury meats, two ounces of vegetables, two ounces of bread, two ounces of pastry, half an ounce of cheese, four ounces of fruit, one pint of wine, one glass of liqueur, one cup of coffee or tea. The solids, it will be seen, which are consumed at this meal amount to thirty and a half ounces; whilst at luncheon-time, eight ounces would probably be consumed; and calculating the eggs, fish, or cutlets eaten at breakfast, an additional twelve ounces would fall to be added to the account, equivalent to forty-eight ounces of solid food per diem; and there would be at least three pints of liquid material in coffee, soup, wine, and liqueurs. At present prices, the eating and drinking of a professed good liver could not be accomplished for less than twelve shillings per diem, including wines and liqueurs. That may seem a large sum; but the money which is necessarily expended in cooking such a dinner as an epicure would order is considerable, and necessarily falls to be included in the bill of costs; while if high-class wines be selected, twelve shillings will hardly cover the expenditure. Twelve shillings a day for a period of three hundred and sixty-five days amounts to two hundred and nineteen pounds; and in sixty years at that rate, the good liver's commissariat account will sum up to the very handsome sum of thirteen thousand one hundred and forty pounds sterling. Assuming, however, that even an epicure might live tolerably well during his lifetime on eight thousand pounds, and that there are, say, ten thousand epicures in the British Islands, a saving of fifty millions sterling would accrue if the rate of living was in each case thus reduced by the sum of five thousand pounds. Could it be decreed that the British population should henceforth live on two-thirds of the food it had been in the habit of consuming,

we should be able to solve the greatest problem of our time—namely, how to make our country grow sufficient food for the people who inhabit it. Moreover, were every man, woman, and child so to abridge his or her expenditure, the wealth of the kingdom would ultimately become enormously enhanced.

Coming to the class below epicures and persons who are accustomed to a lavish table, it will be found by inquiry that almost all the middle class, and the professional class as well, eat and drink at a rate that instead of nourishing tends to kill the body. Each unit of the classes named will, as a general rule, consume quite as much food as the epicure, although he may not have his food cooked at the same expense, nor will he perhaps be so fastidious about his liquors. It may safely be accepted as a fact that thousands of the population sit down every day of their lives to four meals, at three of which fish or butcher-meat is served, and at two of which there is wine or beer. Our middle-class men of business—our manufacturers, merchants, and shopkeepers, that is—are hearty eaters. See any of them who happen to dine at a restaurant, and the fact will be apparent; or follow them home from business at six o'clock, and cast an eye over their well-furnished tables, and it will be seen that the viands are plentiful and good appetites not lacking. It can be calculated that a healthy and hungry eater of the upper middle class, able to afford a good dinner, will in the course of his lifetime consume thirty fat oxen, two hundred sheep, as many lambs, a hundred calves, fifty pigs, twelve hundred barn-door fowls, three hundred turkeys, four hundred ducklings, and as much game as he can afford to purchase; his consumption of fish, fruits, and vegetables will be in proportion; say sixty salmon, a hundred and fifty cod-fish, two hundred soles, and many hundreds of the minor fishes, not to speak of a few hundred lobsters and many thousand oysters! Taking, then, the food expenditure of the professional and higher mercantile men—persons we shall say who pay rentals of from sixty to two hundred pounds a year—we cannot compute it at less, including wines, spirits, and beer, than eight shillings per diem, which, when expensive fruits and choice vintages are taken into account, is a moderate enough estimate, especially if the occasional dinner and supper parties given in the course of the year be included. A year's dinner and food expenditure at the rate just mentioned would sum up to one hundred and forty-six pounds; and taking a similar rate for a period of fifty years, it represents a total amount of seven thousand three hundred pounds. Presuming that, if he pleased, the professional or mercantile man of the class indicated might easily so restrict his expenditure as to admit of a saving of two thousand pounds on his life's food account, the total gain would be positively enormous. If there are, say, a million of such persons—and for illustrative purposes we may assume there are a million—the amount gained would be represented by no less a sum than two thousand millions! Such figures must of course be set down as utopian, because men as a rule have become such slaves to their appetites, that it would be hopeless to attempt to wean them from what they have grown to consider a necessary of

their lives; but the fact remains notwithstanding that 'we all eat and drink too much.'

Digging into a lower stratum, it is somewhat difficult to estimate the food expenditure of the artisan and labouring class; but as every person knows, a large number of them expend a considerable proportion of their wages on beef, ham, and other food-stuffs. The working-man, as a rule, enjoys a full meal just as well as his social superiors. We have seen a London journeyman carpenter eating his couple of thick mutton chops, followed by a large hunch of bread and a slice of cheese, the whole being washed down with a pint of beer, with the same hearty relish as the alderman who dines on turtle and turbot, with a slice or two from a well-basted haunch of venison. It has been more than once stated that the labouring classes of the community are not well enough fed considering the amount of work they are required to accomplish; but that is undoubtedly a mistake, or rather it is the outcome of a feeling of sentiment. It would be easy to demonstrate that capital work could be obtained from our artisans even if they laboured on shorter commons than they do. There is no healthier body of men than the prisoners in our jails, yet the exact amount of food on which their frames can be profitably kept up whilst undergoing hard labour, is allotted to them, and no more. Prisoners undergoing sentences of penal servitude are compelled to work for their food, which is selected for its nourishing rather than its palatable qualities. Our workers in the busy hives of British industry could doubtless still accomplish their day's darg, and accomplish it well, were a few ounces to be subtracted from the amount of animal food which it has hitherto been use and wont to consider necessary for them. Bread may be held to be the working man's staff of life in reality as well as figuratively. In an artisan's household numbering, we shall say, five persons—that is, father, mother, and three children—a loaf and a half of bread will be used every day, the loaf weighing four pounds; that gives five hundred and forty-seven loaves in a year, which in a period of forty years would total up to twenty-one thousand eight hundred and eighty-four-pound loaves. In some families two meals a day are made from oatmeal; and we remember a sum set to his pupils by a Scottish country schoolmaster, which was founded on this practice. It was formulated as follows: If each of the sixty children attending this school use for their porridge morning and night four ounces of oatmeal, how much will the whole use in forty years, if they should all live so long? The answer was not long in coming from half a dozen sharp arithmeticians; it was—Three million five hundred and four thousand ounces, or two hundred and nineteen thousand pounds-weight. In naming oatmeal we have mentioned a substance which was held by a great physician to be the most nourishing food in existence—we allude to Dr Gregory, who said that any man might live like a fighting-cock, keeping up his bodily vigour and maintain his health, on two pennyworth of oatmeal and a pennyworth of milk per diem. At the date when Dr Gregory spoke, oatmeal would probably not cost more than a penny per pound-weight; so that, after all, the Doctor was allowing thirty-two ounces of solid food and a pint of milk for each day; the cost being at

the rate of one shilling and ninepence per week, or four pounds eleven shillings per annum, as against the bon-vivant's two hundred and nineteen pounds!

Far be it from us to grudge the artisan and his children their pile of loaves; but we protest that there is room for a degree of reform in their generally wasteful cookery of baked or fried meats, which indeed are so prepared as to lose in preparation a full third of their nutritive properties. A man who has recently seceded from the ranks of the beef-eaters to the corps of vegetarians, has communicated to the public the great fact that he has flourished exceedingly on his new regimen, and that, for fivepence a day, he is able to 'defeat fell hunger,' and yet at the end of a month to know that he is three pounds heavier! This gentleman has undoubtedly proved that vegetarianism is practicable, and that 'any healthy person can sustain himself with relishable food, build up the body, and rapidly increase the normal weight without the aid of an expensive flesh diet.'

It would not serve any good purpose to increase our illustrative facts; it will certainly be found, however, by every person who has the courage to try the experiment, that he can live and be healthy on two-thirds of his present amount of food, presuming that he eats and drinks to the extent we have indicated. The advice of the famous Dr Abernethy to live on sixpence a day and work for it is not yet out of date; there are many thousands who might take that advice as a basis, and so prolong their days.

## A CONSPIRATOR IN SPITE OF MYSELF.

### CHAPTER I.

#### INVOLVED IN MYSTERY.

EVERYBODY has heard of Molière's famous comedy *Le Médecin Malgré Lui* (The Physician in Spite of Himself); and few can read or witness the performance of this *chef d'œuvre* of the French dramatist without laughing heartily at its amusing scenes, and at the ludicrous positions in which the chief actor is frequently placed. But though amateur physicians are too numerous amongst both sexes, it rarely happens in real life that a man is called to play the part of a physician against his will. In troublous times, however, it sometimes occurs that an individual finds himself placed, not perhaps in so ludicrous, but in so far as he is personally concerned, a far more perilous position—namely, that of a conspirator in spite of himself; and such a misfortune—if I may call that a misfortune which happily led to no serious results—once befell the writer of this paper, while serving, many years ago, on board one of Her Majesty's frigates, then cruising in the Mediterranean.

One day, while on shore near Toulon with a party of my young brother-officers, an awkward fall from a horse necessitated my immediate conveyance to the naval hospital in that famous sea-port. The frigate to which I was attached was to sail the next day for Malta and the Ionian Sea, and it was thought probable that three or four months would elapse ere she would return to Toulon. The surgeon of the frigate, who visited

me in the hospital as soon as he heard of the accident that had befallen me, feared that the patella of my left knee was seriously injured; and such was likewise the opinion of the French surgeons, though in consequence of the swelling, it was impossible to ascertain immediately whether such was really the case. At all events, it was the general opinion of the medical men that it would be dangerous to remove me to the frigate, especially as a heavy sea was running outside the harbour, and the vessel lay at anchor a considerable distance from the shore. Thus it came about that I was left behind in a foreign port, while my shipmates and brother-officers sailed on their cruise.

In the course of a few days, however, the swelling over the knee subsided, and the French surgeons discovered that the injury was not so serious as they had imagined it to be. Still, I was confined to my cot for several days; and some weeks elapsed ere I was permitted to leave the hospital, where I was most kindly and skilfully treated. Then I amused myself pretty well for a while in strolling about the town and the surrounding country; but there is not a great deal to interest strangers in Toulon and its vicinity, especially as foreigners, and naval and military officers particularly, are jealously debarred from visiting the interiors of the fortifications; and I soon grew intensely weary of my enforced idleness, and my solitude in the midst of a population with whose language I was then but very imperfectly acquainted. I longed to be once more on board my ship; but I knew that a weary while must necessarily elapse before I could hope to meet my shipmates again.

By way of passing my time, I sought the acquaintance of the fishermen and the old seamen who lingered about the beach, with whom, after a short time, I was enabled to converse intelligibly. It was the season of the anchovy-fishery, and a number of fishing-boats were about to sail on a cruise off the coast of Italy from Leghorn to Naples, and if occasion required, even still farther south. Among the fishermen was one Gustave Pailleur, the master and owner or *padrone* of a large fishing-lugger—in the South of France many Italian words are in common use—with whom I was on very friendly terms. One day I complained bitterly to the old fisherman of my weariness and of the monotonous life I was leading, strolling day after day from morn to night along the sea-shore.

'And how long will it be before Monsieur can regain his ship?' inquired Gustave.

'Six or seven weeks at least; perhaps two months, or more,' I replied.

'Bah!' exclaimed the fisherman. 'Why need Monsieur remain here all that time? Why not take a cruise with me to the coast of Italy? It will be a change at least; and if the fish are abundant, there will be sufficient occupation and amusement. Monsieur will be welcome.'

Joyously I accepted the invitation. I was well aware that I would suffer inconvenience and probably no little hardship, on board a small fishing-lugger; but what young midshipman of eighteen years eager for change, cares to consider such trifles! *La belle Jeannette*—that was the name of Gustave Pailleur's vessel—would return to Toulon in a month, or five weeks at the utmost; and therefore I should be back long before my

vessel would return to the port. I took no time to consider; but immediately assured the jovial old fisherman that there was nothing I should like better, if I should not cause trouble or inconvenience to him or his crew.

'Trouble or inconvenience!' he replied. 'Bah! No. Monsieur will confer a favour. But you must prepare for the voyage to-day,' he added. 'We sail to-morrow morning at daybreak to Marseilles, to join the fishing-fleet at that port, and thence we proceed forthwith to the fishing-ground.'

'I will be ready,' I replied; for in fact I had little to make ready; for though I was pretty well supplied with money, I had but a small quantity of clothing on shore with me, which a portmanteau would easily contain. I therefore supplied myself with a few comforts and luxuries, such as I was not likely to find on board a fishing-lugger, and such as I fancied would be an acceptable addition to their usual hard fare, to my new messmates as well as to myself; and having packed my portmanteau and paid my bill at the hotel, awaited so anxiously the hour of departure, that I was unable to sleep, and was down on the wharf the next morning an hour before Gustave Pailleur and the five men and boy who composed the lugger's crew—all of whom, save one, were relatives of the *padrone*—made their appearance. However, they came at the appointed hour. *La belle Jeannette*, in company with six other luggers, sailed for Marseilles; and thence, accompanied by a fleet of some eighteen vessels of a similar description, departed in a day or two for Leghorn.

For a few days the fishing was tolerably successful. Then a gale arose, and when it subsided in the course of a few hours—for the gales in the Mediterranean, though sometimes severe, are rarely of long duration, usually subsiding as rapidly as they rise—the fish, hitherto abounding, seemed to have altogether departed. The nets were cast in vain. Coarse fish, that the fishermen cared not for, came up with them; but the wary and delicate anchovies for which we sought, had disappeared. The fishermen, though annoyed, were not surprised.

'It is often so, Monsieur,' said Gustave to me. 'One can never feel sure of success when fishing for anchovies. They are plenty all around. Then a breeze springs up—or sometimes no one can tell why—they disappear in a moment! They have gone south to avoid the gale; and maybe we shall need to follow them to the Neapolitan coast; perhaps even farther, before we find them again. Sometimes even they elude us altogether, and we see them no more.'

The old fisherman judged correctly. Slowly we sailed southward along the coast, day after day casting our nets to no purpose, until we reached the Gulf of Salerno. There we found the anchovies again, but not in great abundance; and from information we received from a passing vessel, we sailed for the Gulf of Policastro, where it was said the anchovy fishermen were doing famously. It seemed, however, as if we were destined to meet with disappointment. It was the period of the serious troubles in the kingdoms of Naples and Sicily, when the tyrannical monarch of those realms, known by the sobriquet of King Bomba, was driven from his throne; and we had frequent intimation during our passage along the Neapolitan

coast of the disturbances constantly occurring on shore. Moreover, we met every day with ships of war, French, English, and Italian, that were cruising about off the coast; and more than once we heard the sound of distant cannonading both at sea and on shore. In fact, only a day or two previous to our arrival in the Gulf of Policastro, a severe conflict had taken place between a Neapolitan corvette and a squadron of small vessels fitted out and manned by the insurgents, which had been beaten off. The sloop-of-war, however, a fine heavily armed ship, still remained at anchor inside Point Palinuro, at the mouth of the Gulf. The timid fish, heretofore so abundant, had been frightened away by the unwonted disturbance; and the fishermen, fearful of getting into trouble, had quitted the spot.

At that period, I was but eighteen years of age, and I troubled myself little concerning political affairs; while my temporary companions and ship-mates, the fishermen, were even more careless and ignorant than I of such matters. All they thought of was the successful prosecution of their arduous occupation, and when they found that interrupted, they sailed for some other part of the coast. Thus, when we entered the Gulf of Policastro, we found it deserted save by some half-dozen coasting-vessels, which lay close in-shore; and though Gustave Pailleur brought his craft to an anchor for the night near the mouth of the Gulf, he decided to return the next day to the Gulf of Salerno.

For the last day or two, the weather had been squally. We had beaten up, dead against the wind, the entire distance between Salerno and Policastro; and the *padrone* and his crew, almost worn out with fatigue, and dispirited by constant disappointment, had retired early to the cabin; I, who had not worked so hard as they, having volunteered to keep watch from eight o'clock P.M. till midnight. The gale had completely subsided. The waters of the Gulf, which had been sheltered from the strong southerly wind by the high lands of Calabria, were already almost as smooth as the surface of a mirror; and though the clouds and scud that passed swiftly by to the northward, told of the atmospheric disturbance that still existed overhead, the moon and stars from time to time shone forth brightly, and all was tranquil on sea and on shore. For an hour or more I paced to and fro on the short and narrow deck of the little vessel. Then, feeling tired, I stopped, and reclined against the low bulwark on the after-part of the lugger; and in spite of my endeavour to keep awake, fell occasionally into a light doze. From one of these light fitful slumbers, I was aroused by what I fancied to be the plash of oars; but the moon was temporarily obscured by a passing cloud, and though I looked earnestly around me and listened attentively, I could not see or hear anything stirring on the water. On consulting my watch, I saw that it was already past eleven o'clock; and drawing my cloak closer round me, I was about to resume my walk to and fro, when I was again startled by the light plash of oars, and fancied I could hear the sound of a human voice. At that moment the moon again shone forth bright and clear, and by its light, I discerned a small boat with two rowers, and a man seated in the stern-sheets, pulling gently out from under the shadow of the high land towards the lugger. The boat, which was low in the water,

and was painted of a light colour that rendered it almost imperceptible, was soon alongside; and seeing me at the gangway, the individual seated in the stern-sheets inquired in Italian, and in a low voice, as if he were afraid of being overheard, at the same time gazing cautiously around him, whether I was the *padrone* of the vessel.

I was but very slightly acquainted with the Italian language, but I understood the question; and replied in French, that the *padrone* was asleep in the cabin.

'*N'importe, mon ami,*' continued the strange visitor, now speaking fluently in French, but with a strongly marked Italian accent. 'You, I presume, are one of the crew? With your permission, I will step on board;' and suiting the action to the words, without waiting for my reply, he sprang lightly from the boat to the gangway of the lugger, which was in fact but a step.

'And now, my friend,' he went on, 'you will greatly oblige me if you will arouse the *padrone*. I wish much to speak with him. He can render me a service of the utmost importance, which will greatly benefit him—will benefit all on board.'

That the stranger was a gentleman was evident alike from his voice and manner, though his face and form were concealed by the cap, which was pulled down almost over his eyes, and by the coarse boat-cloak he wore, with the collar turned up over his ears. Moreover, as he grasped the shrouds while swinging himself on board, I noticed that his small white hand was that of a man unaccustomed to manual labour, and that he wore a diamond ring on his third finger. Still I hesitated a few moments. I was aware of the troubles on shore, and I did not like the secrecy of the affair, and wondered what important business an Italian gentleman could have to transact with a poor French fisherman, that induced him to visit the lugger at near the midnight hour.

With the quick ears of a sailor, however, Gustave Pailleur had heard the lapping of the water caused by the presence of a boat alongside, and suddenly made his appearance on deck.

'Here is the *padrone*, Monsieur,' I said, pointing towards Gustave, who now came forward, evidently both surprised and alarmed at receiving a visit at so late an hour.

The stranger politely raised his cap, and at the same time throwing back his cloak, displayed the delicate clear-cut features of an Italian gentleman; and we now saw that beneath his cloak, he wore the undress uniform of a military officer of superior rank. Still, though, as I have said, there was no vessel near, he again gazed furtively around him before he said in a voice little raised above a whisper: 'Signor *padrone*, if you are abundantly rewarded, are you willing to render me and others a signal but secret service?'

'That depends, Monsieur,' replied Gustave. 'I will not place myself or my vessel and crew in peril; neither will I act dishonestly, nor assist to do injury to any human being, for aught that you can offer me.'

'*Parbleu!* It is not needed, *padrone*,' said the stranger, still speaking French. 'On the contrary, it is an act of mercy that is required from you. If we succeed—as we surely shall, if you will aid us—no one will suffer injury; but the helpless and innocent will be saved from great misery—from long imprisonment, perhaps from a cruel death.'

And you—you will encounter no risk if you implicitly obey the directions you will receive, while you will reap a great reward.'

Gustave hesitated still. He thought of the terrible stories of oppression and tyranny—many of them probably exaggerated, if not false—of which he had heard; and he pictured in his mind his vessel confiscated, and himself and his crew consigned to an Italian prison, from which neither he nor they would ever be released, while their cruel fate would remain unknown to their relatives and friends; and perceiving his hesitation, the stranger drew a steel purse from his pocket, which glittered brightly in the moonlight with the gold coins with which it was filled.

'See here, *padrone*,' he went on; 'here are one hundred *scudos*' [about twenty-five pounds], 'not as payment for your services, but as mere earnest-money, and as a token of the rich recompense you will receive hereafter, and immediately, when your task—easy of performance—is finished.'

I saw Gustave glance eagerly at the glittering coin visible through the meshes of the purse. It was of itself a large sum, in the estimation of a poor fisherman whose present voyage did not promise much success.

'You will swear, Monsieur, that neither my vessel, myself, nor my crew shall be imperilled?' he replied.

'I swear,' answered the Italian.

'And that this is no bribe to induce me to perform a mean or guilty act?' said Gustave. 'Monsieur, we fishermen of France are poor, but we pride ourselves upon our honesty.'

'I have spoken, *padrone*,' replied the Italian. 'An Italian gentleman is equally proud of his honour, and is incapable of performing a mean or guilty action.'

'Monsieur,' said Gustave, after some reflection, 'I am at your service.'

#### DAVID GARRICK.

On a cold March morning, in the year 1737, two young men started from Lichfield to try their fortunes in London. The younger of the two is but nineteen, not tall, but well made, 'a very sensible fellow and a good scholar, of good dispositions, and very promising.' His companion is seven years older, somewhat ponderous in person, rolling in gait, and rather near-sighted. The former is David Garrick; the latter is his preceptor, Samuel Johnson.

Garrick was designed for law; but following a very early and a very strong impulse, he gave himself to the stage, and made his debut on the boards of Goodman's Fields, Ipswich, under the name of Lyddal. His part was Aboan in *Oroonoko*, and from that night his success was assured. His first appearance in London was in *Richard III.*, and for the display of his own powers he could not have chosen a fitter part. His success was triumphant, and as lasting as triumphant. Garrick's was that success which ever rewards not so much continual and conscientious toil as red-hot enthusiasm. His rendering of 'Richard' was a reformation as much as a revolution in the histrionic art.

Garrick's popularity on and off the stage was the result of a happy combination of unusual qualities. Some of these we may endeavour to enumerate. By descent a Frenchman, he had all the volatility and indeed volubility of the French people. His stature was slightly under the middle size; his limbs beautifully proportioned; his arm charmingly tapering off into a hand very neat and very small. Manliness, elasticity, ease, and grace characterised his deportment. 'His movements were refreshing to witness.' What a contrast to the burly and bull-dogged Sam! With his dark-blue coat and small cocked-hat laced with gold, Garrick's figure was unique. His countenance, never at rest, revealed the radiant mind in the expressive play of features. The eyebrows finely arched over a pair of dark, brilliant eyes, the fire of which he had the art of quenching, and making his intelligent orbs as dull as two gooseberries; in the personation of terror or tenderness his eye held the audience like a spell. His voice at once natural, cultivated, and easy in its modulations, wide in its compass, had that undefinable penetratingness peculiar to the great actor and true orator. Impressionableness or intense sensibility was a leading trait in Garrick's mental make-up. This is that quality by which an actor, while setting due store by the words, realises and becomes out and out the character he portrays. The mere repetition of the language of *Hamlet*, however graceful and correct the elocution may be, without that intensiveness by which *Hamlet* as a harmonious whole lives in and shines distinctly through the actor, is perhaps a correct enough portrait, but it lacks the living soul. Garrick too had a true workman-like delight in excellence. And with all his natural endowments and genius, perhaps few professional men have worked so constantly and with such a continued enthusiasm to the very end of a public career. His whole soul was in his work, and his work was his joy. 'He saw no one on the days he performed; he was full of the 'part' for the evening. And even between the acts he separated himself from the other actors and would speak to no one. He brought genius and put conscience into his work.'

Another element, if not of his success at least of his happiness, was his marriage to that charming singer, the fair Eva M. Veigel or Violette. This lady was said to be 'the most agreeable woman in England.' Sterne, who saw her among the beauties of Paris in the Tuileries Gardens, declared 'she could annihilate them all in a single turn.' Even Horace Walpole could forsake his cynicism, and say of her that her 'behaviour is all sense and all sweetness.' During the twenty-eight years of their married life, David was not so much the husband as the lover; and his affection was rewarded with a love as true and as constant as his own. Mrs Garrick survived her husband more than forty years, and for at least thirty of these she would not allow the room in which David died to be opened. Buried, at her own request, in her wedding sheets, she occupies the same grave with her husband at the base of Shakspeare's statue, 'until the day dawn and the shadows flee away.' Doubtless a helpmate so attractive and so congenial and pure greatly aided the actor in striving to attain his ideal.

Does any one, or all of the qualities mentioned as constituting the equipment of Garrick, account for the fact that unlike Mrs Siddons, Kemble, and Macready, Garrick at once and by a bound placed himself in the front rank of the priesthood of the stage? The sun sometimes foretells his rising by scattering the clouds that cap the hill-tops, while as yet we see him not; but inch by inch he rises like a golden wheel; slowly inch by inch he scatters the mist and kindles the heights, until at length he rises—a full orb—pouring his brilliant splendours on all below. So rose gradually Mrs Siddons, Kemble, Edmund Kean, and Macready. On a dark and cloudy day, the sun is obscured; he has risen, is well up the horizon, but is draped in cloud and shadow and is invisible; the wing of the storm sweeps away shadow and cloud, and in the twinkling of an eye the burning, blazing sun has burst on view. So burst David Garrick on the British stage.

Garrick's character was by no means perfect. Many faults were laid to his charge; and amongst others was his fondness of flattery. Murphy, to whom Garrick had given loan upon loan of money, accuses him of meanness. This charge, however, has been proved to be as unjust as it was ungrateful. On one occasion, Murphy was asked his opinion of Garrick. He replied: 'Off the stage, sir, he was a mean sneaking fellow; but *on the stage*'—throwing up his hands and eyes—'Impossible to describe!' Mrs Clive was one night standing at the wing, alternately weeping and scolding at Garrick's acting; and turning away in anger, she exclaimed: 'I believe he could act a gridiron!' Once, at a splendid dinner-party at Lord —'s, they suddenly missed Garrick, and could not imagine what had become of him, until they were drawn to the window by the convulsive shrieks of laughter of a young negro-boy, who was rolling on the ground in an ecstasy of delight to see Garrick mimicking a turkey-cock in the courtyard, with his coat-tail stuck out behind, and in a seeming flutter of feathered rage and pride. In *Lear*, Garrick's very stick acted. The scene with Cordelia and the physician, as Garrick played it, was ineffably pathetic. The anathema in this play exceeded all imagination; it electrified the audience with horror. The words 'Kill—kill—kill!' echoed the revenge and impotent rage of a frantic king.

When it was announced that Garrick was soon to take leave of the stage, there came a rush of people from all parts of Europe to witness his last performances. Many foreigners who came specially to England to see Garrick play were unable to get admission. A week or so after his last appearance, he thus writes: 'When it came to taking the last farewell, I not only lost the use of my voice, but of my limbs too. It was indeed, as I said, a most awful moment. You would not have thought an English audience void of feeling if you had seen and heard them. After I had left the stage, and was dead to them, they would not suffer the *petite pièce* to go on, nor would the actors perform, they were so affected.' Thus retired from the stage perhaps the greatest actor of modern times. Garrick departed this life in January 1779. His death was a national event. The funeral was the largest ever seen in London up to that time, among the mourning thousands

at Shakspeare's monument being old Samuel Johnson affected to tears. Perhaps he was thinking of that cold March morning when he and his friend left Lichfield for London.

### STRAY THOUGHTS IN A LIBRARY.

WHEN we walk through a spacious and well-equipped library, and gaze on the book-lined walls, one cannot help pondering upon the real wealth therein contained; and how the thoughts that are contained in the books may be destined to live and exert their influence long after their authors have passed into dust.

Many thoughts glide through our minds when in a library. There is a feeling of sadness when we look at so much 'medicine for the mind' stored on the shelves, and reflect that we can never master even a tithe of their contents—that many branches of study must ever remain closed to us—and that in the few in which we can engage our progress will be slow, and will soon be ended. Again the thought of the fleeting nature of human life and fame occurs to us. The authors whose works we see around had all their little day—they commenced life with advantages or disadvantages; they emerged from obscurity, and gained the fickle applause of the day, or pined in want. But celebrated or uncelebrated, worthy or worthless, the same lot happened to all—to the same home each and all tended.

When we think, however, of the small number of books which by their merit establish a claim to immortality, or that possess any native vitality, we are reassured, and recognise that if we confined our attention to books of this class, we would have a reasonable hope of mastering much of the learning, and acquiring much of the knowledge, handed down to us by superior genius. The youthful reader who is turned into a well-stocked library to choose his course for himself, is in danger, under the influence of an unregulated mind, of either feeding to repletion, or being vitiated by something either hurtful or poisonous. The first thing is to cultivate a literary appetite, for the choicest dishes may be prepared in vain for a man devoid of taste—the genius of the writer spent in vain if there be no responsive understanding, no sympathetic kindling on the part of the reader. The next thing we have to learn is to receive ideas with discrimination; not to accept what is written because it is written, but because of its truth or intrinsic value. It is important to be able to get at the kernel of a book. There may be much unpalatable husk or padding; let that go, so as you get the substance. A study should be pursued with an end in view. If we make a journey to the bank, we do not leave until we have got the money we require. If there is much store of precious metal beneath the soil, the way to reach it is to sink a mine, not to lightly scratch over a large surface. We may flit as the butterfly from book to magazine, from history to travels; but with the bee we should extract what good we can, and store it away for future use.

The tree of Biography if well cultivated, presents to the student of mankind a source of endless delights. The fruit is of kinds as various as the characters of men; but there will be found a certain generic affinity, which will enable us to trace resemblances, establish theories, and draw conclusions. Though their paths in life and outward circumstances were widely different, we find that the men whose lives have been recorded for our benefit have had their joys and sorrows, doubts and fears, and present lessons for our guidance which, in most cases, deserve a careful and conscientious study. We have read of an old stone being found imbedded in a bank which bordered on a dangerous morass. On this stone some benevolent man had long ago carved the words, 'Keep on this side.' Such a message is conveyed by every biography which pictures a good man—a man true to himself and to his God. In the eyes of Society, a man is a walking mystery; and even his friends know little or nothing of what passes in the secret chambers of his heart. Nor can the man himself read his own heart until he has made it his careful and patient study. But in a conscientiously written autobiography the outworks which guard his individuality are passed when we see him in his private life, as he walked and talked, laughed and wept—when we look through the windows of his soul and visit him in his inner chamber.

There is an innocent and even laudable curiosity in our hearts to know how great men conducted themselves when in the quiet of home. How much closer are we drawn to our favourite heroes in biography, when we know how they were loved and revered by their nearest relatives, and how their greatness of intellect and powerful genius were compatible with humility, good-nature, and playfulness, and those minor virtues which contribute to the excellence of character as a whole. We do not think the less of them as we peruse their humorous letters to their children, or see them indulging in a game of rumps. No; if we are to have a man's life-history, let us have the man without his dress suit—not as seen in the ecstatic glow of some enthusiastic imagination, but through the clear unveiled atmosphere of truth and reality.

Next to biography, History comes as a natural sequence; for is it not compiled biography? Events and men are inseparably connected. The hand that moves the lever or guides the helm is the hand of a mortal like ourselves. The characters of history are men who, some by birth, some by merit, have been most conspicuous in their acts. What, after all, is the value of history but accumulated experience? Into what fields does it not lead us! from the luxurious atmosphere of court-life to the sulphureous canopy of the battle-field. Into what minds does it not peer, and what hearts does it not dissect! To what characters, scenes, and events does it not introduce us! Tyrannising kings, intriguing courtiers, time-serving flatterers, the pomp of war, the quiet of the cloister, the stormy voice of the people, the shrill tempest of revolt, the quiet march of civilisation, the battle of the church, the strides of science, the blazing forth of genius, the triumph of truth, nations crumbling and disappearing, tottering thrones, political earthquakes. All these pass before us in one vast panorama!

It is difficult to tell wherein lies the secret of good descriptive writing. It seems to be the making a window of the author's mind, through which the eye can discern the scene described. It is being true to nature, and picturing either with bold broad strokes, leaving the filling-up to the imagination, or labouring with faithful minuteness to produce a photograph.

We might go on from bookcase to bookcase and find our topics inexhaustible. But we must close; and in doing so, remember that it is not what we read but what we retain and assimilate that will benefit ourselves and influence our lives and those of others. Of what use to pile fuel if there be no light to kindle? Of what use to accumulate material if there be no hand to build? Mere knowledge is altogether insufficient, if there be not wisdom to use it judiciously.

### A KENTISH STREAM.

AMONGST the various rivers and streams that flow through the picturesque county of Kent, there is a stream so small that an average pedestrian proceeding at his usual pace of walking, can start from the source after breakfast, and reach its estuary comfortably before dinner. And this no mere dribbling brook, or ditch dry for half the summer, but a steady perennial stream, rising in a beautifully romantic country, and capable, when it is in flood, of letting the inhabitants of the adjacent valleys feel its power by wild irruptions into kitchens and cellars, flower and kitchen gardens, disturbing the porcine inmates of the sties in their slumbers, and scaring the poultry in their sheds.

Whoever is unfamiliar with the country around Hayes and Keston in Kent has a treat yet in store for him. The tract of country we are about to describe is not more than twelve miles from the centre of London, yet for peaceful beauty and wildness it might well be a hundred miles away. The little village of Hayes is as quiet and romantic as if it stood in one of the dells of Westmoreland. Leaving the village, we begin to cross a wild, breezy Common about two hundred acres in extent, from the summit of which we catch fine views over the Crystal Palace, the Great Metropolis, and the Kent and Surrey hills. The Common—which has been generously dedicated to the public use by Colonel Lennard, the lord of the manor—is one of the wildest specimens of heath scenery imaginable, being covered with gorse, heather, brambles, and scrub of almost every description. At the north-western end of the Common are some fine snatches of scenery, a small forest of gigantic oak-trees; and on the opposite side of the road, copses of rare beauty. Here, in autumn, when the changing foliage lends a glorious colouring to the landscape, artists may be seen in dozens, easels before them, making sketches of the various silvan beauties.

Passing over Hayes Common, we come in a few minutes to another tract of heathland, Keston Common, where the stream we are about to follow

rises. Keston Common is smaller but hillier than Hayes, and abounds with springs, one of which gives rise to the river Ravensbourne. But before we proceed to trace our stream, let us turn aside a few paces, to visit a spot of great historic and humanitarian interest. Adjoining the main road that skirts Keston Common is Holwood Park; and crossing a stile in the fence, we stand almost immediately before a venerable oak-tree. At the foot of this oak is a seat, and on this seat is the following inscription, from the autobiography of that great philanthropist, William Wilberforce: 'I well remember after a conversation with Mr Pitt in the open air at the root of an old tree at Holwood, just above the steep descent into the vale of Keston, I resolved to give notice, on a fit occasion in the House of Commons, of my intention to bring forward the abolition of the slave-trade.' The seat with the inscription was erected by Colonel Stanhope in 1862. What advances has the great cause of humanity made since Wilberforce gave notice of his memorable motion!

Returning to the Common again, we come at once upon the source of the Ravensbourne, known as Caesar's Well, whence rises a copious stream of crystal water. The traditions that Caesar watered his troops here, and also that their steps were directed to it by the flight of a pair of ravens, may be received as true or not, as the reader thinks fit. From this well the water flows into two small lakes, one beneath the other, and finally into a third lake, which is now inclosed in private grounds. From this spot, for some miles, the stream, having a serpentine course, flows through private estates, only in one place disclosing itself in a pretty waterfall, and then flowing round a small island, radiant in spring with blossoms of the rhododendron. Hence, through Hayes, near Bromley, and past Beckenham, the tiny river steals along, and at a place called Southend, again comes forward into public view. Here it forms a pretty little lake, flowing round an island popularly called Jack Cade's Island, from a tradition that the celebrated rebel of that name used to find shelter in its cover. From this point it winds through Southend and Catford to Lewisham, where it formerly bifurcated, the larger branch flowing behind the village, the smaller through the centre of the public street. From Lewisham the stream soon begins to lose its romance, and is here joined by a not inconsiderable tributary, the Quaggy, which in rainy weather brings down torrents of water, and manages, with the waters of the Ravensbourne, to do considerable damage to the house-property which, in defiance of the laws of prudence, has been built on the lower levels.

At two miles below Lewisham, the Ravensbourne becomes a tidal river from its connection with the Thames. Instead of green fields and rich pastures and leafy glens, its waters, polluted by all kinds of filth, now flow past mills and sheds and dingy factories, till presently the waters lose themselves in those of the Thames. Rising in a healthy, breezy moorland, in the depths of the country, the Ravensbourne terminates its career in mud and filth, and amidst grimy wharfs and dingy factories. Yet the whole distance from its source to its termination is not more than about ten miles as the crow flies,

and possibly not more than fifteen in all its meanderings. And yet few streams, considering their length, present greater attractions to the wandering artist.

#### A NEST-BUILDING WATER-BEETLE.

From a young entomologist who has evidently studied his subject well, we have the following interesting notes regarding a nest-building water-beetle; and as the natural history of our ponds and ditches is daily becoming more popular, we gladly offer the little sketch to our readers. Our young friend writes as follows:

One of the most curious and interesting objects to be found in stagnant ponds is the nest or cocoon containing the eggs of our largest water-beetle, the *Hydrotus piceus*. This beetle—unlike the other large water-beetle, *Dytiscus marginalis*, which lays its eggs loose in the water—prepares for the reception of its eggs a most elegant and beautifully adapted nest. It is spun by the female; and consists of a hollow case nearly resembling in shape and appearance, externally, a small white turnip-radish with the root cut off, the upper surface being somewhat flatter than the under side; but instead of the green tuft of leaves of the radish, there is at one extremity of the cocoon an upright or nearly upright spike of a brown colour, tapering to a point, and expanded into a flat triangular form at the side of the cocoon.

The cocoon is formed of silk and a gummy secretion looking very like common whity-brown paper; and its walls are about the thickness of ordinary note-paper; but on one side, just beneath the triangular termination of the spike, and halfway to the bottom of the cocoon, this paper-like substance is replaced by a loose silky film, by breaking through which the young larvæ escape as soon as the eggs are hatched. On making a section of the cocoon by cutting it through longitudinally, it will be seen to be very like an oval bag, flattened above, filled with a quantity of silky down; which downy or silky substance extends upwards into the spike, and downwards to one side, where, as already mentioned, it replaces the more solid substance of the rest of the cocoon. The eggs are placed behind this filmy substance, extending nearly to the other end of the bag, and appear to be attached to the flattened roof and bottom of the cocoon by thin silk. The spike is composed of a somewhat similar substance to the rest of the exterior of the cocoon; but is of a closer nature, and thicker and stronger make. The nest measures an inch across, and is about seven lines deep—the height from the tip of the spike to the bottom of the cocoon being about an inch and a half. This is about the average, different specimens varying considerably in the height of the spike, &c.

The cocoon before the eggs are hatched is very buoyant; and although, if left to float undisturbed and free in still water, it is generally so balanced that the spike remains uppermost, a very slight disturbing cause, such as a water-snail crawling over it, will overturn the frail barque, and leave the spike pointing to the bottom of the pond. It is evidently not in accordance with the well-being of the eggs that this should happen, for the cocoons are almost always found attached either to the tall grasses growing at the margin of the pond, or

the nest is built on the under side of a floating aquatic leaf, the spike protruding just beyond the edge of the leaf.

It will be observed that both these positions offer good protection to the nest, by rendering it not easily seen from above; still, as one would imagine the greatest danger to the eggs would be from beneath the water, it may be fairly concluded that this position is not chosen by the parent beetle as a protection from the attacks of aquatic insects. I have no doubt, however, that the nests are damaged by the attacks of natural enemies; for I have found the cocoon floating loose with holes made through it, and most of the eggs gone, and the rest bad. The nest is not invariably attached in this way; for I have found it fixed to and surrounded by the green *conservae* which float in ponds.

After the eggs are hatched, the empty nest still floats for a time; but it afterwards sinks, as though saturated and soddened with water; and from experiments I have made with cocoons recently hatched, I find the substance of which they are composed is, for a reason which I shall presently explain, not impervious to water, as it will pass through it more or less rapidly.

These nests, each of which contains about fifty eggs, may be found during June in the neighbourhood of London and elsewhere; the latest day I have taken one unhatched is the first of July. When hatched, the young larvæ are about seven or eight lines long, and swim very freely; and it is a curious fact that they will often crawl back into the nest after having left it.

The heads of these larvæ are armed with a pair of mandibles, which are curved inwards and upwards from their bases; and in this stage these insects exhibit the singular habit of bending back the head when feeding, so that the food carried between the mandibles is rested on the back, giving the necessary purchase for the action of the jaws; and so great is the power in these larvæ of turning back the head, that when viewed from above, the *under* side only of the head is seen, the back being at the same time curved, so as to form a more firm support to the morsel of food. Their food is small aquatic mollusca; and when young, they appear to subsist principally on water-snails recently hatched.

I am not clear as to the purpose served by the spike attached to the cocoon. It has been considered as intended to carry air to the interior; but I think that if this were its use, the spike would most probably be entirely hollow, and would terminate in a distinct *orifice* open to the air. But this I cannot find to be the case. Moreover, as the cocoon floats on the surface of the water, and is not water-tight, the air would—except when the cocoon is attached to the under side of a leaf—penetrate the substance of the body of the cocoon which is above the water. It is, I think, possible that a continually changing supply of water may be necessary to the preservation of the eggs; and supposing this to enter through the thin integument through which the larvæ subsequently escape—as they would readily do, this portion being under water—the moisture may be brought in contact with the eggs, and then slowly ascend the spike, and be gradually evaporated through its substance.

I believe the existence of the spike is necessary to the cocoon; for in the case of two specimens, I cut off the spike, and neither of these hatched. This may possibly have arisen from another cause; but the inference to be deduced from the fact is, that the spike is by no means an unnecessary appendage.

#### PASSENGERS' LUGGAGE.

In this *Journal* of 14th July 1879 appeared an article on the defective arrangements which exist on the English railways with reference to 'Passengers' Luggage.' The article is quite true as regards railways generally; but a correspondent draws our attention to an exception to this rule, which, in justice to the well-managed Company in question, we willingly notice. He says: 'Whoever, like myself, has been a passenger by the London, Brighton, and South Coast Railway, has found the great convenience of an arrangement, simple in itself, but fraught with advantages, in the treatment of personal luggage. It is enough in summing up its advantages to say that the traveller is relieved of all care, trouble, and responsibility. I am going to Brighton, and have with me say five parcels of personal luggage. The porter who meets me at the cab accompanies me to the ticket-labeller, who labels each parcel "Brighton" with a special number, say 263. He gives me a similar ticket, bearing the same destination and number. I trouble myself no further with the luggage, which in due course is put into the luggage-van of the train I am going by. When I arrive at Brighton, I call a porter of the Company, and give him the ticket I hold, telling him the number of packages it represents; and they are given to him by the guard on his surrendering the ticket. Thus, after the luggage is labelled, no one can obtain possession of it but the holder of the ticket; whilst, when it reaches its destination, there is no confusion as to its identity, nor any fear that it can be obtained possession of by any but the lawful owner.'

Other Companies would do well to follow.

#### TWILIGHT'S HOUR.

The sunlight on a waveless sea  
In softened radiance fades slowly,  
The folded flower, the mist-crowned tree,  
Proclaim the gathering twilight holy.

It is the hour when Passion bows—  
A solemn stillness round us lingers;  
And on our wildly throbbing brows  
We feel the touch of angel fingers.

It is the hour when lovers fond  
(For Love its native air is breathing)  
Drape with fair hopes Life's drear beyond,  
Gay garlands for the future wreathing.

It is the hour when in far land,  
The wanderer tired of ceaseless roaming,  
Longs for the clasp of kindred hand,  
And the dear home enwrapped in gloaming.

It is the hour when mankind hears,  
Amid Earth's mingled moans and laughter,  
Chords which will swell when unborn years  
Are buried in the great Hereafter.

## JUDGE BATHGATE'S LECTURING EXCURSIONS.

MR JOHN BATHGATE, whom we have described as being absent on leave from his duties as District Judge in Otago, New Zealand, is now about to return to the colony; and at our request, has favoured us with a few notes regarding the work he has gone through since his arrival in Great Britain. These notes on his Lecturing Excursions are in various ways interesting. They show what can be done for the public advantage by a person of by no means robust constitution, who is regardless of trouble, and feels animated by a desire of doing good. Mr Bathgate's object was to make known the desirability of New Zealand as a field for immigration to farmers, capitalists, and others. For this purpose, he prepared a series of lectures on his voyage to England, some of them being written on his passage up the Red Sea, and the others matured during his residence in Peebles, Edinburgh, and elsewhere. Besides this laborious exertion, he prepared a book on the same subject, entitled, 'New Zealand, its Resources and Prospects,' which has been published at a small price, and has had a large circulation. We have no doubt the book has effectually fulfilled its design; and, along with the lectures delivered at various towns to large and appreciative audiences, will have influenced many to fix on New Zealand as a desirable place of settlement. When we consider that Mr Bathgate is not a professional land-agent, and has no purpose to serve, further than the pleasure of recording his convictions, drawn from personal knowledge and well-ascertained facts, we may view him as one who unselfishly gives up his leisure for the public benefit.

Taking a review of his proceedings before quitting Edinburgh in May, to take shipping in the Thames for New Zealand, he writes as follows: 'In the course of November last, I had the pleasure of delivering lectures at the following Scottish towns: Haddington, Dirlتون, Dalkeith, Selkirk, Innerleithen, and Peebles. I was everywhere well received; but while the meetings were

very successful and the audiences apparently much interested, no practical results followed. This probably arose from the fact that the land in Scotland is principally held on lease for nineteen years, and the tenants accordingly were unable to contemplate immediate emigration. The plan I generally adopted in a lecture was to assume that, in order to obviate the intense competition which had raised rents to an abnormal height, it was necessary that some of the farmers, especially the younger men, should leave for a new country. The question was then asked: Where should they go to? I answered I would select the country which had the greatest number of points of excellence for insuring success in agriculture and comfort in life. The points suggested were: 1. A genial and healthful climate. 2. A fertile soil. 3. Good communications by roads and railways. 4. Abundance of water and fuel. 5. Freedom from locusts, mosquitoes, and other insect plagues. 6. Variety in production—that is, a country having something else than agriculture to depend on, such as wool, gold, manufactures, &c. 7. Ready market. 8. Social advantages, such as good education; and 9. Good government, law, and order. I shewed where some colonies were deficient in several important points, and proved that New Zealand was the only country known which possessed the whole of these qualifications in happy combination. In every case where, after the facts were fully stated, I asked for a favourable opinion from the audience, it was accorded with acclamations almost bordering on enthusiasm.

'In December I went to London; and while there, I received a pressing invitation from Mr Alderman Hedley of Tynemouth to visit him at his place, West Chirton House, near North Shields. I went down to see him, and found that he had just returned from New Zealand. About two years ago, he became afflicted with severe nervous depression. He tried a ramble through France, Germany, and Italy; and returned home without improvement. The medical men urged that he should take a long voyage to Melbourne. He

yielded most reluctantly to their advice, and sailed for Melbourne. When he arrived there, he felt he was better in his general health; but his burden still weighed him down. Having letters of introduction to New Zealand friends, he next went thither, and was hospitably received at a station in Southland. In fourteen days he became a new man. The depression left him, and he was able to ride forty miles at a stretch, whilst in England he could not have ridden four to save his life. He attributed the beneficial change to the exhilarating and pure atmosphere. He travelled all over the colony in the enjoyment of unbounded pleasure in the new scenes which came before him; and after making numerous friends, he returned to England in November last, loud in his praises of the colony, and feeling as if he could not be grateful enough for the benefits he had received. It was kindly arranged that I should deliver lectures in Newcastle, Darlington, and Middlesborough, and each of them proved an unqualified success. At Newcastle, the Mayor presided, and the room was packed with a thousand people.

'At this meeting, I felt I had a thorough command of the audience; and before I was done, there was so much interest excited, that if I could have said a ship was waiting at the quay in which they might embark for New Zealand, it seemed as if a third at least of the audience would have been willing to go. Mr Hedley followed with a few graphic sentences, corroborating my statements, and giving his recent experience. Immediately after the vote of thanks to the chairman, the platform was mobbed by eager inquirers. The articles in *Chambers's Journal* had proved excellent pioneers, and were undoubtedly the means of drawing together the large attendance. Several of the gentlemen present had made up their minds to leave—men with capital, the very stamp of settlers we require. One intelligent farmer came forty miles to be present, and he has since given up his farm, and is arranging for his immediate departure. Similar meetings were held at Darlington and Middlesborough. A lady at Darlington, a councillor's wife, waited to be introduced to me, and declared with empressment "It was a charming lecture," and she had enjoyed it so much!

'After a very pleasant week, I returned to London. I then received a kind invitation from Mr Joseph Tangye, a member of the celebrated firm of Tangye Brothers of Birmingham, to visit him at his seat, Tickenhill, near Bewdley, in the valley of the Severn. He had been a constant reader of *Chambers's Journal* since his boyhood. He had been much taken with the articles on New Zealand. The little book had now been published; and he was so pleased with it, that he bought half-a-dozen copies to circulate among his friends. He arranged for a meeting at Kidderminster, three miles distant from his home.

'This meeting passed off equally well with those previous. The Mayor occupied the chair; and as he had recently returned from a tour in New Zealand, he confirmed my statements in his address at the close of the lecture. At the conclusion of my remarks, the applause was very hearty, one lady in front of the gallery so earnest, that she looked as if she would never tire waving her handkerchief. Through Mr Tangye's friend, the lamented Mr J. S. Wright, M.P. for

Nottingham, I was invited to address the Chamber of Commerce, Birmingham. This I did one afternoon with good effect to a crowded meeting, and received a cordial vote of thanks. I took up the question of the indebtedness of the colony, and shewed that the real point was not its amount, but whether it could be profitably used. Mr Wright had informed me that he would catechise me on the debt; but my argument and facts seemed to be appreciated, as no questions were put regarding it. While at Birmingham, I was conducted through the extensive works of Tangye Brothers. In the yard waiting to be tested were two large cranes for the Dunedin Harbour Board. No engine or article is allowed to leave the works until thoroughly tested. The consequence is that the raised letters "Tangye Brothers" are an acknowledged guarantee for excellence. The firm had often been asked by merchants to put the name of the party ordering on the engine, as is done in cutlery; but they have invariably refused, on the ground that they were responsible, and that they wished by care and good workmanship to make their name a voucher for a high standard of excellence.

'After this I was invited to lecture at Leeds, Hull, Louth, and Lincoln; when the dissolution of parliament took place, and disorganised all my plans. As I had to leave Great Britain in the end of May, I have had to renounce the idea, with much regret, of visiting these places. The only engagement I kept was to address the Midland Farmers' Club on May 13th. I had a pleasant meeting there, and an animated discussion followed my address. I understand several of the members have it in contemplation to give up their leases, which are shorter than those in Scotland, with a view to emigrate to New Zealand. I may mention that altogether, as the result of my efforts, considerably over one hundred thousand pounds of capital will flow into the colony with intending settlers from various parts of Britain.

'On every occasion I have discouraged labourers from proceeding to the colony until better times follow the want of employment consequent on the recent monetary crisis. My efforts have been chiefly in the direction of submitting facts for the consideration of farmers with capital, that they might decide whether they would not materially better their circumstances by emigrating to one of the most fertile of our colonies, instead of wasting their energies and resources in vainly striving here against the fierce competition arising against them in other food-producing countries. In all my labours, the articles in *Chambers's Journal*, a periodical which seems to penetrate everywhere, have been most powerful helps. They led to a flood of correspondence, as I have received and answered above a thousand letters from all parts of the world; but I have not grudged the trouble, confidently believing that while I was promoting the interest of my adopted country in the discharge of that duty, I was conferring a favour on many in making known the true elements which alone could lead to success on the part of those who might emigrate thither.'

Successful as Mr Bathgate's lecturing tours have been, it is proper to say that his averments have not been unchallenged. Writers in a Dunedin newspaper having questioned some of his facts, on that subject being referred to in the 'Hadding-

tonshire Courier,' Mr Bathgate wrote to the last-mentioned paper as follows:

'I have on no occasion stated as a fact that which I do not fully believe, my belief being based on trustworthy evidence. If you will turn to page 44 of "New Zealand, its Resources and Prospects," a copy of which I forward, you will find the following sentence: "The following estimates have been carefully prepared by an experienced land-owner near Oamaru, in the very centre of the finest wheat-growing district, and may be considered reliable." The point is, whether the testimony of this land-owner is reliable. I therefore give his name and standing. He is Mr John Reid of Elderslie, North Otago, a colonist, like myself, of seventeen years' standing. By his integrity, skill, and enterprise, he has amassed a large fortune, all made in the colony. He is the owner of eighteen thousand acres of the finest agricultural land, in a high state of cultivation. He is universally respected, and his assistance is desired upon every public board on which he is willing to act. He has just been selected by the government as a member of a Royal Commission appointed to inquire and report on the working and administration of our railways. Surely a gentleman of this standing is more reliable than an anonymous writer in a newspaper, who gives no facts to support his opinion. The leading daily paper in Dunedin, "The Otago Daily Times," also expressed a doubt as to the accuracy of my statements. This called forth a most convincing letter from Mr Reid, which the editor published and added: "We with pleasure insert the letter, and are quite satisfied that all the statements of fact have been accurately made." I now inclose you the letter, and as it contains much which cannot fail to be interesting to your readers, I have to request that you insert it as appendix to this communication. I may add that New Zealand has carried off the first prize at the Sydney Exhibition for malting barley and oats. According to files just to hand, the following rates per acre are not unusual this last harvest in the best districts—namely, wheat, sixty bushels; barley, seventy bushels; and oats from eighty to one hundred bushels. It has been a fine season. I leave your readers to compare these rates with those of the very finest seasons in East Lothian.'

The following is Mr Reid's letter to the Editor of the 'Otago Daily Times,' above referred to by Mr Bathgate. As it is important, we give it entire:

'SIR—My attention has been called to an article in your issue of the 10th inst., which I had overlooked, questioning the truth of certain statements made by Mr Bathgate which appeared in *Chambers's Journal* some time since. The statements referred to are not only not overdrawn, but are considerably under the mark. I accept the responsibility of proving their correctness, as they were furnished by me to Mr Bathgate. He instances a farmer who bought a farm for fifteen pounds per acre, and cleared that sum out of his first year's crop. The farmer referred to is Mr Thomas Rainforth, of Teaneraki, whose land adjoins my own; and consequently I had ample opportunity of seeing and knowing of the result referred to. The land was cultivated in a proper manner—a thing which is too seldom the case. The crop sown was barley with grass and clover seed. The yield was seventy

bushels of first-quality grain, besides a quantity of second quality, and the price obtained for the crop in Oamaru was five shillings and eightpence per bushel, which brought the gross yield to over twenty pounds sterling per acre. The whole expense connected with the crop was under four pounds sterling per acre; thus leaving a net return of sixteen pounds sterling, instead of fifteen as stated. In addition to this, the pasture obtained from an outlay of a few shillings per acre for seed is as luxuriant as could be desired, and adds considerably to what Mr Rainforth gains by the crop. Mr Thomson of Columella, also an adjoining proprietor, thrashed out a crop of barley at the same time, which yielded over eighty bushels first-class grain, and which gave a correspondingly large result; in his case nearly doubling the amount paid for the land on which it grew. In both cases those results were obtained by having first-rate land and giving the crop proper cultivation, the proprietors also being fortunate in getting a good price for their produce.

'I could point out numerous instances where net returns of five to fifteen pounds sterling per acre have been made from good land here, but shall content myself in the present instance with merely vindicating the statements referred to in your article of the 10th inst.

'You also doubt the correctness of the statement that a farmer may make twelve hundred pounds sterling per annum from a farm of five hundred acres: this statement I maintain is also under the mark. Mr Bathgate supplies particulars as to how this result may be obtained during an average of seasons. Those figures are very moderately stated. I am aware of much better average results having been obtained from similar areas during the past seven years. As you are doubtless aware, many men embark in farming pursuits who neither have land of their own, capital, nor agricultural experience. Such men have not only to pay the very highest rates of interest, but they are also charged heavy commissions for advances of money. Such interest and commission, although perhaps not too much when the risk to the lender is considered, are a heavy burden to the borrower; and if combined with an utter want of agricultural knowledge and experience, failure is almost a certainty. Such are not the men to whom Mr Bathgate refers, but to those whose five-hundred-acre farms are their own and free of debt, and who have a capital of not less than three pounds sterling per acre to stock the land and work with.

'He assumes that the land is of good quality, and near to a market or port of shipment, as his estimate of its cost will shew—namely, fourteen pounds sterling per acre. His figures, which are based upon very moderate yields and prices, shew a net return of eleven hundred and forty-five pounds sterling (L.1145) from the working of the five hundred acres, after deducting all properly chargeable working expenses, rates, taxes, &c. For the remainder I will copy his statement, namely: "The sum of L.1145 being left as the balance after paying expenses, is chargeable with rent, or interest of the capital expended in purchasing the land. Estimating the cost of the land at fourteen pounds an acre, this at seven and a half per cent. gives a charge of 21s. per acre, or L.525 on the farm. Deducting this from the net profit, a balance is left of L.620 for the tenant's income;

being 40 per cent. interest on his capital (£1500) invested in stocking the farm." Your remark with reference to the book which he is said to be compiling is, I think, rather unkind and quite unnecessary. However, he is so well known and respected by those who know him, that your advice is not likely to be taken; and his book when published will, I doubt not, be the means of assisting to benefit the colony, and many deserving farmers in Great Britain, who may be influenced thereby to throw in their lot with us.—I am, &c. JOHN REID, *Elderslie, 20th February.*

These letters afford the best evidence of Mr Bathgate's accuracy, as well as of his caution in making statements. There is, however, no end to cavilling. We observe that in a newspaper he is found fault with on the ground that the colony is at present labouring under a severe financial pressure, and that land is selling at reduced prices. To our mind, these ought to be inducements, instead of drawbacks, as far as immigrants with capital are concerned. Now, apparently, is the time for young agriculturists to emigrate to buy tracts of land at a cheap rate with ready-money. By putting off a year or two, during which prices may recover, the chance of getting a bargain may be gone. From the arguments employed by the newspaper in question, it would appear that people should give up trying to better themselves because bankers, through the effects of panic, have restricted their loans. Such restrictions send a shiver only over those who depend on discounting bills and otherwise borrowing. The man who is able to pay his way and to carry on his transactions with cash, has nothing to fear from financial derangements. What intimidates others, inspires him with enterprise. Immigrants with capital, therefore, besides benefiting themselves, would go far towards strengthening the financial condition of the colony, and what seems desirable, they would give employment to the wage-receiving classes, both as regards land and manufacturing industry.

Every piece of fresh information we receive confirms the impression made by Mr Bathgate's luminous statements, that New Zealand has attractions for agriculturists possessing a fair share of capital and spirit, beyond what are offered by any new country we are acquainted with. In conclusion, we take it upon us to thank Judge Bathgate for the trouble he has taken in making the merits of New Zealand so well known to the people of Great Britain. We wish him a pleasant voyage to the colony, and hope that there, the efforts he has made among us will be duly appreciated.

W. C.

## A LIFE'S ATONEMENT.

### CHAPTER XXIII.—HISTORY.

*'There is a spark of goodness here.'*

ON a day in spring, when the birds seemed mad with jollity, a little child came singing down a country lane. She carried a basket on her arm, and in one hand she jingled together some eight or ten copper pieces. Two or three fleecy clouds set off the perfect blue of the sky; a light wind, full of the fresh scent of trees and flowers and country earth, fanned the child's face; and no bird in the

hedges or the trees about her sang a blither song than hers. As she danced down the lane, there appeared in the highway before her the figure of a diminutive man in a coat made of an old sack, and corduroy trousers much too large for him. He had a spiky white beard and moustache, and he wore a silk hat battered out of all shape, and foul with dirt. The little maid skipped gaily on rattling her coppers, and the diminutive man paused to regard her. He heard the jingle of the money in her hand, and looked cautiously up and down the road.

'Where are you going, my little dear?' he said as she approached him.

The bits of blue sky which shone in the damsel's eyes clouded, and she stopped with a look of affright. The little man shuffled up to her, and with a sudden cruel grip, caught the child by the wrist and gave her a sharp wrench. She screamed faintly, and dropped both her money and her basket. The little man picked them up, and looking about him with an air of indecision for a moment, flung the basket over the nearest hedge, then put the coppers into his pocket, shook his fist at the child, grinned, and walked away. The little maiden only a minute before so glad and fearless, sat down and wept bitterly. Home was her only refuge, and she trembled to go home, and she was afraid to stay in the lane, which now seemed so dangerous and lonely. So you see she had nothing left but to sit there and cry broken-heartedly.

Perhaps half an hour later, came that way a man with deep sunken black eyes and a sallow face half hidden in a great black beard laced with gray. His black hair hung about his face and neck, and there were many white hairs intermingled with it. He was dressed in broken garments, and his boots scarce clung to his feet. As he walked on slowly with downcast eyes, the noise of the child's weeping struck his ear, and he looked about in a slow dazed inquiring way, as if the sound hurt him. Following the child's cry, he turned into the lane, and there saw the little girl lying on a grassy hillock with her face in her hands. He knelt down beside her and spoke soothingly. 'What is it? Poor little woman. What is it?'

The child looked up at him with her large blue eyes quite overbrimmed with tears. She could not stop crying all at once. Her little breast heaved, and her open lips quivered, and the blue eyes overflowed; but she stretched her arms out to the ragged tramp, as if she trusted him; and he sitting on the hillock, took her on his knee, and put one arm about her neck, and petted and soothed her until she could speak. Then with many sobs, she told her story; and the tramp having heard her to the end, first scrambled through the hedge and restored her basket; and then shewing her a shilling, asked her if that was as much as had been stolen from her. She could not tell; but he bade her run to complete her errand; and away she went with her fears banished and her trouble over. The tramp looked after her for a minute before he resumed his walk. He had parted with his last coin, and now for the first time in his life was penniless. Yet he cared little

for that as he went upon his way. He had nothing to walk for and nowhere to go, yet he walked with a dogged downcast perseverance, which to the eye of any one who had troubled to observe him would have seemed to indicate a purpose. Once or twice men garbed like himself passed him on the way and flung him a rough salutation; but he returned no answer. The sun went down and the air began to be chilly, and he walked on shivering. The darkening road stretched out before him lonely and sad in the twilight. He leaned over a gate and peered into the fields; then climbed the gate, and sauntered to a hay-stack, beside which some twenty or thirty bundles of straw had been thrown down. He nestled under the lee of the stack, and drew the great bundles of straw over him; and lay there dry and snug until a refreshing warmth came over him, and he fell asleep. He was up before dawn, for fear of discovery, and plodding along the road again in the cold and darkness. He grew dolefully hungry; but at that season of the year the fields were bare, and there was no chance for a penniless man to pick up anything. He walked all day, and housed himself at night in a barn to which he found a chance entrance. Next day saw him again upon the road, travelling more slowly and with greater effort, but still bent nowhere, and utterly without a purpose, though his dogged perseverance might have made it seem to one who watched him that he was walking away from death to life. That night he found another sheltering hay-stack, out of which he dragged enough hay to make room for his body. He lay down there, and pulled the surplus hay over him; and the racking of his rheumatic limbs and the pangs of an empty stomach kept him awake all night. Next day he sighted London, and went on with wearier and ever wearier feet in the profitless race against his own shadow, refusing at every step to know that he could go no farther.

In one of the outlying districts of London, an enterprising tradesman had lined the back of the window in which he displayed his goods with gorgeously panelled mirrors. The tramp came by in the sunshine and looked at the window. The tradesman stood at his own door and surveyed the sunlit street and the striped shop-blinds, and looked kindly on a thirsty dog which went to the waterman's bucket opposite. But observing that the human Pariah paused before his window, the tradesman turned and eyed him with suspicion. For his part, the tramp paused in perfect vacuity of mind, and in a mood so dreamy and unobservant, that he took the reflected image of himself for the actual solid body of some person standing in the shop. And being, as we have seen already, of a tender heart, he felt a dim pity stir within him at the sight of that melancholy spectacle. Stained with travel, ragged, bent, miserably shod, the creature standing there in the shop seemed deserving of pity. But as the tramp outside raised his head and moved his hand, an answering motion arrested his regard, and he saw in a second the trick his mind and eyes had played him. More than the third part of a year had gone by since he had consciously beheld the similitude of himself in a glass, and then he had seen a figure so different from this that his momentary failure to recognise himself need scarcely be regarded with surprise. He had been gay, and well dressed,

and young, and splendidly handsome five months ago; and now this human scarecrow, who looked so hungrily and mournfully back at him from the gold-bound mirror—this was he—this bowed and bent and broken wretch with the knotted black beard, gray-sprinkled, that flowed over his sunken breast, and the elf-locks with silver lines in them—himself and no other. And all this breaking in upon him, not as it is here set down, but like a lightning flash for swiftness and terribleness, he clasped his hands with one heart-rending groan, and his eyes grew so dim that the mirror and its reflection were blotted out of sight. At the sound of the groan the tradesman came off the door-step.

'What's the matter?'

The tramp turned his eyes upon him for one instant, and no more; and then with his hands drooping and clasped piteously before him, and his head bent downwards, he crawled on, dragging one foot after the other. The tradesman took a step in pursuit, and sent a thumb and finger into his own waistcoat-pocket, whence they returned with a shilling between them; and the man half-benevolent, half-suspicious in mood, sending one glance after the retreating figure and another over the way, saw his rival tradesman regarding the tramp and him with a smile of satiric humour. That decided him. He followed the pitiable figure, slipped the shilling into the clasped hands, and shot himself shamefacedly back into his own shop again. The tramp faltered in his walk, and looked down upon the coin. He turned slowly; but he could see no one in the street, and he did not know from whom the gift had come. 'Humiliated?' the tramp said to himself questioningly. 'What right have I to feel humiliated?' But he had been proud, and this first offer of charity was very bitter to him. The bread he ate tasted of charity, hungry and empty as he was, and his swelling throat almost refused it.

The streets grew fuller and busier as he neared the City; and the lights springing up in the thin dusk, and the roll of carts and cabs, and the hoarse murmur of the distant streets, were to him accustomed things, and full of remembrances. What had moved him back to London? He could not tell. How should he live there? Where bestow himself? He could not tell. At length he found himself on London Bridge. Was there any temptation there? Ay! The dirty stream that ran oilily about the wharves and the greasy mud-banks, and stole in such filthy smoothness round the boats that lay moored in mid-stream—vaguely seen past the lights that rose in the thin spring dusk—called to him with a voice which found a ready answer. But though one half his soul clamoured with an eager cry for the rest that lay there, he shook his head in answer to that inward call and muttered: 'No. That is the basest end of all. Let the close come how and when it may, I can't seek it wilfully.' And in answer to that resolved murmur, rose an inward voice of longing: 'Let the end come soon;' and he muttered again, shaking his gray sprinkled head: 'Amen to that. Let it come soon—let it come soon.' In this sorrowful case, still furtively munching the bitter bread of charity, and walking with his face bent downwards, shadowed by the drooping hat he wore and by his matted hair, he let his feet carry him whither they

would. He had wandered back to Holborn—for he had come up from the Western country—and the spring dusk had given way to night. A fretful wind teased itself with moanings until a close fine rain came down and stilled it. He was standing on the pavement facing Chancery Lane, when a private cab came by, rasping the kerbstone, and pulled up within three or four yards of him. 'Hold that there for me a minute, will you, mate?' said a whining voice in the tramp's ear; and before he knew it, he found himself holding a street-sweeper's broom. The owner of the broom had taken charge of the horse in the private cab; and the owner of the cab had swung himself out of it, and had gone with a hurried step along Warwick Court. The horse was restive, and insisted on going forward. The man who had assumed the charge of him was either unable to control, or unwilling to provoke the horse; and the cab was taken on slowly for perhaps a dozen yards, when it was brought to a stand behind a great wagon which blocked up that side of the way. Scarcely noting these things, the tramp stood at the kerbstone beneath a lamp-post, and directly at the head of the crossing, broom in hand. 'Hi, sweeper!' said a comfortable voice; and the tramp saw a gloved hand extended towards him. Mechanically he put out his own hand, and a sixpenny-piece dropped into it from the gloved thumb and finger. Then, by some unaccountable accident, another and another and another charitably disposed soul came by; and although the tramp solicited nothing—perhaps partly because of that—copper pieces were dropped one by one into his hand, until, when the sweeper came back to claim his broom, his locum tenens had something like two shillings waiting for him.

'Why, whatever's this?' cried the sweeper in amazement, as the tramp put the sixpence and the little pile of coppers in the hand held out for the broom.

'It is yours,' said the tramp. 'It was given to me as I stood in your place, and was meant for you of course.'

'Oh, I say, mate,' cried the sweeper, 'you are a real true good sort; and what extraordinary luck you do have, to be sure.' The sweeper was a thin and faded man, dressed in somebody's cast-off suit of black broadcloth. Somebody's suit had been highly respectable once upon a time, and was sunk into a deeper disgrace of seediness by reason of that old respectability. Some feeble attempt had been made to patch its looped and windowed raggedness; but little fragments of torn cloth shook at the man's shoulders and elbows and knees, and the skirts of his coat were vandyked with rags. The tramp had drooped his head again after one look at the sweeper, and had turned away; but the other followed him, and said, with a sort of reluctant haste: 'No; look here, mate; half of this ought to belong to you. No, sir; I'm poor, and I may have took to drink; but I've allays kep' my 'ed above water in the way of honesty, and I really couldn't. O dear, no—I really couldn't.'

'Are you so scrupulous?' asked the tramp, turning round upon him wearily.

'Which, speakin' fair and honest, sir,' the sweeper answered, 'I really am, sir. I couldn't do it. O dear, no—I really couldn't do it.' He counted the money with his shaky fingers, and

proffered half of it to the tramp, who only shook his head in answer.

'O please!' said the sweeper in his whining voice. 'Don't think me indelicate or over-pressin'; but I really couldn't keep it. I've seen better days, though I am a crossing-sweeper now; and I really couldn't demean myself to keep it.'

The tramp faced round again, and regarded him attentively. 'There is a spark of goodness here,' he thought; 'though not many would have suspected it. The man is thoroughly in earnest; and who am I of all men in the world that I should trample a good impulse down?' There came into his mind, as though a voice long silent had repeated them, these words: 'The bruised reed I will not break, the smoking flax I will not quench.' And that long-silent voice which whispered to his soul, seemed to lay a commandment on him. 'You will feel the want of this to-morrow,' said the tramp, as he held out his hand, and the sweeper placed the money, wet with the dismal rain, in his palm.

'Which we'll try to 'ope not, sir,' the other answered, and stopped before a flaring public-house. 'I haven't had a drop to-day,' he said, passing his hand across his mouth. 'Will you come in and take share of half a quatern?'

'No!' said the tramp with a little inward shudder.

'I beg your pardon,' said the other in his querulous whining tones, 'for asking you; but I've seen better days myself; and any one can see, sir, as you've not been used to this, sir, when you speak.'

'Can you tell me where I can get lodgings for the night?' asked the tramp, ignoring the dubious compliment. 'I am very poor. I had only tenpence when you shared with me.'

'If you'll only wait for me half a minute,' returned the sweeper, 'I'll take you to as good a place as there is. It isn't far, sir, and I'm going there myself.'

Receiving a nod of assent, he shambled into the gin-shop; and after a pause of a minute, came shambling out again, rubbing the back of his hand relishingly across his bristly lips. He led his companion along Holborn and into Oxford Street, and crossing the road with a brief injunction to the tramp to follow, went down a dark and noisome passage which led into a court-yard. At the far end of the court burned one oil-lamp, a feeble blur of light on the darkness. 'A good many of the steps is broken,' said the sweeper; 'and you'll have to feel along the wall, because the balusters has been broke up for firewood;' and with this caution, he preceded the stranger once more; and with now and then a warning word, made needful by the unsafeness and darkness of the way, led right to the top of the building. 'Wait there while I get a light,' said the tramp's guide, speaking out of dense darkness. The tramp stood still, and heard him prowling cautiously about the floor, sliding his feet before him, as if afraid to set them firmly down. After a while, the man struck a light, and found a candle; and then called the other to him. 'Step cautious,' he cried; 'you ain't used to the place, and there's a-many holes about.' The tramp not heeding this warning greatly, crossed the creaking floor, and in the dim light of the candle looked about the room in which he found himself. It was absolutely bare of

furniture, and held nothing, so far as he could see, but three tea-chests, a heap of shavings, and some ragged sacks.

'I haven't got a lock to the room,' said the sweeper, still whining, as though he was beseeching charity; 'and when I'm in luck, and I've got a bit of firing, Mrs Closky she keeps it for me in her place down-stairs.—Sit down here, sir,' he continued, placing one of the tea-chests bottom upwards, 'and I'll see about a fire.' Leaving his guest in the dark, he went down-stairs; and the tramp heard the murmur of conversation in the room below. He leaned his bearded chin upon his hands, and looked before him at the scenes which memory and fancy threw upon the black canvas of the night. They were many, and some of them were glad, but not one of them had any other lesson than despair for him. And suddenly, with no wish or conscious thought of his to bring them, the bridge and the river were before him, with dim blots of light upon the bridge against the thin spring dusk, and brightly scintillating sparks in the distance where the filthy stream went out of sight beneath the curtain of the gathering dark. And his whole soul yearned after the rest which lay within the bosom of the river, till he set his teeth and gripped his beard hard with both hands, and muttered to himself: 'Not that—not that. The coward's way. The meanest end of all. Not that, in God's name!' The slinky stream with its twinkling lights faded out of fancy's gaze; and the sweeper came stumbling up the broken stairs with the candle in his hand, and a lean sack thrown over his shoulder. Tumbling out a few handfuls of coal and wood upon the floor, he knelt down at the grate, and built up carefully the materials for a fire.

'Is this your own place?' asked the tramp, glad to turn his thoughts into any current but that in which they chose to run.

'Yes,' said the sweeper. 'It comes as cheap as Flight's Place; and I've been well to do in my time; and I can't abear the thoughts of mixing up along of them low riff-raff. Which that's what they are, I know right well, sir—the very lowest of the very low.'

'What is Flight's Place?' the tramp asked.

'It's a thieves' kitchen—nothing better, sir,' answered the sweeper, fanning the fire with his hat, 'close by where I had the pleasure of meeting you, sir.'

'Ay?' said the tramp.

'Not as I'd say,' the sweeper continued, 'as Bolter's Rents was ezactly the kind of place as a man might care for to live in which had been well reared. But it's very quiet and retired-like, when you're at the top; and since the time when my poor wife died—my pardner-in-life which she is dead and gorn, sir—there ain't been one creetur in this room but me. That is, not except Dr Brand.'

'Dr Brand of Wimpole Street?'

'That's the same gentleman. Do you know him?' asked the sweeper.

'No,' said the tramp; 'but I have heard of him.'

'I daresay now, sir,' said the sweeper, leaving his place at the fire, which now burned brightly, and dragging one of the empty tea-chests before it, 'as you'd wonder what brought a gentleman like Dr Brand to think of coming here, sir?'

'What brought him here?' the tramp returned, trying to feel some interest in the other's chatter, and to shut out the thoughts which beat at the door of his own mind.

'Why,' said the sweeper, spreading his hands before the blaze, and basking in it, but speaking always in the same whining tones, 'me and my poor pardner which is gorn, meaning my wife, sir, kep' a stationer's shop, with a license for tobacco, close up against where Dr Brand formerly used for to live when he was younger in practice. An' he used to deal with us, which he put a deal of money in my way, and brought a lot of custom. Which when I'd been in business nine or ten 'ear, sir, I'd saved a bit of money; and I thought I'd venture for to enlarge the trade. And—Ah!' broke out the sweeper, shaking his head dismally at the fire, 'what a fool I were for certain! I went to a man as had a office in Long Lane, which his name was Mister A. Tasker'—

A light shone suddenly in the tramp's dull eyes, and he lifted his head and looked in the speaker's face. His own countenance flushed crimson, and then paled again. He dropped his chin slowly upon his breast, and took his beard with both hands. The sweeper went on, noting nothing of his companion's agitation.

'And I borrowed more money off of him; and that was what broke me up; for he followed me that hard, and he did that persecute me. If you'll believe me, sir, I paid him four or five times over, which I shouldn't be surprised if I paid him six. And finally he came and sold me up.'

'Ay!' said the tramp. 'A blood-sucker.'

'Oh, you may well say that, sir,' cried his host, and maundered on again. But the tramp had fallen into a reverie, in which the other's words fell idly on his ear. He came out of his dream in time to hear the statement that *that* was what the sweeper called a judgment; and he in answer nodded and said 'Ay!' But he had missed a story which might have been of interest to him had he heard it. It was no other than the tale of Mr Tasker's fall as related in court three days before by the counsel who appeared against Closky.

The sweeper saw something of the tramp's pre-occupation, and forbore to speak further; but rising began to arrange for him a bed of shavings, and to apportion the sacks which were to cover him. The self-absorbed man took no notice of his movements, and was indeed by this time unconscious of his presence. The host went down-stairs again, taking the candle with him; and returning by-and-by with two rough and ragged blankets, threw one upon each of his improvised couches, and touched the tramp upon the shoulder, saying that he might go to bed when he would.

'What do you pay for this place?' asked the tramp, without turning round.

'I pay one-and-ninepence a week for it,' returned the sweeper. 'That's just threepence a night, you see. It comes as cheap as a lodging-house, and I have it to my own self.'

'Will you take me as a lodger for a week if I share the payment with you?' asked the tramp, bending above the scanty embers of the fire. 'I am tired, and I must rest for a day or two.'

'You can stay here and welcome,' whined the sweeper. 'I don't want nothink from a man as is poor and honest, like myself.'

'I will not stay unless you let me pay,' said the tramp.

'Very well,' said the other. 'It ain't my fault if I lack the money. I don't ask for none. Good night, sir.'

'There's tenpence-halfpenny, and I am your lodger for a week. Is that agreed?'

'That's agreed,' said the sweeper; and the new lodger cast himself wearily down upon the sacks and shavings, and drew the tattered blanket over him. The sweeper as he arranged his own bed to his mind, offered two or three remarks to his companion; but receiving no answer, lay down, curled himself up in his blanket, and fell fast asleep.

And it was in this wise that Frank Fairholt became a lodger in Bolter's Rents.

### SOME SCIENTIFIC HOAXES.

It is not a little curious that men of science, notwithstanding their devotion to truth and critical examination of evidence, are so apt to be imposed upon by deceptions got up in their own particular study. Perhaps it is because they are disposed to confide in the honesty of others, and also that their enthusiasm carries them away and gets the better of their circumspection.

The most touching of all the scientific hoaxes with which we are acquainted was perpetrated in the eighteenth century. Although the ancients had again and again dug up fossils of animals, shells, and plants in excavating the ground and quarrying the rocks, they were very long in finding out their true nature. Some philosophers attributed them to a formative force in nature which moulded them as they were; some considered that the Creator had shaped them for some inexplicable reason; and latterly we find it generally held that they were either freaks of nature or relics of the Flood. These views especially prevailed with John Bartholomew Adam Beringer, a Professor at the University of Wurzburg, who, in accordance with them, instructed his pupils that fossil remains or 'figured stones,' as they were called, were mere 'sports of nature.' Now, some of his mischievous young students were of opinion that they, as well as nature, might have some sport in making figure-stones; and accordingly they set to work and carved many curious and fantastic forms out of the soft limestone rock of the neighbouring hills, and buried them in the localities where the Professor was accustomed to dig for his fossil treasures. 'His delight at the discovery of these strange forms,' says Professor O. C. Marsh, the celebrated American geologist, 'encouraged further production, and taxed the ingenuity of these youthful imitators of nature's secret processes. At last Beringer had a large and unique collection of forms, new to him and to science, which he determined to publish to the world. After long and patient study, his work appeared in Latin, dedicated to the reigning Prince of the country, and illustrated with twenty-one folio plates. Soon after the book was published, the deception practised upon the credulous Professor became known; and in place of the glory he expected from his great undertaking, he encountered only ridicule and disgrace. He at once

endeavoured to repurchase and destroy the volumes already issued, and succeeded so far, that few copies of the first edition remain. His small fortune, which had been seriously impaired in bringing out his grand work, was exhausted in an effort to regain what was already issued, as the price rapidly advanced in proportion as fewer copies remained. He died in poverty, mortified at the failure of his life's work. It is said that some of his family, dissatisfied with the misfortune brought upon them by this disgrace and the loss of their patrimony, used a remaining copy for the production of a second edition, which met with a large sale, sufficient to repair the previous loss, and restore the family fortune! This work of Beringer's, in the end, exerted an excellent influence upon the dawning science of fossil remains. Observers became more cautious in announcing supposed discoveries, and careful study of natural objects gradually replaced vague hypotheses.'

We are here reminded of an anecdote which is related of a certain Edinburgh Professor of natural history who was engaged in delivering a course of lectures on Geology, but which had a result different from what was anticipated. One day a chosen band of his students acquired possession of a brickbat, which they painted a variety of specious hues, and placed amongst the other fossils and rocks on which their master was to discourse. The Professor illustrated his lecture by reference to the specimens before him on the table, saying, for example, as he went on: 'This is a piece of volcanic trap-rock,' or 'This is a piece of granite.' At length he came to the mysterious stranger with the gaudy livery, and after taking it up in his hands and examining it attentively for a few moments, he proceeded: 'And gentlemen, this is, I am sorry to say, a piece of foolishness.'

The cases of scientific imposition which we have thus far cited had at least a harmless intent; but there are instances of others which were either conceived in recklessness or malice. The figure of Newton in the scientific imagination is only comparable to that of Shakspeare in poetry; and his extraordinary fame chiefly rests on his grand discovery of the law of universal gravitation. To take away this from his credit would be like proving that *Hamlet*, *Macbeth*, *Othello*, and the *Merchant of Venice* were pilloined by Shakspeare from some other pen. Nevertheless this is precisely what was attempted some years ago by a learned member of the French Academy of Sciences, M. Charles, who must not be confounded with M. Philartète Charles. Charles declared that Newton had pilfered his discovery from an older source, and the news fell upon the scientific world like a bombshell. To prove his assertions, M. Charles produced a show of faded yellow manuscripts, purporting to be letters from Pascal to Sir Isaac, containing the germ of the great idea. The documents were plainly ancient, for the ink had been tested by chemical means; it was remarked, however, that the style of French in which they were written did not agree with the date alleged. The letters and other documents produced by M. Charles at the same time were said to have belonged to the Abbey of Tours. Thence they came into the possession of a certain Count de Boisjournain, who emigrated to America in 1791, and was wrecked on his return, losing all his effects, except

his precious manuscripts, which he ultimately sold to keep himself in bread. From the hands of the Count the said documents passed into the keeping of him who gave them in turn to M. Chasles.

Such was the story; and to the acute objections of Mr Brand of Glasgow, Chasles audaciously produced another letter from Galileo, which proved that Pascal had made known his discoveries to him. This letter was dated 1640; and on its being pointed out that Galileo was struck blind in 1638, M. Chasles, nothing daunted, met his critics again with a letter from Galileo to Pascal, in which he warned his 'young friend' not to betray the secret that he had *not* lost his sight as reported, but had only pretended to have lost it, in order to prevent his enemies from persecuting him. There was no combating this unequivocal evidence, and the *savants* of the Academy admitted that M. Chasles had triumphed, and deserved well of posterity for proclaiming the truth. Thus encouraged, M. Chasles became a mine of antiquarian wealth, and shewed letters from most of the famous men and women of old times, both saints and sinners, all in French of the seventeenth century. Amongst these he exhibited a correspondence from Alexander the Great to Aristides, several notes from Attila the Hun, and the widow of Martin Luther; and sundry communications from Judas Iscariot to Mary Magdalene, and from Lazarus to St Peter! These astounding documents were produced by M. Chasles with such an air of perfect good faith, that it was impossible to doubt him. He stated that he had purchased twenty-seven thousand manuscripts for five thousand pounds, but would not betray the source, lest others should share in it. At last the exposure came in spite of M. Chasles, who turned out to be a miserable dupe. A committee was sent to Florence to inquire into the authenticity of a pretended autograph of Galileo, and on its being judged apocryphal, the materials of the fraud were discovered. The forger was an ill-educated fellow named Vrain Lucas, a native of Chartres, who was taken, tried, and severely punished.

Coming now to more recent times, we find that an interesting case of unmitigated hoax in a matter of pure science, was perpetrated on the English chemical world in 1865. In the number of the *Mechanic's Magazine* for March 3, 1865, there appeared a letter signed Walter Power, the Royal School of Mines, announcing that the celebrated German physicist Schönbein, the discoverer of ozone, had succeeded in decomposing the element oxygen into two components, ozone and antiozone, by means of the *negative* spark from an electric machine; the positive spark again effecting their combination into oxygen. A few days later a paragraph appeared in the *Chemical News*, characterising the alleged Schönbein's result as being without doubt the greatest chemical discovery ever made, and promising the original memoir as soon as it could be got from Munich. The French Association also heard of the rumour, and forthwith invited Schönbein to come to Paris and exhibit his experiments to the wondering gaze of the Parisian *savants*. To the disappointment of all, however, an answer came from Schönbein denying that he had ever made such a discovery; though he had been engaged over thirty years in investigating the nature of oxygen, and had been led to *infer* that it was composed of ozone

and antiozone. That the original notice was a wilful hoax, could be proved by the wording of the letter and the spurious references given, even if it had not since been confessed as such by the writer; and it is instructive to see how even skilled chemists were hoodwinked by it.

America is proverbially the land of that kind of illusion or deception in scientific matters which is perhaps best understood by the term 'mare's-nest.' The Americans are eagerly bent upon discovery, and the temptation to run into 'mare's-nests' unwittingly, or even to perpetrate a veritable fraud for the sake of notoriety or gain, is unfortunately powerful amongst them. When the famous Mr Edison began his remarkable career as an inventor, he announced to the world one day that he had discovered a new physical force which he named 'Ethereic Force.' The force did not appear to be electrical, since even the most delicate galvanometer or electric current detector failed to note its presence; nevertheless it was produced by means of electricity, and like electricity could generate a brilliant light. Mr Edison was to do wonders with it, revolutionise telegraphy, and turn the world topsyturvy; but serious investigation by a man of science who knew more about electric science than the daring young telegraph operator, soon demonstrated that the mysterious power was nothing more than what is known as the 'extra spark.'

A notorious deception practised on the American public three years ago was the 'Keely Motor,' which, according to Mr Keely the inventor, was also based on a new force he had discovered by accident. His machine consisted in utilising this force, which could be generated from water vapour; and Mr Keely, who modestly disclaimed any merit in his invention, declared that he could work his machine up to ten thousand horse-power if the metal would bear it. The small model machine which he exhibited consisted of an elaborate array of wrought-iron, cast-steel, and copper, tubes, balls, and basins, which defied all understanding. It was stated to utilise only a quart of water at a time, and from that a thousand horse-power of energy could be generated for a time sufficient to run a steam-ship across the Atlantic. A joint-stock company was formed to work the concern, and the shares went up to an extraordinary premium. One of the directors said: 'We have been laughed at, and called cheats and impostors; but out of the original company who joined in raising the one hundred and twenty thousand dollars already expended upon this occasion, only three or four have withdrawn. In a month or two now, all Mr Keely's tests will be finished, and we will shew the world whether he is the greatest inventor or the greatest humbug of this age. Scientists, machinists, and learned societies are invited to come and make every test they can think of.' At last the knavery was exploded. Professors Marks and Barker of the University of Pennsylvania were invited to test the apparatus, and observing that a heavy iron tube was connected to the machine just before it began to operate, they discovered that this tube was in reality a secret store of compressed air.

About this time the American scientific periodicals were exceedingly rich in wonderful new motors and new forces. Just as Mr Keely announced that a little water could be made to

furnish him with an incredible amount of physical force, several magnetic motors were trumpeted forth to public notice, notably those of Mr Gary and Miss Hosmer. Gary's motor was based on the discovery of a substance, which, when placed between a magnet and a piece of iron, destroyed the attraction between them. The new machine was patented, as also was that of Miss Hosmer, a young lady artist, resident in Rome. The latter contrivance was to furnish its possessor with a source of perpetual motion by the expenditure of a few pence; but, like all the rest, it was ultimately shewn to be a delusion.

Another American notion of a rather dangerous kind was exposed only a few months ago. It appears that a certain Professor Wingard claimed to be the inventor of an apparatus with which he could destroy a vessel at a distance of five miles. This would, he reasonably said, put a stop to all naval warfare, since anybody in possession of his secret would be able to shatter a hostile fleet into nothingness without getting within range of its guns. Two years ago he gave a public exhibition of his plan at New Orleans, in presence of many scientific men. The hulk of a schooner was blown by him into atoms from a small boat which was rowed within about a mile of the hulk. As to the nature of this awful force, the Professor could only say that it was electricity, that scapegoat for all inexplicable phenomena, and that it was applied without any direct connection between the machine and the object to be destroyed. He appeared again at Boston last summer, formed a stock company, and got one thousand eight hundred dollars for a preliminary experiment. A little steamer was obtained, and in a dark house on its deck, with careful privacy, Wingate arranged a great quantity of mysterious apparatus. On the day appointed for the test, one day last November, an old vessel was towed to a safe point in the bay, and the steamer was stationed a mile away. Suddenly there was an explosion at a considerable distance from each craft; and afterwards the wreck of a row-boat, with two mangled human bodies, was found at the spot. Wingard, greatly agitated, said that his experiment could not be carried out that day; and he has since confessed that the trick used at New Orleans, and about to be repeated at Boston, was to explode a large dynamite torpedo under the vessel by means of a rope running to the pretended electric apparatus. The two unfortunate men were on their way to put the torpedo in its place when an accidental explosion caused their death.

## A CONSPIRATOR IN SPITE OF MYSELF.

### CHAPTER II.

#### MYSTERY (CONTINUED).

THE stranger placed the purse in the *padrone's* hand.

'Yet stay, Monsieur,' said Gustave, before he transferred the purse to his pocket. 'I claim the right to draw back, and to return this purse and its contents to you, if I disapprove of the service I am asked to render.'

'Be it so, *padrone*; but there will be no occasion,' answered the Italian. 'But the night progresses. It is now near midnight; and the service I seek from you must be rendered ere daybreak,

if it is to prove successful. There is therefore no time to lose. Will you enter the boat with me? We must hasten on shore.'

Gustave started back in alarm. He had thought that he would be required to proceed somewhere with his vessel, and he did not like the idea of trusting himself on shore at such a time alone with the Italians.

'You wish me to go on shore with you, Monsieur?' he said. 'I cannot consent. I did not arrange for that.'

The stranger appeared much annoyed. 'I do not wish you to go with me alone,' he replied. 'One of your people will accompany you—one in whose discretion you can place trust.'

The Italian, while he was conversing, had glanced several times at me; and though I was attired in a fisherman's garb, I presented a very different appearance from the toilworn, weather-beaten crew of the lugger. 'You, Monsieur, are not one of this vessel's crew?' he asked abruptly.

'No, Monsieur,' I replied.

'What then are you? An Englishman, I presume?'

'I am an Englishman,' I replied.

'I thought as much. But what do you, an Englishman, and evidently not a fisherman, on board a French fishing-vessel?'

'You have no right to question me, Monsieur,' I replied. 'But there is no reason why I should desire to conceal anything from you, and I will answer you truly. I am an officer of the British navy; and as briefly as possible, I explained how it came about that I was now on board a French fishing-lugger.'

'An Englishman and a naval officer,' murmured the Italian musingly, as if to himself. Then addressing me, he went on: 'As a British officer, Monsieur, I may trust implicitly to your honour. Besides, you English are foes to tyranny and oppression, whether on the part of a vile mob or their legitimate rulers. May I ask if you will accompany the *padrone* to the shore?'

'Recollect, Monsieur,' I replied, 'that by assenting to what you propose I may get into trouble—perhaps into disgrace with my superior officers.'

'I will guarantee that if you follow the directions you will receive, nothing of that kind will happen,' the Italian replied. 'Moreover, you will render a service to one in great distress, that you will afterwards be proud of.'

To tell the truth, I was only too willing to go on shore with the *padrone*. Such an adventure presented a strong attraction to a young midshipman of eighteen years; and as Gustave Paillieur seemed to wish that I should be his companion to the shore, rather than one of his own crew, I gladly consented. 'At all events,' I thought to myself, 'it will be something to boast of to my messmates of the gunroom, when the frigate returns to Toulon.'

'You will promise, Signore,' said I, 'that we shall not be detained on shore? And I should be better satisfied if you would give me some idea of the nature of the service you require from the *padrone* and myself.'

'Monsieur, I will guarantee will return to the lugger before daylight dawns,' replied the Italian. 'As to the nature of the service required, I can only repeat that it is one in which all who engage will have reason to be proud.'

I hesitated no longer. The *padrone* called up his crew, and informed the men that he was going on shore on important business, and bade them keep a sharp look-out, and admit no strangers on board. Also, at the request of the Italian officer, he ordered his mate to have everything prepared for the immediate departure of the vessel from the Gulf, should such a course be necessary.

We then—that is, the *padrone* and I and the Italian officer—entered the boat, which was immediately pulled away from the lugger. And now I perceived that the boat's oars were muffled, in order that the rowers should make as little noise as possible.

Opposite the spot where the *Belle Jeannette* lay at anchor, and at the distance of perhaps a mile, was a small town or village, near which the other small vessels that were in the Gulf lay moored. We pulled steadily towards this spot until we were quite out of sight of the sloop-of-war that, as I have mentioned, lay at anchor behind the Cape; and then we altered our course, and proceeded towards a portion of the coast, on the opposite side of the Gulf, on which a dense wood extended to the very verge of the beach. In a quarter of an hour or less we had landed, in as solitary a spot, seen at the hour of midnight, as it is possible to conceive.

'You will please to follow me, my friends,' said the Italian officer, as soon as we had landed, having previously ordered the two boatmen to pull a short distance off shore and to watchfully await our return.

'We have a distance to walk through the wood,' he added, addressing us, 'but not far. Meanwhile, do not converse, but walk quietly, making as little noise as possible.'

In about ten minutes we emerged from the wood, and found ourselves at the gate of what appeared to be an extensive park. A slight tap at the gate led to its being opened by a porter, who had evidently been expecting us.

'Close the gate, Luigo,' said the officer to the porter, in Italian; and then addressing us in French, he added: 'In a few minutes, Messieurs, we shall arrive at the palace. Then all that will be required from you will be to obey such orders as you may receive without demur and without asking questions. Trust to my word that your personal safety will be in no respect imperilled.'

A few minutes more, and we saw before us a large and handsome *palazzo*, surrounded by a balcony, and by pleasure-grounds evidently cultivated in high perfection. It was yet early in the spring; but in that southern climate the weather was delightful, and the flowers already in bloom filled the atmosphere with a delicious perfume. We now entered a lofty and spacious hall, in which were several officers in brilliant uniforms, who were conversing earnestly together. They saluted with great respect the young officer whom we accompanied, and then stood silently and anxiously watching us, as we ascended a wide stone staircase, until we reached an antechamber, which formed one of a numerous suite of apartments, as we could perceive through the doors which stood open. An elderly gray-haired officer, whose breast was covered with stars and orders, now approached us from one of the inner apartments, and conversed in whispers for some moments with our youthful conductor, who then

addressing us, said: 'You *padrone*, and you also Monsieur, must now consent to be blindfolded. Fear nothing. No harm will happen to you. For my part, I would trust to your honour; but Monsieur le Duc insists that it is advisable—in case of your being hereafter questioned—that you should be kept in ignorance concerning the short journey you are about to undertake.'

This was more than we had bargained for; and we began to expostulate against such an indignity.

'*Silenzio!*' said the elderly officer sternly; and as he spoke, the entrance into the room of four armed soldiers, one of whom carried the silk handkerchiefs with which our eyes were to be bound, convinced us that any attempt at resistance would be worse than useless.

The young officer, whom the elder addressed as *Altezza* or Highness, took one of the handkerchiefs from the soldier, and proceeded to bind my eyes himself; while the soldier was left to bind those of the *padrone*.

'Be calm, Monsieur, and submit patiently,' the young officer whispered in my ear. 'You will have but a few miles to travel, and then the bandages will be removed from your eyes. Then do as you are directed without question, and all will be well.'

Our eyes having been so carefully bound that we, or I at least, could scarce perceive the difference between the brilliantly lighted *salon* and the darkness that existed without, were led by two soldiers into what appeared to be a court-yard, and assisted into what we supposed to be one of the common carts of the country. I knew by the sound of the wheels that there was at least one other cart or wagon in the court-yard; but for what it was required, of course I had no means of knowing. We were seated on some straw at the bottom of the cart, and ordered to keep perfectly silent; and in a few minutes the carts were in motion. But before they started, we were again ordered to remain perfectly quiet, on peril of our lives. We obeyed for the time being; but when in a few moments the vehicles were driven out of the court-yard, we were able to converse in whispers—the rumbling of the wheels over apparently uneven ground, preventing our conversation from being audible to our guards. So far as I could ascertain—by the sound only—there were two vehicles—common carts, drawn by oxen, such as are used by the Calabrian peasantry; that in which we were placed, and probably the other likewise, containing firearms and gunpowder concealed beneath the straw. At all events, I could feel what I took to be muskets and pistols stowed near me, in the bottom of the cart, and also several small kegs, which I naturally supposed to contain gunpowder.

In piteous whispers, poor Gustave Pailleur expressed his regret that he had been tempted to leave his vessel. He declared that he was sure that we should come to grief before our journey came to an end, and declared that he would give up—if he had it to give—ten times the amount of the earnest-money he had received, to be safe on board again; while I on my part placed little faith in the young Italian officer's assurance that no harm should befall us if we obeyed the orders we should receive. That we should be safe enough, if nothing occurred to prevent the object

for which we had been persuaded to trust ourselves on shore—of the nature of which I could form no conception—from being carried into effect, I had little doubt; but the evident anxiety of the Italian officers, the precautions taken to preserve secrecy, and the vigilance of the soldiers who accompanied the vehicles, betrayed the fact that they were not without fears that the journey would be interrupted by an attack from some one of the numerous bands of insurgents that were said to be in existence in all parts of the country. More than once we heard the distant report of musketry, and once the firing was sufficiently near to create alarm. The carts were stopped, while the soldiers conversed in low tones of voice; and were then, after a brief delay, turned aside into a road or lane, in a more wretched condition—as we soon discovered from the fearful jolting, which threatened to dislocate every bone in our bodies—than that, rough and uneven as it was, over which we had already passed.

Still I cannot say that I felt much fear. I knew that if the soldiers were attacked, we ran the risk of being hit by a chance shot; but to a lad of eighteen years there was a charm in the adventure that overpowered all other feelings. 'If the assailants should be the victors,' I thought to myself, 'as they probably will be, for they will not venture to attack the convoy unless in overwhelming numbers, they will perceive that we are captives; and though we may have to suffer some hardships and may be exposed to subsequent peril, they will do us no injury;' and if it had been in my power to transport myself safely back on board the lugger—so eager was I to witness the termination of the adventure—I believe I should have declined to avail myself of that power.

I strove to impart some of my feeling of confidence to my older companion, but to no purpose.

'Neither party,' said I, 'would dare to maltreat an Englishman, especially a British officer; and the people believe that the English wish them success in their endeavours to escape from the tyranny of their oppressors. Rest assured that no harm will come to us'—

'Ah, Monsieur,' said poor Gustave, 'but I am a Frenchman, and the Italians hate the French.'

'They will not dare to harm you,' I replied. 'Under any circumstances, they will not offer to wreak their vengeance upon a harmless fisherman!'

But the poor *padrone* refused to be comforted, and started and trembled at every sound he heard. His fears, however, proved happily to be groundless.

Lying blindfolded at the bottom of a jolting cart, the journey seemed to have occupied hours; but, as I afterwards perceived, an hour could scarcely have elapsed from the time we set forth until we drew up in what I imagined to be a paved court-yard, similar to that from which we had started. In a few moments we were assisted from the cart, and conducted each, as before, by a soldier, up a long flight of stone steps, into what I supposed to be either a prison or another *palazzo*. We were then led through room after room—a hum of voices resounding on each hand as we passed along, until our conductors let go our hands and left us standing, apparently in the

centre of an apartment occupied by several people. I do not know whether the young Italian officer had accompanied the carts, or whether he had preceded them by some other route; but it was he who now approached and removed the bandages from our eyes.

'You perceive, Monsieur, I am here before you,' he said smilingly; and I knew the voice, although I did not immediately recognise the man, for my eyes, so long in darkness, were dazzled by the brilliancy with which the apartment in which I now stood was illuminated. It was no prison, as I had anticipated, to which we were now introduced, but a *palazzo* of greater magnificence than that which we had lately quitted.

The young officer appeared to be amused by my evident amazement and bewilderment; but he left me without another word, and I had leisure to look around me. The room, which was splendidly furnished, and was made to appear fourfold its actual dimensions by the immense plate-glass mirrors which covered the walls, and reflected every object on every hand, was occupied by several persons, some of whom were in uniform; while others, who appeared to mingle with them on terms of perfect equality, were attired as artisans or peasants; and I remarked that among the occupants of the brilliant *salon* there were three or four priests in their clerical robes. I could hardly believe my eyes. I almost fancied that I was dreaming, or was under the influence of some magic spell! It was as if a page of the *Arabian Nights* were suddenly realised. As for the poor *padrone*, he was half stupefied between wonder and terror. He crossed himself, and his lips moved in prayer to his guardian saint, as he gazed with a bewildered air at the splendour by which he was surrounded.

In a few minutes, the same aged officer who had been addressed as Monsieur le Duc approached me. 'You are English? An English naval officer?' he said, addressing me sternly, but in very imperfect French.

'I am, Signore,' I replied.

He looked intently at me, as if doubtful whether I spoke the truth, but at length appeared to be satisfied.

'And you?' he continued, addressing the *padrone*.

'A poor humble fisherman of Toulon, Highness, who has never willingly wronged any person,' replied Gustave.

'Your vessel is in the Gulf?'

'It is, Excellency.'

'And prepared to put to sea at a moment's warning?'

'Yes, Highness.'

'It is well, my friends,' said the officer. Then pointing to a soldier who had followed him into the room, carrying a bundle under his arm, he added: 'You will now, Messieurs, have the complaisance to divest yourselves of your fishermen's attire, and don the garments which this soldier carries. He will conduct you to an antechamber for that purpose.—See to this, Signor Capitano,' he went on, addressing an officer who stood near him; 'and be diligent. It is almost the hour.'

The officer motioned to us to follow him; and accompanied by the soldier, we passed through several apartments, into an anteroom in which half-a-dozen youths, attired as pages, were idly

lounging about. The soldier untied his bundle, and displayed to my wondering eyes two suits of regimentals such as were worn by the Italian infantry.

The officer, who could not speak French, motioned to us to strip ourselves of the garments we wore and don the regimentals. The idle youths who were in the room, attracted by curiosity, arose from their lounging postures and gathered round us, smiling and whispering to one another. To refuse to obey the order would have been folly. Still I hesitated to divest myself of my clothing before strangers; and the officer divining the cause of my hesitation, spoke to the soldier, and pointed to a closet at the end of the room. The soldier beckoned to us to follow him into the closet, where, after we had divested ourselves of our coarse fishermen's garb, he assisted us to attire ourselves in the regimentals, to which we were quite unused. We were then conducted back to the apartment we had recently quitted; where we found the officer who had visited the lugger, awaiting our return.

He looked earnestly at us, and seemed to be satisfied with our appearance. 'They will do. They will pass amidst the darkness,' he observed to the soldier; and then addressing us in French, he said: 'Now, be seated, my friends. Be silent and discreet, and no harm will befall you.'

We obeyed silently and mechanically, as if we were a pair of automotons moved by strings and pulleys; for by this time I at least began to feel as if I were without a will of my own. In a few minutes the folding-doors at the upper end of the saloon were thrown wide open, and two young boyish-looking officers—preceded by a couple of tall footmen in rich liveries—made their appearance. These two young men, though they wore the plain undress uniform of subalterns of the line, and though they appeared so shy and timid, that one, the younger of the two, seemed ready to faint, were received with every mark of respect and homage. The footmen, who had stopped—one on each side of the folding-doors—turned about and bowed low as they entered the room; and the officers and other persons present who were seated, rose to their feet, the padrone and I rising, as it were mechanically, with the rest; while the aged officer who had questioned us on our first appearance, approached the youth who seemed to be so much overcome, and respectfully offering him the support of his arm, whispered what appeared to be words of encouragement in his ear, and led him to a sofa with as much courtesy as he could have displayed had he been conducting a queen to her throne.

### BURNHAM BEECHES.

IN June of last year there appeared an advertisement in the London papers of the sale of 'portions of the Dropmore estate,' in which was included what were described in capital letters as 'THE CELEBRATED BURNHAM BEECHES.' Among others who read this advertisement was Mr Francis George Heath, the well-known author of more than one delightful book on trees and ferns; and he, knowing and appreciating the beauty of the woodland of Burnham Beeches, and considering

its proximity to London, at once set about calling public attention to the sale, urging the desirability of securing the property, to be preserved for all time coming as a place of popular resort. He left no stone unturned to effect his purpose. He communicated with the Commissioners of Woods and Forests; but that body found it was a project they could not entertain. The Corporation of the City of London was next appealed to, and with success; the result being that the three hundred and seventy-four acres of common or open ground on which the Beeches stood became the property of the Corporation. Mr Heath thus laid the public under a deep debt of gratitude to him, by securing that this magnificent piece of forest should not only be saved from falling under the axe of the speculator, but should be appropriated and perpetually maintained as common ground, to which the pent-up millions of the great metropolis may freely resort to breathe the invigorating air of the country, and to see Nature in some of her most beautiful forms. And now, in addition to his other labours in this connection, Mr Heath has written a very pleasant little book on the subject—*Burnham Beeches* (London: Sampson Low)—which will not only serve as a guide to those who have the pleasure of visiting the Beeches, but embodies within it much interesting information as to the trees themselves. It is from the pen of one who evidently loves trees as Byron loved mountains; and the fine pictorial illustrations with which the descriptions are accompanied greatly enhance the charm which every reader is certain to experience over its pages.

Burnham is situated within twenty-five miles of London, and between five and six from Windsor. It is accessible by the Great Western Railway, the Beeches being within three and a half miles of the station of Slough on that line. Burnham also has other associations of an interesting kind. 'It was the poet Gray,' says Mr Heath, 'who first, in the early part of the last century, called attention to the secluded, unique, and beautiful, but comparatively unknown, bit of wild woodland in Buckinghamshire left stranded, as it were, by the rolling sea of forest which once spread around it, but has now—almost all—gone for ever.' The Beeches became known to the world on the publication of the poet's letters; and so identified is the district with recollections of him, that Mr Heath makes bold to point out the very beech-tree by the brook under which the poet mused, as described in the *Elegy*—

Yonder nodding beech

That wreathes its old fantastic roots so high.

Whether this be so or not, may very well be left to the individual imaginations of the poet's admirers, who, however, have ample means of gratifying their tastes in this direction if, in walking from Slough to Burnham, they take Stoke Pogis on their way, where Gray himself is buried, and with the church and churchyard of which place the locality of his *Elegy* has been so long

identified. Burnham has still other associations of a literary kind, for here stands East Burnham Cottage, the house, since enlarged, to which Richard Brinsley Sheridan brought the lovely young bride whom he first ran away with and then fought for. This house was in 1838 bought by George Grote, and in it he wrote a large part of his *History of Greece*.

Reverting to the Beeches, it may be well to let Mr Heath describe them: 'The Beeches of Burnham,' he says, 'have been described as "magnificent pollards." The description is not quite an accurate one. That these singularly picturesque trees were "pollarded" at some remote period of their history is certainly beyond question. But they can scarcely be called "pollards;" for that expression is used to indicate trees whose limbs have been cut off close to their trunks, leaving nothing to grow but a mass of slender boughs—if boughs there may be without branches—and of small twigs—if twigs there can be without boughs. But from the once—"pollarded" giants of Burnham have grown huge limbs like large trees.' These Beeches are many of them of an immense size. The bole of the one which Mr Heath seeks to recognise as the 'nodding beech' of Gray, and which stands near the southern entrance to the forest, is quite hollow, with half of its shell gone; yet the half-bole that remains is sixteen feet in girth, and carries singularly vigorous branches. Another beech, also with part of the shell gone, must have had when complete a girth of twenty-four feet; and there is in the same spot another beech of twenty-one feet girth. Beyond this, says Mr Heath, 'lies the wild tract of Burnham Forest, sloping upwards as it rolls away out of our sight, and spread with lawns of singular beauty, studded with huge forms of beech, and spread with bracken, furze, and bramble, the greensward starred with daisy blooms, and golden with buttercups and trefoil. . . . On now, and upwards, our road continues, under the spreading shadows of beeches on each side of our way, hollow, gnarled, and rugged. The fringe of common is narrow on our left, and we can see, between the leafy interstices, the yellow hue of ripening corn, and the red tinge of the flowering meadow grass; on our right, the forest view alone—great fantastic forms of beech contrasting with the white-patched slender trunks of birch, mossy boles, withered leaves, graceful brake, and dancing shadows, as the wind stirs the foliage above. Now oak and holly mingle their foliage with the prevailing beech; and as we reach the crest of our upland road, the open country bursts upon us on our left, spread with the richest colours which meadow and corn-field can furnish in the height of their summer glory. On the right is the fringe of our forest, with juniper and holly scattered wildly about in the foreground, whilst the view is closed by umbrageous beech. Now the heather mingles with the graceful bracken, and flaunts its purple bells, whilst deep yellow blossoms still cling to the sprays of the broom.'

This is exquisite description: true to Nature in the sense of confused beauty which it conjures up. Few surely can read it without desiring to look for themselves on the picture in its original, either under the splendid radiance of a summer sky, or in the softened sweetness of an autumn day. We cannot more fitly close this little notice

than by joining gratefully in the musical invocation of Henry Luttrell:

O ne'er may woodman's axe resound,  
Nor tempest, making breaches  
In the sweet shade that cools the ground  
Beneath our Burnham Beeches.

## THE ECCENTRIC BACHELOR.

### A CHAPTER OF REAL LIFE.

F— was a living specimen of the typical old bachelor, a personage more often met with in the pages of fiction than in real life; lean and sharp-visaged of aspect, crusty and cynical of temper. He was, moreover, an avowed oddity; one of the privileged class who, by virtue of this reputation, can do what others dare not without exciting surprise or giving offence; whose eccentricities are met with a shrug of the shoulder and the remark: 'What else could you expect of an oddity like him?'

He was an unpopular man, receiving scant sympathy; yet capable nevertheless of kind and generous acts, performed on the condition that they were to be kept strictly secret and that he was never to be thanked for them. Woe betide the recipient of a favour to whom it was brought home that he had mentioned the same to any one, or extolled the kindness of his benefactor! The unlucky wight once detected in thus giving vent to his gratitude, had taken the surest method of cutting himself off from further help. He never got another chance.

Our old bachelor enjoying, as we have said, the privileges of eccentricity, it excited no surprise when on one occasion, after an absence from home, he wrote to inform his servants—an old couple who had lived with him for years—that on his return he would be accompanied by a widow lady, who was likely to make a long stay in his house, and for whom apartments were to be got ready.

'And a pretty upset she'll make!' exclaimed the dismayed old housekeeper. 'A fussy, middle-aged party, no doubt; ordering and interfering and wanting to have everything her own way; which she won't get. John, as long as you and I can prevent her. She'll be a clever madam if she gets her foot inside my storeroom while there's locks and bolts to keep her out, I can tell her!'

'Don't you make too sure,' said John. The old man could not resist now and then teasing his helpmate, as a little set-off against sundry naggings on the part of that good lady. 'Maybe it's a mistress of the house and of yourself that's coming to it. Them widders are great at wheedling. It's time, if the master is ever to marry, that'—

'Ah, stop your croaking now!' cried Mrs John. This dire suggestion was too overpowering for her feelings.

The appointed day arrived; and when the cab drove to the door, the two old domestics, with very sour faces and their backs very much up, went to receive their master and his unwelcome guest. Their first glimpse of the latter shewed them they might have spared their fears and hostile intentions. Out from the cab, before their astonished eyes, sprang a girlish figure, whose bright happy face contrasted curiously with her mourning garments.

'Mind the step, uncle!' ['Oh, his niece, she is!'] she cried, tripping up to the hall-door.—'Don't trouble, please,' with a smile to the old housekeeper; 'that bag is too heavy for you; I'll carry it.'

And when the stranger came down to breakfast next morning with a morsel of a cap perched on the top of her golden braids of hair ('Not my idea of a widow's cap,' said the dame to her husband; 'and would you believe it, John? singing away like a bird while she was dressing!'), she looked absurdly young; more like a girl in her teens than an experienced 'settled' matron.

The advent of his pretty niece made some change in the habits of the old gentleman. He had friends at dinner more frequently than of yore; and in addition to the elderly fogies that formed his usual society, younger guests were invited, suited to the years of his visitor. With grim amusement, her uncle observed the attraction her comeliness and winning ways were for these. 'Swarming round—like flies about a honey-pot! Scenting, I daresay, a fat jointure. All widows are supposed to be rich; and just because she is a widow, and for no other reason, making up to her, the fools!' This to himself with a cynical chuckle. Aloud: 'Nice little woman, sir, that niece of mine. Plenty of good looks; but hasn't a sixpence—not a sixpence to bless herself with!'

It was wonderful how the old house was brightened up by the presence of its blithe young inmate. But by none was its pleasant influence more felt than by the domestics, who had vowed such hostility before her arrival. The old woman especially was devoted to her; loving her for her own sake as well as for the kindly help and good offices she was always receiving from the deft and willing hands of the young girl. In the store-room—that sacred retreat which her foot was never to invade—the latter was to be found on 'company-days,' busy and happy as a bee; with sleeves tucked half-way up her plump arms, her heavy crape skirts stowed away under one of the old lady's capacious holland aprons, and lappets pinned high over her head, while, laughing merrily at the queer figure she had made of herself, she worked away at cakes and sweets, taking a world of trouble off the housekeeper's hands.

'And so thoughtful she is, and gay; bless her!' his wife would tell old John. 'She'll come tripping up to me, and "Now, do as you're bid," she'll say, playful; forcing me down into my big chair. "Sit you down and rest, there's an old dear, and take your tea. I'm not a-going to let you do a turn more." And then she'll work away, her tongue going all the time as fast as her fingers. Running on about her mother and her home, her flowers and pets—dogs and birds, and what not. But never a word about husband or married days. And if I touch upon them or ask a question, she'll get quite silent and strange-like in a minute, and turn off the subject as if it burned her. Perhaps for all she's so merry outside, she's fretting in her heart for him that's gone, and can't a-bear to talk of him.'

'Nothing of the sort!' cried old John. 'Don't you go to think of such stuff. She'd take a husband to-morrow; mark my words. And it's my opinion there's a young gentleman as comes to this house that has a fairish chance. He's

desperate sweet upon her. I haven't eyes in my head for nothing, and I see plain she doesn't dislike him, or hold herself up distant from him, as she does from others.'

Old John was right. Matters were in due time so far satisfactorily settled between the young couple that an appeal to the uncle was deemed expedient. The old gentleman received the announcement with a half-pleased, half-satirical grimace.

'Ha, I thought so!' he muttered. 'But are you aware, my friend, that there is no money in the case? The lady hasn't sixpence, and'—

'I know it,' indignantly interrupted the suitor. 'You have made that remark before. I want no fortune with my wife, my own being ample; and my love'—

'Oh, spare your raptures, young sir. Not so fast. Don't be too sure of the prize; for when you hear what I have to tell you, there may be perhaps a change in your views. I have no time to go into the matter now; but come to-morrow, and be prepared to hear what will surprise you;' and the old gentleman went off, nodding back—malevolently, the lover fancied—over his shoulder, and leaving the poor fellow in a state of most uncomfortable suspense and uncertainty.

What could this dark hint mean; and why was he not to make sure? Could it be possible there was any doubt, any mystery as to the demise of the beloved one's husband? He could not help calling to mind her confused and singular manner at times; a certain want of frankness; an evident embarrassment at any allusion to the past. The possibility of an obstacle made the young man realise, as he had not before done, how deeply his affections were engaged. He spent a miserable night, awaiting in vain conjecture and sleepless anxiety the tidings which the morrow might bring forth.

In order to explain matters, it will be necessary to go back for some months previous to the arrival of the young lady at her uncle's house; as well as to change the scene from it to a country cottage in a remote part of England—the home of the widowed sister of the eccentric bachelor. In it we find him pacing up and down the small drawing-room, and listening to the querulous complaints that its occupant, a confirmed invalid, is uttering from the sofa on which she lies. 'I think but little of my bodily sufferings,' she is saying; 'they cannot now last long. Every day I feel more plainly that the end is not far off; and my doctor tells me the same. The distress of mind that torments me is what is so hard to bear.'

'And what may that be about, if I might ask?'

'The future of my child, when I am gone. All I have, as you know, dies with me. She will be penniless; and the thought of what is to become of her, cast on the world without a home, haunts me night and day. It is too dreadful!'

'A girl—and young—and not bad-looking. Where's the fear? Somebody'll marry her. Men are such fools!'

The sick woman could not forbear a smile. 'Ah, but there are no men, no fools here! In this remote corner, we see no one; and the poor child, taken up with nursing me, and tied to a sick-room, has made no acquaintances. It is killing me to

see her young life sacrificed, and to think of the future.'

The mother's tears began to flow. Her hearer, never very amiably inclined towards the weaker sex, or at ease in its company, increased his quarter-deck paces in much discomfiture as these symptoms of 'water-works turned on' became apparent. His hurried steps soon subsided, however, to a steady march up and down the little drawing-room, while with frowning brow and occasional chuckles, he seemed to be concocting some scheme. After a few minutes he came to a sudden halt before the invalid's sofa. 'Can the girl act?' he asked abruptly.

'Act! How do you mean? I'—

'Oh, you needn't look frightened; I'm not going to propose sending her to the Gaiety or the Criterion.'

'Well, except in the little make-believe plays and dressings-up that children delight in—all children are, I think, actors born' ['Ay, and men and women too,' growled the cynic]—'except that sort of thing, she never has seen or had any opportunity of acting. Why do you ask?'

—And in reply, her brother unfolded the plan he had been concocting—namely, that his niece, laying aside her 'frillery and her trinkets and young-girl's nonsense,' was to put on the mourning garb, and act the part of a widow, in which assumed character she was to come to stay with him in his London home.

'But I don't understand'—

'And you're not wanted to understand,' he snarled. 'It's my whim; and it may be for the girl's advantage. If she's willing, and can hold her tongue, I'll come back for her when she's ready. And I'll pay for her outfit. Crape and weepers! Ho, ho, ho!'

When the first surprise at her uncle's strange proposition was over, the young girl jumped eagerly at the prospect of a change from the dull home she never yet had left. She was young and spirited; at an age when love of variety and a longing to see the world and plunge into its unknown delights, are natural. The playing the widow she thought would be excellent fun. There was a spice of adventure in it, and it would be like the private theatricals and acting charades she had read of and imagined so pleasant. The old gentleman's reason for wishing her to do so was a puzzle; but then who would wonder at anything he did? absurd oddity that he was! Perhaps it was to avoid having to provide a chaperon for her; he hated ladies so, elderly ones especially.

The result of the scheme we have seen; and the scheme itself was what its originator proceeded to divulge to the would-be husband when that individual presented himself with considerable misgiving and agitation on the appointed morning.

'As the lady has not turned out to be what you took her for, is not, in fact, a widow, perhaps the whole matter may be off. A disappointment, no doubt,' wound up the uncle with one of his grim chuckles; 'but 'twas only right to tell you in time. Young man, if you can pardon the conceit, take her.'

'Well,' exclaimed the young man to his fiancée, when, all things cleared up and satisfactorily arranged, the engaged pair were talking over the queer circumstance that had brought them

together, 'I always knew your uncle was eccentric, but this surpasses anything I could have imagined even of him.'

### THE SKYLARK.

HARK to the dropping melody  
From the brown Lark above yon grimy cloud!  
Ambitious traveller! for earth too proud,  
Wouldst join the angels' psalmody?  
Or is the steadfast sun the magnet bright  
That ever to the sky attracts thy flight?

Sing on, thou joyous reveller!  
Pouring tumultuous from thy reedy throat  
Torrents of sound: who heedless hears thy note,  
Is dull, or senseless driveller!  
'Twould seem thou hadst indeed heard heaven's song,  
For strains like thine can ne'er from earth have sprung.

Here, on the cool grass lazily  
Outstretched, I listen to thy happy note,  
And pleasant images upon me float,  
Watching thy form, that hazily  
Shews through slow-moving vapours high above,  
As up in fluttering spirals thou dost move.

So once my soul, awakening  
From thoughtless slumber, sprung to greet the morn,  
And from its depths a merry lay was born;  
Hope stood before me, beckoning,  
And led me forth along a golden way,  
Where sunlight never ceased to beam and play.

Would that all we, here wandering  
About this earth, could sing away our days,  
And ne'er in discontent our voices raise,  
Short life in sorrow squandering;  
And would that we to toil as blithely bent,  
As thou ascendest through the firmament.

The nightingale's sweet sorrowing  
Lulls us with fantasy and idle dreams,  
Till all the world to our charmed vision seems—  
From solemn music borrowing  
Soft magic—a fair place of pleasant pain,  
Wherein to dream, and sigh, and dream again.

Thy song is bright and vigorous,  
Seeming to summon men to active lives,  
Boldly proclaiming he who nobly strives  
'Gainst evils that beleaguer us,  
And faces manfully his worldly work,  
Shall prosper well— they ill who duty shirk.

When twilight shades cross drearily  
The sinking day, and all afield is still,  
Save the vexed murmur of the restless rill,  
Like stone thou falkest, wearily,  
To earth, and, sleeping in the dew thy breast,  
Secretly creep'st to thy hidden nest. J. T. C.

The Conductors of CHAMBERS'S JOURNAL beg to direct the attention of CONTRIBUTORS to the following notice:

- 1st. All communications should be addressed to the Editor, 339 High Street, Edinburgh.
- 2d. To insure return in case of ineligibility, postage-stamps should accompany every manuscript.
- 3d. MANUSCRIPTS should bear the author's full Christian name, surname, and address, legibly written; and should be written on one side of the leaf only.
- 4th. Poetical offerings should be accompanied by an envelope, stamped and directed.

Unless Contributors comply with the above rules, the Editor cannot undertake to return ineligible papers.

PRICE 1½d.

## THE GENTLE ART.

SUPPOSE, in the course of a summer's morning walk, you should suddenly come upon what you had never seen before—for everybody must see a thing once for the first time—namely, an angler plying his art. Natural curiosity would no doubt incite you to stand and watch him at his work. He has chosen a beautiful spot for his meditative pastime. It may be a quiet-flowing river in a broad English county, shaded by solemn lines of lordly chestnuts, or beeches murmurous in the summer air. Or better still, some secret recess in the higher reaches of a Scottish glen, in the cool shadow of a dripping rock, whose rugged sides are draped with mosses and lichens of every hue, and from whose clefts the lady-fern hangs out graceful fronds to bathe in the spray of the neighbouring waterfall. The bit of level ground at his feet is carpeted with the summer's greenest grass, chequered by purple violets that court the shade, and snow-white mountain-sorrel that seeks the sun. The day is beautiful as one might wish. The heat is tempered by a brisk breeze that blows up-stream, curling the surface of the pools into innumerable ripples; and the blaze of the sky is curtained off with drifting masses of fleecy cloud. The oaks and birches that clothe the steeps above and below, are not enough altogether to shut out sun and wind, and just enough to warm the angler by glimpses of the one, and to fan him by airs from the other.

Whatever else he may be defective in, it cannot surely be on the score of what is beautiful in nature, for of all the glen he has chosen the sweetest nook. And yet he seems to give but little heed to the beauties around him. He is bait-fishing. Half-sitting, half-kneeling on the mossy bank, he marks with eye intent the spot on the farther side of the dark pool into which his deftly baited line has just been dropped with delicate exactness, and his whole faculties appear to be engrossed in watching the issue. For a while his line hangs motionless and inert, except when now and again

touching by a passing breeze; but presently he feels a slight tremulous motion, and the point of the rod dips slightly downwards. Now is the supreme moment. With a quick upward movement of the rod he jerks the line out of the water, and there, flashing and pirouetting in mid-air at its extremity, like an animated coil of molten gold, is a specimen of the finny prey he has spent the morning to entrap. In a moment more it lies before him on the grass, its yellow sides spotted with drops of brightest vermillion, gasping out its little life in the evil element of air. With careful hand he dislodges the fatal hook—slips the victim head foremost into the basket at his back, which is made to carry twenty or thirty pounds of such shiny fry—takes from the little bag at his coat-button a small red wriggling worm, and proceeds with something like tenderness to thread it upon his tackle of triple hooks—which he confidentially informs you is 'Stewart's'—then, after leisurely filling and lighting his pipe, and glancing up at the sky for a moment as if doubtful of the weather, he lifts the rod again with easy and half-indolent gesture, and prepares himself for another cast.

'And is this angling?' you say. 'Why, it seems the simplest of all processes for amusing one's self it is possible to invent.' And yet to be an adept in its many phases is quite another matter. You have only to take up one of the many large and elaborate works on the subject, to discover this. It may be, as Byron calls it, a 'solitary vice,' but it is not a simple one. Its paraphernalia—what may indeed be called its machinery—is as complex and heterogeneous as the 'fixings' of a cotton-mill or the hieroglyphs in the Chinese alphabet. Were a rod and line, a hook and worm, as in the foregoing sketch, its only requisites, it would be comparatively a manageable process. It might call for the exercise of some dexterity, and no little patience; but beyond this its demands upon the labour and ingenuity of its devotees would be but slight. But what is the case? In the matter of methods alone, you have pond-fishing and, pond-fishing, bank-fishing and bottom-fishing,

worm-fishing and fly-fishing; you have spinning and trolling and live-baiting; light-corking and daping, and casting from the reel. The question of rods is more easily settled. That instrument may be of hickory-wood or greenheart, and may cost from a few shillings to a few pounds; or it may be a piece of bamboo, or a willow-wand. The line may be a bit of common cord, such as that with which boys wind a top or sniggle eels; or it may be of twisted horse-hair, or twisted silk, or both combined. Among the miscellaneous articles also required are baskets and landing-nets, swivels and gaffs, floats and sinkers. But it is when you arrive at the department of hooks and lures, that you become aware of the recondite nature of the processes and expedients in vogue for enticing the various 'finny tribes from their native element. A mere catalogue of them would look like a swarm of nouns and adjectives which had made their escape out of a dictionary, and got mixed up in irretrievable confusion.

Without entering into the detail of hooks, and combinations of hooks, or into the comparative merits of the Limerick bend, the Carlisle bend, or the sneek bend, something may be said of the varieties of lure. Were there but trout to capture, possibly a simple alternation between worm and fly, according to time and weather, might be sufficient for ordinary purposes. Or it might be a spinning minnow. As it is, trout are but one of many species of fish to which the angler's art is applied. There are gudgeon and bleak and roach; barbel and chub and dace; bream and carp and tench; eel and perch and pike; and, besides many others, the monarch of the stream, the salmon.

If every man, according to Walpole, has his price, so has every kind of fish its peculiar bait. For bottom-fishing in the Thames, besides worms and gentles, such various substances are used as greaves, bran, rice, boiled wheat, grains, and malt. If you would take roach out of the Norfolk rivers, you are directed to use barley-meal; and if bream, then boiled barley. If you go to the Hampshire streams for dace, a scrap of bacon-rind will tempt them to bite; or if you desire to capture chub, you have a wider choice of methods at your disposal, as, besides cheese—of which they are very fond—they will also take cockchafers, humble-bees, wasps, caterpillars, slugs, and snails. The barbel—sacred to youthful readers of Grimm's *Goblins*, by being once a prince, and turning the head of a poor fisherman's wife, though not, as he himself said when a king's son, good to eat—is an active creature, and gives good sport; he is partial to lob or dew worms, and will also succumb, like the chub, to a bit of cheese. The tench is another curious fish, living in the strictest seclusion at the bottom of weedy ponds; and although extremely cautious as to what food is offered him, can hardly resist a bit of dainty red worm. The carp, while getting the character of a lubberly fellow, is nevertheless, like Dickens's little Major, 'deep, sir, very deep, and—sly;' and though he may be taken at times by a common worm, yet his principal weakness is for paste, made either of honey or bread—and, what is rather remarkable in one brought up strictly as a water-drinker, he takes this all the readier, we are assured, if it be mixed with

gin or brandy! The eel is a greedy glutton, and not at all particular as to his diet, being quite well pleased to snap at a ball of worsted if it appear to have worms about it. The perch also, like the eel, is not over-scrupulous as to what he eats, and small tit-bits of worms will perchance lure a shoal to destruction. But the most voracious and unscrupulous of all is the pike, who is in general ready to bolt anything he can get his mouth over—frogs, mice, water-rats, dead birds, or—what is said to answer the purpose as well—an artificial rat made from a slice of the skin of a cow's tail!

But it is when you leave this, what may be called the vulgar order of fish, and ascend to the dainty trout and salmon, that the angler's resources are most severely taxed. Every season and river and locality seems to have its own peculiar bait. Besides the ordinary temptation of grubs, worms, creepers, larvæ, &c., there is the almost countless variety of flies on which trout and salmon love to feed. For the former, there are, among many others, stone-flies, willow-flies, and sand-flies; silver-horns and cinnamons, duns and spinners. Each month brings its own particular ephemera. There are the February reds and the March browns; in May and June, the stone-fly and the oak-fly, the wren-tail and the brown-bent; then follow the July dun, the August dun, and the whirling dun of September. These, and scores of others, are either used in their natural condition, or imitated in form and colouring to represent life. For salmon-angling, artificial flies are used in still greater variety, many of them being exquisitely beautiful. And curious names some of these works of art go by among the angling brotherhood. There are the Purple King and the Green King; the Captain, the Major, and the Colonel; the Priest, the Parson, and the Doctor; the Coachman, the Policeman, and the Game-keeper; the Butcher, the Baker, and the Candlestick-maker. Other flies derive their designations from the feathered tribes, and accordingly you have the Eagle, the Grouse, and the Partridge; the Guinea-hen and the Goldfinch; the Indian Crow and the Canary. Then there are such oddities among names as Jock Scott, Kate, and Switching Sandy; as also two others which bear the somewhat startling appellations of the Water-witch and Thunder-and-Lightning. And yet those we have enumerated are but a tithe of the expedients which experience and ingenuity have devised where-withal to replenish the angler's basket. Surely, after all this, you cannot still be of opinion that angling, however gentle, is a simple art.

Nor is this all. It is one thing to have your tools, and quite another thing to know how to use them. You may have your rod and line, gut and tackle, from the first makers—a score of different flies in your pocket-book, and a hand-book on angling in your head—and yet be fated to carry an empty basket. Not only so, but the stream at your feet may be stocked with fish, that will only lie 'laughing and winking' at you from behind the stones, wondering how you can be so foolish as to offer them a kind of food for which you ought to know they have not the slightest stomach. Nor need you be at the first too much cast down about this. Even such veterans of the rod and reel as Mr Francis Francis, whose delightful *Book on Angling* has mainly supplied us with

the materials of this sketch, has had his difficulties, and no doubt will have them still. It is only he, and such as he who has brought his wits to bear for a lifetime on how best to circumvent the finny tribe, that knows how many wiles, and smooth deceptions, and artful dodges, must be tried before your purpose can be effected. The carp, we have said, is a sly fellow. Well, to secure him, you must be sly too. You must offer him his food in the shape in which he usually gets it; for which reason, if fishing with worm, your bait should rest on the bottom, and not hang high in the water. 'It is not natural,' says Mr Francis, 'to see a worm hanging so as barely to touch the bottom, and that the carp know well enough. In this position, too, the gut ascends directly from the head of the worm, and the unnatural attitude of the bait challenges the carp's attention to this "new thing in worms." Monsieur Carp then catches sight of the shot-sinker, and, lastly, in all probability of the float above. All this is of course strange and unusual, and he proceeds to investigate the bait, with all due care nibbling and picking at it, like the female ghoul in the *Arabian Nights*, who ate rice with a bodkin. He cannot make up his mind to take it, and yet he cannot make up his mind to leave it, so he nibbles and nibbles; and at last you think he must have got the bait, and you strike. Now, it is not customary for worms to dart off in that frantic fashion; and therefore, while your worm dashes off one way, Master Carp dashes off the other.'

Even perch, which you may take in dozens and scores in January and February, require delicate handling on a summer's day. 'Often have I,' says the author just quoted, 'through the clear crystal water, watched the proceedings of a dozen perch, at the worm or minnow on my hook, some twelve or thirteen feet below; how they come up to it with all sail set, their fins extended, their spines erect, as if they meant to devour it without hesitation, and how they pause when they do come up to it, and swim gently round it, as if a worm or a minnow were an article of vertu, which required the nicest taste and consideration of a connoisseur to appreciate it properly. Then one of the boldest will take hold of the extreme tip of the tail—as timidly as a bashful young gentleman takes hold of the tip of his partner's finger, when he leads her to the festive quadrille—and give it a shake. . . . They cannot make up their minds about it. Is it a safe investment or is it not? . . . And then comes an aldermanic perch, a warm livetymen of the Fishmonger's Company, of nigh two pounds, a regular turtle-fed lord-mayor elect, with his cheeks blown up, his eyes staring out of his head, his fins all bristling with magisterial importance. "Now then, what is this case? Ha, hum! a worm, eh? yes. Found hanging about the streets with no ascertainable occupation, and without any home, eh? Ha! bad case—very bad! a mysterious and vagrom character evidently. Take him away, some of you, and lock him up—very suspicious indeed—very much so." . . . And so, with a fan of his tail, the alderman scuttles off to a fresh case, and all his little people scuttle after him, save, perhaps, one unhappy little fellow who won't take warning.'

And now you may fairly conclude that if such comparatively voracious fish as carp and perch call for such attention and skill on the part of the

angler, the coy trout and the capricious salmon will tax his energies still more. 'If trout,' says Mr Francis, 'are various in their forms and shapes, no less various are the means employed to take them, there being hardly any of the numerous plans adopted for wiling fish from their watery domains which may not be successfully applied to the capture of trout, for the trout feeds equally at the top, in the middle, and at the bottom of the water.' The skill and patience of the angler 'will often be taxed to the uttermost, and vainly, many a time and oft, in the attempt to hook some wily old four or five pound brook trout, who may be feeding rapidly and constantly under his very flies, which, tied on almost imperceptible gut, fall like gossamer above him, and float fruitlessly down over his head, as like the real thing as human cunning can contrive. Nay, you shall even float the live fly, drake, stone, or whatnot, over him so deftly, that nothing in your deception seems to you wanting. You shall offer him worms, minnow, and cadbait, or drop the all but irresistible cockroach or cricket within his ken, while you remain concealed. He may wave his fan-like tail coyly, and take a nearer glance askance at your bait, but proves a very St Anthony to your temptations. He will perhaps come to it like a bulldog, making your heart jump into your mouth, but he will then "pull up sharp on the post," as turfites say, and refuse it; and do what you will, nine hundred and ninety-nine times out of a thousand his virtue is ancient Spartan, and his cunning modern Spartan; but haply on the thousandth, in some sheltering flood, a fair deceiver, in the shape of a fat worm or minnow, tempts him—he gobbles it down, and dies the death. Happy you if it be your worm or minnow!'

The hooking and playing of a salmon require equal skill and dexterity, though perhaps of a slightly different kind. It is in the capture of trout and salmon indeed, that all the elaboration of means to an end, which we have just referred to, is brought into action, and the art of the angler tested to the full. And a peaceful and pleasant art it is, bringing its votary into frequent contact with Nature in her most beautiful aspects, with the blue of the sky above him, and the green of the grass beneath his feet. The subject is a wide one, and admits of varied treatment; but we have not specially sought to deal with it either as an art, a recreation, or a pleasure. All we have aimed at has been to engage the reader's attention for a little over a few of the more salient features of old Izaak's favourite pastime.

Before quitting the subject, it may not be out of place if we take this opportunity of expressing our regret that the illegal practice of netting trout in our Scottish rivers and streams is becoming more and more general, notwithstanding the efforts of bailiffs and other water-guardians to put it down. Under cover of night, gangs of men set out from some quiet village or town by the water-side, and regardless of the interests of the legitimate angler, systematically harry the neighbouring waters of their speckled denizens. Nor are other nefarious means wanting, of depopulating streams, as will be seen by the following extract of a letter which appeared in an Edinburgh

newspaper (*The Scotsman*) last month. The writer, addressing the editor, says :

'While every legitimate angler rejoices in the late capture of some of the netting fraternity, will you allow me, through your columns, to draw the attention of fishing-clubs and all who desire to protect the streams from illegal depredators, to a deadly mode of capturing trout, which is destructive of the sport of all true anglers. As half a century's experience has enabled me to compete pretty successfully with most fair fishers, I was astonished to find, during a late fishing-tour in the south on the Gala and Leader, that my moderate captures were nothing in comparison, both for numbers and size, with the baskets I saw hawked for sale by professional fishers who make a living by the sale of their fish. I was puzzled to find out how these hawkers beat me, till I was initiated into the mystery by one of the gang, who, in the exuberance of his heart, and under the influence of "mountain dew," produced a pot of salmon roe, and generously offered me some. After pointing out the illegality and unfairness of his doings, and the chances of a jail which were before him, he went on to inform me how adroitly he could pick out the biggest and the best from a stream, under the very noses of other fishers, without their supposing that he was using any other lure than the usual worm. Such men make a regular trade of selling the fish so caught, and are inadvertently encouraged in their doings by the handsome price they often realise from gentlemen they meet on the riverside and other customers in hotels and elsewhere. One of these men I came across lately on the Gala who had twice in the course of half a day emptied his basket in this way ; and a second one I saw at Earlston, after having early scoured the Leader, take train for Melrose to dispose of his spoil there. I would suggest that an effort be made to organise a general association of anglers for the protection of the waters, something like that lately set up at Greenlaw for the protection of the Blackadder. There are few who follow "the gentle art" but would gladly join for such a purpose, and by annual subscription help to put an end to the practices complained of.'

From what we ourselves know of the wholesale destruction of trout by night-netting as well as by roe-fishing, practised in such rivers as the Tweed, Gala, and Yarrow, we do not hesitate to say that ere long, those time-honoured streams will be rendered useless for the true angler, unless the fraternity rise in a body to stamp out the practices that are so fast robbing them of their favourite pastime.

## A LIFE'S ATONEMENT.

### CHAPTER XXIV.—AUTOBIOGRAPHY.

*'There may come a time in your career when gentle dealing may seem out of place.'*

I SUPPOSE it was a natural thing that Gascoigne and Gregory minor having had their quarrel out, should become fast friends. The conciliation seemed at first a strange one ; but I learned to welcome it. I had had so little companionship, and had become so solitary and sedentary in all my ways, that a rambling, adventurous, tree-

climbing, bound-breaking young person like Æsop was the most valuable of all companions for me. I was afraid of him at the beginning ; but I soon trusted him. He was as open as the day ; and I believe a lie at any cost would have been morally impossible for him. His fancy ran riot with him often, and he launched himself fearlessly on grotesquerie's wildest stream, and allowed it to take him whither it would ; but he was unlike any other imaginative boy I have known in his stolid adherence to fact in all matters outside the domain of fancy. He was always in trouble, and he seemed to like it and to flourish on it, for he was always happy. He taught me to boat and swim and play cricket, and was willing to bowl at me for an hour together. Out of the companions who crowded about me at school and college, Gascoigne and Æsop were the only two who accompanied me in after-life. I have no time to linger here upon the pleasant memories of my school-days, though I would do it willingly ; but there are two incidents which shew so clearly in the light of later years, that I record them. I see them distinctly. They make pictures in my mind. I can almost hear the voices speak again.

I have been swiftly brought from school by Major Hartley, with whom by this time I am quite familiar. Major Hartley is a sort of Captain Poyntz without Captain Poyntz's humour. He has a portentous drawl and a big moustache, and he swaggers a little in his gait. He takes me on fishing and shooting expeditions in the holidays ; and last season I rode to hounds beside him. He tips me with outrageous generosity, and tells me stories of the Crimean War. He is not a good teller of tales ; but my imagination fills in much of the detail of his sterile stories, and I am always quite absorbed by his narrations. But we have been very silent all the way home, and the house is very silent now. The domestics go about their duties noiselessly, like ghosts in livery. Everybody speaks with subdued voice ; and I, though I notice all these things with the keenest observation, am stricken through with grief. For the sad message that has brought me here is that Maud is at death's door, and that there is little hope for her. The medical man of Wrethedale is in consultation with a physician from the county town. They are clothed in black, and look to my frightened eyes like Death's heralds. I am admitted, on promise of outward calmness, to Maud's chamber, and see her lying asleep, wan and fragile. Uncle Ben meets me at the door, and I see that his whole face is red, as if it had been scalded. He makes no concealment of his grief ; and when he takes me on his knee in his own room, he puts his handkerchief over his face and cries unrestrainedly. I am too stonily cold in my grief to cry at all, and think myself terribly hard-hearted and unfeeling. I tell myself all that Maud has been to me, and how dearly I ought to love her, and still sit there cold and stony while Uncle Ben cries behind his handkerchief ; and I can do nothing but look at a great miserable gap in the world which nothing can ever fill again. And a voice which is no part of me at all says distinctly and keeps on saying : 'I don't care ;' and though I strive against it with abhorrence, it will not be silent. I grow to feel so fearfully wicked under the iteration of this inward voice, that I

become quite frightened at myself, and sit there whilst Uncle Ben's grief flows on, and feel stonier and colder every minute. At length a tap is heard at the door, and I rise and answer it.

'Mr Hartley is inside, sir,' whispers the domestic to some one outside the door; whereupon a very tall, broad-shouldered man with iron-gray hair, and a nose like an eagle's beak, nods in answer, enters the room, and lays a hand on Uncle Ben's shoulder.

'Is that you, Brand?' says Uncle Ben, rising from his chair. 'The other doctors are here, but I haven't got a lot o' faith in 'em. Come and see her.'

'Take me to the doctors, first,' says the newcomer; and Uncle Ben and he leave the room together. Then comes a long interval of silence, and I am left alone. I can hear one of the dogs whining in the kennels, for my uncle's room is at the back of the great house; and I think of the superstition which accredits animals with a foreknowledge of human death. After a great lapse of time, a female servant enters and makes up the fire; for Uncle Ben will have all domestic offices performed by women, and keeps up the tribe of menials in plush for service at table and for show. I venture to ask her if the new doctor holds out any hope; but she does not know, and steals away again as silently as she came. I wait a long time with a growing sense of fear, accusing myself all the while for my wicked want of feeling. Then the new doctor returns alone, not observing me at all, as I sit at the window looking out upon the night, which is calm and clear and cold. He seats himself with his back towards me, and lights a cigar and smokes it. I can see the dull red reflected in the polished marble of the mantel-piece, and the smoke that curls above the chair in which the doctor lounges. I want desperately to ask him the question which I put to the housemaid; but that accusing voice within me goes on saying: 'I don't care;' and I seem to have been so long silent and unnoticed that I am afraid to speak. Then after another lapse of time, a tap comes to the door again, and the doctor throws his cigar into the fire and walks out of the room; and with my stony misery still upon me, I fall asleep in my chair, until voices awake me.

'Where is Mr Hartley?' asks one voice; and looking up, I see that the doctor has returned, and that Cousin Will is with him.

'In his bedroom, and waiting anxiously to see you,' answers Cousin Will; and the doctor makes a movement to the door. But Will laying a restraining hand upon his arm, he turns round and faces him, looking down from under projecting brows. 'What,' asks Cousin Will, 'is your opinion of—the case?'

'Serious,' says the doctor; 'but there is ample room for hope.' With that he leaves the room; and I see Cousin Will fall upon his knees beside an armchair and bury his face within his hands. And for myself, at that good news, I only know that the false accusing voice within me goes silent suddenly, and that I weep for relief and hope, as I have never wept before.

Two weeks later, I am back at school with an egregious gratuity from Uncle Ben. Mand is recovering rapidly; and what with my joy at that, and the gleeful excitement with which I find

myself richer in the middle of the school-term than ever golden Midas was in his auviferous life, I am supremely contented, and the days race after one another till they bring the Christmas holidays.

Other pictures take form and colour before me, and there are other voices in my ear. It is my fifteenth birthday. Gascoigne is at the head of the school. Gregory minor is Gregory major now, and only one behind Gascoigne in the race. I lie upon the grass under the shadow of the beech-trees. It is night-time, and the moon is glorious; and across the field in the woods beyond the river, a nightingale is singing. I lie alone, heedless of damp grass; and I travel in thought through such a life as only an eager lad can live in his dreams. *On n'a pas toujours quinze ans*, sings Suzanne, and at fifteen one has a right to one's dreams. I recall the scene almost as if it were a spectacle in a theatre. The solemn beech-trees are alive with light at the edges of their masses of dark foliage. There is a visible nimbus about the meanest object in sight, and the nightingale sings. Over my dream and through the story of the nightingale steals a serious voice, which comes nearer as it speaks. I know the voice for that of the head-master. His companion is tall and slight, but manly in figure; and as they go by at a distance of twenty yards perhaps, I think it ridiculous when the figure looks like Gascoigne's. Gascoigne is a prosperous scholar, and a great deity of mine; but there are limits even to my beliefs in him, and I can scarcely dream of him—dreamer as I am—as walking in intimate talk with our head-master. Whilst I wonder, the head-master turns, and Gascoigne—for it is he—turns with him. The master's voice comes clear and solemn to where I lie in the grass, and my heart beats with half-a-score of emotions at once—sorrowful and joyful.

'You leave to-morrow, then,' says the head-master; 'and you carry my hopes and my prayers with you. Your career at school has been an exceptionally brilliant one, and you have proved that you are master of exceptional qualities. There is only one way with those qualities, if you would prosper with them and make them useful.' The measured tones and the measured step fall into the distance together, and after an interim, return. 'Good-bye, then,' says the master, pausing once more opposite my unseen post, and turning towards his own residence. 'I will keep the high hopes I had of you. I am more than willing to believe in you. There may come a time in your career, Gascoigne, when gentle dealing may seem out of place, and strict justice may claim her own more rigidly. But the scales will not be in my hands then. Take care that I have never to throw into them the weight which I reserve to-day. Good-bye.'

With no farewell from Gascoigne's lips, the master moves on towards his own house. His step dies in silence on the turf, and I lose his form in shadow. Now Gascoigne is down upon his face, and I can hear him moaning. What—what is this? What shadow of disgrace or grief is here? I dare guess nothing, dare fear nothing. And the memory haunts me like a nightmare through the day which follows, and through the next, and through the long vacation which succeeds it. Gascoigne has gone one day before his time, with-

out good-byes to any ; and his friends are chagrined, but not suspicious. And only he knows what casts that shadow which *will* fall between himself and me, though all my soul rebels against it.

## RECOLLECTIONS OF AN ANGLO-INDIAN CHAPLAIN.

### ARCOT AND VELLORE.

WITHIN four hours by rail from Madras, are picturesquely situated amongst rugged hills the two towns of Arcot and Vellore. They lie close by each other, and although bereft of the pomp and grandeur of former days, are still populous and important places. Arcot was the capital city of the province of the Carnatic, where dwelt, in all their barbaric splendour, the Nabobs of that ilk ; whilst Vellore was their large and almost impregnable fortress. Both towns are intimately associated with our early conquests in India ; around their walls are the scenes of many hard-contested fights, in which French and English, Mohammedans and Mahrattas, were engaged. It was the taking of Arcot by Lord Clive—at that time simply Captain Clive, recently a merchant's clerk in Madras—which gave the finishing blow to the Mohammedan dynasty, quenched the hopes of their French auxiliaries, and firmly established the English rule along the eastern coast of Southern India. True indeed after that period the English had to fight many battles on these same plains of the Carnatic against many foes ; chief amongst them were the terrible Hyder Ali and his fierce son Tippoo Saib. Again and again did these redoubtable warriors hasten to the assistance of the Nabob, determined if possible to drive the hated Feringhi from Indian soil. But in vain. The great waves dashed against the little rock, and were broken and routed ; and campaign after campaign led to fresh conquests by the English forces and to new acquisitions of territory, until ultimately, as it is now, the kingdoms of Southern India from east to west had come directly or indirectly under British rule.

The taking and defence of Arcot is one of the most heroic stories in the annals of the British army, illustrative of British bravery and pluck. How history repeats itself ! The gallant defence of Rorke's Drift at Zululand the other day by the shattered remnant of the 24th, was but the repetition on a smaller scale of the equally gallant defence of Arcot by Clive a hundred years ago. With only five hundred English soldiers and sepoy under him, he was besieged by ten thousand Frenchmen and Mohammedans ; and yet with this handful he defied the surging host for fifty days, and then drove them, defeated and demoralised, from the broken-down ramparts, where they left behind them guns and ammunition and hundreds of slain.

After the conquest of the Carnatic, Arcot and Vellore became garrisons for British troops. In the former was stationed a regiment of English cavalry ; and in the fortress of the latter were one regiment of English infantry and three or four regiments of sepoy. Such were the troops stationed at those two places in the year 1806, when there happened a tragic event that filled our whole country then with horror and indignation ; just as we were appalled twenty years ago

by the outbreak of the Mutiny, or as, the other day, by the news of the disasters in Africa. After the death of Tippoo Saib, the tyrant of Mysore, and the overthrow of his dynasty, his family, consisting of several sons and daughters, were removed to the fortress of Vellore. Here they were permitted to enjoy almost perfect freedom, little or no surveillance being kept over them. And as the English government was most liberal in its allowances, those princes were enabled to live very luxuriously, and so attracted to their court many of the adherents and followers of their late father. The consequence was a secret but widespread conspiracy among the Mohammedans.

Very early in the morning of the 10th of July of that year, the soldiers of His Majesty's 69th Regiment were there asleep in their cots, every door and window being wide open, to admit a cooling breeze into the barracks. Suddenly a murderous fire of musketry was poured in upon them. These came from the guns of the British sepoy who had been seduced from their allegiance by the treacherous Mohammedans, and incited by whom, they were now bent on murdering the sleeping English. And unfortunately they succeeded but too well. Fifteen officers and eighty-two privates were killed ; ninety-one others being wounded. Some of the surviving soldiers hid themselves in nooks where the bullets could not reach them, and not a few gained the ramparts, where, led by Sergeant Brodie, they maintained a gallant defence. One man leaped from the fortress, swam the moat, that swarmed with alligators, and fled with breathless haste to tell the dismal news to the cavalry at Arcot. Luckily he met with Colonel Gillespie, the commander of the regiment, which was the 19th Light Dragoons, and who was out for his morning ride. The soldier told his story. The Colonel rode into the barracks, sounded the alarm 'to boot and saddle,' and at the head of the first troop that was ready, dashed on to Vellore. The gallant Colonel reached the gates before his men, and was pulled up the ramparts by a rope formed of the soldiers' belts. Rallying their exhausted strength, the poor survivors of the 69th charged the mutineers, whilst the Colonel drew the bolts of the ponderous gate. Thus the way was opened ; and the dragoons with flashing sabres rushed upon the sepoy and cut them down by hundreds. And to this day the mound in the middle of that fortress tells of the signal revenge that was taken for that dismal treachery. Such is the story of the 'Vellore Mutiny.' It fills a sad page in Anglo-Indian history. I have here given it as told to me by an old Scotchwoman, who was a member of my church at Bangalore, and whose young husband, seventy years ago, was one of that avenging column which rode from Arcot to Vellore on that bright summer morning to exact a retributive punishment for the murder of their fellow-soldiers.

Within the fort of Vellore is a group of Hindu temples, regarded as amongst the finest specimens of that kind of architecture to be found in all India. They are of a prodigious height, and built of stones colossal in their size and elaborately sculptured. The Hindus, who are very fond of dilating upon the antiquity of their country and their religion, love to speak of those temples as being so old that the time of their erection cannot be guessed. They have certainly

reached a good old age; their appearance tells us that; but it tells us something more than that, namely, that those temples have reached the decay of old age. I have groped my way beneath their gloomy darkness; I have wandered through their silent and forsaken vaults; I have trodden their passages and courts, where weeds of a sickening smell rankled, and where filth of every kind was strewn; and I have rejoiced in those undoubted evidences certainly of neglect, but certainly too of a day that will speedily come, brought about by that very neglect, when those temples shall stand as interesting ruins to tell of a darkness that was once upon the land, and a gross darkness that was once upon the people. 'Our day is past—yours is at hand,' said a Hindu priest to a Christian missionary. The poor Brahman was feeling not the mere breath of change, but the tempest of change. Not long ago he could command the riches of the people to uphold his sacred offices and sacred shrines; but now he can scarcely extort sufficient to keep himself and his family from starvation, let alone the keeping up of the temple.

One of my last visits to Vellore was in company with Dr Norman Macleod and Dr Watson. We went thither to visit the Scottish mission and to ordain a native pastor. And what a joyous day it was; one of many such, all laborious yet full of joy, spent with 'the Deputation,' midst the sunshine and warmth of Southern India; Norman—let me with all affection and respect call him such—ever being the light and life of our party. Nothing seemed to be able to weary him out, no travelling, nor speaking, nor 'interviewing,' neither early rising nor sitting late at night—although all the time he was far from being physically well. And certainly nothing could damp the exuberance of his spirits, nor interfere with what I must call his perpetual boyhood's glee. As I said in the first General Assembly after my return home, we in India were very glad to welcome him, and glad to have him with us; but we were glad too when he went away, for we felt that with his incessant labours he was killing us, as alas! he was certainly killing himself. For too, too soon thereafter, the 'death of Norman Macleod' was flashed as dismal tidings to every portion of the British empire, and beyond it too; and everywhere it cast a melancholy gloom over hearts and homes, for everywhere his name was known and honoured and beloved.

### LUXURIOUS BATHING.

In an article on 'Hydropathic Establishments,' which appeared in a former number of this *Journal* (Sept. 7, 1878), occasion was taken to refer to some of the advantages of hydropathy as a promoter of health, and to the increased facilities afforded for the application of its principles by the establishment of such places of public resort as those indicated. Baths, as is well known, form one of the chief hygienic features of these institutions; and, no doubt, when judiciously applied, and under the medical superintendence that is given, the bath in its various forms becomes a valuable remedy in the case of individuals whose jaded energies require restoration, or whose enfeebled health stands in need of some gentle stimulant. But it is not at all times convenient,

or even possible, for the great mass of people, let them be ever so seriously indisposed, to relinquish altogether their professional or business engagements in order to submit themselves to the course of treatment which such establishments impose, and therefore it becomes a matter of much practical importance that people should have some knowledge of how to treat themselves in such a case.

There are few citizens of our larger towns who have not, either in their own dwellings, or by means of public baths, the opportunity of testing for themselves the benefits to be derived from the application of water, either in the ordinary purposes of ablution, or with a view to the removal or prevention of disease. Nor is there perhaps any other question so nearly affecting personal health and comfort on which such erroneous and hap-hazard notions exist, as this of bathing; great part of the prevalent dubiety as to its advantages being traceable not so much to its own defects, as to the irregular, capricious, and frequently mistaken methods by which it has been tested.

It is with pleasure, therefore, that we draw attention to a volume entitled *Luxurious Bathing* (London: Field and Tuer), in which very simple yet valuable directions are given for the use of the bath.

The kind of bath first referred to in the book, is the hot or soap bath. The cold bath is to many persons a painful and trying ordeal; whereas the soap-bath is 'at once a necessity and a luxury, and in order to obtain the greatest number of benefits, including increased health, appetite, vigour, and good spirits, this bath is the most effectual, and moreover the pleasantest and least trying to the weakly or over-sensitive constitution.' It appears also, says the author, 'from the evidence obtained by modern scientific research, that hot water destroys the germinating power of malignant contagious diseases, and that soap chemically poisons it. These germs or spores are carried about by every wind that blows; and when it is borne in mind that, roughly speaking, a million of such germs will lie on a threepenny-piece, the value, as a preventive of contagion, of a thorough daily ablution with soap, may be estimated.' The application of the hot or soap bath is simple; the bather, provided with a piece of soap and a loose washing-glove, and with a basin of hot water before him, vigorously covers himself from head to foot with a thick and abundant lather. This process need not take more than three or four minutes, after which, while the body is thoroughly warm, two or three plunges should be taken into cold water, a couple of rapid dips being sufficient to remove every particle of soap. The head must remain uncovered and receive the full benefit of the cold water, otherwise a violent headache may follow. 'The momentary shock of the cold dip is succeeded by a delightful feeling of vital internal warmth—a delicious triumphant glow.' The nature of the cold bath which follows the hot is of little moment; and instead of a plunge—a shower, sitz, or sponge bath may be used.

But however the cold water be applied, the essential of its application is to obtain that reaction from its shock, without which bathing is injurious instead of beneficial. Much depends upon this reaction. If it be slow, then coldness, shivering,

violent headache, slow pulse, and probable sickness follow. On the other hand, if the reaction be lively, then the heart is actively excited, and the blood propelled with unusual force through the system; the temperature of the body rapidly rises, and a general glow supervenes, accompanied with mixed feelings of increased vitality, buoyancy, and exhilaration, difficult to describe. With the non-robust, the stay in the cold water can hardly be made too short; the principal shock is produced from the first application, and the endeavour ought rather to be to get out as quickly as possible, than to stay in under the mistaken notion of deriving increased benefit.

A milder mode of applying the cold water than the plunge, is the sponge-bath; and a more violent mode is the shower-bath. To obtain the fullest benefit of the sponge-bath, in the most agreeable manner, 'the charged sponge, as the bather steps into the bath, should be lifted and carried quickly to the back of the head, which should be slightly inclined forward, so that the bulk of the water will run down the spine and back; the next spongeful should be almost instantaneously applied, leaning forward, to the top of the head; and the third, standing quite upright, to the chest; the arms and legs may then be separately treated; and if desire be felt for more, the application may be repeated to the back of the head and chest.' The shower-bath requires greater caution in its use. 'To those able to stand it,' says Mr Tuer, 'nothing can be more agreeable and refreshing; but it may be safely questioned whether a shower-bath taken on a cold misty morning, with the water all but freezing, can possibly prove salutary even to the most robust. Nearly freezing water from a shower-bath produces a feeling something akin to what might be imagined to result from a shower of red-hot lead; the shock is tremendous, and the shower, if continued for any length of time, would assuredly cause asphyxia.' If headache follow, or reaction be slow, accompanied by shivering, the shower must be discontinued and a milder bath resorted to.

Immediately on emerging from the bath, dry towels should be vigorously made use of, and if desirable, the flesh-brush. No unnecessary delay should at this point be made, however the bather may dawdle in his subsequent dressing. With respect to tepid baths, the author rather discourages them, and suggests that persons who are in the habit of using these baths, and remain splashing about for a considerable time, would derive greater benefit, and the body be more refreshed, by a shorter immersion in water of a lower temperature. Another point as to which some difference of opinion frequently exists is, whether it is a wise or safe thing for a person who is warm from exercise to plunge into cold water. Mr Tuer is of opinion that it is quite safe, and may be indulged in with impunity even when much heated, provided the plunge be taken the moment the clothes are removed. The danger, he points out, is in standing about on the brink, during which time the body rapidly cools, and cold may be taken. But he adds: 'Although perfectly safe to plunge into cold water, no matter how much the body may be heated, care must be taken to avoid it, if there are feelings of lassitude and exhaustion; these are sure signs of over-fatigue, and a cold bath under such circumstances is not

only weakening, but might prove absolutely dangerous.' When a bath is taken while the bather is heated, he ought afterwards to have a complete change of clothes, so as to prevent any chance of taking cold through putting on clothes rendered damp by previous exercise. We would, however, caution all against the danger of plunging into cold water while the body is in a state of perspiration. Rather wait, before undressing, until the body has had time to cool from such excessive temperature, or let the intending bather first rub himself down till thoroughly dry. In slight colds, the baths may be continued; but in the case of a violent cold, or affection of the throat, they should be discontinued.

In treating of sea-bathing and swimming, Mr Tuer states that salt water is more energetic in its action than fresh, and after a dip in the sea there is not the same liability to take cold from insufficient drying as after a fresh-water bath, the saline particles which adhere to the skin further exciting its action, and producing a healthy and more vigorous glow. It is for the same reason that children may dabble and patter about in the pools by the sea-shore, without any risk of taking cold. In this connection, the author strongly urges the propriety of having boys and girls taught swimming at schools. 'We ought,' he says, 'as islanders, to be swimmers, and it is to be regretted that we are not. Swimmers are of necessity bathers; but bathers are not always, as they should be, swimmers.' It is an accomplishment unquestionably useful; is not difficult to acquire; and when acquired, not readily forgotten.

The volume to which we are indebted for the foregoing hints is a magnificent specimen of typographical and pictorial art. The descriptive portion of the book—that on bathing—is from the pen of Mr Andrew W. Tuer, while the beautiful folio etchings, initials &c., are the work of Mr Sutton Sharpe. The whole production—binding, paper, and printing—is faultless as a piece of book manufacture, and we are in doubt whether the epithet of 'luxurious' in the title is not intended to apply as much to the book itself as to its subject. Besides initials, tail-pieces, &c., there are twelve folio etchings, each of them illustrative of some poetical stanza; many of them representing real scenes; and all of them, as might in the circumstances be supposed, introducing water as a leading feature in the landscapes portrayed. Charming as all these examples of the etcher's art undoubtedly are, there are some of them, more than others, whose subtle beauties are qualified to elicit genuine admiration. One of the most striking of these is that entitled 'Ennerdale Water'—

That sacred lake withdrawn amid the hills.

By what may be said to be a few graphic touches, not one of which is wasted, we have the lake before us, in all its sheen of summer splendour, without a ripple or a shadow, save where a little boat shoots out into the water, the higher hills behind whitened in the sunlight, and the glare of the summer's day only relieved by the darker masses of the lower spurs. Another etching of great power and beauty is 'In the Fens,' illustrating a stanza of Tennyson's 'Brook,' as are also those entitled a 'Study of Water,' and 'Water Lilies.' But it is not our purpose to further dwell on the book as a work of art; in this respect it must be seen to be

fully appreciated. So much for the book and its subject-matter. It is not often that hygiene is so pleasantly set forth as in this volume. It is a work of art, yet not altogether so; for, as our analysis of its teaching may indicate, its pages contain much good sense, wholesome advice, and valuable hints as to the use of the bath—when to use it, how to use it, and when to let it alone. As to the connection between the subject and the illustrations, there does seem to be some little inconsistency; but the author has anticipated the objection, and ‘hopes that the first “shock” caused by the incongruity will be followed by a “reaction” of pleasure and perhaps approval. Anything,’ he adds, ‘which tends to the better health of body and mind must increase the capacity for enjoyment both in nature and art.’ It is to be hoped that Mr Tuer may see fit to issue an edition of the work which may place it within the reach of the masses.

## A CONSPIRATOR IN SPITE OF MYSELF.

## CHAPTER III.

## MYSTERY (CONTINUED).

MUCH earnest but whispered conversation took place during the brief interval that elapsed from the time when the young officers entered the saloon, until a messenger, booted and spurred and covered with dust, as if he had ridden hard, appeared at the door. ‘All is ready, Signores,’ said he in Italian.

‘It is well, Signore,’ replied the aged officer, who—in conjunction with the young man who had boarded *La belle Jeannette* in the Gulf, a few hours earlier, and had persuaded Gustave Pailleur and me to accompany him on shore—appeared to assume the direction of affairs.

Advancing to the sofa, and again offering his arm to the youth who had not yet entirely recovered from his agitation, he led the way forth from the saloon, followed by several of the company; while the *padrone* and I were ordered to march in line in the rear with others, who were like ourselves disguised as common soldiers, whom I now suspected to be officers or other persons of superior position. We descended the long flight of stone or marble steps into an open courtyard, where three carriages awaited our appearance. To one of these carriages the aged officer who was addressed as Signor el Duca conducted the two youths; and when they had entered the vehicle, the young officer who was addressed as Altezza followed after them, and seated himself opposite to them with his back to the horses. The second carriage was occupied by others of the party; and then the *padrone* and I were ordered to take our seats with our backs to the horses in the third carriage. The aged officer and an individual disguised as a common soldier then seated themselves opposite to us in the carriage, and the three vehicles were driven forth from the court-yard.

‘Now, my friends,’ said the old officer, in his imperfect yet still intelligible French, addressing himself to Gustave and me, as soon as the carriages were in motion; ‘mark well what I say. You are Italian soldiers for the time being. You will probably be challenged by the sentries. In such case reply: *Tutta buono!* [All is well!]—nothing more. And’—uttered to me—‘if you say a word

more, or if you attempt to escape or to give alarm, you will do so at the peril of instant death.’

He then became silent; and not another word was spoken until after a drive of perhaps a couple of leagues, we drew near the sea-shore. Here we alighted from the carriage, as did the rest of the party from the vehicles they had occupied. But to our great astonishment, two elegantly attired ladies, who we were positive had not entered the vehicle from the *palazzo*, alighted from the second carriage. These ladies appeared to be weeping bitterly, inasmuch as they did not for a moment remove the handkerchiefs which they held to their eyes, while they kept their veils down, as if to conceal their faces as much as possible. They were, however, courteously treated by the officers; though Gustave and I—a musket with fixed bayonet having been handed to each of us when we quitted the carriage—were sternly ordered to march on each side of them, together with four other men, who if they were not really what they appeared to be, were dressed like common soldiers—as if we were keeping guard over them, while several other persons followed. Still the attention of the aged officer who had accompanied us in the carriage was given entirely to the two youthful subalterns—who, together with the young officer who had boarded the lugger in the Gulf, brought up the rear—to the utter disregard or neglect of the weeping ladies!

Near the spot whereat we alighted from the carriage stood a military guardhouse, which it was necessary to pass within the distance of a few yards, in order to reach the beach. As we were passing this guardhouse, a sentry challenged us, and we answered *Tutta buono!* in accordance with the orders we had received. An officer then came forth from the guardhouse, and—as they passed by—entered into conversation with the officers of our party; but as they spoke Italian, the conversation was unintelligible to Gustave and me. On reaching the beach, we had a full view of the mouth of the Gulf; but we were unable to see *La belle Jeannette*, though she lay at anchor not more than a couple of miles distant, by reason of her being concealed by a projecting point of land, called Point Licosa. A man-of-war’s pinnace, steered by a young Italian naval officer, and manned by six sailors, was lying off the shore, to which it drew nearer as we approached. Again we were hailed from the boat, and again the *padrone* and I and the other men dressed like soldiers responded to the hail: *Tutta buono!* upon which the boat was pulled in until her keel grated on the pebbles. Two sailors leaped overboard, knee-deep into the water, and hauled her up as far as was possible on the beach; and then a plank was laid from her bows to the shore, in order that we might get on board without wetting our feet.

We entered the pinnace, which was a boat of considerable size, to the number of twelve, all told—namely, the aged officer, whom for distinction’s sake I may style M. le Duc; the young officer who had boarded the lugger, who from his being addressed as Altezza, I judged to be of princely rank; the two youthful subalterns; the two ladies; the *padrone* and myself, and four others attired in the garb of soldiers, whom, from their manners and appearance, I suspected to be

of superior rank. When all were seated, the boat was shoved off; and was pulled by the Italian sailors towards the lofty Cape on the northern shore of the Gulf, behind which the Italian corvette lay at anchor. Scarcely, however, were we out of sight of the guardhouse, when, on a signal given by M. le Duc, the Italian naval officer and the six oarsmen were suddenly seized all at the same moment, and ruthlessly hurled overboard! I uttered a cry of alarm, as also did one of the young subalterns; but I was sternly commanded to be silent by M. le Duc; while the Prince, as I may style the younger leader of the party, whispered in the ear of the young subaltern officer, as if to reassure him. Then addressing the *padrone* and me in French, and pointing to two huge buoys—to which large vessels that entered the Gulf were sometimes moored, and between which we were passing—he said: 'Do not fear for the sailors; you see they can swim; and they will cling to yonder buoys until help comes to them.'

The sailors were swimming towards the buoys, and they reached them before we in the pinnace lost sight of them; we were therefore satisfied as to their safety. It was evident that the sailors had quitted the corvette prepared for self-defence, anticipating the probability of an attack from some band of insurgents; for each man carried a ship's pistol stuck in his belt, and I had noticed that there were several cutlasses lying in the stern-sheets of the pinnace. But even if it had been possible for them to use their pistols when seized so suddenly and unexpectedly, the weapons were now rendered harmless by immersion in the water.

The oars were now taken by the *padrone* and me and the four men, attired like ourselves as soldiers; while M. le Duc took upon himself the office of steersman; and the pinnace was now pulled across the Gulf in the opposite direction into the deep shadow caused by the high land. Then we pulled along the land close in-shore until we rounded Point Licosa, and beheld *La belle Jeannette* lying quietly at anchor a short distance ahead, with a lantern hoisted to her mast-head. We now steered direct towards the lugger, and were soon alongside, to the great astonishment and alarm of the crew left on board. It would have been useless for them to have offered resistance; but some minutes elapsed after we had clambered on board before the men could believe that it was really the *padrone* and I who stood on the deck before them in the guise of Italian soldiers. It was yet hardly four o'clock A. M.; for the events I have narrated had passed rapidly, and it was still dark—darker indeed than it had been at midnight, for the moon was on the wane.

'You assured me,' said M. le Duc to the *padrone*, 'that your vessel could be got under weigh in a few moments. Lower the lantern, and get her under weigh immediately.'

'Whither, Monsieur?' asked Gustave, who still trembled with affright.

'Ask no questions, but obey the orders you will receive,' answered the aged officer. 'Do so, and you will have no cause for regret. Hesitate, and the command of the vessel will be taken out of your hands. Let all lights be extinguished.'

There was nothing else for the *padrone* to do but to obey, since he and his crew were powerless amidst so many armed and determined men; and

in a few minutes the lugger's anchor was hoisted, her sails were set, and she was standing out of the Gulf.

M. le Duc, who now assumed the command of the little vessel, ordered her to be steered as close as possible under the high land, that she might be concealed in the deep gloom it cast across the Gulf. The fishing-luggers are generally swift sailers and excellent sea-boats—these qualities being necessary to vessels that are liable to be exposed to storms and tempests at all seasons of the year. We had the breeze on our starboard quarter. It was the vessel's best point of sailing; and in half an hour we had rounded the Cape, and were in sight of the corvette, which lay at anchor about half a mile distant. In order, however, to avert suspicion by boldness, M. le Duc now ordered the *padrone* to steer the lugger in a straight course out to sea. This course brought us almost within hailing distance of the corvette, which, in evident expectation of the return of her pinnace, carried three lanterns at her mast-heads. Her commander, I presume, imagined the lugger to be a harmless fishing-vessel; for though the corvette had her boats lowered, none of them left her side, nor were there any attempts made to bring us to. We had not, however, got beyond range of her guns when three sky-rockets were sent up rapidly one after the other from the guardhouse, as an alarm signal; and a few moments afterwards we heard the report of a gun.

'Monsieur,' said the young officer whom I will style M. le Prince, who was standing by my side, 'that is an alarm from the guardhouse on shore. The seizure of the pinnace is discovered. The corvette will respond to the signal, and will give chase to us or will fire upon us. Are we beyond the range of her guns?'

'I should say that we are, Monsieur,' I replied, speaking to him in French, in which language he had addressed me. 'But whether or not, although her lanterns betray her position to us, those on board cannot discern the lugger through the darkness. If she gives us chase, we shall easily escape from her, unless a chance shot should strike us.'

'That is well, Monsieur,' said he. 'You are a sailor. You will do your best to avoid capture? The poor *padrone* is *tête montée* with affright.'

'The lugger is his property, and the means by which he obtains his livelihood, Monsieur,' I replied. 'He would almost as soon perish himself as lose his vessel.'

I was still speaking, when a tongue of flame darted forth from the side of the corvette; a round-shot struck the water about half a mile to windward of the lugger, and in a few seconds we heard the report of the gun. We were evidently not yet beyond the range of the corvette's fire; but the chances were a hundred to one that we should escape her shot in the darkness, even if she gave chase. The two young subaltern officers had retired to the cabin immediately after coming on board; but everybody else, even to the two females, was upon deck, and in a state of great excitement. But though two or three more shots were fired from the corvette without effect, she did not attempt to get under weigh, as we could perceive by means of the lanterns at her mast-heads, which to all appearance remained stationary.

Meanwhile the *padrone* and his crew were ordered to look out for a large schooner which

they were told would display a green light; and in about twenty minutes such a light was seen gleaming to windward of the lugger. The *padrone* was now directed to rehoist the lantern to the mast-head, and dip it thrice. This order was obeyed; and the green light was immediately dipped and rehoisted, in response to our signal.

'*C'est bien,*' said the young Italian officer to me. 'It is the schooner we were seeking.'

But daylight was now beginning to dawn, and though a light haze rested on the water, all doubt was soon set at rest by the appearance of a three-masted schooner, which, looming large amidst the haze, came bearing down towards us. The outlines of the lofty Cape Palinuro were distinctly visible above the haze to leeward; but nothing could be seen of the corvette, which lay concealed in the deep shadow cast over the water by the high land. The excitement on board the lugger increased. The schooner rapidly neared us; and in a few minutes we were hailed by some person on board of her. The hail was answered; the two vessels rounded to within speaking distance; and a lively conversation, in Italian, ensued between the people of the schooner and the officers on board the fishing-vessel. A few minutes more, and a boat was lowered from the schooner, and pulled alongside the lugger; the two youthful subalterns, who had until now remained below in the cabin, were led upon deck by the elder officer M. le Duc, and assisted into the boat, into which the younger officer Sua Altezza, had previously descended to receive them.

The strong suspicions I had heretofore entertained that the two young subalterns were females, were now confirmed. I had a good view of their features, and of their slender figures. Their fair delicate complexions, and small white hands, upon the fingers of which glittered rings of great value; their bashfulness and timidity; their manner of descending into the boat, and many other traits, together with the great respect and deference with which they were treated by the Italians, betrayed the fact beyond the possibility of doubt, that they were females, and to all appearance ladies of high rank and station; while the pretended sorrowing females—of whose sex I had certainly entertained some doubts, though these doubts had been from time to time discarded, so well did they act the characters they had assumed—were in reality two young military officers, but little past the age of boyhood, who now appeared in their proper apparel; and who, while evidently relieved of a great responsibility, seemed inclined to regard the whole affair as a capital joke.

The *padrone* was then ordered to enter the boat; and it was politely intimated to me by the young officer Sua Altezza, who remained in the boat with the ladies, that he would be happy if I would accompany the *padrone* on board the schooner. This request was seconded by M. le Duc, who remained on board the lugger.

'I cannot possibly remain on board that schooner, Monsieur,' said I to the young officer in the boat.

'Assuredly not, Monsieur,' he replied. 'It is not required. The boat will return to the lugger in a few minutes with you and the *padrone*.'

I no longer hesitated; for I had an eager desire to see the affair to the end. I entered the boat

therefore, which immediately put off to the schooner. As we left the side of the lugger, the Italians on board, who lined the low bulwark, lifted their hats to the disguised ladies and wished them happiness. Some among them appeared to be deeply affected by the parting, particularly the aged officer, who raised his eyes to heaven, as if imploring a blessing upon them. The disguised ladies themselves wept bitterly; the younger and handsomer of the two seeming as if she were scarcely able to support herself, while the young officer by her side strove to console and encourage her.

### A FEW MORE WORDS ABOUT THE AUDIPHONE.

THOUGH on several occasions we have noticed this useful instrument, and have suggested a variety of kinds, we have been unable to publish any practical results accruing from its use. We are therefore glad to be able to offer to those of our readers who are afflicted with deafness, a few words from one who, having tested the instrument invented by Mr Rhodes, is qualified to speak of its efficacy. The importance of the subject is our apology for recurring to it. Our correspondent says:

I am not absolutely devoid of the sense of hearing, but I am deaf enough to make most annoying mistakes sometimes when engaged in conversation with any one; and when I happen to be in a room where several people are conversing together, I require to exert the utmost attention—sometimes even to a painful degree—in order to make out what they happen to be talking about, and frequently fail to extract sense or meaning out of the apparently confused buzz around me. My hearing being in this unsatisfactory state, I was much interested in a notice of the Audiphone which appeared in your *Journal* a few weeks ago; but as it was an American invention, I must say that I felt very much inclined to accept with caution accounts which I had gathered of it from other sources. I thought they were at least exaggerated, like many other travelled stories. But having discovered that the patentee of the invention had established an agency here in Glasgow, I resolved to satisfy my curiosity about it. The results of my inquiries I now write, in the hope that they may prove interesting to many of my fellow-sufferers, who may not be able to investigate the matter themselves. I must first, however, state that it is only in cases where the auditory nerve has not been altogether destroyed or very seriously injured, that the instrument can be of any service; just as a pair of spectacles would be useless if the optic nerve were gone.

The audiphone, in my opinion, cannot strictly speaking be called a discovery; it is rather an ingenious and highly useful application of the well-known fact in acoustics, that the auditory nerve receives impressions when conveyed to it through the medium of the teeth, almost as well as if they reached it through the ears in the natural manner. Almost everybody has at some time or other noticed deaf people, when wishing to ascer-

tain whether their watch was going or not, apply it to their teeth instead of to their ear; and we all know that the little instrument called a tuning-fork is almost always applied to the teeth when we wish to hear its sound. Some people—myself among the rest—have even advanced so far in the science of acoustics as to invert their hat, directing the aperture towards the place whence the sound is expected, and placing the edge of the top against the teeth, and have thus been enabled to hear a very great deal more distinctly than they could without any such appliance. It is also very generally known that Beethoven the great composer was deaf; but by placing one end of a metallic rod between his teeth, and resting the other on the sounding-board of his piano, he was enabled to hear perfectly. Many other instances might be adduced of the capability of hearing through the medium of the teeth, and of various plans which have been tried to utilise the faculty; but to Mr R. S. Rhodes—of the publishing firm of Rhodes and M'Lure of Chicago—is due the credit of having discovered a convenient and practical method of rendering this mode of hearing serviceable, and thus conferring an unspeakable boon on the great number of his fellow-men who are labouring under the very great discomforts and deprivations which result from the total or partial want of the sense of hearing.

On my arrival at the office of the agents of the patentees—Messrs Eglin and Gardner, 70 York Street, Glasgow\*—I stated the object of my visit to them; and very soon had all my doubts as to the beneficial effects of the instrument in my own case completely removed. Mr Eglin handed me an audiphone, and told me how to use it. He then took a book, and began to read from it in a clear distinct voice close to me, before I applied the instrument to my teeth. He then receded from me till I could only hear his voice very indistinctly. I then placed the upper edge of the audiphone against my teeth; and by its aid I could hear quite as well as ever I could in my life. I noticed also that a confused chaos of noises, which kept buzzing in my ears, was apparently resolved into its component parts; and I was enabled to hear clearly all that was going on both in the office and in the street outside. Although I was quite satisfied with the effects of the instrument on my own powers of hearing, still I longed to see it tried on others. As the firm are agents for a number of other American patents and inventions, I set to work to inspect a few of the ingenious and useful novelties with which the premises abounded; and whilst I was doing so, a lady entered, bent on ascertaining the merits of the new invention. She was very deaf—indeed so much so that she could hardly hear any one although they shouted as loud as they could close to her ear; but by means of the audiphone she could hear any one talking in an ordinary conversational tone of voice, or even in a loudish whisper. I was also told by Mr Eglin that an old gentleman upwards of eighty, and who had a complete set of false teeth both in the upper and under jaw, called at the office a few days ago; and was so

well pleased with the efficacy of this help to hearing, that he purchased one, as a proof of his belief in its powers. I am afraid, however, that it would not succeed with decayed or carious teeth.

A few days after my visit to Messrs Eglin and Gardner's office, whilst looking through the Glasgow Agricultural Society's show, I found that those gentlemen had secured a stance for the exhibition of their various wares—the audiphone among the rest; and as a good many people were experimenting with that instrument, I had a good opportunity of observing its effects on a variety of persons. One young gentleman who tried it was entirely and completely deaf, but had not lost his hearing before he had learned to speak. He remarked by means of the finger-alphabet that he had only a very vague recollection of what sound was like, and how it affected him, as he was so deaf as not to be able to hear his own voice, which indeed only consisted of a series of weird inarticulate noises; having during his prolonged deafness entirely lost the power of modulating the performances of his vocal organs, although these remained in every respect perfect. After a few trials of the ordinary instrument, the gentleman tried the effect of a double one; and by means of it he was enabled to hear his own voice, the hideous sound of which dismayed him considerably at first; but joy at the recovery of his lost faculty soon overpowered every other feeling, and he confidently expressed the conviction that by the aid of the audiphone he would be able both to hear and to speak fluently. It was now only a question of time with him. After he had satisfied himself, many others tried experiments with the instrument; some of whom considered it to be too powerful, while others were of the opposite opinion; but all agreed in pronouncing it the best aid to hearing ever offered to the public.

I am by no means convinced that it has as yet reached that state of efficiency and perfection which it will attain in the future, now that the principle of its construction has been made known to the world; and I am told that Mr Rhodes is still endeavouring to improve it. I have no doubt of the capability of the audiphone to transmit sound by adjusting the thickness of the disc to the amount of hearing-power possessed by different people, just as the lenses of spectacles are adjusted to different sights. Some other material may yet be adopted from which to manufacture the instrument; or some other form may be discovered better adapted to collect and transmit sound than the one at present in use; or it may perchance be modified in many various ways, as it most likely will be before long, should the minds of skilled experimentalists in the science of acoustics be thus directed.

By way of experimenting, Mr Rhodes tried many kinds of metal and wood, all of which he found to be objectionable in a greater or less degree; till at last his attention was attracted to the diaphragm of a telephone, and from it he caught a suggestion which resulted in his audiphone. The following description we again quote from the *Chicago Tribune* (September 4, 1879): 'It is in shape like a square Japanese fan, and is made of a composition the major portion of which is vulcanite. At the back of this

\* Our correspondent is not aware of any other agency in Great Britain, though others are to be appointed. A descriptive pamphlet, with illustrations and prices, may be had from the Glasgow agents.—ED.

thing there is a cord, stretching from the upper edge to the handle. By means of this cord the instrument is tuned like a violin, and the tension is regulated according to the distance the sound has to travel. The upper edge of this audiphone is placed against the two upper teeth; and the vibrations received on its surface are conveyed by the medium of the teeth and the nerves of the teeth to the acoustic nerves, and produce upon them an action similar to the action produced by sound upon the drum of the ear.'

To enable a deaf-mute to learn to speak and to hear his own voice, a *double* audiphone is preferable, or rather, necessary. This consists of two discs, like the one described above, fitted into the same base, about a quarter of an inch apart, and separated at the upper edges the same distance, so that each disc may act independently of the other. This arrangement is best adapted for the use of deaf-mutes, because not only is the sound produced of greater volume and more distinct, but also the voice of the mute when spoken between the discs is much intensified, and therefore the more distinctly heard by himself.

The difficulties attendant on the acquisition of speech even after the primary one—want of hearing—has been removed, must needs be so obvious to all, that I feel it would be a work of supererogation for me to enter on that subject. Suffice it that I have endeavoured to give a true and faithful narrative about my inquiries into the utility of the audiphone; and from them I have come to the definite conclusion that never yet has an auxiliary to hearing, capable of such universal utility, been introduced to the world at large. I have no doubt as to its being improved in the future; but as to how or when such improvement will take place, I leave to more philosophic minds than mine to puzzle out.

[From other sources of information we learn that the inventor of the audiphone has been himself deaf for nearly twenty years. After using ear-trumpets and other appliances of this nature, and not receiving the requisite assistance from them, he began to make experiments for himself. He was led to do so by happening to hold a watch one day between his teeth, and noticing that he could distinctly hear its ticking, though when he held it to his ear no sound was audible. This led him to think that possibly he might be able to invent some device by which the sounds of the human voice could be transmitted to the auditory nerve, through the medium of the nerve-tube, just as the ticking of the watch had been. He forthwith began his experiments, which he extended over many years, testing wood, metal, and almost every possible material, and in all varieties of shape and construction; and at length hit upon a peculiar composition of hard india-rubber, which in a thin sheet enabled him to hear articulate sounds distinctly, and free from the sonorousness present in all the other materials which he had tried, and which rendered them useless so far as intelligible conversation was concerned. He then proceeded further to experiment as to the best form for such an appliance, and after considerable labour and anxiety discovered that articulate intelligible sounds could only be conveyed to the auditory nerve if the surface of such an instrument was convex; also, that it was necessary that such convexity should be regulated according to the exi-

gencies or peculiarities of each particular form of deafness, as shewn in individual cases. In effect, he found that sound, to be articulate and distinctly recognisable, required that the instrument should be capable of being instantly focused, as it were, to different degrees of convexity, much in the same way as an opera-glass or telescope may be arranged to suit different sights or distances.

The invention has thus far been remarkably successful. About ninety per cent., we are told, of those who test it are benefited in a surprising degree; in the case of the other ten per cent., the non-success is attributable to the auditory nerve being either quite destroyed, or so injured that no artificial aid is available to enable the patient to hear.—ED.]

## AT THE TROIS ETOILES.

### IN TWO CHAPTERS.—CHAPTER I.

WHERE am I to go? That is the question. The doctor has ordered me bracing air and rest; and I cannot quite make up my mind where to go in search of them. I have been shut up for some time in a sick-room, nursing an old aunt who is now dead; and the confinement and broken rest, which I did not feel at the time, are beginning to tell upon me. I am 'low' and nervous—a very unusual state of things with me, and my kind and cheery doctor has peremptorily desired me to 'fly to other climes.' 'I don't much care where you go,' he says, 'provided the climate is bracing, and that you can be a great deal in the open air. Go to bed early, sleep and eat and drink well, and in a fortnight you will be looking a different woman;' and he departs, leaving me to solve the knotty point as to the 'where' by myself.

'Bracing air and rest,' I repeat mentally, as I watch his figure disappearing down the garden walk. 'Where shall I find the combination?' And I run over in my mind the names of different places where people usually go to seek health; but I reject them all. One is too gay; another, too cold; another, too relaxing; others, too ugly, too far, or too near. But Memory has started on its travels, and in another moment has hung out a picture before me, at sight of which I exclaim: 'The very place! I will go to the *Trois Etoiles* at St Pourçain. I will rest; I will drink in deliciously bracing air, and I will sketch.'

So I ring the bell, order my box to be packed; and, in three days' time, find myself in the *coupé* of the lumbering diligence, toiling up the steep picturesque street of the little Norman village, which I have only seen once before, but which I am destined now to know intimately. A year ago I had been on a sketching tour through Normandy with a friend—I am an artist in a dilettante amateurish sort of way—and we had passed through this village, and been much struck by its quaint beauty; but we were then hurrying home, and had only time for a peep, promising ourselves that we would come again at some future time, and make a longer stay at the little inn where we

had found ourselves so comfortable during our brief sojourn.

I am the only passenger for St Pourçain ; so the *conducteur* deposits me and my box at the *Trois Etoiles*, and with a smile and a 'Bonjour et bonne santé, Madame,' proceeds on his journey ; while I turn to the pleasant-looking hostess who comes forward to meet me.

'Ah, how Madame must be tired,' she exclaims. 'That diligence is of a slowness—ah ! ciel, of a slowness ! And Madame has been ill, and demands repose.' [I had said so in writing to engage rooms.] 'No. 4 is quite ready for Madame—the chamber she occupied when she and her so charming friend were here, there is now a year. And what of goodness on the part of Madame to remember herself of the *Trois Etoiles*, and to come there to seek for rest and fresh air. Everything shall be done to insure Madame's comfort. Will Madame give herself the pain to mount to No. 4 ?'

Madame does give herself the pain, and follows the voluble little woman, talking all the way, into a charming room, fresh and bright as the hostess herself. The vine-wreathed lattice stands open, and on the table is a bouquet of freshly gathered flowers. The bed-furniture is white as the driven snow ; and the bright blue paper on the walls, and the gay clock and vases of flowers on the mantel-piece, are as refreshing to my eyes as the comfortable arm-chair into which I sink is to my tired body.

'Madame is quite exhausted,' says Madame Petit. 'She must descend no more to-night. What will Madame take before she retires ? Perhaps *un thé* would refresh Madame, and there is a *galantine* of the most delicious, or the wing of a chicken.'

I decline the tea, much to Madame Petit's surprise ; I am an old traveller, and know what straw-coloured infusion of scented hay would be presented to me. But I express my desire to test the excellence of the *galantine*, accompanied by coffee. And soon the table is spread with a snowy cloth, and I am making a meal with much more appetite than I could have dreamt of three days ago. Madame has not over-praised the *galantine*—made by her own fair hands ; and the coffee is—French coffee. The table is drawn into the window, whence I can look into the sunny little court-yard, with its gay flowers, its vine-wreathed windows, the lime-tree, under which stands a comfortable seat, and its pump, the handle of which seems never still for a moment. The clatter of Babette's wooden shoes makes a pleasant click-clack as she goes to and fro over the stones between the kitchen and the pump. The sinking sun sends a level ray through the open door, and I see the copper stewpans shining and glinting ruddily on the wall. A carved wooden beam runs across it, dark with age ; a tall oaken press stands in a corner ; and the red brick floor makes a bit of warm colour where it is touched by the sun. It is a pretty picture, and Babette's quaint costume and high Normandy cap add to the charm.

'I remember Babette when I was here before,' I remark.

'Oh ! certainly,' says Madame Petit, smiling. 'Babette was here last year, and no doubt will remain for many more, until she finds a husband, which Madame will comprehend is not so easy for a poor girl. Nothing changes much in St Pourçain.'

'Ah !' I say without thinking, 'I suppose there are not so many marriageable young men since the war ; but you must have seen many changes during that terrible time.'

I regret the words almost as soon as I have uttered them, for the little woman's face loses its brightness, her eyes fill with tears, and she glances down at her black dress. 'Ah ! indeed ; yes, Madame,' she says with a sigh. 'I had three sons, and I gave two to France. And I was not alone. Many a mother in St Pourçain sent her boys, full of hope and longing for glory, to fight the Prussians. But alas, alas ! but few of them returned !'

I take her hand, and press it in sympathy. 'Your two boys were in the army then ?' I ask.

'No, Madame,' she replies sadly ; 'they were drawn in the second general conscription, and no substitutes were permitted to be purchased. Besides,' she says proudly, though her tears are now falling fast, 'my Jean and my Henri were no cowards, and they were wild to get at those Prussians.'

'But you have one left ?' I say.

'Yes, Madame,' she replies, brightening. 'And a good son he is, my Oscar ; and the good God be praised ! he can never be drawn for the conscription, for he is the only son of his mother, and she is a widow. It is a great mercy, for there will be a drawing for our *commune* in two or three weeks.' As she speaks, a fine young fellow enters the court-yard, with the blue eyes and light curly hair so often seen among the Norman peasantry.—'Ah ! there he is,' she exclaims, her vivacity returning as if by magic. 'I must go and give him his supper, if Madame will excuse.'

Left to myself, I soon seek my couch ; and after the fatigue of my journey, sleep more soundly than I have done for many a night.

The next morning, while I am dressing I hear the sound of the pump, and gay laughter in a girlish voice, accompanied by a man's deeper tones. I look out, and see a pretty picture. A young girl—she might have stepped out of one of Greuze's canvases, so fair, so fresh, so innocent is her face—is holding some salad with both hands under the pump, her sleeves tucked up, and shewing the dimples in the soft round elbows ; while Madame's son is pumping as hard as he can, and gazing with very evident admiration on the damsel beside him.

'O Oscar, how thou art awkward !' she says, with a coquettish glance from under her dark eyelashes, as a harder swing of his shoulder sends a stream of bright water right over the rounded arms. 'Thou hast wetted all my sleeves, and made me so untidy.'

He stoops forward and whispers something in her ear which I do not catch, but which makes her smile and blush.

'Chut, chut ! my children,' says Madame from the kitchen-door. 'The English lady sleeps still, and must not be disturbed ; she is not strong.'

I hardly recognise myself under this description, I feel so much revived by my good night's rest ;

and I descend, and confute Madame's first statement by appearing wide awake before her. She welcomes me with effusion, and is so pleased to find me less tired, so anxious to know whether I am quite comfortable, that I feel as if I were quite one of the family, and decide, in answer to Madame's questions, that I will take my meals in the *salle à manger* with the rest of her guests, instead of in sulky Britannic majesty in my own room.

Madame's guests are not many. An occasional *commis-voyageur*; now and again an artist, or an English tourist who has forsaken the beaten track, and who may linger here for a day or two; but that is all. At present, she has no one staying in the house but myself; but the *curé* always comes to dinner, a mild benevolent old gentleman, who continually presents me with *bou-bons*, in spite of my being a heretic; and an old soldier—who lives on his tiny pension in this quiet corner of the world—drops in on us occasionally, when he can afford himself a better dinner than his usual bread and Gruyère and fruit. A primitive life enough, but I thoroughly enjoy it.

'Who is that pretty girl?' I ask my hostess in the course of the morning.

'Ah!' says she, with a pleased smile, 'that is Marthe. She is the betrothed of my son, who loves her, dear Madame, that it is a pleasure to see. She is an orphan, the daughter of my dear husband's brother-in-law, by his first wife; so that there is no relationship, Madame sees. She has lived with me all her life, since she was a little one. She has a nice little dot; and when they are married, I will give over the *Trois Etoiles* to my children, and nurse the babies in the chimney corner.'

'And does she love him?' I inquire innocently.

'That goes without saying,' says Madame in a slightly offended tone—could any one help loving her Oscar?—'but I have never asked. My father and mother never inquired whether I loved M. Petit. He seemed to them to be a proper *parti* for me, and that was enough. For the rest,' she continues gravely, 'young girls ought not to allow themselves to have any thoughts about love until after they are married.'

I smile, but answer not, knowing that this is a subject it is useless to discuss with any Frenchwoman.

A few days afterwards I am sitting in the courtyard, making a little sketch—a bit of old wall, a pump, a few pots and pans seen through an open doorway—a nothing in fact, but somehow it looks pretty. Marthe is sitting beside me knitting (or rather pretending to knit; for she is watching with the deepest interest every stroke of my brush, and exclaiming vehemently as any familiar object is added to the little picture), when a shadow falls through the gateway, and is followed by a young man covered with dust and wearing a knapsack. He is English—that I see at a glance; and something in the Bohemianism of his dress, and the portfolio which he carries under his arm, tells me that he is a member of the fraternity of the brush. Madame comes forward in her pleasant *empressee* manner, and in reply to his inquiry whether he can have a room, escorts him up-stairs, and, probably, looks after him like a mother.

Presently he comes down, having got rid of the dust of his walk, and seats himself at a table in

my vicinity, where he has a meal of some sort served to him. I see him stealing an occasional admiring glance at Marthe from under his eyelashes, so I tell the child to go in and see if she cannot help Madame. 'It will not do to have the little thing's head turned by any wandering artist,' I say to myself severely, as I continue my sketch. I have not made many more strokes, when I hear a voice behind me saying in French: 'Excuse me, Madame—you have dropped your shawl; and that garment, which has slipped from my shoulders, is gently replaced on them.'

I look up, and laugh. 'I am English,' I say, 'as I can see you are, in spite of your good French.'

I am no longer young, indeed I am of a 'certain age,' which Lord Byron says means 'certainly aged;' but I am still susceptible to good looks in a young man; and the face which looks into mine is so *very* good-looking, that I am afraid I give a gracious and encouraging smile as if I should say: 'Pray, go on talking.' He evidently so interprets my facial expression; for he comes round and seats himself on the bench beside me, and begins to comment on my sketch, praising it where it deserves, and making two or three criticisms with so much acuteness and discrimination, that I feel certain he is a painter of no mean order of merit. From my sketch the talk wanders to art generally, then to artists. We discover that we have many mutual friends, and at length he tells me his name is Stirling. I remember at once having seen a little picture of his at one of the winter exhibitions in London, and having been very much struck by its talent; and I say so.

'Ah,' he says, 'I hope I may get something into the Academy next year. I am painting a picture for it; but I have no interest, and I am poor. I sold that little picture you liked for eighty pounds, and I have been spending that in seeing all the great art galleries of Europe. It is nearly exhausted now,' he concludes, laughing.

By the time Marthe comes back to tell me that coffee is ready, we seem to be quite old friends. 'Who is that lovely little thing?' he asks. 'She is a perfect Greuze. That is just the head I want for my picture. I must sketch her.'

'Must you?' I say dryly. 'I don't think her aunt will allow it.'

'But you will ask her for me, won't you?' he pleads. 'You don't know what a help it will be for me. See! I will shew you the sketch for my picture, and you can judge;' and he fetches his portfolio and, selecting a drawing from it, places it before me. The moment I see it I am conquered—I go over to the enemy without a struggle. It is full of genius; and I see that Marthe's is just the head he wants for one of the principal figures.

So the following morning he makes his petition to Madame, warmly seconded by me. To my surprise, she consents at once. It does not seem to enter her head that there can be any possible danger to Marthe in being painted by a good-looking Englishman. Is she not a well-brought-up young person? And is she not engaged to Oscar?

So young Stirling sets up his easel among the flowers in the sunny courtyard, and begins to paint Marthe's Greuze-like head against a background of vine-leaves. I generally come and sit by with my book or work and play propriety;

but in spite of this, I can see that Oscar does not like the arrangement; in fact I hear him remonstrating with his mother about it. She is generally a slave to all his caprices; but Stirling has bought her over entirely by a promise of a copy of the picture he is painting of the girl, to hang in her *salon*.

'Nonsense, my son,' she says, in answer to his objections. 'Where is the harm? I am in and out of the court-yard all the time; and Madame is generally there with her work.'

'Yes,' Oscar says with a dark look in his eyes; 'but he admires her. I know he does, by the way he looks at her.'

'*Ciel!*' cries Madame; 'only listen to the child? Do you suppose he would want to paint her if he did *not* admire her, great baby?'

But Oscar looks unconvinced as he walks away, and I see a pained expression on his face as he looks across to where Marthe is laughing gaily at something the painter has just said to her. As he so looks, Stirling goes over to Marthe and, taking her chin in his hand, turns her head into the right position, from which it has slipped—a natural action enough, as every artist knows. But Oscar does *not* know; and I think it is only my presence which prevents his giving more significant expression to his feelings than the muttered *Sac-r-r-é*, with which he swings through the arch and down the village street.

#### FRESH DISCOVERIES OF COAL IN STAFFORDSHIRE.

VERY frequent have been the predictions that the coal-fields of these islands would soon become exhausted. Considering the present enormously increased consumption for locomotive and stationary steam-engines, for the manufacture of gas, for the household requirements of an ever-increasing population, &c., the exhaustion of our coal-fields seemed by no means an impossibility. More particularly have these apprehensions been extended to the South Staffordshire coal-field, which, in the immediate vicinities of Wolverhampton, Bilston, and Tipton, has appeared to be either worked or 'drowned' out.

We have now, however, most reassuring intelligence from this supposed used-up coal-district. Some five or six years ago, coal was found, although at considerable depth, at Sandwell Park, about three miles from Birmingham, and the same distance from Walsall. Encouraged by this discovery, and making a careful survey of the country, geologists and practical mining surveyors came to the conclusion that coal, even the celebrated thick, or ten-yard seam, existed in abundance under a large tract of land in the neighbourhood of Great Barr, and more particularly under what is locally termed the Hamstead Estate, some three and a half miles from Birmingham.

In Reports dated so far back as February 1875, Mr E. Smallman and Mr David Peacock gave their opinion that the thick coal would be found here at a depth probably of five hundred and fifty yards; and Mr T. Checkley that he did not expect the depth would exceed six hundred yards. Five years have elapsed since the opinions of these eminent local mining engineers were written; and it must have been no small gratification to

these gentlemen and their friends to learn that on the 16th of April last, the borers struck the thick coal at a distance of six hundred and fifteen yards. The thick seam has since been proved; the net thickness of coal being found to be twenty-two feet three inches, and possessing all the good qualities of the famous ten-yard seams, with partings of one foot nine inches. Brooch coal, three feet thick, was found forty-one yards above the thicker deposit; and under this last, another seam two feet six inches thick has been found. As at present determined, the position of the new coal-field is about a mile to the east of the 'fault'—where the Silurian rocks are upheaved—which was supposed to form the eastern boundary of the South Staffordshire coal-measures, and is underneath the Permian rocks, with an eastwardly dip of one in sixteen. Between the two veins of coal, the strata are hard and strong, and will form a good roof for working the thicker deposit.

Some idea of the added wealth of fuel may be formed from the assertion of one of Her Majesty's Inspectors of Mines, who has given it as his opinion that practically the recent discoveries double the extent of the South Staffordshire coal-fields. So great an addition to our carbonaceous supplies is an event of national importance, and one which will have a material influence upon the 'toyshop of Europe' (Birmingham) as insuring for generations to come a cheap and abundant supply of that fuel which is the staff of life to its numerous industries.

#### A SKETCH.

THERE is a land—a lonely place—  
No tree or flower is there to grace  
Its flat and bare and parched face;  
And evermore  
The dark'ning shadows briskly chase  
Each other o'er.

The glist'ning streams that were, are not,  
Their moist'ning tendency forgot,  
And all around is almost rot  
For lack of rain  
To make that dry and hardened spot  
So fresh again.

The burning sun lays bare the heath,  
And though no trees a shade bequeath,  
A hidden stream runs clear beneath  
That hard dry crust—  
And some day bursting from its sheath,  
Will lay the dust.

That gentle streamlet running clear—  
Unseen, will run until 'tis near  
Another, richer, deeper sphere,  
And mingling there,  
O'erflow the barren place and scar,  
And make it fair.

A heart though young and oftentimes gay,  
For lack of Love, may fade away;  
Its own pure tide is left to stray,  
Then nearly gone,  
May meet a kindred heart one day,  
And join in one.

## RURAL CRICKET.

BY 'SAXON.'

THE game of Cricket is such a thoroughly British pastime, that many people will be disposed to view with regret its apparent decline in popular favour in the small towns and villages of England. The reasons for this decline of what may well be called Rural Cricket are not hard to find. Not so very many years ago, every small town, and almost every village, could boast of its Cricket Club. The game was supported by rich and poor, by old and young; and in the matches that took place between neighbouring and rival Clubs, nothing but hearty good feeling was manifested. The spirit of rivalry extended only to the actual play; and the contending parties were both during and after the game, as good friends as ever; a hollow or a hard-earned victory only serving to cement old-standing friendships, and to incite the players on both sides to further exertions, with a view to alter the result of a match on a future occasion.

By degrees, however, a change came over the scene. Clubs once in a flourishing condition both as regards funds and skill, and under efficient management, gradually fell off. The officers ceased to take as lively an interest in their duties as of yore, and in consequence the Club declined in prosperity and efficiency. By degrees the apathy of the officers was communicated to the more active members—active with bat and ball, I mean, for a good officer need not necessarily be a good player—and one by one the playing part of the community dropped off. Other and equally attractive amusements, which, moreover, had the charm of novelty to recommend them, cropped up. Bicycle, Archery, and Lawn Tennis Clubs were formed. Boating-parties and Picnics usurped the holidays once devoted to Cricket. The martial ardour latent in every British breast took the form of an increasing interest in the formation of Volunteer Corps; and so the cricket-ground became deserted, the lustre of the once famous Club was

dimmed; and in a short time the Club itself, after a feeble struggle for existence, prolonged only by the exertions of one or two veterans, ceased to exist. This sketch is not by any means imaginary. Such a state of affairs has come under my own immediate notice on more than one occasion; and in my own locality only, I could point to half-a-dozen or even more Clubs as examples of what I have attempted to describe.

It must not be supposed, however, that the causes I have already enumerated are the only ones which have operated in effecting the decline of Rural Cricket. Internal mismanagement, it is to be feared, has in many instances brought about the unfortunate result. Time was when matches between Clubs were carried out with scrupulous fairness. By degrees, however, Captains and Secretaries, conscious of the inferiority of the skill of their legitimate members, began the pernicious practice of borrowing men from other Clubs. Members claimed the privilege of securing a place in the Eleven for a stranger friend. A young man spending his college vacation in the country, and bringing with him a cricketing reputation for skill with bat or ball, was greedily run after by prowling Secretaries, and so the matches lost local interest. It was not the Club that maintained its efficiency by steady practice and the due encouragement of the rising generation, that won the most matches; but that more fortunate one which had a popular Secretary with a wide circle of cricketing friends more or less remote from headquarters. Young members found the places in the Eleven that were theirs by right of membership and attendance at Club practices, usurped by peripatetic strangers; and no wonder that they ceased to take the same interest as formerly in the welfare of their Club. Matches were no longer played, by town against town, village against village, or even Club against Club; but on each side strangers, at times under fictitious names, or even second or third rate professionals, were smuggled in, and engaged.

The successful management of a country Club is not an easy matter, so many contingent circum-

stances having to be considered; and as the cricket season is now on, a few practical hints on the formation and carrying on of a Club may be both interesting and useful to those who have at heart one of the most beneficial and at the same time healthful institutions that can be organised in any locality. Cricket, like curling, is a game in which all classes can very properly be brought together; and for this reason alone, apart from many other considerations which naturally suggest themselves, it might be very properly urged that the encouragement of the game is for prudential motives incumbent on those who are placed in a more important, and consequently more responsible position than their less fortunate though perhaps no less deserving neighbours.

The preliminaries connected with the organisation of a country Cricket Club are so much dependent on circumstances, that no hard-and-fast rules can be laid down. We will presume that a suitable ground has been secured, a Committee formed, the amount of the subscription fixed, a title chosen, and a few—very few are absolutely necessary—rules made for the management of the Club's affairs. If the services of a good professional can be secured, matters will be much simplified; but this luxury can only be attained by Clubs which have very considerable funds at their disposal, and to such Clubs the hints I can give will appear perhaps somewhat presumptuous. It is, however, to less pretentious, though no less enthusiastic communities that these hints may be of service. Two good officers—a Captain and a Secretary—are indispensable for the satisfactory working of even a small Club; and these officials should work together in matters connected with the well-doing of their charge. While the Secretary need not be a hero with bat or ball, it will be better that the Captain should be one of the best, if not the best player in the Club. His suggestions will have far more weight if they come from one who not only knows how everything should be done, but who is able personally and practically to shew his subordinates, if occasion requires. It is with regard to the management of the practice days that most Clubs come to grief. The practice, for want of proper direction, is no practice at all in the real sense of the word; and here it is that the Captain will have an opportunity of displaying his fitness for the post to which he has been elected.

We will suppose that under the rules of the Club, certain days—three in each week is the usual number—are fixed for practice. In most if not in all country Clubs, the practice will take place in the evening, for the members will principally be engaged at business during the day. The three practice-evenings can profitably be disposed of as follows: one evening for net-practice, one for a sort of field-day, one for a pick-up-side.

Net-practice is undoubtedly good if it is carried on properly; but in how many instances is this done? All the balls the Club possesses are flying

about in every direction; bowlers fire away until they are tired; batsmen slog until their arms ache; copper-seeking urchins run hither and thither over the ground, fighting and squabbling with each other for the ball. Surely this is not 'practice'; yet in a way it does a certain amount of good. It is capital exercise, and is enjoyed by many cricketers. Let one evening be set apart for this. If the Captain is in the way, he can now and then give a word of advice, and above all he can see that each member has his proper share of batting.

Next on the list comes the important part of the practice—namely, the 'field day.' This should be fixed for the evening that is most convenient to the majority of the playing members of the Club. In fact the day should be settled by vote at a general meeting at the beginning of the season, and a fine levied on those who are absent, except when prevented by illness or by business duties from attending. If as many as fifteen members are available, it will be all the better, for with two batsmen and two umpires, there will be still eleven in the field. Umpiring may be voted rather slow work, but nothing else so well teaches the laws of the game, and each man can take his turn. The Captain, with the Secretary as his lieutenant, should take the command of affairs. The positions of the men in the field should be very carefully allotted, due consideration being paid to the physical qualifications of each particular man for the place in the field chosen for him, and also with reference to the place he will have to fill when matches are played. A scorer should be in attendance, and a careful register of the runs each man makes should be kept. The length of innings alloted to each pair of batsmen will depend of course on the number engaged in the game, and the time available for the practice. As a rule, ten minutes will be found convenient as well as profitable. The scorer can keep time, and with the field properly placed, the two umpires on the *ground*, and the two regular bowlers to start with, the game can be carried on with as much spirit as if it were a real match. If a man loses his wicket before his time is up, he goes on and completes his ten minutes, the loss of the wicket being marked against him on the scoring sheet. The four bowlers take their turn, and as each pair of batsmen complete their time, they take their places in the field, and allow others to wield the willow.

An analysis of the bowling should be kept, as well as the runs scored by each individual, and at the end of the season, if the funds of the Club will allow it, prizes should be given for the best average of runs, the best bowling analysis, and to the fielders who secure the greatest number of catches. Keeping these scores correctly may be looked upon as a toil rather than a pleasure, but it will add much to the zest put into the game if all these matters of detail can be attended to. A practice such as this once a week will surely be productive of great good to any Eleven; and so certain do I feel that this is the case, that I earnestly recommend my cricketing readers to give the plan a fair trial. The trouble involved in the undertaking will be amply compensated by extra smartness in the field, careful batting, steady bowling, and as a natural consequence, a greater proportion of matches won during the season.

Only, the plan to be of any real service must be persevered with; not merely tried once or twice as an experiment, and then dropped.

Having thus disposed of two out of the three practice-evenings, the third still remains to be dealt with. This last evening, provided the other two have been managed in the way I suggest, can with most profit be devoted to what is called a 'pick-up-side.' As many members as can be secured should be on the ground; two of pretty equal strength should choose sides, and a good game will be the result. The more equally the players are balanced, the better fun they will have; and if, as is often the case in country Clubs, there happen to be one or two men much superior in point of play to the others, they will do well to be satisfied with going in late on their respective sides, in order to allow their less skillful brethren to enjoy some batting. The Captain should make a point of being present. Let him stand umpire, keep wicket, or bowl if his forte lies that way, so that he can give a timely hint now and then to the youngsters engaged in the game.

The younger members of a Club require special looking after, as from them the ranks of the Eleven will have to be recruited in course of time. If no attention is paid to the rising cricketers, how is it possible to supply the place of the veteran who retires when he feels that his eye is getting dim, or that he is not so active as he was thirty years ago? The young members require to have the cricket-practices made as attractive as possible, or the restraint of a field-day might prove a trifle dull to some of them. If the Captain is up to his work, he will be able to inspire his crew with some at least of his own enthusiasm; and by well-timed praise and reproof he will have no difficulty in keeping his pupils—for so they must be styled—up to the mark.

It may seem at first sight that I have devoted too much space in this article to the method of conducting the practice-days, and have thereby excluded many other particulars connected with Club management, the arranging of matches and so forth, that I might well have touched upon. On consideration, however, I think it will be clear that *practice* is such an important element in the internal organisation of any Club, that too much cannot be said on the subject. How is it that School Elevens so frequently are victorious over teams individually far stronger than themselves? Why, because of their constant attention to those minor details of practising that their older opponents are so apt to overlook.

One last word to Club officers, and I have done. Let Captains and Secretaries of country Clubs remember that there is no wider field in the arena of games for the display of innate tact, ability, and judgment, than that which includes the duties that fall to their lot. Let them be courteous, yet firm, on all occasions, and ever ready to sacrifice their own pleasure for that of the other members and for the good of their Club. More depends on the officers of a Club than most people imagine. Under proper management, even where the game has almost been forgotten, or at best is only remembered as a relic of the good old times, we might see Rural Cricket once again in a flourishing condition.

In conclusion, I would remind past, present, and future members of cricket Clubs of the old adage: 'What is worth doing at all, is worth doing well.'

## A LIFE'S ATONEMENT.

### CHAPTER XXIV.—CONTINUED.

My story calls me, and I go onward.

Gregory major held the position of school-chief for a year, and left at the end of it for Exeter, Oxford. But before he went, Uncle Ben—who had heard of him from me a thousand times—would needs have him at Hartley Hall; and we arranged it so that we travelled down from school together. On the way down, Æ-op amongst many other things spoke of my uncle's wealth, and said that the common legend went that he was made of money. I answered that he was not at all a metallic sort of a man, but honest flesh and blood, and lovable. In that case, Æ-op declared he'd soon get to know the old fellow, and get what he could out of him for a comic paper.

'Think of getting paid for making jokes, young man! Think of all the jokes I've made in my time, and never had so much as a "Thank you" for! I've been kicked, cuffed, and caned for 'em—I've been at school arraigned for 'em—I've often been disclaimed for 'em—my character I've stained for 'em—I've many a time been pained for 'em—but I've never been paid for 'em in all my life. If I were editor of *Punch*, I wouldn't swop berths with the Emperor of China. You'll see me go at the old fog,' said Æ-op, 'a perfect bee-line.'

Knowing what I did of Æ-op's rugged manliness of character, knowing how he stuck by a friend, and how gentle he was at the bottom of all his roughness and his jollity, I was more than a little pained by his behaviour when we reached the station at Wrethedale. Who should be on the platform with Uncle Ben but Gascoigne? I leaped out of the carriage to greet him, and called out to Gregory that Gascoigne was here.

'Yes,' he said; 'I see;' and busied himself among the belongings he had stowed away in the railway carriage. When he alighted, he had nothing but a nod of the head and a rather sullen 'How d'ye do?' for Gascoigne. My hero himself looked a little disconcerted at Gregory's coming, I thought; and Uncle Ben that evening called me up to his study, and after a number of minor questions, asked me if I had not told him that the two old school-fellows were fast friends.

'They used to be,' I answered in some dismay.

'Never mind,' said Uncle Ben. 'Boys will be boys; and what they'd have to be if they couldn't be boys, I don't know. They've had a bit of a quarrel, I suppose. Leave 'em alone together, and it'll all come right. They're fine young chaps both of 'em, and as thoroughbred a pair as I'd wish to look at. You take pattern by 'em, Johnny; and remember above all things as they're your guests and not mine, and that you've got to do your best to please 'em. You'll find a plaything in that pocket-book as'll amuse you as long as they're here, I dessay. And now—off you go! You'll find 'em in the billiard-room.'

I discovered on my way to the billiard-room that the 'plaything' spoken of by Uncle Ben was a cheque on the Hetherton Bank; and Gascoigne went with me next day to cash it. Mr Crisp the manager invited us into his own room and proffered refreshment; and as I left the bank, I heard one man say to another as they waited at the counter: 'The one in the turn-down collar's a navy of the millionaire's. Hartley—Hartley Hall, you know.'

'I know,' said the other; and I felt as if their eyes burned my back as I walked out at the swinging doors. We had ridden over attended by a groom; and quite a little crowd assembled to see us mount and start again.

Gascoigne laughed, and said: 'You are a prince in your own country, Jack.'

I should have made an answer, I suppose, but that I saw something at that minute which put all thought even of Gascoigne from my mind. It was no less than Mr Fairholt's carriage, and in it sat Aunt Bertha and Cousin Will and Polly. That I should dare to call her Polly, even in writing, seems in the memory of that hour a wild presumption. Ay! I may laugh now, if I will; but I remember how, after bowing to the carriage generally, and exchanging greetings with Cousin Will and Aunt Bertha, I asked with a beating heart after the health of Miss Fairholt, and trembled at the sound of my own voice.

'Do you mean me?' said Polly, with her eyes dancing. 'How very droll!'

Aunt Bertha had always insisted that a certain portion of my holidays should be given up to her; and I had spent a yearly month with her at seaside places; but I had never passed the doors of Mr Fairholt's house since I had ceased to live there. In these yearly excursions, Polly had been Aunt Bertha's constant companion, and we had naturally been a great deal together. I had always been her submissive slave from the hour of my first capture; and now these long absences had brought timidity on top of helpless bondage. I cannot remember that I was up to this time at all under dominion of dress. That hard rule came later; but I know that at the moment at which I encountered Polly, every article of my attire seemed to have undergone some fateful change. My collar was rumpled and refused to sit, my boots were soiled, my riding-trousers were splashed to the knee, my jacket held my arms in awkward fetters. The very horse I sat had, to my changed and dispirited fancy, a besmeared and disorderly look. I resented the presence of the groom. What did I want a groom for, as though I were a girl, and not to be trusted on horseback without a man to take care of me? I would not by comparison have cared for an army of critics, though public notice of any sort was a burden in those days not lightly to be borne; but Polly's briefest glance dismayed me.

She was very pretty, fresh, dainty, charming—all these things Gascoigne said of her as we rode homewards. What were these praises to me? I believe from my memory of my own sensations that if I could have found a phrase, or found the sense to hunt for a phrase to describe her as she afflicted me, I should have called her a delicious avalanche. I felt like that. She was delicious; and her presence fell upon me, crushed me, broke me, buried me. Absence resuscitated me; and I

langued again to be in her presence, and being there, was again crushed, broken, and buried. There came a time afterwards when Macassar oil made me feel less unworthy of her, and an embroidered and scented handkerchief brought some solace to my soul. But this was not so, as yet.

When Polly asked me if I had called her Miss Fairholt, and said: 'How very droll!' I felt in my crushed and broken and buried way, that that was a good sign, and that it might please me when I came to life again. Then I told myself: No; it wasn't. Girls who cared for a fellow were always coy. That was how I put it to myself. It remained as a natural conclusion that Polly did not care for me; and my views of the world became intensely misanthropic and gloomy accordingly. If any man chooses to think that I exaggerate in remembering, I defy him. I have never been more in earnest in my life than I was then. I have lain in the under-the-avalanche condition for a day at a time, and have had no other wish than to publish a volume of poems, and straightway die and be buried in the moss-grown churchyard. I told Polly of this aspiration once; and she said in her imperious and elderly way, that I was a foolish boy, and was not to talk nonsense. I went back to the house—we were at Scarborough at that time, I remember—and wrote a broken-hearted set of verses, of which all that I can remember is that one line ran thus:

This seemed to childhood's eyes the time of gold;  
and that it rhymed to this:

I only feel that I am growing old.

I know that these were the second and fourth lines of a verse; but what went before and between them, I know no more than Adam. I wrote another set of verses at this time beginning with:

Let the mad world prate on of youthful folly;

but I can recall nothing further. I gather from it, however, an idea that I was under some sort of impression that the peoples of the globe either were or would be interested in my views about things, and that I despised those peoples, and wished to let them know it.

The result of this meeting in the street in Hetherton was an invitation for Gascoigne, Gregory, and myself to Island Hall. Cousin Will himself informally conveyed the invitation, and held out prospects of a dance. I have reason to believe that both my friends were at this time in love with Maud, and that they accepted the invitation chiefly because she was going, and because they hoped to dance with her. Mr Fairholt—so Will said at the luncheon-table—would spend the day and night at Wrethedale, in order to be out of the way. Uncle Ben being a good deal pressed, promised to attend the garden-party in the afternoon. It was to be an assemblage of boys and girls, with a sprinkling of older people, and some half-dozen young ladies, who were to be imported, as it appeared, for the especial benefit of Gregory and Gascoigne. I looked forward to the day with that eager tremor which always awoke at the bare thought of meeting Polly, and with a conviction that I should on this occasion do something or other which should decide my fate. I resolved that I would be avalanched no more, and that I would be as gay

and unembarrassed in her presence as anybody else could be.

The day came, broiling hot, with just a light wind from the west, which tempered the sun a little. We bowled along the broad white road, past the undulating meadows and the stretch of river, where the cattle always stood udder-deep, switching their tails at the flies—a luxurious picture on a day like this—and into that reach of road where, for half a mile, the trees, a living gallery, roofed us in. Then out of its sweet green gloom we came suddenly into the sunlight again, swept once into shadow, and again swiftly into sunshine. I leapt from the carriage half-blind with the glory of the light, and walked into the hall, where everything lay in a softly shaded coolness. All was very dark to me for a moment; but I could see descending the stair a something in white, which moved leisurely towards me. I knew Polly's voice; and by the time she had reached me, my eyes were accustomed to the shaded light, and I could see her. She laughed bewitchingly, and courtesied to me. She was dressed in white, as I have said already; and her hair was twined with flowers, that sat upon her regal little head like a diadem.

'How do I look?' she asked, turning a pirouette, that I might have a complete view all round. She asked the question just as she would have said: 'How do you do?'

Beautiful! I cried, and clasped my hands. There was such a fervour in the tone that Polly blushed. I meant it then, and I indorse the verdict now. I can see the dear little figure in the cool shaded air. It seems as if I had but to turn my head to see my companions helping Maud from the carriage, one to each hand. The blinding sunlight on the gravel, the cool green of the shrubs upon the lawn beyond the path, and then the belt of elms where the air looked like deep green sea-water in the shade—these are not fancies. I see these things as clearly as if with my bodily eyes. Dear little face flower-crowned, and dainty figure clad in pure soft white, I see no lifeless portrait, but herself! I see my old self less clearly, but I feel his spirit awake in me again. How pure a worship, how honest a devotion! How, in spite of all its perpetrated follies of boyish verse and speech, that was the fount at which I drank my purest draught of hope, from which I filled my pitcher for the desert, when my time came to sojourn there. You know no change, dear face and dainty figure, in my changeful mind; and though I am unfaithful to the loftier hopes my early worship bred within my soul, I am faithful to my memories of youth and you. But the hopes are withered, like the flowers you wore.

But where were my resolves? Gone! borne down by the resistless pressure of my own feelings. Gay? Unembarrassed? Could Cheops have danced beneath the load of his own pyramid?

I was very near taking Æsop into my confidence when we had reached home late at night, for I felt as swollen with my secret as the Duke of Clarence did in his dream of drowning. I held it in, however, by almost superhuman effort, and confined myself to some general statements to the effect that when I went into the world I would make a plunge to do something or other, and that there seemed nothing so enviable to me as to die gloriously in battle. To which Æsop responded

by an adaptation of the words of Mr Tennyson, who, curiously enough, was at that time his favourite author:

Yea [Simeon] thy dream is good;  
It is the stirring of the blood  
While thou abidest in the bud.

He left me at Gascoigne's call; and I wandered down the drive in the darkness to where the lamps blazed above the great gates by the lodge. There a voice from the road called out: 'Hi! young gentel-man!' and a man came into the range of light and stood outside the gate.

'What do you want?' I asked.

He answered my question by another: 'Do you live in the house?'

I answered that I did, and repeated my question.

'Are you anything to Mr Hardley?' he asked again.

'Yes,' I answered; 'I am his nephew. What do you want?'

'Misdar Hardley,' he said, 'was my baydron once. I zerved him for vive years; and zince he has left me, look and zee what I am begome. I have zent him many ledders, and he does not rebly. I have walked from London, and I ztarve. I have not dasted food for two days. Haf pity, little gentel-man—haf pity! Sheak to Misdar Hardley for me. If he knew to what I had gome, he would haf mercy.'

I believe that was the first appeal that was ever made to me, and it touched me nearly. 'What is your name?' I asked him.

'My name,' he said, 'is Tasker. I zerved your uncle for vive years. I was his confidential agent in London. I am ztarving. I haf not one penny. Haf pity, little gentel-man!'

I gave the man a sovereign; for which he called down extravagant blessings upon me. I suppose that howsoever pliable he might have hoped to find me, he had scarcely expected that I should prove so wealthy. When he had blessed me out of breath, I bade him wait until I told Mr Hartley that he was there. I ran up the drive, and came breathless into the house, and panted out the story before them all—Uncle Ben and Maud and Gascoigne and Æsop. For the first time in my life, I saw Uncle Ben angry. His eyes grew small and fierce, and the veins rose thickly in his forehead as he tugged again and again at the bell-rope.

'Go down to the gates,' he shouted to the footman, 'and take one or two of the stable-helpers with you. You'll find a German blackguard there, a-askin' to see me. Flog him away. Break every bone in the rascal's body.'

The footman stood amazed; and Gascoigne and Gregory stared with open eyes.

Maud rose from her seat and touched Uncle Ben on the arm. 'Let me give these orders, uncle,' she said pleadingly.

He resumed his seat gasping and red in the face, and sat mopping his bald forehead with his handkerchief.

'Go down to the gate,' Maud said, 'and tell the man who waits outside that it is quite hopeless that he should expect Mr Hartley to forgive him, and tell him to go away.'

The footman bowed, and turned to go:

'Wait a bit!' shouted Uncle Ben. 'Did he say as he was starvin', Johnny?'

'Yes,' I answered.

'Then come with me,' said Uncle Ben, 'and let's have a look at him.' He beckoned to the footman to follow—took up a hat in the hall, and walked to the gates. The man still hung about there; and Uncle Ben stopped and asked me in an undertone if I had a sovereign in my pocket. I answered that I had; and he whispered to me to stop behind, and give it to the man, but to tell him that it would not be safe for him to be seen about the place again. Having arranged this little plan, he advanced to the gate, and addressed the man who stood without. Uncle Ben's speech was couched in very uncompromising language, and the petitioner listened to it and made no reply.

'You wolfish shark!' said Uncle Ben, 'you dare to come to me—do you? After driving a friend of mine to ruin, a gentleman, and breakin' half a score of people's hearts, and after being let off by me in a matter as might ha' transported you. Get out, you villain! If ever I see you near my place again, I'll have the dogs set on you! Off you go!'

The man shrunk off; and as he went, I beckoned him to stay. Uncle Ben saw the sign, but of course took no notice of it. I slipped the sovereign into the hand stretched through the bars, and said that he had better go far away. He touched the rim of his battered hat and disappeared.

When I overtook Uncle Ben in the drive, he laid his hand upon my shoulder, and said: 'That's the feller, Johnny, as drove poor Frank Fairholt to ruin, more than eight years ago. He was a money-lender, and the poor lad borrowed money of him. Now let me speak to you serious.' He paused, and faced me. 'If ever you want for money, come to me. If you've got yourself into a scrape through evil conduct, and want money to get out of it, still come to me. For as I'm a livin' sinner, Johnny, if ever anybody as depends on me was to put his name to a bill for a money-lender, I'd disown him. Remember that, Johnny: if ever you put your name across a bill for anything or anybody, self or friend, I've done with you for ever!'

I had never seen him more in earnest. But he gave me that advice often afterwards when I began to go into the world and understood it better, and gave it always with the same solemnity.

(To be continued.)

## RECOLLECTIONS OF AN EQUESTRIAN MANAGER.

BY C. W. MONTAGUE.

SIXTH PAPER.

THE following exciting incident occurred while we were at Brighton—exciting, that is for the crowds who witnessed it, but rather amusing to the few who were in the secret. One day while I was standing in the shop of Mr Phillips our printer, and chatting upon various local topics, in came Mr T—, and joined in the conversation. This gentleman had once been a well-to-do hotel-keeper in Brighton, but had been unfortunate; and at this time owned a small beer-shop in an unim-

portant street close at hand. At the date of which I am speaking, it had become the rage to make a 'draw' at taverns and beer-shops by various strange devices, such as dressing the barmaids in 'bloomer' costume, or hiring men of gigantic stature to serve behind the counter as barmen. T— was complaining of the badness of trade, and appealed to Phillips to try and think if something could not be done to make a novel attraction—something that no one else had tried. Several ideas were mooted, and found impracticable. At last I suggested a North American Indian in full war-costume and well tattooed. T— jumped at the idea at once; but—where was the Indian to be found? 'Oh, I'll find the Indian,' cried Phillips, turning to me, 'if you'll find the dress.' 'I'll find the dress then,' I replied. Thus the matter was arranged; Phillips also undertaking to print and distribute some placards, to draw public attention to the 'stranger' in their midst. The Indian chief was quickly forthcoming, arrayed in the picturesque garb of his race, the head-dress of enormous feathers being of course a prominent feature of the costume. The plan succeeded admirably. Numbers of people flocked in to see the 'Red Indian,' who jabbered away in an outlandish tongue, interspersed by an occasional word or two of broken English; and T— had the satisfaction of witnessing a good increase in his profits. But the novelty of the thing soon wore off, and not only that; it began to be whispered among the habitués of the place that this man in feathers was no Red Indian at all—that his skin was as white as any man's in Brighton—that the tattoo marks were painted on—that, in short, the Red Indian was one of Phillips' men 'got up' for the purpose. Again T— was in despair, and sought once more to lay his troubles before his friend the printer. A council was held, and once more Phillips and I went out of our way to try and serve the unlucky publican. Something was to be done which would at once revive the flagging interest, and silence for ever the disgraceful rumours afloat that this wild hunter of the prairies was but a Briton born and bred.

It was a lovely afternoon, and all the wealth and fashion and beauty of Brighton were serenely enjoying their daily stroll in King's Road, the fashionable promenade of the town. Suddenly a heart-stirring cry was heard in the distance, startling the gay and careless crowds from their languid composure. The sound—like a horrible yell with an unearthly echo—was repeated again and again, growing nearer each time. Then a strange form appeared in their midst, dashing along the King's Road at the top of his speed, and recognised by some of the young swells in the crowd as 'old T—'s Red Indian!' Onward he sped, repeating his fearful war-whoop and brandishing a tomahawk aloft—the people scattering right and left as he passed swiftly by. A few yards in the rear, were about a dozen men following in hot pursuit—the foremost armed with a long strong rope. Thus the race continued for more than half a mile along King's Road, causing the greatest consternation to the fashionable throng, till at last a stalwart policeman, regardless alike of the terror-inspiring

war-cry and the death-threatening tomahawk, sprang upon the flying man, and in spite of his terrific struggles, held him till his pursuers, of whom I was one, came up to assist. We at once bound his arms to his sides, and made ourselves responsible for his safety; the policeman, who knew us, being nothing loath to relinquish his weird prisoner into our hands. A full, I might almost say an exaggerated account of the whole affair appeared in the papers next day; the result being another sensation for wonder-seekers, another influx of visitors to T—'s shop, and another good lift for T— over his troubles.

Soon after this I left the town, and do not know precisely how matters fared with the Redskin, or how long he served behind T—'s counter. Perhaps he is now chasing the bison in the boundless prairies of the Far West, or tracking the grizzly bear to his den in the wilds of the Rocky Mountains. Or perhaps, scorning such tame pursuits as these, he is setting up, or printing, or placarding, a flaming, red-hot poster announcing to the good people of Brighton some new and startling sensation.

While performing at Brighton, we had Henry Brown as one of our clowns; not a 'tumbling,' only a 'talking' clown. In his younger days, Brown had been a first-class 'tumbler;' but increasing years had rendered him somewhat more rotund than is convenient for a person who, as Charles Dickens somewhere says, has to 'tie himself in a knot and then untie himself;' and he now confined himself to somersaults of wit and repartee, at which he was no bad hand. At the time of which I am writing he was tall and of a portly build, and a very gentlemanly looking man as far as I could judge of him in his clown's attire and painted face. As ring-master I saw him and talked with him every day in the ring; but he was always dressed and off before I came out, so that I never knew him but as a clown.

Leaving Brown just at this point, I must introduce a person whose acquaintance I had formed as follows. In my daily walks for the past two or three weeks, I had regularly met a gentleman in the street, who if going in the opposite direction to myself, would invariably stop for a few moments' chat; or if in the same direction, would accompany me on my way for a short distance, the topics of our conversation usually being the weather, local news, politics, and other equally original subjects. Looking upon him as perhaps a visitor to Brighton, or perhaps an inhabitant of the town, who had recognised me through going to the circus, it struck me as something not quite in accordance with human nature that he never once mentioned one word of circus matters or made any reference to myself as connected therewith. From his appearance—of commanding stature and somewhat stout, dressed with scrupulous care from the crown of his shining hat to the toes of his well-polished boots—he might have passed muster for a prosperous retired merchant; but there was a calm gravity in his face and in his demeanour which spoke of clerical sobriety of thought and quietness of life, and made me more than half inclined to look upon my acquaintance as a dissenting minister. Hence, while his conscientious scruples forbade to discourse upon the frivolities of a circus, his brotherly love impelled him to

converse with the manager thereof, perhaps in the hope that he might wean me from such paths of wickedness! One morning I had paid a visit to the Mayor's house on business connected with the circus, and had not gone many yards from the door when I met my mysterious friend. 'Fine morning,' he said as I approached.

'Beautiful,' I replied.

'How did you get on with the Mayor?' he then asked. (He must have seen me come away from the house.)

'The Mayor?' I answered in the tone of one who was not quite certain what a 'Mayor' might be.

'Yes—the Mayor,' he echoed. 'You've just been to his house, haven't you? Wasn't he at home?'

'O yes; he was at home,' I replied. 'But—you'll excuse my saying it—my business with the Mayor was of a private nature—connected with the circus.'

'Precisely so,' coolly answered my companion. 'That's just why I thought myself entitled to ask. But it's of no consequence.'

'Confound the fellow!' I mentally exclaimed; adding aloud: 'Well, you must pardon my rudeness; but really, sir, I fail to see in what way my employer's business can concern *you*.' This seemed to stagger him a little; and how the dialogue might have ended I can't tell, had I not at that moment, as I looked him full in the face, noticed a peculiar twitch or twinkle of the eyelid, and recognised the man. It was Brown the clown!

I at once apologised, and explained that up to that moment I had not had the faintest notion who he was.

'Pray, don't apologise, my dear fellow,' he replied; 'but, considering that for the past fortnight you and I have stood face to face in the ring, and rattled away on terms of the greatest intimacy, I could never have dreamt you didn't know me!'

Before quitting Brightonian themes, I will record an amusing incident which befell a worthy gentleman there who has since figured prominently and honourably in the history of the town. It was the occasion of my benefit at the Pavilion, and I had gone to the house of Dr—afterwards Sir John B— to solicit his patronage for the evening. Dr B— was a man of wealth and position, and was well known in that celebrated watering-place. He was a Colonel of the local Volunteers, and as such had attended the first great Volunteer Review held at Brighton, a year previous to my interview with him. It was in connection with this Review that the incident I am about to relate occurred. After promising me his patronage—no slight favour, let it be said—the Doctor asked me if I had seen anything of Mr Newsome lately, or if I had heard anything about his—the Doctor's—borrowing one of that gentleman's horses the year before. I replied that I had not. Doctor B— then narrated the following laughable occurrence, and I repeat it as nearly as I can recollect it in his own words.

'The great Review was near at hand, and it was imperative that I should accompany my regiment on horseback. Well, you know, I am but an indifferent rider. Not but what I can stick on to my horse well enough; but as this was to be a grand

affair and fashionably attended, I had a pardonable desire to stick on gracefully, and to be quite at my ease amid all the warlike din and confusion. In this emergency I applied to Mr Newsome, whose circus was then in the town, and laid my troubles before him.

"I have the very horse to suit you," he said; "a splendid creature, quiet as a lamb, and as easy to ride as a rocking-horse."

"That will just suit me," I replied; and it was arranged that on the morning of the Review the horse was to be brought round.

The day came; and my proud charger—his name was Napoleon—in splendid trappings was brought round to the door. Wasn't I elated! I knew I should take the shine out of a few of them that day; and I did. Having mounted my steed, my wife and friends witnessed my departure, and I was soon serenely trotting towards the rendezvous of my corps. You should have seen the people stare as I passed along. When I arrived on the ground, I was the chief attraction of everybody, and the envy of my brother-officers. There wasn't a single man among them mounted as I was. My horse was a magnificent creature!—splendid action! full of life! He couldn't have been prouder if I'd been a field-marshal. Newsome told me he would be easy to ride; and so he was; it was like sitting in an armchair rather than being on a horse. Well, the Review passed off all right, and my horse shewed admirable coolness at the volley-firing and the blare of the trumpets; that of course was natural enough for a trained circus horse. But during the march-past at the close of the Review, I happened to be stationed not very far from where the generals and others who had been reviewing us had taken up their position—a brilliant staff, their scarlet coats rendered still more conspicuous and glaring by contrast with the sombre uniforms of the civilian troops. My horse became uneasy, and appeared impatient to join the group; but I restrained him without difficulty. Presently, however, just as I was off my guard, the entire staff made a sudden movement from the spot, and galloped rapidly to a distant part of the field. In a moment, my horse, as though seized with some irresistible impulse, bolted off at full speed after them. I tried to pull him up, but in vain. He'd got his head, and I'd lost mine; and presently I found myself right in the midst of a formidable array of generals, and army colonels, and foreign officers, to my great trepidation and dismay. Some of them turned round in their saddles, and looking with a supercilious air over their shoulders, appeared to wonder what in the name of fortune I was rattling after them for. Soon, however, the party made a halt, during which I succeeded in persuading my horse, by the aid of spurs and whip and hard words, that I was not in my proper place, and that the sooner he took me to it the better for him.—When I told Newsome all about it next day, he very coolly remarked, with a merry twinkle in his eye: "I don't feel surprised, Doctor. Nap's my favourite hunter; and when he saw the scarlet coats galloping off, he mistook them for the 'field,' and was off after them. You don't get Nap to keep far behind, when there's business about, sir!"

The Doctor laughed quite as heartily as I did myself, as he recounted to me the ludicrous adven-

ture which had thus somewhat dimmed the glories of the earlier portion of this eventful day. Since then, Sir John has played a much more important rôle even than that of Colonel of Volunteers. He has been Mayor of his town, and I do not doubt that he was one of the most popular Mayors Brighton ever had. To his generosity in private, hundreds can testify; many indeed were the poor creatures who, while benefiting by his professional skill, were at the same time recipients of his bounty. To his munificent liberality in public, all Brighton, to say the least, can bear witness.

## A CONSPIRATOR IN SPITE OF MYSELF.

### CHAPTER IV.

#### THE MYSTERY SOLVED.

A FEW vigorous strokes of the oars carried us alongside the schooner—a large, roomy vessel, having the appearance of a pleasure-yacht that had been adapted for warlike or defensive purposes, she being armed with six heavy guns, while boarding-pikes and cutlasses were ranged round her life-rails under cover of a tarpauling. The ladies were carefully assisted on board, and received with every token of respect by the commander and his officers, who were attired in uniform. They were immediately conducted to the cabin by the commander, and the young officer who accompanied them on board. The *padrone* and I were then requested to leave the boat, which was made fast under the stern to a long rope; the schooner was hauled close to the wind; her sails were trimmed, and she stood away to the westward, with the boat, with one man on board, in tow.

In the course of half an hour the *padrone* and I were requested to descend to the cabin, where we found the ladies and the young officer His Highness, or Sua Altezza, awaiting our appearance. Every preparation must have been made beforehand for the reception and comfort of the ladies; for they had already divested themselves of their masculine apparel, and now appeared in garments suitable to their sex and high position. Both were handsome; but the younger of the two, who was evidently the superior, and to all appearance not more than twenty years of age, was, as I have said, the handsomer. Both had in a great measure recovered their composure; and when the young officer was about to address the *padrone* and myself in French, the younger lady said in the same language, which she spoke fluently: 'Nay, Monsieur; pardon, but I will thank and reward these good men myself.' Then looking earnestly at me for the first time, and evidently surprised at my youthful appearance, she said: 'You are very young, Monsieur; and pardon me, but you have not the aspect of a fisherman.'

I explained who and what I was, and how I came to be on board a fishing-lugger.

'Ha!' she exclaimed. 'An English officer.—Was not this hazardous, Adolphe?'

'On the contrary, I deemed it desirable,' replied the young officer. 'Monsieur pledged his honour not to betray us.' He then added something in Italian, in a low tone of voice, that was

unintelligible to me, but which appeared to convince or satisfy the lady, who with a slight bow to me, now turned and addressed my companion, having first placed in his hand a small bag of gold, which she received from the young officer. 'Receive, Monsieur *Padrone*,' she said, 'this small recompense, in acknowledgment of the services you have rendered me this night; and with it accept the thanks of an unfortunate lady, who will ever feel grateful for all that you have done in her behalf. Adieu, and may God preserve you, and the Blessed Virgin be ever your protectress!' 'And for you, sir,' addressing me, 'may you rise high in your noble profession.'

Gustave, who was still half stupefied with bewilderment, mumbled his thanks; and the lady, rising from the sofa upon which she had sat, again bowed to me, and retired, with her female companion, into the after-cabin. Gustave and I ascended to the deck, followed by the young officer, who told us that we were at liberty to return to the lugger, which had accompanied the schooner, and was now about half a mile to leeward.

'You will place M. le Duc and the other gentlemen who remained behind on board your vessel, on shore at whatsoever spot M. le Duc shall advise,' he said to Gustave. 'Then you will be free to go where you please. But I advise you to give the corvette a wide berth; and warn you to be silent respecting what you have seen or heard this past night.' He then warmly thanked me, and returned to the cabin.

The boat that was towing astern was hauled up alongside. The *padrone* and I and three additional seamen descended into her; and the seamen pulled us alongside the lugger, which was hove to as the boat approached her. We clambered to her deck, and the Italian sailors returned to their own vessel, which was likewise hove to, in order to receive them on board. We saw the boat hoisted to the davits; and then the schooner's sails were trimmed, and she sailed away westward under a press of canvas, with great swiftness.

It was by this time six or seven o'clock A.M. and broad daylight; but with the exception of ten or a dozen fishing-vessels, whose crews were plying their invocation to windward, nothing was visible upon the water. The aged officer M. le Duc, directed the *padrone* to steer southward towards the coast of Calabria; and about mid-day, we landed our passengers at a solitary spot a few miles south of the small seaport of Paola.

The fishing-vessels were making their way slowly northward under easy sail; and by my advice, the *padrone* ran down towards them, and when we reached them, we threw out our nets, as if we had been patiently occupied in fishing throughout the night, Gustave and I having previously divested ourselves of our military uniforms, and resumed our proper garb. The military garments were sunk beneath the waves; and I recommended the *padrone* to conceal the money-bag—which was found to contain five hundred *scudos*, making, with the hundred *scudos* Gustave had previously received, the sum of one hundred and forty pounds sterling—in some secure place, where it was not likely to be found, if the vessel should be searched; for I thought it very probable that the corvette—whose officers and crew had seen us enter the Gulf of Policastro on the previous day, as we sailed close

past her—would be cruising about in search of the fugitives.

We soon discovered that I had advised wisely. An hour or two later, a ship-of-war was espied cruising to windward between the fishing-vessels and the shore. She bore down swiftly towards us; and the fishermen hauled in their nets and made sail on their vessels, for they dreaded, during these troublous times, lest they should be impressed, or lest their vessels should be seized for the service of the government. A gun fired from the corvette, the ball from which passed over them and ricocheted on the water for a long distance beyond them, speedily brought them to; and when within a short distance of the little fleet, the corvette was hove to; and four boats filled with officers and men were lowered from her sides. The boats were pulled towards us, and one after another, the fishing-vessels were boarded and searched, and their crews sharply questioned. The crew of *La belle Jeannette* were told, for the sake of their own safety, to be perfectly silent in respect to all that had occurred during the past night; and to reply to all questions that might be put to them, that they were harmless fishermen prosecuting their arduous calling.

In a few moments it came to our turn to be boarded; and we learned from the officer who came on board that some great personage had escaped from the shore during the night. This was all that we could make out; for we could not understand the officer's language; and his attempts at French were nearly as unintelligible to us as was his Italian. He made us to understand, however, that he was confident that our lugger had sailed from the Gulf during the night.

'Yes, Monsieur,' I replied. 'We sailed at midnight. We have been unfortunate. The fish had quitted the Gulf, and we sailed to try our luck in open water.'

Between signs and words, he asked if we had seen any other vessel leave the Gulf during the night.

'Only a large boat, Monsieur,' I replied. 'It was crowded with people, and it rowed out to a vessel that was awaiting it outside.'

'At what hour?'

'At midnight, Monsieur officier, just when we were leaving.'

The officer shook his head. It was evident that he suspected that we knew more than we thought proper to disclose. The vessel was searched narrowly; but as he could find nothing that looked suspicious on board, he did not detain us. I have no doubt that had the lugger been under the Italian flag, he would have detained us; but nearly one half the number of the vessels that were searched were French, like our own, and he feared lest he might cause trouble with France. At all events, he let us go unwillingly; and as soon as the corvette was out of sight, we set sail, and steered for Toulon, at which port we arrived safely at the end of a fortnight.

The fishery had been unsuccessful. *La belle Jeannette* had not half a full cargo on board, and none of the other luggers belonging to the port had met with much better fortune; but Gustave Pailleur, though he had been much frightened, and though, had we been arrested, he would probably have been placed in a position of great peril, had after all made a prosperous voyage through his

involuntary connection with a conspiracy of whose nature and object he was perfectly ignorant. The *padrone* offered me a share of the money he had received, which I of course declined to accept; and the *scudos* consequently were fairly divided amongst Gustave Pailleur and his crew.

About three weeks after my return to Toulon, the frigate to which I belonged arrived in that port from her cruise, and I immediately rejoined her; but a long time elapsed ere I spoke of the adventure in which I had taken part, even to my messmates in the midshipmen's berth. It was in fact to me an incomprehensible mystery. I had been connected with a conspiracy organised to effect the escape of two ladies, evidently of high rank, from Naples. This was certain; but I could not understand from whom these ladies had escaped. If they had been in the power of the insurgents, and I had aided a party of royalist officers to effect their escape, the affair would have been perfectly comprehensible. But the ladies themselves were evidently connected with the royalists, a party of whose officers effected their escape from other officers of the same party who sought to arrest or detain them! The more I strove to solve the mystery, the more mysterious it appeared to be.

It was not until nearly two years had elapsed from the date of the occurrence that I came by chance across an old French newspaper—dated shortly after the cessation of the troubles in Naples—which, though in accordance with the French custom, proper names were designated simply by initials, threw some light upon the subject. The writer of the paragraph alluded to a 'Romantic Affair' which occurred during the late revolution in Naples.

'A young *demoiselle*,' he wrote, 'of high rank, nearly related to the king, beautiful, and the possessor of great wealth in her own right, had long been secretly attached to the Prince de G., a young officer in His Majesty's service. The king—who was, in fact, the young lady's guardian—was informed of this attachment, of which he strongly disapproved. It was His Majesty's wish that his young and beautiful ward, who was at this period but nineteen years of age, should enter a convent, in order that he might appropriate to himself the greater portion if not the whole of her vast wealth. The young lady, however—the Princess de L.—had no inclination towards the life of a *religieuse*, no matter how high the position to which she might have attained in the convent. Sympathising strongly with the distressed peasantry in the vicinity of her abode in the royal *palazzo* D., on the confines of Calabria, she frequently sent them such assistance as she—still a minor—was able to afford. It was said, moreover, probably with some truth, that she secretly favoured the cause of the insurgents, and regarded with utter detestation the tyranny of the king. Be this as it may, His Majesty made the rumour the pretext for a stricter confinement of his ward to the *palazzo*, and ordered that her domestics, in his pay, should exercise a keen surveillance over her movements.

'The Princess, who had many friends among the nobles of the court, revolted against this rigid surveillance, and at length, weary of persecution, determined to escape, if it were possible, from the country, carrying with her such an amount of

wealth—chiefly consisting of costly jewels—as she could collect together. The young Prince de G., to whom she confided her purpose, joyously consented to aid her to escape, and to accompany her in her self-exile. He arranged his plans with some other nobles and officers in whom he could place confidence—the chief of whom was his uncle, the Duc de P. It is supposed that the king heard of this disaffection on the part of his ward, and also received some information of her desire to escape. At all events, fearful lest the destined victim to his cupidity should elude his grasp, he resolved to cause her to be removed to the city of Naples, where she would be completely in his power. A sloop of war was secretly despatched for this purpose to the Gulf of Policastro; and the Princess was to have been inveigled on board the vessel of war, and quietly conveyed to the capital ere her friends could be apprised of His Majesty's purpose. Unfortunately, however, for the success of his scheme, the corvette was attacked, immediately upon her arrival in the Gulf, by a fleet of small vessels, fitted out and manned by the insurgents. These vessels were beaten off; but the heavy firing betrayed the presence off the coast, where there was no necessity for her appearance, of a vessel of war, and aroused the suspicions of the Princess and her friends. These suspicions were confirmed on the following day, when an officer from the corvette arrived at the *palazzo* with an autograph letter from the king, in which His Majesty expressed his fears for the safety of his young ward, and his desire—or command—that the Princess would hold herself in readiness, on the night following, to repair, under the protection of an escort, on board the ship of war, which would then sail immediately, and convey her from the disturbed part of the country in which she was residing, to the capital, where she would be in a place of safety. This intimation called for immediate action on the part of the Princess and her friends, and rendered it necessary for them to alter in some measure their preconcerted plans.

'The escort, consisting of a party of officers and soldiers from the corvette, duly arrived at the *palazzo* at an early hour the next evening, and informed the Princess that she must be in readiness to accompany them to the shore, with one female friend or attendant, shortly after midnight. But on retiring from her presence to partake of refreshments, they were seized, stripped of their outer garments, and safely secured in a dungeon beneath the *palazzo*. The young Prince de G. then hastened to the coast, and boarded a French fishing-lugger that was at anchor in the Gulf. By means of bribery or force, or both combined, the *padrone* of the lugger and one of his crew were induced to accompany the Prince on shore to the royal hunting-lodge, which is situated a mile or two from the coast. Thence they were conveyed blindfolded to the *palazzo* occupied by the Princess and her suite and servants, in a wagon laden with firearms, destined for the defence of the *palazzo*, should it be attacked by the insurgents. On their arrival, they were compelled to divest themselves of their fishermen's garb, and to array themselves in military uniforms that had been taken from the soldiers of the imprisoned escort; and thus disguised, were ordered to form part of an escort consisting of the friends of the

Princess, some of whom wore a similar disguise, that was to accompany the Princess and her friend and companion, the Countess de S., to the seashore. This escort, which consisted of the same number of persons as that which was confined in the dungeon beneath the *palazzo*, set forth an hour after midnight; the two ladies—in order that they might more easily escape, in case of a surprise—being disguised in the uniforms of two young subalterns who had formed part of the imprisoned escort; and two youthful pages of the *palazzo* being dressed in female attire, to represent the Princess and her companion.

They met, however, with no difficulty on their journey, and even passed close to the guardhouse near the shore, and embarked on board a pinnace from the frigate, which was awaiting their arrival, without awakening suspicion. No sooner, however, had the Neapolitan seamen on board the pinnace pulled out of sight and hearing of the officer and soldiers in the guardhouse, than they were suddenly seized, and ruthlessly thrown overboard, to sink or swim as might be. The oars were taken by some of the escort, and the pinnace was pulled alongside the fishing-lugger, whose master was ordered to get his vessel under weigh immediately. The pinnace was cast adrift after the ladies and their friendly escort had ascended to the deck of the lugger, which as soon as her anchor was hoisted, stood out to sea.

It appears that some days before her escape from the *palazzo*, the jewels, money, and other effects of the Princess and her companion, had been secretly conveyed on board an armed vessel, that was formerly a pleasure-yacht, belonging to the Duc de P. The lights shown by this vessel, which was cruising about off the coast, awaiting the arrival of the Princess and her friends at any moment, were soon espied. A signal was made from the lugger; the armed vessel bore down to her, and sent a boat alongside, on board of which the Princess and the Countess, the young Prince de G., the master of the lugger, and the fisherman who had accompanied him on shore, proceeded to the schooner; the other individuals of the escort remaining on board the lugger.

The ladies now divested themselves of their masculine garments, and appeared in their proper attire; the fishermen were called into the cabin and generously rewarded for the part they had taken perforce in aiding the escape of the Princess, and were then sent back to the lugger, whose master was now ordered by the Duc de P. to land him and his companions on a certain solitary spot on the coast. The landing of the conspirators was safely effected. But scarcely had the lugger again stood out to sea and joined a small fleet of similar vessels whose crews were engaged in the prosecution of their arduous calling, when the sloop of war was espied bearing down towards the fleet. She fired a gun, and compelled the fishing-vessels to heave to; and then sent out boats to search them, and discover, if possible, whether the Princess had escaped on board one of these vessels, or whether she might still be on board one of them; for it appears that the alarm was given within half an hour from the time when the escape was effected. The fishermen had, however, wisely changed their garments on their return to their vessel, and had sunk the military uniforms they had worn deep beneath the

waves of the Mediterranean; and if the officers of the corvette had any suspicions of the complicity in the plot of the French fishermen, they could discover no proof that such had been the case; and in the absence of such proof, they were afraid to detain a vessel that sailed under the French flag. The fishermen subsequently returned to their native port rejoicing, for they had been most liberally rewarded for the risks they had incurred, by the generous gift of the young Princess.

'We are glad to assure our readers that no untoward event occurred to interfere with the complete success of the plot thus far successfully carried out. The armed schooner steered for Gibraltar; and on her arrival at the British settlement, the gallant young Prince and the fair Princess were united in wedlock. They afterwards travelled through Spain and France; but the success of the revolutionary party in Naples and the dethronement of the king very soon released the Princess from her exile, and enabled her to return with her young husband to Italy and take possession of her paternal estates. We assure our readers that we can vouch for the truth of the above romantic story.'

Thus was I compelled to become a Conspirator in spite of Myself. And yet, I am by no means sure that, even had I been aware beforehand of the nature of the adventure in which I perforce took part, I would not have voluntarily offered my services to aid in the rescue of a persecuted young and beautiful Princess from her tyrannical guardian.

## AT THE TROIS ETOILES.

### IN TWO CHAPTERS.—CHAPTER II.

PRESENTLY Madame Petit comes through the court-yard with a visitor. 'Courage, my good friend,' I hear her say, as she parts with her; 'René will have good luck, I do not doubt.' She comes across to me, and seats herself beside me.

'What is the matter with Madame Gomet?' I ask.

'Why, Madame knows the conscription is to be drawn at Gannat the day after to-morrow; and her boys have to draw; for though she lost her husband and one son in the war, she has still two left, so one must take his chance. Ah! Madame, that I should live to thank God that I have *only* one!'

'Can she not buy a substitute?' I ask.

'No, Madame; she is poor, and cannot afford it. If I only had the money,' says the kindly little woman, 'she should not want it; but times have been bad with me lately, and I have it not. However,' she continues cheerily, 'René may draw a good number; why not?'

'And even if not,' I remark, 'there is no war now; and it is but serving for two or three years, and he is back with his mother. Is it not so?'

A look almost of terror comes into Madame's dark eyes. 'Ah! they never return—they never return,' she cries. 'And as for no war, who knows? They say that we *must* get back Alsace and Lorraine!'

'Yes; for very certain we must, and will,' says the old Captain, who has strolled in and joined our group. 'Those pestilent Prussians! Let them only come again, and this time they shall not go

back ; we will make each of them a present of six feet of French soil,' concludes the old soldier grimly, fiercely twirling his moustache.

'Ah!' sighs Madame, rising and folding her work, 'France may get back Alsace and Lorraine, but who shall give us back our children?'

Marthe's sitting is now over, and she runs to me at once. I have made quite a pet of the little thing. I am getting an old woman, and I like bright young things about me; and the child has pretty caressing ways about her, which, joined to her fresh beauty, make her very winning.

'Will not Madame look?' she cries, drawing me towards the easel. 'Is it not wonderful how Monsieur has made it like? See my coral necklace! Ah! if I only had a silver chain and locket like Madame's, how beautiful it would look in the picture!'

I laugh, and look at Stirling. 'The coral necklace makes a good point of colour, and is much prettier than my silver chain,' I say in English; 'but all young girls like fashion;' and I make up my mind that before I leave St Pourçain, my silver chain shall change hands.

'When will you have finished?' I go on, as Marthe leaves us in obedience to a call from Madame Petit.

'Two more sittings will be enough, I think,' is the answer.

'I am glad of it,' I say heartily; 'for I do not think Oscar likes them. He is inclined to be jealous of you.'

'Without cause then, I am sure,' says Stirling. 'She is a lovely little thing to paint; but I should be sorry to trouble her lover's peace of mind by even a flirtation. Besides,' he continues, with the frank look in his handsome eyes which has first won my liking, 'I should be loath to do discredit to your recommendation. You have been sponsor for my good conduct, you know. I shall leave here the day after to-morrow. I am in a hurry now to get home and to work hard.'

I am sorry to lose him, and say so. We have been on several sketching expeditions together, and I have found him a most pleasant and helpful companion. But still, with that look in Oscar's eyes fresh in my memory, I am glad.

The next day, after the sitting is over, he goes off to the neighbouring town for the rest of the day; and I, feeling 'off guard' as it were, sally forth to complete a sketch of a quaint old house I had begun some days before. I am interested in what I am doing, so that it is late when I put up my sketching materials and prepare to stroll homewards. It is market-day in St Pourçain, so I go through the *place* to get some flowers, and also because the gay scene always delights me. The women in their quaint costumes sitting under blue, green, and red umbrellas, and with fruit and vegetables in glorious masses of colour piled up before them; the picturesque buildings with their queer old carved beams and overhanging stories and gables, and the gray old Norman church—which forms one side of the little square—on the steps of which the women deposit their baskets while they go in to tell their beads. The market is almost deserted when I get there; the buyers have nearly all gone home, and the sellers are beginning to put up their remaining wares before leaving. However, I am able to procure my flowers, and am waiting for some change,

when, looking over towards the church, I see a group which interests me. Marthe is standing on the steps beside Stirling; she is holding something in her hand which he has just given her, and is looking up at him with such genuine delight written on her face, that I can read it even at this distance. Then she says something to him, at the same time putting her hand into his. He raises it laughingly to his lips, and in another moment she has turned away and is hastening in the direction of the *Trois Etoiles*. But there has been another spectator of the scene beside myself; for to my consternation, I see Oscar emerge from the shadow of the church and follow her quickly.

'Never mind the change,' I cry to the market-woman; 'you can give it to me to-morrow;' for something tells me that there will be a 'scene,' and that it will be as well for me to be at hand. But when I arrive at the *Trois Etoiles*, I find that I am a day after the fair—Oscar and Marthe are already 'having it out' under the lime-tree.

I have no pretext for interrupting them, so I go up to my own room. My window stands open, and I can both see and hear them, for every word reaches me distinctly through the still evening air. Round Marthe's neck is a silver chain and locket, handsomer than mine; and Oscar is pointing to them angrily. 'I will not have it—do you hear, little traitress?' he cries passionately. 'You women would sell your souls for a bit of finery. Take off that horrible necklace, and give it to me—do you hear? If you are to be my wife, you shall accept no presents from fine gentlemen' [My poor painter a fine gentleman!]; 'no; nor yet hire out your face to be stared at. Take it off!' he repeats.

But Marthe puts up her hand to her silver chain and holds it fast. 'I will not—I will not!' she says. 'What harm have I done? Monsieur brought me this from Gannat, and that is all.'

'I saw him kiss your hand,' cries the incensed lover; 'and you allowed him!' and he utters a malediction. He is in a frightful rage; that I can hear by his voice; but Marthe is angry too, and will not heed the signs of the coming storm.

'A pretty thing truly,' she says, 'if I am to be watched and suspected like this. You have no right to do it; you are not my husband yet, thank heaven!'

Oscar's face darkens. But there is a terrible anxiety in his eyes as he says with an effort at calmness: 'Then you do not love me?'

Marthe pouts her full lips, but answers not.

'If you love me,' says Oscar, 'you will take off that chain, and give it to me.'

'No, no,' she repeats; 'it is mine.' The child clings to her bit of finery, and will not give it up.

'Then you do not love me?' says Oscar once more.

'No!' says Marthe, vehemently stamping her foot and flushing scarlet. 'I hate you—hate you—do you hear? And I will never marry you—never!' And with a sudden flood of tears, she jumps up and rushes into the house.

When I go down in the morning, I find she is in bed with a headache.

'I do not know what is the matter with the child,' says Madame, unsuspectingly concocting her *tisane*, 'she is so hot and feverish.'

'Where is Oscar?' I ask.

'He has gone to Gannat to see the conscription drawn,' says Madame Petit. 'Poor Mère Gomet! God grant her René good fortune.'

I am glad that Oscar is out of the way; for finding that Marthe is unable to sit to him, Stirling makes up his mind to leave by the diligence, which passes through St Pourçain in the course of the morning; so that by the time Oscar returns, my task of effecting a reconciliation will, I feel, be comparatively easy; and when young Stirling proposes that I shall 'set him' a bit on his way, and let the diligence pick him up, I assent with much satisfaction. I have not the heart to tell him at the last moment of the mischief his locket has wrought; and we part with mutual expressions of good-will and hopes of meeting again before long; and I return to the *Trois Étoiles*, hoping to make all things straight between the lovers before night. But my hopes are destined to disappointment. When I arrive at the *Trois Étoiles*, I find the court-yard full of people, all talking at once with French volubility, while Madame is standing in the centre of the group crying and exclaiming: 'It is not true; I do not believe it.'

'What is it?' I ask.

Every one answers me at once; and it is some time before I am able to arrive at the cause of the disturbance, which is this. Madame Gomet's son has drawn an unlucky number, and she has no money to buy a substitute. 'Well, that we knew before,' I say.

'Yes, Madame. But here is one come from Gannat who says that Oscar Petit has volunteered to go in his place, and been accepted.'

'No, no!' cries Madame; 'it is a vile story—an invention. It is impossible that he could so treat his unhappy mother. —Is it not, Madame?' turning with piteous entreaty in her face to me.

'Of course, of course!' I begin hastily; but the words die on my lips as I see Oscar standing in the gateway, with stern eyes and pale compressed lips.

'My son, my son! say it is not true!' says the poor mother, rushing towards him.

But Oscar turns away. 'Yes, my mother, it is true!' he says; and with a low moan, Madame Petit staggers back and sinks fainting into my arms.

We carry her into the *salle*, and I manage to send every one away but Oscar and Babette. 'Go go, my friends,' I say; 'I will see what can be done.—You have been quarrelling with Marthe,' I say angrily to Oscar when they are gone; 'and so you propose to yourself to break your mother's heart—a fine revenge, truly!'

Oscar looks rather ashamed of himself, but says simply: 'I love Marthe too well to live in the house with her if she will not marry me. She cannot leave her home; therefore I must.'

'No, no!' says the poor mother, who now begins to recover. 'She shall go. I cannot lose you, Oscar, my son, my only son!' and she falls into bitter weeping.

Oscar kneels beside her and buries his head in her lap; so he does not see a little figure which comes stealing in at the door with tear-dimmed eyes and white cheeks, and holding a silver chain in its hand. 'Oscar,' says Marthe, 'do forgive me; do, do! Take the chain. I love you—I love you; I only love you;' and she too falls on her knees, crying bitterly.

I feel very much inclined to laugh at the couple of young fools who have got themselves into this scrape—were it not for the grief of the mother, which is almost tragic in its intensity.

'Can Oscar not get a substitute?' I ask.

'I do not know, Madame; but even if he could, I should have to pay heavily, and I have no money laid by—times have been so bad since the war.'

'There is my *dot*,' says Marthe eagerly; and Madame's sad face brightens for a moment; but of this Oscar will not hear, even if the money can be touched legally, which is doubtful, Marthe being under age.

Perhaps I am an old fool for my pains. 'Perhaps,' I remark cynically to myself, 'I am only helping two people to make each other miserable for life;' but it ends in my driving over to Gannat, enlisting the sympathies of the *sous-préfet*, finding a substitute, and paying for him—rather heavily, I am afraid. But when I return home and place Oscar's release in his mother's hand, duly signed and attested, I am more than repaid when I see her joy, which, although she is a Frenchwoman, is too deep for words.

So we have a gay wedding before I leave St Pourçain; and by Oscar's special request, the bride—who looks lovely enough to turn any man's head—wears as her sole ornament a silver chain and locket; and we are all very content and happy, with the exception of the old Captain, who says that I have robbed France of a good soldier.

Marthe is as happy as the day is long. She often writes to me. Oscar has never been jealous again; and heretic though I am, I am to go over this year to attend the christening of the most wonderful *bébé* which has ever been born beneath the shadow of the *Trois Étoiles*.

## THE MONTH.

### SCIENCE AND ARTS.

THE details of Mr Hannay's experiments on the artificial formation of diamond have been laid before the Royal Society, and read at one of their meetings. Except as a record of persevering labour carried on under much risk, they are not interesting to the unprofessional reader. Having noticed in his early experiments that very small hard scales of carbon were formed in the tube, that fact became the basis of his further endeavours. Great heat and enormous pressure were required, and where was a material with sufficient power of resistance to be found? The massive iron tubes slowly cracked or flew to pieces with dangerous violence. Out of more than eighty experiments, not more than three successful results were achieved. It is easy to believe that 'the continued strain on the nerves, watching the temperature of the furnace, and in a state of tension in case of explosion, induce a nervous state which is extremely weakening, and that when the explosion does occur it sometimes shakes one so severely that sickness supervenes.'

'In nature,' says Mr Hannay, 'the temperature has been at one time higher than we can obtain artificially; and the pressure at a depth of two hundred miles below the surface is greater than can be supported by any of the materials from which we can form vessels. It will thus be seen

that whereas in nature almost unlimited solvent power could be obtained, we are not as yet able to reproduce those conditions artificially. Could pressure alone increase solvent power, then much might be done; but pressure acts only by keeping the molecules close together when they have great *vis viva*, and this condition is obtainable by high temperature only.' Notwithstanding that the difficulties appear to be insurmountable, we may, now that the particulars of the experiments are made public, feel assured that other investigators will take up the research, and that further demonstration will be given of the artificial formation of diamond.

By a series of observations made at Grasmere last summer and autumn, Professor G. F. Armstrong of the Yorkshire College, Leeds, has come to some conclusions on the diurnal variation in the amount of carbonic acid in the air. Great care was taken to avoid error; and the results were that the normal amount of carbonic acid present in the air of the land is distinctly less than usually stated, and that it does not exceed 3.5 parts in ten thousand of air—That plants absorb carbonic acid during the day and exhale it at night, and that vegetation, therefore, affects the quantity of carbonic acid present in the air, decreasing it by day, and increasing it at night; and that from this cause there is during that part of the year when vegetation is active, at least ten per cent. more carbonic acid present in the air of the open country by night than by day. Some difficulty was experienced at times in collecting air for the experiments, in consequence of the overabundance of rain in 1879. Grasmere is notoriously a wet place, and is within seven miles of the wettest place in England—Sty Head, where the average annual rainfall is one hundred and seventy-five inches. Last year it amounted to two hundred inches. This is a fact worth recording.

Dr Angus Smith, F.R.S., has devised a means for Measurement of the Actinism of the Sun's Rays and of Daylight, of which he states in a preliminary notice, 'when examining the air of towns and the effect of smoke and fogs, he has often wished for a very simple chemical method of measuring the total light absorbed by these gases, vapours, and floating solids. He does not undervalue the work of others, but thinks he has obtained a process promising good results with great simplicity, although it may introduce its own class of difficulties.' The method is based on the 'fundamental fact, that when iodide of potassium in solution is treated with nitric acid, so small in quantity as to cause no change of colour in dull diffused light, a change takes place when the same mixture is brought into clear light; iodine is set free, and the solution becomes yellow.' Meteorologists as well as sanitary functionaries are agreed that it is important to have a record of the total amount of sunshine; hence we trust that this new means for recording will realise Dr A. Smith's expectations. Further information on all that precedes may be found in the *Proceedings* of the Royal Society.

An observer in the East has pointed out that in the three years 1876—1878 there was an unusual and persistent amount of atmospheric pressure over a large part of India, extending to Singapore, Batavia, and Australia, where it was greater at Adelaide than any one of the Indian stations. It

appears that a gradual increase of pressure had been observed since 1870, and that the maximum was reached in 1877; thereby shewing an approximate conformity to the sunspot variation. This conclusion is supported by more than thirty years' observations made at Calcutta and Bombay; for they prove that the variation of pressure with the sunspot cycle is a regularly recurrent phenomenon.

In a discussion concerning the chemical and geological relations of the atmosphere, Professor Sterry Hunt, F.R.S., of Montreal, shews that while the atmosphere modifies the rocks, the rocks in their turn modify the atmosphere. A layer of the rock known as orthoclase, one metre thick over a fortieth of the earth's surface, would absorb the entire quantity of carbonic acid at present in the atmosphere. This faculty of absorption is fraught with important consequences. The total volume of our atmosphere at the density which it has at the sea-level is, according to calculation, less than four-thousandths that of the earth; the volume of the ocean being very much less. 'There is no known mass of cooled rock,' says the Professor, 'which has not a greater porosity than is represented by these figures; so that the conclusion seems inevitable that, with the complete refrigeration of the earth which must come in the course of ages, its atmosphere, following the ocean, will have so completely sunk into the pores of the cooled mass that its tension at the surface would be very small.' In other words, the earth would be in the same condition as the moon now is, devoid of atmosphere and life; which condition probably exists also in the planet Mercury.

The Secretary of the Royal Agricultural Society has published in their *Journal*, 'Notes on Market Gardening and Vine Culture in the North-west of France,' which are well worth reading by all persons engaged in producing food-crops. The extent to which salad is grown and consumed on the other side of the Channel, seems almost incredible to a dweller on this side. One article is particularly mentioned—the dandelion, which, as we are told, is now systematically cultivated on a large scale, while the market-gardeners and the consumers are enthusiastic in its praise. In England, the dandelion is partially used for medicinal purposes; but in France, five varieties of the plant are cultivated to be eaten as salad in the middle of winter; and this, as the Secretary says, is its great merit, in addition to its hygienic properties, that it abounds at a time of year when most other salads are very scarce.

Among the same 'Notes' are statements concerning the cultivation of asparagus and of the vine; and a curious fact is mentioned concerning figs, shewing how their ripening may be hastened. When the eye of the fig is yellow and about to dilate, the skin also being brilliant and inclining to yellow, a small touch of olive-oil is put on the eye in the early morning or in the evening, and in nine days the fruit will be ripe. But if this operation is tried before the fig is quite ready or in full sunshine, it does more harm than good.

We learn that in another part of France asparagus is cultivated by the plough, and yields a handsome profit.

When Sir Samuel Baker was exploring Cyprus, he was told by certain monks that they believed the Scriptural 'chittim-wood' to be a species of

pine which grows only on the mountains between the monastery of Kyker and the town of Khrysokus, a pathless and almost inaccessible region. Boughs, as specimens of the tree, were fetched by a trustworthy messenger, and were sent to Sir Joseph Hooker, Director of the Royal Gardens at Kew, who in a brief description published by the Linnean Society, says of this newly-found tree, that it differs from the known forms of *Cedrus* in the shortness of the leaves and the smallness of the female cones. In size of cone, size, form, and colour of leaf, it approaches the Algerian far more closely than it does any Taurian, Himalayan, or Lebanon cedar. Among tree cultivators it may be called the Cyprus cedar; and its special characteristics will be better understood when the promised ripe cones and seeds shall be received at Kew.

Sir Samuel Baker writes that he has found two varieties of cypress. One he describes as a tree thirty feet high, with a girth of six or seven feet, the wood cedar-coloured, 'emitting a powerful aromatic scent resembling that of sandal-wood. This is (in Sir Samuel's opinion) the celebrated chittim-wood. Why should Solomon have sent for cedar, which is so common in Asia Minor? The No. 2 variety of cypress is an intensely hard wood, resembling somewhat *lignum vitæ*.'

Two papers—one on Iron as a Material for Architectural Construction, the other on Mild Steel and its Application to Building Purposes—have been read and discussed at meetings of the Royal Institute of British Architects. Mr C. W. Siemens, F.R.S., took part in the discussion, and made clear to all who heard him what is meant in the present day by steel, particularly that form of the metal described technically as 'mild steel.' He made clear too the reason why steel is pure, and iron more or less impure. In producing the steel now used in engineering and architecture, a mass of some ten or twelve tons may be seen in the furnace in a state of perfect fluidity, in which state it is tested by means of samples both as to its chemical and mechanical condition. That steel can be shaped as required for any purpose. Mr Siemens holds that 'for purposes where boldness and grandeur of outline are essential no material can rival steel. When we want to bridge a third of a mile in span, or to construct a roof or dome of enormous size, there is no material that can serve our purpose like steel. If the object is simply to get tensile strength, as is the case in the chains of a suspension-bridge, the use of steel wire enables us to attain a limit of strength exceeding a hundred tons per square inch, or as much as five times the tensile strength of wrought-iron.' In building a house of an area thirty feet by sixty, the using of steel girders instead of wood would effect a saving of two hundred and ten pounds, and the rooms would be higher. This mild steel, which has nearly expelled iron from naval construction, has an absolute strength of about thirty tons per square inch; but its toughness is such, that if a bar eight inches in length is subjected to increasing strains, it will stretch to ten inches before giving way. This steel is of uniform strength—a great advantage when overloaded, or in case of fire; and it is capable of being wrought into the highest artistic forms.

We learn from the tenth annual Report of the Deputy Master of the Mint, recently published,

that the total number of pieces struck at the Mint during 1879 was thirty million fifty thousand three hundred and forty-four. Nearly twenty-eight millions of these were British coins. The demand for bronze coin continues, notwithstanding that from 1860 to the present time, the total of bronze issued to the public amounts to one million four hundred and forty-six thousand pounds, or nearly three times the value of the old copper coin withdrawn from circulation. The officers of the Mint do not fail to take advantage of discoveries or advances in science in carrying on their operations; spectrum analysis has been employed to determine the nature of alloys, and Professor Hughes' induction balance to investigate their molecular structure. It was shewn by the chemist of the Mint that a suitable solvent, aided by a battery, could be used to regulate the weight of 'blanks,' the disks of metal from which coins are struck; and this process having been adopted at the Bombay Mint, the operators there found that the metal dissolved from the too heavy blanks could be deposited on those which were too light; and up to the present time five million silver pieces have been so treated. Formerly, much annoyance and loss were occasioned by brittle gold being sent in to be coined; but since the discovery of a way by which brittle gold could be made malleable, those objections have disappeared.

The Worshipful Company of Turners have given notice of prizes which they will present in October next to 'any workman, whether master, journeyman, or apprentice in the trade in England, who may send in the best specimen of hand-turning in wood, ivory, and precious stones, including engraving in intaglio.' Excellence of workmanship, apart from elaborateness of design, will be accepted as a qualification. The prizes will be silver and bronze medals, sums of money, certificates of merit, and the freedom of the City of London. The week ending October 9 is appointed for the sending in of the competing specimens. Intending competitors will doubtless obtain full information by applying to the secretary of the Company. Let all applicants remember to transmit a postage stamp for reply.

As was predicted, the telephone is now used for reporting speeches in Parliament. The reporter in the House reads his notes into a telephone receiver; the sound travels along wires to the *Times* office, where a compositor sits with his ear close to the mouth of the instrument, and, with the composing-machine, immediately sets up the spoken words in type. The labour and delay of writing out the reporter's notes are thus avoided, and the reports of debates can be printed an hour later than heretofore by the newspaper. In like manner reports may be spoken to all parts of the kingdom; and orators in the country will see their latest words printed at once in the London papers.

Dr Corfield, Professor of Hygiene and Public Health at University College, London, has published a thoughtful book entitled *Health*, which ought to have many readers. He begins with the human anatomy and the circulation of the blood; passes on to nutrition, to the functions of the body, and the nervous system. The conditions of health are then reviewed, air and ventilation, food and drink, water, climate, dwellings, small-pox, and communicable diseases. Any one who has read

all this will know how to live a healthy life. On the subject of hereditary disease, the Doctor makes wise remarks, which should be kept in mind by young people about to fall in love, for he shews that they have 'no right' to marry into a family in which there may be a tendency towards disease which they themselves suffer from. Where this precaution is disregarded, the 'children are almost certain to suffer from that disease in the worst possible form.' 'If,' continues the Doctor, 'there is a tendency to nervous disease in your family, and you marry into a family in which nervous diseases are prevalent, it is very likely indeed that your descendants will furnish a very large number of inmates to the lunatic asylums. Not only are tendencies to disease hereditary, but a tendency to long life is hereditary. If mischief in the organs of the body is likely to descend, and if likenesses descend, it follows, that perfection of the various organs of the body is transmitted in families, and so long life is hereditary. But there is another reason why long life is hereditary, and that is, that long-lived people have a kind of contempt for persons who are not long-lived, and they rarely marry into families that are not long-lived families; and so this tendency to long life is increased, and that makes it still more markedly clear, and it has been observed over and over again that long life is hereditary.' Dr Corfield may well declare that 'people ought to think of these things a very great deal more than they do.'

A book by Mr Kingzett, a Fellow of the Chemical Society, entitled *Nature's Hygiene*, gives an account of the discovery of oxygen and hydrogen, of the physiological action of pure oxygen, of ozone and respiration, discusses the parasitic theory of disease, and sets forth by numerous examples 'the chemistry and hygiene of the eucalyptus and the pine.' We have already in a former *Month* given particulars of the remarkable disinfecting properties of the eucalyptus tree and its oil; and a similar statement may be made of the pine and its turpentine. Indeed, considering the much greater abundance of the pine, it may be regarded as the more important of the two. The quantity of oil of turpentine that finds its way into the atmosphere, especially in hot weather, is simply incalculable. The governments of this and other countries ought, therefore, never to lose sight of the value of eucalyptus and pine plantations. Valleys and swamps may, by their agency, be freed from malarial fever; and in the place of a poisonous atmosphere, they substitute a state of balminess and purity at once luxurious and healthful.

A paper On Nerve-stretching in Neuralgia, read by Mr Underwood at a meeting of the Odon-tological Society, shews that stretching of the nerves will take away the tormenting pain felt in neuralgia. Cases were mentioned of patients who for years had suffered agony, but who by submitting to an operation, were permanently cured. The operation is simple: an incision is made; and the nerve thereby exposed is seized and stretched until ultimately the pain ceases. Nerves will bear a great deal of stretching. It was found by experiment that the sciatic nerve of a strong man would bear a weight of one hundred and eighty-six pounds, and that of a delicate girl eighty pounds, without giving way. Persons

desiring further information on this interesting subject will find it in *Transactions of the Odon-tological Society*, Number 7, 1880, published by Wyman & Sons, 81 Great Queen Street, London.

#### THE VIKING'S DEATH.

Down to the shore slow marched the mournful throng,  
Bearing within their midst the dying king;  
And sadly rose and fell the plaintive song,  
As 'mid the rocks the cortège moved along—  
A song as of a people sorrowing.

Down through the gorge, where, huge on either hand,  
The stern cliffs raise their bare heads to the sky;  
Where nothing breaks the silence of the land,  
Save fitful sound, heard from the neighbouring strand,  
Of Ocean's moan, or lonely sea-bird's cry.

So to the water's edge they slowly passed,  
And there laid down their load with tender care,  
Fearful lest each faint breath should be the last—  
For life's enfeebled tide was ebbing fast—  
And it should be too late to grant his prayer.

For he, their king, whose deeds dim legends tell,  
Had made with trembling lips this last request:  
That, rocked to his last sleep on Ocean's swell,  
Lone 'mid the waves whose voice he loved so well,  
He might sail slowly to the fabled West.

So, near the shore a glorious galley lay,  
Splendid with gems, and awnings, fold on fold,  
Wondrous and rich in light of dying day,  
Which lit with varied hues the sparkling spray,  
And shot the purple sails with threads of gold.

On to the deck the aged king they bore,  
And gently laid him on the silken bed;  
Placed near his hand the sword he ever wore,  
With shield and crown, that on the distant shore  
He might still be a king among the dead.

The snow-white deck they strewed with flowers bright,  
And set the sails to catch the gentle wind,  
And then, ere changed the evening's mystic light  
Into the glimmer of the starlit night,  
The vessel left the shore and them behind.

The pale stars watched the galley glide all night,  
Wave-rocked, whereon the living, lone king lay;  
But when the sun uprose in lordly might,  
And bade the world—aroused to life and light—  
Renew its toil—the king had passed away.

## THE PEASANT-PROPRIETOR CRAZE.

At intervals of a few years, as long as we can remember, there breaks out a craze, that nothing could be more salutary than the creation of a large body of peasant proprietors, each with his family occupying from five to ten acres of land, so as to form a sturdy intelligent yeomanry, the pride and social safety of the body-politic. The persons who throw out these glowing suggestions for public approval are for the most part politicians or literary theorists who have no practical experience in the treatment of land. They doubtless speak or write in good faith. The topic is attractive. Nothing is more delightful than to picture a cure for poverty by a return to that imaginary period the Golden Age.

Very poetical and beautiful these fancies, but desperately at variance with the mental aptitudes, and the conditions which ordinarily govern society. That such is the case, we may offer the following considerations. In the first place, we take it to be a self-evident truth that the use of land is to produce food, and that the more it produces, the better is it for the community at large. Hence, setting aside exceptional cases where there is a necessity for recreation, any plan which tends to limit productiveness for the general benefit, is objectionable. While, on the same principle, everything that skill and capital can effect should be employed in the improvement and cultivation of the soil, with the view of bringing it into the highest state of fertility. It is a mere truism that land is very various in quality, as is the climate, on which fertility largely depends. The soil of the Netherlands, for example, naturally produces far more than by any expedient can be procured from comparatively sterile and humid districts in England, Scotland, and Ireland.

It would be possible for a family near a populous city to make a comfortable living from no more than two or three acres of rich land, by the cultivation and sale of vegetables; but that would be gardening, not agriculture. In Italy may be seen a combination of agriculture and gardening.

So fertile is the soil, and so fine the climate, that there are commonly two crops a year; and we have the spectacle of vines, oranges, citrons, melons, and pomegranates growing in the open air amidst crops of grain. By this combination of advantages, a farm of three acres and a half will support a family of five persons in comfort. Circumstances are totally different in the north of Europe, where, for the most part, farming is a constant struggle with nature, or at least conducted under difficulties. In obedience to a popular craze, peasant proprietorship was some time ago introduced into Norway; but the prevalent state of affairs is far from satisfactory, for it is signalised by bad farming and pauperism.

In France, owing to a law dating from the Revolution, which enjoins the equal division of property among children, the land has in many cases been divided and subdivided down and down, so as to be at length partitioned into small possessions of only a few acres, out of which a living has to be wrung the best way possible. Those who have not seen it can hardly imagine the intense industry, the severe drudgery, and parsimonious habits of the small French proprietors. Early and late, every member of the family is toiling at hand-labour in the unclosed fields. The fare is of the very poorest. The sole object in life is to save. Not a sou is spent on books, or newspapers, or anything out of the dullest routine. The costume is of the scantiest and meanest. With a view to limit claimants in succession, families are ordinarily restricted to two children, sometimes only one child; wherefore the population of France is decreasing to a degree that is a little alarming in a national point of view. There are other evils. Brought up in ignorance, the people in the rural districts can lend no intelligent assistance in public affairs, and become puppets in the hands of political adventurers or of official dictators. Surely, even were it practicable, such is not the social condition to be aimed at for any section of the British islands.

The plan of allocating small parcels of land in

long leasehold at a small annual rent, for the benevolent purpose of rearing an independent and respectable body of peasant occupants, has been tried, in several places in Scotland, and as far as we have heard, the experiments have been generally unsuccessful. Sooner or later, as it would appear, the families to be benefited get into debts and difficulties, fall away from the original design, and the properties in time are either coalesced or revert to the landlord. Where the families linger on as crofters or cotters, and have no other means of subsistence, they lapse into a condition of semi-pauperism and wretchedness. From all that has fallen under our own notice, any expectation of a family living in decent comfort on the produce of five to ten acres of land, even if but a trifling annual rent be payable, is dismally hopeless. Were the land given even for nothing, the project of so small a farm could not answer. The family making the attempt must have a dwelling, however plain, of two or three apartments, which has to be kept in repair; must either keep a horse or hire one when wanted; must feed cattle for the sake of manure, or buy artificial restoratives; must do all the harvesting, or hire labour for the purpose; must get the thrashing effected at some outlay; must keep a cow for a supply of milk; must possess sufficient capital to pay rates, taxes, and accounts when payment is demanded. To expect that a man, though a Hercules in strength, and reasonably thrifty and intelligent, can with his own hands, aided by wife and children, make a decent livelihood and pay his way out of the proceeds of such a small and difficult-to-be-conducted agricultural concern, is in this country an impossibility. A man farming a piece of ground on so limited a scale, or of a few acres larger, would live a life worse than that of a slave. He would not enjoy the comforts of a hired labourer at a pound a week. His troubles would be endless. His existence a dreary burden. The grave a relief.

No wonder that benevolently conceived schemes of this kind should have broken down. The business of an agriculturist or of a store-farmer in the United Kingdom requires to be conducted on that large and creditable scale in which skill, capital, and enterprise find their proper exercise, not alone for individual benefit, but for the advantage of the entire community. We need not describe an improved system of husbandry. It is embraced in good-sized farms of four to five hundred acres, conducted with the best mechanical and scientific appliances, and entered upon only by persons possessing a capital of at least four thousand, or more likely five thousand, pounds, and who are insured a lease ordinarily of nineteen years, during which there is a fair chance of getting out of the land all that is put into it. According to the practice in Scotland, which we think could hardly be improved upon, the landlord, at the beginning of every lease, puts the farm

establishment in proper tenantable order, so that no claim for improvements has to be put forward by the farmer. It may seem a hardship that a certain specified rent should be paid. But how, with justice, is that to be helped? A good farm in workable order such as we speak of, probably cost the proprietor or one of his predecessors five-and-twenty thousand pounds; and after paying all outlays, the money received half-yearly as rent does not yield two per cent. on the investment. Land, in fact, is the least remunerative of anything that can be purchased. It is for the most part acquired only for the honour of the thing, and a costly honour it is. In some respects the tenant is the better off of the two. If he does not find the farm remunerative, he can give it up at the end of his lease. On some estates, farmers remain from generation to generation, the farm being valued each time the lease is renewed. We know cases where after a successful career, tenants have bought farms and become their own landlords. To this there can be no objection. Only, it is to be kept in mind, that by the system of renting their farm, men with a limited capital are able to enter the profession.

The marked feature in the system of leases of land in Scotland is the perfect liberty on both sides—liberty in the proprietor to give a lease to whom he pleases, liberty in the tenant to take a farm or let it alone. Fixity of tenure at a specified rent would be alike abhorrent to both. Owing to a possible reduction in market prices, fixity of tenure might bring ruin on the farmer, while it would amount to a qualified confiscation of the rights of the landlord. If these views be correct, the cry for fixity of tenure among certain classes in Ireland seems ill-advised and unreasonable. In all cases, as it strikes us, the proper plan is to let land, like everything else, find its natural marketable value. We would go further, and say, that the fewer trammels on the transference, disposal, or occupancy of land, the better for every one.

It may be averred that circumstances have rendered the position of Ireland so peculiar, that there can be no analogy betwixt it and Great Britain. We entertain grave doubts on this point. The state of affairs in Donegal and some other parts of Ireland does not differ materially from what prevails in some of the western isles of Scotland. There, within these few years, we have seen the direst poverty and misery, as a result of precisely the same causes as in Ireland—namely, a habitual dependence on crofts, or small patches of wild land, supplemented in some instances by fishing; and when both sources of subsistence fail, starvation is only averted by doles of oatmeal. It has lately been noticed in the newspapers that in some parts of Skye, charitable relief of this kind was required by the crofters. This does not surprise us. The poor inhabitants live as their forefathers did in centuries long gone by. And so they will remain struggling with starva-

tion, while they continue to speak nothing but Gaelic, and rely for subsistence on the paltry patches of land they are allowed to occupy on the bare sea-margins, and still more bleak hill-sides.

What the English as a nation have done for the spread of civilisation, is well known. Their self-reliant and prosperous colonies are found in every clime. We must be excused, however, for saying that in one respect the English have been remarkably deficient. They have neglected or mismanaged the fragmentary relics of an ancient people at their own doors. The consequence is painfully observable. Within the sphere of the United Kingdom are found stretches of country where the inhabitants know nothing of the English tongue, or English habits of thought. Drifting on from generation to generation as occupants of meagre patches of land, without thrift, capital, or knowledge of the world, they live a wretched hand-to-mouth existence, in a style little better than that of the lower animals, their companions in misery, and are ever on the brink of destitution. The failure of some petty crop finishes them. So dire is their condition, so slight their self-respect, that in the day of distress they are contented to accept doles of food, old clothes, or anything. The blame cast upon them is that they live as they please, without the foresight enjoined by English notions of duty. It would be more correct to say that they are helpless and live as they can, as beings who know no better. Fixed to the soil, as it were, by language and traditions, they deserve our sincere sympathy. Remaining where they are, their condition is hopeless.

Some of our readers may have perused the graphic and faithful accounts of the sufferings now endured in the south and north-west of Ireland, as given by the daily press, and it is not necessary to expatiate on the subject. We offer only the following few scraps from a report of the special correspondent of the *Daily Telegraph* at the beginning of January. He is writing of what he saw along the coast of Donegal, where the people are half fishers, half farmers, the patches of land they occupy being two, three, or four acres. 'For several years past the seasons have been bad, and that of last year meant absolute ruin. Potatoes rotted in the ground, and were dug up as masses of corruption; barley and oats and beans, exposed to untimely Atlantic storms, were levelled with the ground or torn up by the roots; turnips sickened in the sour soil—there they are still, some of them, and a pig would hardly deign to root them up; while the incessant rain made it impossible to lay in a store of turf. As for the fishing industry, the poor people have neither the boats nor the gear requisite for deep-sea fishing in winter, and so they are cut off from every means of earning a livelihood. Knowing all this, I was prepared for sad scenes at Kildonay, but even if I had given imagination full play, it could not have conjured up those which actually met my eyes. Our route lay for some time through a dreary and neglected country, sodden with wet, undrained, and in some cases fast going back to a state of bog. Here and there a larger farmstead than usual, surrounded by well-kept fields, shewed that capital, as well as industry, was at work; but these were very exceptional instances, and only, by contrast, deepened the prevailing melancholy.'

By-and-by he comes to a kind of village or hamlet. 'The first cabin into which I went was a place that an Englishman would think too bad for his pig. Its floor, of earth and stones, reeked with damp, and water even stood in the hollows; the only furniture was a few cups and saucers, a stool or two, and as many tubs and pots; in one corner a mass of dirty straw had evidently been used as a bed, and on the wretched hearth smoked rather than burned an apology for a fire. The man of the house—shoeless and coatless, pale and haggard—sat idle upon a bag of Indian meal, beyond which his food resources did not go, and through the gloom around the hearth—there was no window to speak of—could be dimly made out one or two crouching female figures. I never saw anything in the way of a home in a civilised country—and I have seen a good deal—more appalling than this. Yet here was the case of a man renting three acres of land, and usually getting what he would be content to call a living out of them. Now, alas! he and thousands of others like him have reached the end of their miserable last season's crop, and beyond them but a little way lies starvation.'

'Not far from this, I was shewn by my melancholy attendants into an equally wretched hovel, where a widow with seven young children was fighting the bitter battle of life, and rapidly getting worsted in the struggle. She herself had gone out gathering what she could of stuff to make a fire wherewith to cook the family dinner, consisting—O my brothers in comfortable English homes—of a single cabbage! But the poor little children, half-clothed, thin, and hollow-eyed, were there to plead with heart-rending eloquence for aid. Once more I heard the old story. The land had yielded nothing; no turf could be obtained for fuel short of a journey of eight miles, and the family had touched absolute destitution. Over the way, in another apology for a dwelling-place, I found three poor women trying to kindle a fire with damp bean-stalks, their only crop, in order to cook a dish of Indian meal, their only food. Another and another house I visited—but why describe over and over again a uniformly dark and dismal picture?'

It is to this, then, that the social condition of large stretches of country in Ireland, and in a scarcely modified degree in some parts of Scotland, has been brought through the inveterately maintained practice of endeavouring to draw a subsistence from small portions of unimproved moorland. The whole is obviously wrong, an anachronism at this advanced stage of history. It should have been put an end to, or at least discountenanced, long ago. Instead of this, it has been fostered, and absolutely applauded by persons affecting to speak as philanthropists or statesmen. Peasant proprietorship, or occupancy in perpetuity, has been represented as the proper cure for the ills under which Ireland unfortunately labours. In other words, that there ought to be an extension and confirmation of a system which, looking to results, has wrought indescribable mischief, and is very deeply to be deplored. Against this, every reflecting individual, we think, will set his face, as either fraught with confiscation of the rights of property, or the purchase of these rights at the national expense, with the certainty of perpetuating in an aggravated form a species of

land tenure that is synonymous with mental decrepitude and beggary.

For the hapless condition into which certain districts have lapsed, there seems to be but one feasible remedy, comprehensive in its operation. The land should be cleared of its superfluous population; and then, by means of drainage, planting for the sake of shelter, and other improving processes of a costly nature, rendered fit for cultivation or grazing on a large remunerative scale. In the execution of such works, probably there would be employment for many of the resident inhabitants; but for all who are not required, emigration is the proper outlet. On no account, should attempts at peasant occupancy be resumed. A good deal has been done in the Highlands, both mainland and isles, to reclaim the lands and meliorate the climate, followed by the substitution of large for small holdings. Hence, the immensely improved sheep-farming and grazing that have taken place, as is observable by the vast quantities of sheep and fat cattle that are now brought to market. All such territorial improvements have been effected by the land-proprietors, assisted in some instances by loans from government, which are extinguished by annual payments, within a limited number of years. What has thus been done in Scotland, may be done in Ireland, if landlords do their duty and know their own interests. Ireland, however, can already offer examples of improving landlords, as well as either England or Scotland; and the methods of reclaiming bogs and initiating store-farming on a suitable scale have only to be introduced into those parts of the country still lying in a state of nature.

The removal of families from spots to which they cling even in the depths of destitution, may not be without difficulty; but by kindly consideration and assistance, and by taking things gradually, all troubles may be overcome. At any rate, we know of no alternative. On the one hand, by remaining in the old country, are starvation and frequent appeals for public charity. On the other hand, by removing to new homes in the western states of America, Canada, Australia, or New Zealand, there are prospects of well-requited industry and comfort. In his book recently issued, Judge Bathgate explicitly tells us that the wage of a labouring man in New Zealand is eight shillings a day. How preposterous, then, does it appear that people should prefer to stay in a poverty-stricken country, perishing for want, when at comparatively small trouble and expense they could reach a place abounding in means for enjoying every earthly blessing.

The facilities now offered for transferring large numbers to new settlements waiting their arrival are so complete, that emigration has more the character of a pleasure excursion than anything else. There is, of course, the pang of departure; but the whole history of man is a history of the migration of races and changes of situation, impelled by urgent necessity or some other controlling circumstance. The very Celtic people who claim our compassion are not indigenous to the soil. They are the descendants of bands of emigrants from Central Asia, who, ages ago, landing in these islands, dispossessed a prehistoric race, now forgotten, or dimly known by researches among sepulchral mounds and monoliths. Facts

of this kind should be eminently suggestive and consoling. The destiny of man is movement, ever advancing onward and upward. Excelsior! Fixture to a spot is apt to degenerate into stagnation. It is, indeed, only through impulses to improve in circumstances, or to benefit in health, that the surface of the earth is to be eventually peopled. We never hear of a shipload of gallant emigrants leaving our shores without connecting the incident with the great migratory hosts in the days of old, for the same impelling influences are at work. With these sentiments, we must deprecate those fanciful and unwholesome schemes which would fix down men to the soil and perpetuate the conditions incidental to peasant proprietorship.

## A LIFE'S ATONEMENT.

BY D. CHRISTIE MURRAY.

### CHAPTER XVII.—HISTORY.

*'It's ninety-eight pound ten,' said the rueful man.*

HERE let the Muse who guides this chronicle introduce to the reader the host of the *Spotted Dog* in Bloomsbury. Mr James Groves had by nature no more right to a place in a romance or a tragedy than the Derby Dog to gambol in the Elysian Fields. He was a pale and pimply young man, of weedy growth, and his hair and eyebrows were of a faint primrose colour. He was great in the matter of pins and scarfs and fancy waistcoats. His father had been a pugilist, and had fulfilled the ordinary fate of gentlemen of his profession, who being first over-trained, are afterwards not trained at all, and settling down in a public-house to enjoy the *otium cum dignitate* of their lives, take to drinking, and so sink to an unheroic close. With such an ancestry—it might be invidious to trace it further—Mr James Groves might naturally be regarded as an authority on sporting matters. Many matches, of all sorts and for amounts large and small, were made in his house, and the *Spotted Dog* was indeed the chief rendezvous of the sporting contingent in London. I have indicated that Mr Groves was not by nature intended for a place in written romance or tragedy. But one man in his life plays many parts. The heavy-villain of real life has little in common with his prototype of the lending-library and the theatre. Poor old King Lear lets you know when you spend an hour with him that the convulsions of a kingdom have brought about the hanging of the court fool along with other matters. Fate pitchforks people about in an inexplicable way, giving this foolish youngster a place in a tragedy, and that venerable philosopher a part in a farce.

It befell that on the morning of the day on which Frank Fairholt wandered in desperation on to Hampstead Heath, and stood there lonely and half-mad in the rain, Mr James Groves arose and adorned himself with much jewellery; and drove in a high dog-cart in the society of two congenial spirits to the *Spaniard's Inn*, a hostel known to fame, and celebrated in the fiction of that chaste and elegant author the late Lord Lytton. Here the trio bestowed the high-stepping steed and the dog-cart; and after refreshing themselves with certain liquids, they took their unostentatious way to the house of a gentleman in the near neighbourhood. This gentleman lived

for no other end than 'sport,' and was one of those peculiarly constituted people who find their keenest pleasure in witnessing the combats of the lower animals. That is the formula. But for fear of misconstruction, I should have preferred to say the higher animals. The egotisms of humanity shall, however, be respected; and although I have my own opinion as to the relative values of this gentleman's life and those of the rats, dogs, and birds he induced to slay each other, there is no need to impress it on my reader.

There may have been perhaps a score of sporting gentlemen around the cockpit when our trio arrived at it. The brutal restrictions of British law even in those days were extended to the manly sport of cock-fighting, and considerable care was taken by the gentleman at whose house the present 'main' was held, to shroud their pleasure in the profoundest secrecy. No interruption befell the refined enjoyment of the day. Mr James Groves, an admitted authority upon the matter in hand, found many people who were rash enough to bet with him, and having netted a considerable sum of money, was in unusually high-feather. When the main was over, and the greater part of the witnesses had quietly dispersed, Mr Groves and his friends stayed and had luncheon with their host. In the course of the luncheon, Mr Groves launched out in enthusiastic praises of the high dog cart—which was a new product of the art of Long Acre—and of the high-stepping mare, which had been purchased by the lamented Groves senior, a notable judge of horse-flesh, and was famed for having repeatedly trotted a mile in some quite incredibly small number of seconds. These things to hear did the host of Groves Junior seriously incline, and being blessed with the two things which Groves Junior most admired in others—money and credulity, namely—burned to possess the marvel of a dog-cart and the high-stepping mare of fabulous achievement. This flame of desire being artfully fanned by Mr Groves's friends, and Mr Groves himself declaring with much emphasis that he would sooner be boiled alive than part with either of those his properties, the host determined upon an ocular inspection of them; and despatched his own groom to the inn with orders to bring the matchless mare and unprecedented dog-cart round. This done, he inspected them both with the aspect of a profound connoisseur; and by way of establishing his own cunning in the matter of horse-flesh and dog-carts, admired the pair so highly, that Mr Groves was at length compelled, with many sounding asseverations of his sorrow, to part with them at something like twice their highest value. A formal receipt was drawn up and signed, a cheque handed over, and the transfer was complete.

'And now,' said Mr Groves, 'how am I a-goin' to get 'ome, my pippings?'

This query accorded well with the host's simple ideas of humour, and he laughed loud and long. Mr Groves with great geniality joined in the laughter; but his friends, who had not especially profited by this transaction, 'relucted,' as the Great Essayist puts it, at the idea of walking home.

'I can put two of you fellers up here,' said the master of the house; 'but I can't find room for all three of you.'

Mr Groves had an important engagement at a

most absurdly early hour in the morning, and must go home that night. Would the host let his groom drive him over?—'No; he wouldn't,' said the host, and added humorously: 'Let him walk. It would do his legs good.'

'I'll tell you what we'll do, Grovey,' said one of Mr Groves's friends. 'Bobby and me'll stop here to-night; but we'll walk with you as far as the top of the Spaniard's Lane, and there you're bound to be able to get an 'ackney-coach, you know.'

This programme was accepted; and in the lowering dusk, the three set off together. They had not gone far when the rain began to pelt down sharply, and they took refuge at the inn. The rain rather increasing than failing in force, after the space of an hour passed in the consumption of alcoholic liquors, Mr Groves announced himself as 'gettin' a leetle peckish,' and proposed a steak with onions. His companions, who were pretty generally willing to eat or drink at any man's expense, fell in readily with his views, and another hour went by. By this time none of the three felt at all inclined to move.

'You landed a bit on the main, didn't you, Bobby?' asked Mr Groves from his side the fireplace.

'Five flimsies,' his friend responded sententiously.

'What did *you* fetch out of the pit?' asked Mr Groves of his other companion.

'Oh,' said he carelessly, stirring his grog as he spoke and sipping at it, 'I won about twelve pound.'

'I don't quite know what I won,' said Mr Groves; 'I'll see.' And suiting the action to the word, he drew his chair up to the table, and produced a little chamois-leather bag containing gold and notes, and throwing this on the table, where it fell with a pleasant muffled jingle, he began to count its contents.

Whilst that gambling, horse-chanting, cock-fighting trio sat over whisky-and-water at the hospitable fireside of *The Spaniard's*, one solitary and melancholy figure plashed about the roads of the heath in the darkness and the rain. For poor Frank, the pillars of the world were shaken, and chaos had come again because of the want of a trifle less than a hundred pounds. Emotions in a nature like his are very changeable, and he had come now to a blind angry rage at Fate who had thus cruelly waylaid him. How bitter and how hard it was, you may partly guess. His penitence had been sincere, his reform earnest, his struggle with the worse half of himself severe and constant. He had striven honestly after virtue, had banished his besetting sin of idleness, and had crowned himself publicly with hard-earned laurels; and here and now in the very flush of his triumph and the confidence of his hope, his dead vice and folly came to life again, and laid their hands thus heavily upon him. He saw father and brother and lover broken-hearted; his delicate vanity heard already how the town rang with his disgrace. Then he could bear the thought of these things no longer; he fell into a dull desperation, and in that mood tramped on through mud and rain until he came suddenly upon a gleam of light, and seeing that he stood before an inn, bethought him suddenly of how tired and wet he

was, and so entered. He called for a glass of hot brandy-and-water, and threw his wet coat and dripping wide-awake over a chair by the fire.

'Will you walk in here, sir?' said the landlord, throwing open a door.

Frank accepted the invitation; and entering the room, saw three men standing at a table, two of them laughing, and one somewhat ruefully regarding a quantity of gold and two or three notes which lay before him.

'Well, now, how much is it, Jimmy?' asked one of them.

'Why, it's ninety-eight pound ten,' said the rueful man, with an exclamation which need not be chronicled.

Ninety-eight pounds ten? Those words had been ringing in Frank's ears all day. After his exposure to the rain and his long tramp in the darkness, he felt a little dazed and dream-like on his sudden entry to the warmth and light of the room. The sigh of the wind and the plash of the rain and the noise of his own monotonous footsteps were yet in his ears. He was scarcely certain that his fancy had not played some trick upon him in the repetition of this haunting phrase. But he had scarcely seated himself when the man repeated it ruefully. 'I'd ha'e bet twenty to one,' he said, 'that there was a hundred pound there.'

'Well,' said one of his companions, 'you *did* bet two to one as there was a hundred pound there. Hand over a couple of sovs.—Thankee.'

'Hand over,' said the third man laughingly.

The loser paid both claimants from his purse. 'I'll carry this here ninety-eight pound ten home as I got it, anyway,' he said; and raked the money towards him, and bestowed it in his chamois-leather bag. 'Oh, you fellers can grin as much as you like; but I've done a pretty good day's work, takin' it altogether. I've made pretty near a couple o' hundred out of that little bargain, my boys, and I pulled ninety-eight pound ten out of the cock-fight'—

'Sh!' said another, looking across at Frank.

Mr Groves was somewhat inflamed by liquor, and chose to be very loud and lordly over this interruption. 'Look here, Mister "Sh!"' said he, with semi-drunken importance, mimicking his companion. 'I'm a-takin' it for granted as I'm a-talkin' among gentlemen; an' if any gentleman overears me a-remarkin' as I've won ninety-eight ten to-day on a cock-fight, why, so he may, and welcome. I don't suppose as anybody here is a-going to lay a criminal information; but if anybody is, why, my name's Jimmy Groves, and I'm the landlord o' the *Spotted Dog* in Bloomsbury, and what I say I stick to.'

'Oh, all right!' said the other, shrugging his shoulders deprecatingly. 'Say what you like.'

'Well,' said Mr Groves, elaborately desirous to justify himself, 'I'll leave it *with* the gentleman. If a man's won ninety-eight ten on a cock-fight, and he says so, fair an' square an' plain, without palaver, mind you, what's the odds? I didn't say wheer the cock-fight was—did I, stupid? I leave it to the gentleman.—Did I say wheer the cock-fight was, sir?'

Thus accosted, poor Frank responded that the gentleman seemed to him to have spoken most discreetly, and to be admirably worthy of his high good-fortune. This speech which fed the bitter-

ness of his own heart, put Mr Groves into a great state of good-humour, and he refought the great encounter—'main,' as it is termed by the sporting fraternity—of the morning, whilst Frank sickened at him. Whilst he sat there and heard this drunken cad relate his brutal story, the young man thought how wild was the fashion in which Fortune distributed her gifts. Frank looked at this pimpled and bejewelled young publican, and felt very bitterly towards him. 'This howling drunkard,' he thought as he looked at him, 'has made to-day, by his presence at that degrading spectacle, the very sum of money the want of which will be my ruin at noon to-morrow. One can hardly believe in Providence, in the face of it.' Frank became half-frightened at his own thoughts, so dark they grew. He called for more brandy, and drank it; then passed into the outer room, put on his overcoat and hat, and went out into the darkness and the rain again. He tramped along slowly, so wretchedly absorbed that he scarce knew where he went. He filled and lit his pipe mechanically, and coming to a gate, threw his elbows on it and lounged there unconscious of the night, or not caring for it, and smoked as he looked across the gloomy fields.

As he leaned there, he heard loud voices coming up the lane, startling the dreary night with tuneless song. *We won't go Home till Morning* refused to blend with *Auld Lang Syne* and *The Bay of Biscay*. Frank, half-hoping that they would go by in company, and save him from the demon who tempted him, drew nearer to the hedge at the side of the gate, and stood still there. The voices and the footsteps ceased awhile, and then he could hear the murmurs of conversation. Then two voices went away, and one came nearer, unmusically roaring, 'For he's a jolly good fellow.' As the owner of the lonely voice came on and reeled past the gate, Frank knew him for the man who had been boasting of his winnings. 'That blackguard,' thought Frank, 'has in his pocket the very money which would save my whole life. Would it be theft to take it from him, and send it back when my cheque comes? I know who he is, and where he lives. It would save me, and do him no harm.' Thus the demon tempted him. 'Bd!' said Frank; 'I haven't the pluck for it. I can do any amount of filibustering in fancy, but I let the chance go by.' Up to that second of time he had only feared that he might be tempted, and had speculated on what he would do if he were. Now, as if some irresistible hand impelled him, he dashed on at full speed after the stumbling drunkard in front, and coming up with him, in half a minute laid a hand upon him. The man supposing it to be one of his late companions, hiccuped 'Hillo!'

'Listen to me!' said Frank.

'And who are you?' asked the other with an oath, reeling from beneath Frank's grasp and throwing himself into an attitude for defence.

'I am a desperate man,' said Frank. 'You have money about you that I want. I don't mean to rob you. I know who you are and where you live, and I will send the money back again to you; but I *will* have it now. Give me the bag with ninety-eight pounds ten in it.'

'Stand off,' said the landlord of the *Spotted Dog*, 'or I'll blow your brains out! D'ye think I travel down a lane like this without pistols?'

He made a pretence of feeling in his breast-pocket; and in that instant Frank sprang upon him and brought him to the ground. He lay dead-still; and with a frantic haste and horror such as no words can tell, the abandoned madman searched for the bag and found it and dashed away. He then leaped the hedge, and ran in a blind and maddening terror across the fields. It was not the dread of anything that might pursue that urged him onward. His fear dwelt within. His abhorrence of the deed before it was fairly done was a thing that language cannot deal with. There is no such Tophet elsewhere as any man may create within the depths of his own soul. He was bound for ever beyond hope of release to himself, that vile footpad who had just struck down the helpless man in the road behind, and he shuddered at that hideous companionship, and shrank from it with inexpressible loathing. Such a hopeless gulf arose between his present self and that happy misery of five minutes since, that as he ran he sobbed and wailed to think of it. He had not been running for twenty seconds when, with an access of remorse and terror, he stopped and turned, and hurled the bag away from him with all his strength. Then he ran once more like a madman until breath and strength failed him together, and drove him to the ground.

When he came to himself, the rain had ceased, and a watery moon was shining. He arose weakly, and knew the place in which he found himself. Like a man in a dream, he walked homeward, dragging one weary foot after the other. He was three miles from the scene of his crime, when a cab came rumbling by, and he hailed it, and ordered the cabman to drive him to the square nearest to his rooms. When he reached them, he found the house in darkness, except for his own sitting-room, in which a lamp was burning. He entered, and was surprised to find nothing changed. A whole unfathomable gulf of time lay between him and the hour at which he had left the place. He looked on his table for letters, as a phantom returning to the place known in the flesh might do things once familiar. He opened them, and regarded their contents with almost an added misery. All had been well if he had but suffered that little trouble patiently. It seemed quite a pany trouble now in comparison with this awful companionship with himself, which must be endured for ever. The decanter of brandy from which he had poured a glass before going out was still upon the table. He seized a tumbler, and helped himself plentifully. Then he took the lamp into his bedroom, undressed, and got into bed. The brandy and his fatigue sent him to sleep, and he lay in heavy forgetfulness until the sun was high.

He awoke with a sense of rest and ease, and stretched his arms luxuriously. But the terror which waited for his awaking dropped down upon him as swift as light, and oppressed his soul with anguish. Through it all, with a strange automatic exactness, he went through the usual routine of his toilet, bath'd and dressed, and wound his watch, and then rang for breakfast, and even ate a little. Next he called for a cab, and drove to the bank with Benjamin Hartley's cheque. He opened an account there, and drew one hundred and fifty pounds in notes and a hundred pounds in gold. It was strange to

himself how his thoughts seemed to float on the surface of that fiery sea of remorse which lay burning in him. He looked a little ill and tired, he thought, when he regarded himself in the glass. Could such misery look so unconcerned? he wondered. Could men carry such tragedies as his about the town and not declare them in their looks? What numberless horrors there might be in the world, unguessed of! He drove to Tasker's place in Acre Buildings, and found the office boy alone. The lad said his master had not yet come; and Frank waited there, and read the paper the boy gave him, and read understandingly and with interest, whilst that vast sea within lay burning him, and the knowledge of his sin and the eternal presence of his remorse were with him all the time. By-and-by a fellow-countryman of Tasker's came in excitedly, and told the story of the previous night, and stated that Tasker had recovered sufficiently from the first shock of the attack to send for him and to give him a power of attorney; and that he, the fellow-countryman, whose name was Schmidt, was ready to do any business in behalf of Mr Tasker. He had already been to the police station and received the documents found upon his friend's person—amongst them Frank's bill for ninety-eight pounds ten shillings, which he now delivered. Frank paid over a hundred pounds in notes, received his change, put the bill in his pocket-book, drove home, and there burned that fatal paper. He sat awhile after this, and then bethinking him of certain jewellery which he had of late been compelled to pawn, he sought out the tickets, and walked to the pawnbroker's and redeemed them. When he had gone, for the first time, thither, he had walked shamefacedly up and down the street in the dusk; but now, memory left him no room for any smaller thought, and he went into the house unconcernedly and emerged with boldness, with the recovered rings already upon his fingers. He returned home, and again sat vacant for a while, and then rising, he took a towel, and looking carefully over it to see that it was unmarked, he laid within it the hundred pounds in gold, and putting it into a cigar-box, sealed it carefully, using a half-crown as a seal. He wrapped the box neatly in brown paper, and putting the parcel into a small travelling-bag, laid it on one side awhile, and walked the streets, and met friends and acquaintances, and talked with them. Some of them remarked that he looked unwell, and he answered that he had been a little worried. So the day passed in idle routine, and the inward tragedy went on. All ambitions, all purities, all innocent pleasures and sweet hopes were dead—drowned in that inward sea of fire. A score of times when the common vacuities of the day failed him, the pain of remorse came with so intense an agony upon him that he could have cried aloud.

He dined at the old Club. Food and wine were flavourless. He went home when the night had fallen, and took up the black travelling-bag, which bore nothing to indicate its owner, and walked by devious ways towards Bloomsbury. In a by-street in Soho he came upon a ticket-porter, who stood alone at the door of a little public-house with a pewter pot in his hand.

'Will you do an errand for me?' Frank asked.

'Yessir,' said the man, and bustled into the

house with the pewter pot, and returned wiping his lips.

'Take that,' said Frank, 'to the *Spotted Dog* in Bloomsbury.—Do you know it?'

'O yessir,' said the ticket-porter.

'Say the gentleman who borrowed it in *Spaniard's Lane* last night has sent it back again.'

'Any name, sir?'

'No.—Yes. Thomson.'

Frank gave the man a shilling, and he shuffled off. Frank also, bearing his haunting pain with him, went away, and rambled listlessly about the streets. Finally he went home wearily, and slept a horrible disturbed sleep, full of awful faces and night-fears unseen, and sudden gulfs that opened for him, and seas that drowned him, or floated some ghastly thing up to him slowly out of the depths. He arose in the morning, had his bath, and dressed, and rang for breakfast. The girl who waited upon him lingered a little.

'Do you want anything, Mary?' he asked.

'Why, no sir,' said the girl. 'But you're looking very ill yesterday and to-day, Mr Fairholt; and if you'll forgive me for saying so, sir, I think you'd better see a doctor.'

Everybody had loved the young fellow, and his kindly generous jollity had enlisted Mary's sympathies these past two years. He dismissed her fears lightly; but she went away with a shake of the head, to indicate that she held her own opinion. Frank toyed languidly with his breakfast for a time, and then opened the paper. And there out of the printed page this struck him like a blow—'Murder and Robbery in Spaniard's Lane.'

#### TRAMWAYS.

THE practical application of the tramway system took place in the United States, where the straightness and regularity of the streets offer many facilities for such a system. An American—Mr Train—primarily constructed tramways in London, in three or four localities. But he was beset with difficulties from first to last; vested interests combined to battle him; parish and county authorities, omnibus companies, cab owners and drivers, carriers and carters, all joined in the opposition; and the public were not sufficiently familiar with the conveniences of the system to espouse the cause of the projector.

Tramway companies have been established by degrees, first in the metropolis, then in many parts of the United Kingdom. It belongs to the history of railways to trace the manner in which George Stephenson and other clever men, taking the tramway as their basis, gradually developed the truly mighty railway system. Had it not been for the invention and continued improvement of the locomotive, railways would only have been a kind of superior tramway.

We may incidentally say a few words concerning that curious modification known as the *Wire Tramway*, invented and introduced by Mr Hodgson the engineer. It is in effect a suspended tramway, the rails being over the cars or trucks instead of under them, and running along an elevated wire instead of on the solid ground. The wire, or rather wire-rope, is upheld by posts or poles; and by a most ingenious application of

mechanism the trucks travel along unimpeded by the summits of the posts. If the posts are made of various heights, the wire-rope can be carried across wide valleys or deep ravines without touching the ground. The wire-rope is kept continually moving from end to end by the tractive power of stationary engines. The gradients of the wire or rope are so regulated that the ascent of empty trucks just counterbalances the descent of those laden with minerals. These singular tramways avoid the expense of cuttings and embankments, and that of bridges and viaducts over rivers and deep hollows; they occupy scarcely any land; they are not affected by floods or snow; and they can be readily removed from place to place. Yet, notwithstanding these advantages, the system has commercially failed—in this country at all events. The idea had been to employ the wire tramways to transport slate, stone, and other minerals from quarries and mines to towns and shipping-ports; but the working expenses, chiefly for steam-power, have proved to be too heavy to leave a sufficient margin of profit.

Let us now return to our real tramways. Like Mr Hodgson's system, they dispense with bridges, viaducts, embankments, tunnels, and deep cuttings; but they have difficulties of their own to battle with. The rails must be made of such a form as not materially to interfere with the wheels of ordinary street vehicles, and at the same time so laid as to give a side groove for the wheels of the passenger cars. These cars are longer, broader, and loftier than the wretched omnibuses that continue to disgrace the metropolis, more comfortable to the passengers inside, better provided with stairs or steps for outside passengers to reach the roof, and easier for ingress and egress to all. The tramways are, in fact, decided favourites with the public; and this will gradually enable the companies to overcome alike commercial and mechanical difficulties.

At present, however, the problem of the mode of traction is a difficult one. The cars are usually drawn by two horses abreast. Where the streets are level, this species of traction is not particularly objectionable; for the animals are not severely tasked. In all cases, however, where the thoroughfares are less or more on an incline, the drawing of the cars is attended with difficulties which it is painful to witness. In such cities, for example, as Edinburgh, which is built on a group of hills, with heavy ascents, the traction by animal power, even when three horses are employed, cannot merit approval. The heavy expenditure on horse-flesh is another matter of serious concern. Many of the tramway companies have succeeded in establishing and organising so large a trade, that they have surmounted the results of this heavy drag upon their resources, and realise fairly good dividends. Nevertheless, the use of some more economical mode of traction—one that shall alleviate the merciless work which in certain districts is assigned to the poor horses—continues to be a problem of serious importance to them all alike.

Can tramway cars be drawn by steam-power through the streets of a busy town without danger to foot-passengers or to horses and vehicles engaged in ordinary traffic? It is known that more than a century ago an engineer invented and constructed a steam-carriage for transporting

heavy articles to short distances. Next after him came Trevithick, Murdoch, and several other English inventors, who one by one introduced numerous improvements in the same direction. The first steam-carriage actually used for conveying passengers, invented by Griffiths, made its appearance in 1812, but was soon abandoned on account of its deficiency in steam-generating power. Next came Burstall, Gordon, Gurney, Anderson, and James, who severally displayed an almost inexhaustible fund of ingenuity in devising new forms of carriage and improved modes of employing steam-power. Gurney made the nearest approach to success, seeing that some of his steam-carriages attained a speed of twenty miles an hour on common rough roads. But this was about the year 1830, when the railway system was beginning to display some of its great capabilities; and the new competitor seriously affected the road-locomotive. Not killing it, however; for Dance, Ogle, Macerone, Church, Mandslay, and above all Hancock, continued to labour in the same direction for several years longer. The Americans carried on experiments of the same kind, and in 1859 placed a locomotive on one of their tramways. Ingenuity was not confined to the use of steam; seeing that compressed air and ammoniacal gas engines were in succession tried, but not with satisfactory results. England and Scotland followed suit by the placing on short lines of tramway various forms of locomotive invented by Perkins, Grantham, Merryweather, Hughes, and other clever mechanical engineers, professional or amateurs.

It appears, from inquiries made by a Parliamentary Committee, that the legislature has had much to do with the frustration of plans for using steam or other locomotives on tramways. A statute has been passed, bearing relation to the use of such a mode of traction on common roads, but it is also found to affect tramways. The desire of the companies to introduce steam is very urgent, due to the expense and waste of horses already mentioned. The Secretary of the Edinburgh Tramway Company informed the Committee that though they purchased good horses at good prices, provided the best fodder and the best stabling arrangements, yet the horses are severely tried, and speedily become worn out. The Committee say in their Report: 'This evidence is entirely corroborated by the experience of the London General Omnibus Company. The Company owns nearly eight thousand horses; and in addition to its own vehicles, supplies horse-power to some of the tramways. The horses are usually bought at about the age of five years; and the average life of a horse after that time, if drawing an omnibus, is four years and a half, or four years only if drawing a tram-car. It follows thus, that in the work of this Company alone sixteen or seventeen hundred horses are broken down every year. Of these no less than one thousand are sent at once to the knacker's yard; while the rest are sold at the hammer for what they will fetch, usually at an average price of nine or ten pounds. Common humanity therefore loudly demands some other motive-power than that of horses.'

Do the horses attached to other vehicles manifest any symptoms of fright at the strange puffing fiery monster passing along the streets and roads?

The answers to this question remind us of the old saying, 'When doctors disagree,' &c. Some witnesses state that horses, even in crowded thoroughfares, appear to be almost wholly indifferent; others hold a contrary opinion, and express serious alarm at the prospect of the introduction into the streets of a new motive-power. This diversity of opinion is most striking in the case of the witnesses who have watched with interest the working of a steam-car upon one of the tramways in Paris. The steam-car has been running over a length of three to four miles, from the Bastille to the Mont Parnasse Railway station; it passes about six thousand horses daily, besides cavalry, and horses brought to a fair in the vicinity. During the period of its running, says one witness, 'not a single member of the public has been killed or wounded; but several accidents have occurred, and in one instance an omnibus was overturned. Much depends on the nature of the traffic; whilst a real public advantage may be obtained at no risk where the roads are wide and the passing horses are chiefly employed in drawing cabs, omnibuses, and carts.' Our own experience leads to the conclusion that the fears sometimes entertained on this matter are exaggerated.

The Committee, after considering the facts and suggestions brought before them, recommend in their Report that all reasonable facilities should be afforded by the legislature and the Board of Trade, with due regard to the convenient arrangements of the tram locomotives—in most instances the steam-engine forming part of the car itself—to protect and conceal the engine and its boiler from view; to keep the cars free from unpleasant noise, heat, and smell; to obtain free ingress and egress for the passengers without hindrance from the machinery; to make the engine consume its own smoke and noxious vapours as much as possible; to supply amply sufficient brake-power; to furnish the engine with a bell or some kind of warning; to keep the maximum speed at eight miles an hour in towns and twelve miles an hour in the open country—these are the recommendations made by the Committee.

As to the total mileage of tramway in the United Kingdom, little definite can be said. Not for want of statistical returns; but because the carrying out of the several schemes is so very uncertain. No Act of Parliament is necessary. If the consent of municipal, parochial, district, and county authorities be obtained, the Board of Trade issues the regulation orders, and the construction of the tramway may commence. We say *may*, seeing that many a hitch is likely to occur. Sometimes the projectors or promoters of the scheme cannot get the public or the capitalists to take shares or advance the money; especially at times when the financial prospects of the country are under a cloud. Sometimes the Company arrive at a conclusion that the route chosen is not the best that could be found; they abandon it, and have to apply for other powers *de novo*. Sometimes they construct only a small part of the length for which they possess powers, and either abandon or indefinitely postpone the rest. But the tram system has taken hold of the public favour, and is sure to triumph over all obstacles. Setting aside the vast metropolis: when we are told that Edinburgh, with only six or eight per cent. as

many inhabitants, has carried some millions of tramway passengers in a year, we may well look forward to a successful future career for the system.

### THE EVICTION:

AND WHAT CAME OF IT.

IN TEN CHAPTERS.—CHAPTER I.

I BELONG to the Whartons of Westchester. The branch of the family with which I am immediately connected has never been by any means the wealthiest; and as I was born the youngest of five sons, there was not much for me to look forward to in the way of patrimony. However, my parents did the best in their power for me; they gave me a good preliminary education, and when I had arrived at the age of twenty-one they sent me to Oxford. There, unfortunately, my studies were of a very unpractical nature; in fact, I developed no taste whatever for entering upon a profession. When the time came for leaving college, I had no reason to congratulate myself on my position or prospects; for, save a small legacy, I found myself with absolutely nothing to fall back upon. Thereupon, acting on the principle that 'greater evils medicine the less,' I married a penniless wife. Married for love, without being able to afford it! True it was that the family into which I had married was closely related to that of the Earl of Mahon, and we had hopes that he would exert himself on our behalf. But two years of our married life passed away, and our second child had already been born before any signs of the expected favour appeared.

At last the opportunity came. Mr Carnegie, the agent for many years of the Earl of Mahon's property in Westmeath, Ireland, had died suddenly. By the kindness of his lordship, I was at once accorded the vacant post, despite the fact that a large number of well-qualified men had sent in applications for it. The decease of Mr Carnegie, falling as it did upon the annual rent-day itself, had thrown the business of the estate into considerable confusion. Accordingly, I received instructions from my noble patron to cross over to Ireland forthwith. My wife had not yet recovered completely from her late confinement; with cheerfulness, however, she expedited the preparations for my departure, promising to follow after me as soon as circumstances and her health would allow. The second day after I had received notice of the appointment, I was *en route* for Ireland, a country which I now visited for the first time.

On my arrival there I posted direct for Castle Mahon. It was a fine old baronial hall, the residence of the Mahon family whenever any of its members were minded to visit their Irish estates. But the country swarms with absentees, as an Irish wit has expressed it; and the Earls of Mahon were no exception to the rule. The establishment shewed traces of this neglect. Intrusted to the tender mercies of a care-taker, it had an air of all-pervading mouldiness; environed by gloomy woods, in which the woodman's axe had long ceased to ring, it seemed the very abode of solitude and melancholy. However, I had neither time nor inclination for indulging in such reflections; and the sight of the bailiff of the estate, who, with the housekeeper and a groom, was at the entrance to receive me, soon recalled my

mind to a sense of business. The bailiff was there to obtain instructions from me, and to deliver up certain important papers connected with the management of the estate. I gave him an audience at once; found everything in the main satisfactory; and arranged for the earliest date practicable for the receiving of rents. Business over and the bailiff dismissed, I wrote a cheery letter to my wife, as I knew she had peculiar views about the state of Ireland, which would be apt to unsettle her peace of mind. Thereafter, I addressed myself to a lonely dinner in the dining-hall, and some hours later to a still more lonely couch in the Earl's bed-chamber. It was the first time since my marriage that I had been away from home: I felt unaccountably disquieted and anxious; but I was at anyrate glad that I had written the cheery letter to my wife.

The day appointed for the receiving of rents came round. Michael Donnelly—that was the name of my bailiff—was in attendance, and afforded me much valuable assistance in the task. This he was well qualified to do. Independent of a good share of natural ability, he had also a long practical experience with the working of the estate, having served under Mr Carnegie, my predecessor, in his present capacity for the twelve previous years. But no case that required especial attention occurred during the day; thanks to a good season, the condition of the tenants was unusually flourishing, and the rents were paid up in a most commendable fashion. In the afternoon, however, running my eye down the list, I came upon the name of a defaulter, which I had not observed before that time. At once calling the attention of the bailiff to the matter: 'Donnelly,' said I, 'who is this Patrick Scallan? He appears to have forgotten that this is rent-day.'

'Faix, Mr Wharton,' replied the bailiff, 'he's been forgettin' often an' often these past years under Mr Carnegie. 'Deed this time twelvemonth we sarved him with a reminder in the shape of a notice to quit. That, av coorse, was all well an' good. Sorra a bit of it put him about; fur though the notice was sarved duly, the niver a bit of notice, saving yer presence, was taken by the same boy'—

'Well, of course,' interrupted I, 'when the legal interval had expired, Mr Carnegie put the affair into the hands of the sheriff to get possession?'

'No sir; fur jist afore that time Scallan an' the wife—there's only the two of thim—kem up to the office with a cock-an'-bull story, an' begged him to stay proceedings fur a week longer, an' so an ever since; till at last the poor ould gentleman tuk the inwardly pains that settled him.'

'This must be attended to at once,' said I. 'But perhaps I had better see the folks concerned before we write to the sheriff. What do you think?'

'Twould be a good job, sir, to have thim up here face to face wid yerself an' talk thim over, fur they're slippery folk them same Scallans. Rap-scallions is what Mr Carnegie used to tarm thim.'

'Very well,' said I; 'let them know this evening that I want to see them particularly at the office to-morrow.'

'I'll have thim up, sir, an' no mistako; laste-ways his wife; fur Scallan himself has been on the boose ever since Sunday week.'

'On the what?' I asked.

'Dhrunk, sir. He'd dhrink the say dhry. Shure it's between that an' bad company that he's become to be the politishun he is, sir. An' whin he has a dhrop in, he cares jist as much for a madgisthrate or an agent as he does for a gobblin' turkey-cock.'

'Well, well; at all events deliver my message. I want to do the best I can for the unfortunate couple.'

## CHAPTER II.

The message was delivered. To it Scallan made no response in person, as the bailiff had prophesied; but he sent his wife Biddy over with plenipotentiary powers, as his representative. She seemed to be a quiet broken-hearted woman. I gave her a seat, and stated as briefly and clearly as I could the position in which affairs were. Her husband had been nearly two years in arrears of rent, when my predecessor in office served him with a notice to quit. Since that time he had apparently made no effort to rid himself of his difficulties, nor fulfilled certain promises made to Mr Carnegie under the pressure of the sheriff's process. Since I had come into office, I had received several offers for the land from persons who were both able and willing to pay the rent, which indeed was ridiculously low. There was no help for it—the affair must be put into the hands of the sheriff. However, as this was the first case of the kind I had to deal with, and as I did not wish even to seem to deal harshly with them, I was willing to allow them an advance of thirty pounds, to keep them going till they got an opening somewhere. I told her that I should do this on my own responsibility—no legal claim for compensation could be established, as it was a simple case of eviction for non-payment.

Biddy listened with great attention and apparent satisfaction to my harangue. At its conclusion, she said: 'Thank ye kindly, yer honner Mr Wharton, fur spakin' so fair intirely. 'Deed an' word, sir, whin Mick Donnelly kem down last night an' tould me that I was going to be sarved with an injectment pross, if the very breath didn't lave me wid fright. Paddy kem in attherwards, an' tould me all about what it was. He'll do whattiver ye tell him, but not to expict any rint on the prmisses; an', thine for him, there's not twinty shillins' worth about the whole consarn. 'Deed an' 'deed, yer honner, he's jist dhrunk himself out of house an' home, an' left his wife the talk of the country. It wasn't always so wid me, Mr Wharton yer honner; fur I kem of the Maginnisses of Ballybrien, an' there was priests in the family, so there was. An' a sarry day it was for me, a clane daycent Maginnis, to take it into me head to marry a dhurty Scallan. But yer honner, I was young an' foolish. How-andiver, he was a good man to me whin he kep off the dhrop. An' there was the public-house so handy, axin' him in like to have a glass, as he would say to me. So as I tould him, maybe it's the luckiest job ever happened ye to get clane away from that rudyvous an' the dhrinkin' an' the play-actin'. 'Prehaps, Biddy," sez he to me, "prehaps yer right." So on the spot I settled wid him to go to his brother's in the County Tipperary, who is well to do, an' wants Paddy down there very bad. An' the money ye offer us

—we've no right to it, good or bad; but it would be very welcome jist at prisent.'

Thus ended the interview. The money was paid over to the unfortunate couple; the legal process was gone through; and the sheriff formally took possession. Scallan and his wife transferred their quarters for the time being to a neighbour's house, whither their furniture, a few wretched sticks, had preceded them. The applicants for the vacant homestead, three in number, formally presented their claims. For one of them, a Scotchman named Nesbitt, I declared a preference, and appointed an early day for settling the matter with him.

Since my arrival, several of the resident gentry of the place had called on me. Among the rest was a Mr Gerald Carnegie, nephew and sole representative of my predecessor in office. He shewed himself very kind, and gave me a warm invitation over to his place. I determined to cultivate his acquaintance; the society of such a man would be not only agreeable, but, for a man circumstanced like me, profitable in the extreme. Towards the latter part of his uncle's life he had taken part in, nay, almost entirely managed the business of the estate. Before he took his leave—he had called on the afternoon of the day that I had been speaking to Nesbitt about taking the farm—I mentioned Scallan's affair to him. He was quite pleased at my conduct in the affair. The fellow, he said, was an arrant ruffian, who had given his poor uncle a great deal of trouble.

'In what respect?' I asked.

'In every way possible. He was constantly in bad company, organising conspiracies and getting up shooting-parties.'

'Shooting-parties!' I echoed. 'That sounds badly for his lordship's preserves.'

'Oh, nothing of that sort,' replied Mr Carnegie, smiling; 'but parties of Ribbonmen, for the purpose of shooting obnoxious bailiffs, agents, and landlords.'

'Merciful powers! he must be a regular villain! I am quite delighted to have rid the estate of him.'

'It is a good job, Mr Wharton; and the neighbouring land-agents should feel deeply indebted to you. I am sure he materially shortened my poor uncle's life by a systematic course of intimidation. When both mind and body become enfeebled, there is a strong temptation to make a truce with villainy; and I'm afraid that was the case with the old gentleman. The fact is, Scallan kept himself quiet; but he was asked for no rent.'

'It was a ruinous principle to go upon,' I remarked.

'That's a fact, and I used to remark the same to my uncle daily. It was no use advising him. There was something in it too—for at any rate the poor old soul died in his bed.'

My visitor dismissed. I went to dinner. A review of the day's proceedings afforded me considerable satisfaction; but this satisfaction was somehow tinged with an uneasiness, caused by the statements which I had heard from Mr Carnegie relative to Scallan's connection with the Ribbon society. After dinner, I felt more secure. But with the evening post came two letters, one from my wife in England, the other from I knew not whom. As a matter of course, I opened my wife's letter first. From it I learned that both

she and the children were much improved, and that she hoped to be able to join me in two or three weeks at the most. She had been reading the account of a murder in Galway, since my departure; how a landlord had been shot by an enraged tenant. Hence she had been very uneasy; but she prayed every night for me beside our children's cot that God would keep me from danger. Then followed a lot of minor details, of no interest to the reader, but of the deepest interest to me, separated from my home for the first time in my life, a stranger in a strange land.

I laid down my wife's letter, and took up the other—a suspicious-looking billet, to say the least of it. It was addressed in a sidelong fashion: 'To WHARTON, Sassenach agint over the Mahon property, Castlemahon.' I tore open the envelope, and plunged into the contents. They were as follows:

Wharton, you villan, this is to let you know that the Boys has had a meatin on you for puttin poor Scallan an' the wife out of there place, an' your to give the same back to them at waunst. Else prepare your coffin, fur the Boys thinks that the likes of you is not wanted in the County Westmeab. Neglect this warnin at your Perill; an' the next notiss youll have ill be the Death Billet. Sined by me in the preasence of the Boys.—RORY OF THE HILLS.

N.B.—My freandly advise to you is to lave the counthry intirely. Dhrop the thrade an' quit it.

On the top of the letter was sketched the rude effigy of a coffin; on one side of it, an Irish pike; on the other, a blunderbuss; at its foot, the legend, 'God save Ireland.'

The crisis had come. I threw down the threatening letter upon the table, and leaning back, strove to review my present position calmly. What was I to do? What was going to befall me? Was I to violate my trust, and consent to the dishonourable course proposed to me? Or was I to adhere to my original purpose? which I knew to be the only one in accordance with honesty. In other words, was I to stipulate with ruffians for my life, or were my wife's fears to be realised—that she should soon be left an impoverished widow, and her children helpless orphans? Or was there some third course open to me—was I to fly the country forthwith? I knew not.

#### CLEVER MARRIED WOMEN.

MARRIAGE is much more to a woman than it is to a man; it only forms a part of his life, while it constitutes the whole of hers. Her chief interests centre, or ought to centre in her home. Some of the happiest unions have been where husband and wife have had intellectual tastes in common, as in the cases of Dr and Mrs Somerville, Henry and Sara Coleridge, William and Mary Howitt, Samuel Carter Hall and his wife. It is to women such as these that Wordsworth refers in the following lines:

The reason firm, the temperate will,  
Endurance, foresight, strength, and skill;  
A perfect woman, nobly planned,  
To warn, to comfort, and command—  
And yet a spirit still, and bright  
With something of an angel light.

In the case of clever women being married to a dull heartless class of men, what can be expected but great unhappiness on both sides. Such, from the method of arranging marriages in France, frequently occurs in that country; the misery being aggravated from the circumstance of there being no means of liberation by divorce. The well-known French novelist who wrote under the name of Georges Sand was married when a young, lively, and pretty girl of seventeen to a man old enough to be her father—we had almost said grandfather—a retired military officer, entirely devoted to amateur farming. He spent the large fortune which he had received with his wife in importing new breeds of sheep and magnificent bulls. In Georges Sand's novel of *Indiana*, one of the characters who closely resembled him is thus described: 'He was a man with a gray monstache and a terrible eye; an austere master, before whom all trembled—wife, servants, horses, and dogs.' The Baroness Dudevant, for that was then her name, endured her uncongenial existence with this man for some years. Two children were born to her, and they for a time a little reconciled her to her fate, but only for a time. One day early in the year 1828 she was missing. She had left her home, determined to seek a happier life elsewhere. She first took refuge in the convent where she had been educated; but soon found that she had only exchanged one kind of captivity for another. Again she took flight; and we next hear of her as inhabiting a garret in one of the streets of Paris, and supporting herself by flower-painting and by writing those novels which have made her name famous. Some time afterwards, Georges Sand entered into a lawsuit with her husband, and obtained a separation from him and the restitution of all her property.

Delphine Gay, another French novelist, was the daughter of a French official in one of the departments, and of his wife Sophie, who was the authoress of a number of works both in poetry and prose. Monsieur Gay was doomed to experience one of the penalties which sometimes attend the possessors of clever wives. Sophie having written a witty sally against a prefect of the department, her husband was deprived of an appointment which he had enjoyed under the victim of his wife's satire. Their daughter Delphine married Monsieur Emile de Girardin the well-known journalist, a really good and conscientious man, but one also whose temper had been soured by early misfortunes. His young, beautiful, and witty wife was as great a favourite in society as he was the reverse. Her rooms were the constant resort of the most celebrated literary characters of the day: Lamartine, Alexandre Dumas, Balzac, Victor Hugo, Méry, Théophile Gautier, Eugène Sue, and sometimes Alfred de Musset. Among all these celebrities it is to be feared that the husband was often forgotten; and though Delphine occasionally met him at dinner, nursed him when he was ill, and was ready at all times to help him out of the difficulties into which his quarrelsome disposition had involved him, he inhabited his own rooms, and never appeared at his wife's receptions.

We hardly read of a single authoress during the middle ages. In those days female education was almost entirely neglected, except in rare instances.

If women possessed talent, they were compelled to hide it. No female novelist worthy of the name appeared in England until the reign of George III. The lady who first had the courage to brave public opinion was Frances Burney, the friend of Garrick and Dr Johnson. Miss Burney remained unmarried until she was nearly forty years of age. Romance is then supposed to exercise a less dominant power; but she nevertheless had the imprudence to espouse Monsieur d'Arblay, a French refugee, whose income consisted only of a precarious annuity of one hundred pounds. The marriage, however, proved a very happy one. Macaulay describes Monsieur d'Arblay as 'an honourable and amiable man, with a handsome person, frank soldier-like manners, and some taste for letters.' The pair did not suffer from poverty; the wife became the bread-winner; and not very long after her marriage her third novel, *Camilla*, was published, by which she is said to have realised over three thousand guineas.

Charlotte Brontë in the zenith of her fame married Mr Nicholls, her father's curate, a thoroughly good conscientious man, but possessing by no means literary tastes. It was the woman not the anchoress with whom the hard-working clergyman fell in love, and whom he wished to make his wife, and he would rather have preferred than otherwise that she had not written at all. This fact seemed to add to, not to detract from his wife's happiness. Writing of him to a friend shortly after her marriage, she thus speaks: 'One of the villagers when proposing my husband's health described him as a consistent Christian and a kind gentleman. I own the words touched me deeply; and I thought to merit and win such a character was better than to earn wealth or fame or power.'

Lady Mary Wortley Montagu was a great benefactress to her country, and a very clever and beautiful woman; but she was not quite fitted for domestic life; though, however, she chose to reside abroad while her husband remained in England, they regularly corresponded with each other on the most friendly terms. Mr Edward Wortley Montagu was by no means deficient in talent; he was the intimate friend of Addison, and distinguished himself in parliament as an able and upright politician. He was much older than his wife; and it is very probable that Lady Mary would never have accepted him in spite of his entreaties, had it not been to escape from a most distasteful marriage, into which her father endeavoured to force her. Few young ladies would like to imitate her example, and elope with a man with whom they were not in love; but the high-spirited daughter of Lord Kingston would not be given away against her will.

The life of Angelica Kaufmann, the gifted Swiss artist, was a very romantic one. It has been said that she actually refused the hand of Sir Joshua Reynolds. Whether this is true or not, it is almost certain that while in England she married an adventurer who represented himself as Count Horn, a Swedish nobleman. Her second and last husband was an artist of the name of Zucchi, whom she had known from a child; and the remainder of her life was spent happily with him in Italy.

The beautiful and enthusiastic Manon Philipon, who so distinguished herself by her devotion to

liberty, and her animosity to the monster Robespierre during the French Revolution, married, at the age of twenty-five, Monsieur Roland, an elderly man of reserved manners, and with a grave, harsh countenance; nevertheless, under this unpleasing exterior were concealed sterling qualities. His political opinions were like his wife's; and her literary ability was of great service to him in his capacity of Minister of the Interior. He entertained for her the greatest affection and esteem; but his love was so selfish and domineering, that he expected her every feeling to yield to it. To this tyranny she submitted without a murmur. Madame Roland was one of the many victims of the Revolution. She perished on the scaffold. A few days afterwards, her husband was found quite dead, leaning against the trunk of a tree, with a paper pinned on his breast. This paper, after explaining who he was, went on to say: 'Whoever thou art that findest me lying here, respect my remains; respect them as those of a virtuous man, who consecrated all his life to being useful, and who died as he had lived—virtuous and honest. Not fear but indignation made me quit my retreat, on hearing that my wife had been murdered. I wished not to remain longer on an earth polluted with crimes.' When the poor old man first heard of his wife's death, he had wished to go at once to Paris, in order to denounce her murderers; but he remembered that if he were tried and condemned, all his property would be forfeited to the state, and his child left penniless, and therefore put an end to his own life.

Probably the happiest years of Madame de Maintenon's life were those which she spent as the wife of Scarron, and yet he was so deformed that it is wonderful that a young girl of sixteen or seventeen could be induced to accept him as her husband. But Madame de Maintenon, then Frances d'Aubigné, was an orphan and nearly penniless, and Scarron was almost the only friend she had. This well-known writer was not born the misshapen being which accident afterwards made him. As a young man he was active and well-shaped. The story of his misfortunes is as follows. He was the son of a wealthy counsellor, and was forced to enter the Church by his father, greatly against his will. He did not perform his duties as an abbé with much propriety. In Marseilles, as in the greater part of the cities of Provence, the carnival is closed by public masquerades. For one of these Scarron chose the following strange disguise: he first plastered his body over with honey, and then rolled himself in a feather-bed, which he had ripped open for that purpose. Thus transformed, he went to the masquerade, and drew the attention of the company entirely on himself. Of the women, some fled frightened at his approach; others crowded round him, and despoiled him of his feathers; and it was soon discovered who he was. The people now exclaimed against the scandal given to the Church. Scarron at length succeeded in making his escape; but being pursued, and finding a bridge in his way, he jumped heroically over it, and swimming to the opposite bank, lay down among the reeds to conceal himself. The cold now struck into him, and fixed in his blood the principles of those disorders which afterwards overwhelmed him. Sciatica, gout, and rheumatism sometimes seized him successively,

and sometimes all together, and rendered him an epitome of human misery. When Frances d'Aubigné married him, his body was, from the contraction of the nerves, something like the letter Z. His head hung on his breast, and his legs were drawn up; he wrote either upon his knees or upon two steel brackets fastened to the arms of his easy-chair. In spite of his sufferings, however, he was always cheerful, and even merry; and his rooms were the constant resort of the most brilliant society in Paris. When eight years after her marriage, Madame Scarron was left a widow, she wept long and sincerely for the kind and good-tempered husband she had lost.

Genius, when unaccompanied by right principles and self-control, is a more dangerous quality in a woman than a man. Nothing shews this more plainly than the life of Lady Caroline Lamb. No one was more fully alive to her faults than she was herself. When the Hon. William Lamb, then Lord Melbourne, laid his heart and fortune at her feet, she refused him, saying that she was afraid her violent temper would wreck their happiness. Again, however, he proposed; and this time, unfortunately for himself, he was accepted. Lady Caroline's fear that she could not control her temper was by no means groundless. At the marriage ceremony she was seized with a fit of passion, and she thus afterwards described her behaviour: 'I stormed at the bishop, tore my valuable dress to pieces, and was carried nearly insensible to the carriage which was to convey me for ever from my home.' Lady Caroline was certainly at times not quite sane. Lord Melbourne made her a far better husband than most men would have done; and though at last he was obliged to separate from her, he still retained a portion of his old affection.

Without undervaluing intellect, we think that no one will be inclined to deny that both in men and women the qualities of the heart are far more important than those of the head; and we cannot do better than conclude with the following lines of the late Canon Kingsley, addressed to young girls, and which bear closely on this subject:

Be good, sweet maid, and let who will be clever;  
Do noble things, not dream them all day long;  
So making life, death, and that vast forever,  
One grand, sweet song.

#### A STORY OF ADEN HARBOUR.

It is a common practice on passenger vessels, more especially on board the large 'overland' steamers voyaging to and from India, for certain of the male passengers to assemble after dark in the smoking-room or other snug retreat, and there spend the long evenings in singing songs or telling 'yarns.' On one of these occasions it had come round to the turn of an Indian officer either to sing a song or to tell a story for the benefit of his companions; so after thinking for a few minutes, and urged on by repeated calls of 'Come, go on, B——,' he at length chose the latter alternative, and commenced as follows.

Many years ago, during the last China war, I was attached to a regiment bound for the Peiho and Peking; but most unfortunately, just as we

were on the point of leaving Hong-kong for the north, my health, which had been ailing for some little while, suddenly gave way; and much to my chagrin, after appearing before a medical board, I was ordered home to England by the first mail-steamer. Naturally, the disappointment of taking leave of my companions—all in high spirits at the prospect of seeing a little field-service—was a severe trial to me; but undoubtedly my being sent away from China to a healthier climate was all for the best, for I daily grew weaker, and the disease I suffered from appeared to get a stronger hold on me, so much so, that when the homeward-bound steamer anchored in the harbour of Hong-kong, and the time came for passengers to embark, I was so ill as to be quite unable to walk, and was carried on board as helpless as a child. Soon, however, when the vessel got under weigh and faced the broad ocean, the glorious sea-air worked a gradual change for the better, and by slow degrees I began to pick up strength and spirits. We touched at Singapore to take in a supply of coal, and made a quick run thence to Ceylon, and on the evening of the sixth day came to an anchor in the beautiful harbour of Point de Galle. The Calcutta boat arrived some few hours later; and early the following morning I found myself and baggage on the deck of a crowded 'overland' steamer. After the usual bustle and confusion had in a measure subsided, and I had made the acquaintance of the purser and doctor of the ship, I obtained, by their assistance, a good airy cabin in the forepart of the vessel, away from the noise and heat of the engines, and occupied by one other passenger only—a weather-beaten old General in the Madras army, returning to England at the termination of his service.

Our steamer was named the *Nemesis*, a well-known Peninsular and Oriental vessel of former days. She was a fine large boat, splendidly fitted up and equipped, like the generality of her class, but was nevertheless, for more reasons than one, exceedingly unpopular among overland passengers in general, and deservedly so, for the following reasons. She was built almost entirely of iron throughout, and was so strongly framed that she bore to all outward appearance a greater resemblance to an armour-plated frigate than to a steamer intended to carry the government mails, a heavy cargo, and a large number of passengers. She was ill adapted for a mail-steamer on account of her very moderate rate of speed—still less so for a passenger-boat; for when loaded up with mail-boxes and merchandise she lay so low in the water that her ports could seldom be opened with safety, even in fine weather and with but little motion on the vessel. This fault in her build was a very serious objection to the *Nemesis*; for often during the hot-weather months, when the heat of the Red Sea was something terrible and overpowering, her cabins were filled with poor invalids, returning from India to their native land, to whom a breath of fresh air between the heated decks of the steamer was almost a matter of life and death.

The *Nemesis* had met with several adventures and mishaps during her career. Once, when coming down a narrow and most dangerous channel in the Hooghly, she met with a steamer

from Rangoon bound for Calcutta, passing up the river. The latter should never have been allowed to enter this narrow passage till it was clear of vessels, there being no room for two large steamers to pass each other. The *Nemesis* held straight on her course, and presently struck the Burmah steamer so terrible a blow as to cut her almost in halves without receiving any material injury to herself. This little occurrence had earned for her the sobriquet of 'the Peninsular and Oriental Ram.' On another occasion the *Nemesis* ran on shore near Point de Galle; but her powerful frame again stood her in good stead, for after scraping and bumping about for several hours among reefs of rocks that would speedily have wrecked any ordinary vessel, 'The Ram' was got off little the worse for all she had gone through. But I am wandering from my story.

Our passage from Galle to Aden was fortunately, for the time of year, a remarkably good one. The heat was certainly very distressing; but the sea was so smooth that we were able to keep the ports wide open night and day; and this was no slight boon to an invalid like myself, unable to leave his bed or to enjoy life on deck; for although there was comparatively little breeze to speak of, yet the mere motion of the vessel as she ploughed her course through the deep, caused a slight current of air to blow through the stifling cabin.

At length the bare Arabian coast was reported to be in sight; and some few hours later we slowly steamed into Aden harbour, and safely dropped our anchor amidst a crowd of shipping. I had so improved in health during our run between Galle and Aden that latterly, when the great heat of the day was over, I had been able occasionally to spend a few hours on deck, reclining in an easy-chair, propped up with pillows, and there enjoyed a talk with my companions; and two days before reaching Aden, I had made such good progress towards recovery as to be able to reach the deck without the assistance of the steward. I felt so elated at this change for the better, that a longing desire came over me to accompany some of my comrades bound for a ramble on shore, flattering myself at the same time that if I could not walk far, I could at any rate hire a carriage of some kind, and drive about from one place to another. But my friend the doctor of the *Nemesis* very soon put an end to my project, and dissipated these illusions so soon as he heard of them, by peremptorily forbidding anything of the kind; at the same time earnestly advising me to keep quiet on board ship, for that the least exposure to the sun, or the slightest over-exertion, would assuredly bring back a return of the illness from which I was only then just recovering. Of course I had to give way and submit to my fate; though it was a sore disappointment to me to see my fellow-passengers all going ashore, while I was left behind alone. However, it could not be helped, so I amused myself by looking over a bundle of fresh newspapers giving the latest intelligence from England. But I was not long to be thus left in peace. Soon some immense lighters, deeply laden with bags of coal, and manned by gangs of half-naked savages, approached the steamer; and speedily the babel of voices alongside, the clatter of the coal as it was shot down the iron bunkers, and the cloud of

black dust which began to cover everything, drove me away from my comfortable easy-chair on deck, and forced me to take refuge in the saloon below.

The day wore on; but still the unceasing noise and uproar of the coaling continued, till about sunset, when much to my relief, the din and confusion outside the steamer suddenly ceased, and the vessel once more became quiet. Feeling tired, I made for my cabin. The steward presently came down, opened the port, and lighted a small lamp, to enable me to read while reclining in my berth. And he also brought me a bottle of iced lemonade. Then, quite in opposition to the rules of the Peninsular and Oriental Company, I smoked a cigarette in my cabin.

Gradually eve stole on, and the sun disappeared behind the towering crags of the fortress. I got tired of reading, so blew the lamp out. My berth was exactly opposite to, but considerably above the open port, so that while reclining on my couch I obtained a good view of the harbour, shipping, and shore. The air was calm and still. Lights began to glimmer among the distant houses, and I could see the signal-lamps gliding up the rigging of the vessels riding at anchor. Now and again I heard the tinkle of the ship-bells marking the hour. Presently a bright flash of flame momentarily illuminated the cabin, and then after a pause came the booming thunder of the evening gun across the water. I could hear the distant roll of the garrison drums beating the tattoo; then a profound stillness supervened, broken only by the gentle plash of the waves against the iron side of the steamer. I pulled my blanket closer round me, preparatory to taking a nap, and gradually glided into the land of forgetfulness. I must have slept for some little time, when I gradually became aware of low muttered voices. I must tell you that as it happened I had fallen asleep directly facing the open port, so that on opening my eyes, I could, without moving my position, see what was going on in the cabin. To my astonishment, the first thing I beheld was the half-naked form of a Soomalie—as the woolly headed inhabitants of Aden are called—balancing himself on the lower sill of the port. He was leaning forward and eagerly scanning the various articles of clothing, &c. scattered around. The moon was shining brightly at the time, and rendered objects on the floor and sides of the cabin clear to view; although my berth, considerably higher up, was shrouded in darkness. I was very soon wide awake on discovering this intruder, and eagerly watched his movements. The rascal kept up a low converse with some confederate apparently in a boat on the outside of the steamer; and as he glanced round the cabin, I fancied that I could see the glitter of his black eye. For a second he looked furtively up in my direction, and I imagined that he had discovered me. But no. I was well concealed by the darkness, and remained perfectly motionless. At length, my friend with the curly head seemed to have decided upon making a prize of a gay Cashmere dressing-gown, the property of my fellow-passenger the old General, which article of raiment hung suspended from a peg on the door of the apartment, and as it happened was rendered fully conspicuous by the light of the moon. Presently a long forked stick was handed up from the outside of the ship

to the would-be thief, who stretching out his arm, by a dexterous twitch with the tip of this weapon removed the coveted garment from the peg, and then turning the stick round and round, gradually wound the valuable article into a ball, preparatory to drawing it towards him and removing it altogether.

Things had now reached a crisis. While this scene was being enacted within a few yards of me, I had been rapidly revolving in my mind what was to be done to punish this rascal, and at the same time to prevent him from carrying off my comrade's property. A heavily knobbed stick, called a 'Penang lawyer,' was resting on two pegs within easy reach of my hand; but I felt certain that long before I could possess myself of this weapon, the thief would discover me, and immediately escape. However, there was not a moment to be lost; so I slowly raised myself on my elbow, intending to make a sudden clutch at the stick, when the knuckles of my hand touched something hard lying on the edge of the berth, and the next moment I had firmly grasped the neck of the empty lemonade bottle. And not a moment too soon; for already the thief, who had been leaning forward while disengaging the dressing-gown, was slowly recovering his former position, and in another moment would doubtless have successfully accomplished his design. But I was well above him, and he was yet within easy range. So raising myself on my left hand, I suddenly leaned forward and hurled the heavy glass bottle full at the curly pate of the cabin invader, and with a good aim, for the conical end of the missile struck him a tremendous blow, apparently full in the centre of his skull. With a yell of pain and fright he dropped stick, dressing-gown, and all; and in spite of the thump which he had received on his cranium, which was sufficient to have fractured the skull of a European—though seemingly it made little impression on the thick skull of this Soomalie—he dropped down into the boat with the agility of a monkey, and quickly disappeared. By the time that my shouts had brought one of the stewards of the ship to my assistance, all trace of the thieves had disappeared; though one of the watch on deck, when questioned, remembered noticing a boat paddled by two natives making off at speed from the side of the vessel.

We got under weigh the following morning at daylight; and when the hour to dress came round, it was discovered for the first time that numerous articles of clothing had mysteriously disappeared. Fortunately, however, nothing of any great value had been taken; though a lady in the next cabin had to mourn the loss of a waterproof cloak, which doubtless, like the other missing articles, had fallen a prey to the thieves of Aden harbour.

#### PLAYMATES.

A tripping footfall on the stair—  
A vision from 'Le Follet'—  
A sudden fragrance in the air—  
Ye gods! can this be Molly?  
This 'symphony' in silver white,  
Perchance some star—off duty—  
Come down to set us mortals right  
Upon ideas of beauty.

Or snow-flake that has lost its way—  
Its path in life mistaken—  
Some dream that flies at break of day,  
And leaves us loath to waken.  
The Molly that I knew of yore,  
Was but a chit of seven,  
In sandalled shoes and pinafore—  
While I was just eleven.

A pair of youthful lovers we  
In days of childish folly,  
Ere Time had stole a march on me,  
And carried off my Molly.  
'Relentless parents' came between.  
Behold Miss Mary Seaton  
Consigned to boarding-school routine—  
And me—a fag at Eton.

Ah, Molly, I shall ne'er forget  
The day on which we parted;  
I think you cried, you small coquette;  
But I was broken-hearted.  
A Niobe in garments brief,  
Your tears were quite in season;  
But then your doll had come to grief—  
An all-sufficing reason.

I still preserve with tender care  
Your Prayer-book—frayed with kissing—  
A relic much the worse for wear,  
With half the pages missing.  
Have you the many-bladed knife  
I gave you once?—I wonder.  
The most unlucky gift in life;  
It cleft our paths asunder.

My sweetheart of the Past is dead—  
That mourned her broken 'Dolly';  
And now I turn to greet instead  
This most imposing Molly.  
Observe—A dress of filmy lace  
Beyond my powers of painting—  
A tiny vinaigrette—in case  
The maid should think of fainting.

A dainty cap (I think I'm right)  
The golden head surmounting—  
A pair of gloves whose buttons quite  
Defy attempts at counting.  
A satin fan where baby-loves  
That seem to weary never,  
Disport themselves in myrtle groves  
That blossom on for ever.

A gleam of gems whose elfin light  
In weird and fitful flashes  
Reflects the eyes—demurely bright  
Beneath their shady lashes. . . .

\* \* \* \* \*  
'And did you not forget?' she says.—  
'Forget you, Molly, never!  
The love of Eton jacket days  
Is just as green as ever.'—  
'You silly boy.'—'As silly still,  
Ah, Molly, do not doubt it.'—  
'My glove has come unbuttoned, Will.  
. . . . How long you are about it!'

GEORGE WARRINGTON.

## ILLUSIVE VISIONS.

MODERN science has made us aware that the old belief in apparitions rested on nothing more than illusive fancies caused by some kind of physical derangement of the person so affected. It is important that young persons should be made thoroughly aware of the fact, that there never was and never will be any such fancy which is not capable of being explained upon natural grounds. A person in weak health, though in perfect possession of all his faculties, begins to be troubled by waking visions of persons with whom he may be familiar, or who may have been long dead, or who sometimes may appear as perfect strangers to him. The spectres who flit before him, 'come like shadows' and 'so depart.' They represent, in the most perfect manner, the reproductions of things that are or were—utterly intangible creations. The subject of these visitations may hear the spectres converse, and they may even talk in turn to him. He is perfectly aware of their visionary nature, and is as convinced of their unreality as is the friend who sees them not, and to whom the phantoms are described. No suspicions of insane delusion as to these visitations can be entertained for a moment, and the question may therefore naturally be put to the man of science, 'How can these illusions be accounted for?' The answer is to be found in one of the simplest studies in the physiology of nerves and of mind, and shews us that these illusions have a material basis, or that, in the words of the poet, the 'shadow proves the substance true.'

To thoroughly elucidate the subject of illusions within a brief space, we may begin by selecting one or two illustrations of illusive vision, such as have been recorded for instruction and edification in the pages of the physiologist. One of the best known cases—deriving its interest from the fact that the subject of the visitations in question himself narrates the facts—is that of Nicolai, a well-known citizen and bookseller of Berlin, who read an account of his case before the Berlin Academy of Sciences. We shall give the

account in his own words. 'During the few latter months of the year 1790,' says Nicolai, 'I had experienced several melancholy incidents, which deeply affected me, particularly in September, from which time I suffered an almost uninterrupted series of misfortunes, that affected me with the most poignant grief. I was accustomed to be bled twice a year, and this had been done once on the 9th of July, but was omitted to be repeated at the end of the year 1790. . . I had, in January and February of the year 1791, the additional misfortune to experience several extremely unpleasant circumstances, which were followed on the 24th of February by a most violent altercation. My wife and another person came into my apartment in the morning in order to console me; but I was too much agitated by a series of incidents which had most powerfully affected my moral feeling, to be capable of attending to them. On a sudden, I perceived at about the distance of ten steps, a form like that of a deceased person. I pointed at it, asking my wife if she did not see it. It was but natural that she should not see anything; my question therefore alarmed her very much, and she sent immediately for a physician. The phantasm continued for some minutes. I grew at length more calm, and being extremely exhausted fell into a restless sleep, which lasted about half an hour. The physician ascribed the vision to violent mental emotion, and hoped there would be no return; but the violent agitation of my mind had in some way disordered my nerves, and produced further consequences, which deserve a more minute description.

'At four in the afternoon, the form which I had seen in the morning reappeared. I was by myself when this happened, and being rather uneasy at the incident, went to my wife's apartment; but there likewise I was persecuted by the form, which, however, at intervals disappeared, and always presented itself in a standing posture. About six o'clock there appeared also several walking figures, which had no connection with the first. After the first day, the form of the deceased person no more appeared; but its place

was supplied with many other phantasms, sometimes representing acquaintances, but mostly strangers: those whom I knew were composed of living and deceased persons, but the number of the latter was comparatively small. . . . When I shut my eyes these forms would sometimes vanish entirely, though there were instances when I beheld them with my eyes closed; yet, when they disappeared on such occasions, they generally returned when I opened my eyes. . . . They all appeared to me in their natural size, and as distinct as if alive, exhibiting different shades of carnation in the uncovered parts, as well as different colours and fashions in their dresses, though the colours seemed somewhat paler than in real nature; none of the figures appeared particularly terrible, conical, or disgusting, most of them being of an indifferent shape, and some presenting a pleasing aspect. The longer these persons continued to visit me, the more frequently did they return, while at the same time they increased in number about four weeks after they had first appeared. I also began to hear them talk; sometimes among themselves, but more frequently they addressed their discourse to me; their speeches being uncommonly short and never of an unpleasant turn. At different times there appeared to me both dear and sensible friends of both sexes, whose addresses tended to appease my grief, which had not yet wholly subsided; their consolatory speeches were in general addressed to me when I was alone. Sometimes, however, I was accosted by these consoling friends while I was engaged in company, and not unfrequently while real persons were speaking to me. The consolatory addresses consisted sometimes of abrupt phrases, and at other times they were regularly executed.'

Such was Nicolai's account of the phantom-visitors who addressed and consoled him in his domestic affliction. It is interesting to pursue still further his account of their disappearance. The reader will recollect that Nicolai had neglected to repeat at the end of 1790 the blood-letting in which it was customary in the days we speak of for our forefathers to indulge. It was at last decided that leeches should be used, and on April 20, 1791, at eleven o'clock in the morning, Nicolai informs us the operation was performed. 'No person,' he continues, 'was with me besides the surgeon; but during the operation my chamber was crowded with human visions of all descriptions. This continued uninterruptedly till about half an hour after four o'clock, just when my digestion commenced. I then perceived that they began to move more slowly. Soon after, their colour began to fade, and at seven o'clock they were entirely white. But they moved very little, though the forms were as distinct as before; growing, however, by degrees more obscure, yet not fewer in number, as had generally been the case. . . . They now seemed to dissolve in the air, while fragments of some of them continued visible for a considerable time. About eight

o'clock, the room was entirely cleared of my fantastic visitors. Since that time,' adds Nicolai, 'I have felt twice or three times a sensation as if they were going to reappear, without, however, actually seeing anything. The same sensation surprised me just before I drew up this account, while I was examining some papers relative to these phenomena, which I had drawn up in the year 1791.'

Such is a historical account of what may appear to the senses of a sane and reasonable individual. Before entering on their scientific explanation it will be advisable to give one or two further examples of the phenomena in question. On the occasion of the fire which destroyed part of the Crystal Palace in the winter of 1866-7, part of the menagerie had been sacrificed to the flames. The chimpanzee, however, was believed to have escaped from his cage, and was presently seen on the roof endeavouring to save himself by clutching in wild despair one of the iron beams which the fire had spared. The struggles of the animal were watched with an intense curiosity mingled with horror and sympathy for the supposed fate which awaited the unfortunate monkey. What was the surprise of the spectators of an imminent tragedy to find that the object which in the guise of a terrified ape, had excited their fears, resolved itself into a piece of canvas blind, so tattered, that to the eye of the imagination and when moved by the wind, it presented the exact counterpart of a struggling animal!

Such an example is of especial interest, because it proves to us that not one person alone, but a large number of spectators may be deceived by an object imperfectly seen—and aided in the illusion by a vivid imagination—into fancying all the details of a spectacle of which the chief actor is entirely a myth.

A singular case has been given on strict medical authority of a lady, who, walking from Penrhyn to Falmouth—her mind being occupied with the subject of drinking-fountains—was certain she saw in the road a newly erected fountain, bearing the inscription, 'If any man thirst, let him come unto me and drink.' As a matter of course she mentioned her interest in seeing such an erection to the daughters of the gentleman who was supposed to have placed the fountain in its position. They assured her that no such fountain was in existence; but convinced of the reality of her senses on the ground that 'seeing is believing,' she repaired to the spot where she had seen the fountain, only to find, however, a few scattered stones in place of the expected erection.

We may now turn to consider the scientific explanation of such curious phenomena in human existence. The causes of these illusions are not difficult to understand, since they in reality depend upon a slight derangement of the powers whereby we see and hear in an ordinary and normal method. To make our meaning clear, let us briefly consider what takes place in ordinary sensation, when we see or hear the objects and sounds of every-day existence. The eye alighting on an object transfers an impression of that object

to the brain through the special (optic) nerve of sight, which leads from the eye to the part of the brain exercising the sense of sight. We in reality do not see with the eye. That organ is merely an arrangement of lenses adapted to receive, focus, and otherwise adjust rays of light streaming from the objects we see. The function of the eye is simply that of adjusting and correlating the conditions necessary for the production of an impression. This impression is carried in due course to a special part of the brain, where it becomes transformed into a special sensation—that of sight. We thus truly see not with the eye, but with the brain, or rather with that portion of the brain which lies in direct relation with the nerves of sight. The eye represents the lenses of the photographer's camera; but the brain corresponds to the sensitive plate which receives the image of the sitter, and on which all subsequent alterations of the image are effected. Of the other senses, the same prominent feature may also be expressed—namely, that in the brain and not in the mere organ of sense must be allocated the true seat of knowledge. The ear modifies waves of sound; but it is the brain which distinguishes, appreciates, and acts upon the information conveyed by the organ of hearing. The finger touches an object; but the seat of knowledge does not exist at the extremity of the hand. The impression of touch is duly conveyed to the brain as before, there to be analysed, commented upon, and if necessary, acted upon as well.

On the appreciation of the simple fact that the brain is the true seat of the senses, rests the whole explanation of the ghosts and apparitions which occasionally attend the footsteps and meet the eyes of humanity. When we are conscious of looking at a real object, a sensation of sight is formed in the brain, as we have seen. Such a sensation we called an 'objective' one, because it is derived from a veritable object. So also, when we hear a tune played by a person whom we see, or of whose existence, even when unseen, we entertain no doubt, the sensation of sound is then called 'subjective.' But there are many familiar instances in which the power of the mind to reproduce the sensations, sights, and sounds we have received, is demonstrated. The day-dreamer can sometimes bring the scenes in which he has once taken part so vividly before his mental gaze, that his reverie may actually be broken by the words which unconsciously flow from his lips as his imagination starts into bodily action. Such a power of fancy and imagination is the beginning or faint imitation of a still more powerful means which we possess of bringing before ourselves the forms and scenes which have once been objectively present with us. In the dream this power is illustrated typically enough. From the background of consciousness so to speak, we project forwards, in our sleep, the pictures which a busy brain is reproducing, or it may be piecing together from the odds and ends of its fancy to form the ludicrous combinations we are familiar with in the 'land of Nod.' And if we carry the idea of this same power being exercised in our waking moments, to form the ghosts of science, the explanation of the otherwise curious and mysterious subject of illusive visions will be complete.

We know then, that the brain has the ordinary

power of forming images which may be projected outwards in the form of the fancies of every-day life. But these projected fancies may grow into plain and apparent sensations or images under the requisite conditions. When we hear 'a ringing in the ears,' we know perfectly well that no objective sound exists, and scientifically we say that the sensation of hearing in such a case is an internal or subjective one. When we see flashes of light which have no existence in the outside world on which we happen to be gazing, we explain their occurrence in the same way. Now, on such a basis, the ghosts of science are both raised and laid. The images and phantoms of Nicolai, like the sparks or flashes of light, are subjective sensations. They arise, in other words, from some irritation of that part of the brain, which would have received the impressions of sight had the objects in question had an actual existence. But the subject also involves a reference to bodily condition and to memory itself. Primarily, it will be found that illusive visions appear only when the health of the subject of these visitations is in a weakly state. The derangement of the health is the primary cause of these curious states.

It is, however, equally worthy of remark that many of the phantasms of Nicolai were persons whom he knew. Such visions then may be supposed to simply represent the effects of very recent images which had been received and stored in the brain, and which were evolved by the exercise of unconscious memory. Of the deceased persons whose images appeared to him, the same remark may be made—memory again reproducing, by the subjective impressions of the brain, the forms of dead friends. But what, it may be asked, of the strange visions whom Nicolai did not recognise? The reply which science offers, is that these also were images or conceptions of persons whom Nicolai must have seen at some time, but whom he could not remember; mysterious reproductions, by the brain, of events which had been impressed thereon, but which had escaped remembrance by ordinary memory. Even the characters whom Nicolai may have simply heard described, could be thus produced, and present apparently the images of persons with whom he was not, as a matter of conscious memory, familiar. The brain, in other words, registers and remembers more than memory can evolve; and it is reasonable to conceive that forgotten images of things or persons once seen formed the mysterious strangers of Nicolai's waking dreams.

It is noteworthy that only after a long period of visitation from his fantastic friends, did Nicolai begin to hear them speak. Thus, the sense of hearing had also come in time to lend its aid in propagating the illusions; and the fact that the visions addressed Nicolai concerning his own immediate affairs and his personal griefs and sorrows, clearly shews the unconscious action of a mind which was brooding over its own trials, and which was evolving from within itself the comfort and consolation of kindly friends. Last of all, that the material basis of these visionary friends resided in the weakly body of their host, is proved by their disappearance on the resumption of the customary blood-letting and the improvement of the health—an additional

fact shewing the relation of the healthy body to the sound mind.

One of the most interesting cases of vision-seeing by a person of culture and intelligence is that related in the *Athenæum* of January 10, 1880, by the Rev. Dr Jessopp, who, in Lord Orford's library, when engaged in copying some literary notes, saw a large white hand, and then, as he tells us, perceived 'the figure of a somewhat large man, with his back to the fire, bending slightly over the table, and apparently examining the pile of books I had been at work upon.' The figure was dressed in some antique ecclesiastical garb. The figure vanished when Dr Jessopp made a movement with his arm, but reappeared, and again vanished when the reverend narrator threw down a book with which he had been engaged. Dr Jessopp's recital called forth considerable comment, and a letter from Dr Andrew Wilson of Edinburgh, presenting a theory based on the principles of subjective sensations, treated of in the present paper. After detailing the fashion in which subjective sensations become projected forwards, Dr Wilson says (*Athenæum*, January 17, 1880): 'The only point concerning which any dubiety exists, concerns the exact *origin* of the specific images which appear as the result of subjective sensory action. My own idea is that almost invariably the projected image is that of a person we have seen and read about. . . In Dr Jessopp's case there is one fact which seems to weigh materially in favour of the idea that the vision which appeared to him in Lord Orford's library was an unconscious reproduction of some mental image or figure about which the Doctor may very likely have concerned himself in the way of antiquarian study.' It is most interesting to observe that in the succeeding number of the *Athenæum*, a Mr Walter Rye writes: 'Dr A. Wilson's solution "that the 'spectre' . . . was an unconscious reproduction of some mental image or figure about which Dr Jessopp may very likely have concerned himself in the way of antiquarian study," seems the right one, and I think I can identify the "ghost." The ecclesiastically dressed, large man, with closely cut reddish-brown hair, and shaved cheek, appears to me the Doctor's remembrance of the portrait of Parsons, the Jesuit Father, whom he calls in his "One Generation of a Norfolk House," "the manager and moving spirit" of the Jesuit mission in England. . . Dr Jessopp when he thought he saw the figure, was alone in an old library, belonging to a Walpole, and Father Parsons was the leader of Henry Walpole, the hero of his just-cited book. Small wonder, therefore, if the association of ideas made him think of Parsons.'

All such illusive visions are thus readily explained as the creatures of an imagination which, through some brain-disturbance, is enabled to project its visions forward, on the seats of sense, as the 'ringing' in our ears is produced by some irritation of the hearing-centre of the brain. The known vision is a reproduction of a present memory, and the unknown vision is the reproduction of a forgotten figure which has nevertheless been stored away in some nook or cranny of the memory-chamber.

Science may thus—as we have before had frequent occasion to assure our readers—dispel the illusion by its free explanation; and science has

no higher function or nobler use than when, by its aid, a subject like the present is rescued from the domain of the mysterious, and brought within the sphere of ordinary knowledge.

## A LIFE'S ATONEMENT.

### CHAPTER XVIII.—HISTORY.

*'War's declared! Hurrah! Come and join us.'*

NEITHER Mr Tasker nor his assailant gave prospect of early recovery. Tasker had received a terrible shaking; and Closky had been thrown with such force against the railings of Dr Brand's house, that he incurred a severe concussion of the brain, and made no conscious movement for many days. With the wide benevolence of British charity, which falls like the rain of heaven upon the just and unjust, this man was nursed as carefully for penal servitude as if it had been intended to restore him to lifelong happiness and comfort. The emotions which agitated Mr Tasker's bosom when he recovered his senses and discovered that Closky lay in the next bed to him, may in some measure have retarded recovery; but be that as it may, five weeks elapsed before he was able to leave the hospital walls and go in pursuit of the friend and compatriot to whom he had intrusted his affairs. The friend and compatriot was not to be found. Mr Tasker found his place of business in Acre Buildings, closed; and the inquiries which he caused immediately to be set on foot resulted in a discovery. The compatriot had realised everything realisable, and had disappeared with the proceeds into space. Detective ingenuity revealed the fact that the land to which he had betaken himself was one with which England had no extradition treaty. Tasker's creditors were for the most part of his own people, and had compassion upon him; and he with a true Eastern love for jewellery, had got together in the days of his prosperity a large collection of *glads* of value, the which he now disposed of as circumstances pressed him.

When Closky was so far recovered as to be able to endure with safety the first examination before a magistrate, he was taken from the hospital to the police court; and Hastings, Benjamin Hartley, and Dr Brand met Mr Tasker there, and gave their evidence. The prisoner was formally committed for trial; and the business being over, Tasker essayed an appeal to his old employer. Mr Hartley would have none of him, and bade him sternly, if he valued his own freedom, to speak to him no more. Tasker went away sadly and disposed of a jewel, and broken-heartedly drank away the proceeds. He was so crushed, that he made none but the feeblest efforts to recover his position; and he had, moreover, so little will to curb his old propensities to extravagance, that by the time the trial came on he was on the very edge of the gulf of poverty. The counsel for the prosecution alluded to Tasker's losses, which he deplored in feeling terms as the result of the ruffianly and unprovoked assault of the prisoner. Closky was found guilty, and sentenced to twelve years' transportation beyond the seas. Penkridge, his old companion in Bolter's Rents, sat by Mrs Closky

in court whilst sentence was passed, and took the poor woman out and offered her whisky, which was by that time perhaps the only consolation he knew.

The necessary attendances at the police court and at the assizes brought Hastings and Dr Brand together. Hastings took a fancy to the Doctor, who returned the young man's liking cordially. Grief for the death of the dearest cannot last for ever, and Hastings was growing reconciled to loss; but he stood steadfast to his resolves, and accepted the responsibilities which his new position threw upon him. Mrs Brand would fain have enlisted him in the cause of Bolter's Rents; but beyond money he could be persuaded to give nothing to that enterprise. The little lady accepted his donation with reluctance, and would have refused it outright but for the thought of that great ocean of poverty on the shores of which she now walked so often. All this time the rumours of war were growing, and Benjamin Hartley made money as only millionaires make money when the fate of nations approaches. He was much in London negotiating on 'Change and in the arcana of Croesus Brothers and others of that golden breed, for vast *coups* of financial policy.

One night Will Fairholt walked quietly into the chambers to which Hastings had recently removed in King's Bench Walk, Temple, and where, to keep himself out of harm's way, he was assiduously reading for the bar. Hastings sprang eagerly to salute him. 'What brings you to town? Have you any news?'

'None,' said Will, shaking his head. 'I am here on business. The poor old governor is quite broken, and can attend to nothing.' His voice quivered as he spoke, and he looked pale and wretched.

'Will, old friend,' said Hastings gently, 'you are wearing yourself out. It ought to lie more heavily on me than you; for though, heaven knows, I would do anything now to undo what I did, I know I helped to this miserable end, and that all your strength went to prevent it.'

'You meant no wrong,' said Will, 'nor I; but I'm afraid we all did wrong together. There is nothing to do but to wait now, and no hope that waiting will do anything for us.'

'The scoundrel who ruined him has met with his deserts,' said Hastings; 'and there's some comfort any way.'

'Little comfort,' said Will, shaking his head.—'Hastings,' he added suddenly, 'I must tell somebody, or I shall go mad. Before this terrible thing happened, and poor Frank disappeared, he and I were rivals. And I feel sometimes so hideous a temptation to be glad that he is gone and out of my way, that it is killing me.' After saying this, he buried his head in his hands and leaned above the table.

'A morbid dread of a foolish shadow, Will, believe me,' his friend said kindly. 'I know you better. A casuist torment, which a man of your conscientious and sensitive nature is safe to create for himself as often as he can. No, no, Will. Don't fight phantoms of that sort any longer. Turn daylight on them. You are worn and tired just now. Come into the streets, and let the wind blow the cobwebs from your brain.' He clapped his companion on the shoulder.

Will arose without a word, and they went out

together. They passed up the silent walk, and through the narrow way beyond it, and came out at Temple Bar, where they turned westward. As they passed the western church, there broke upon the air the sound of a scattered cheer, and then another and another. A chance acquaintance of Hastings' came by at that moment arm-in-arm with a friend, and turning at the sound of the cheering, lifted his hat and shouted 'Hurrah!'

'What's the matter, Ward?' asked Hastings, laying his hand upon the arm of the man who cheered. 'Is war declared?'

'Hillo!' cried the other, turning round. 'That you, Hastings? Now, old man, you always said that if there was any fighting to be done, you'd get a commission. Go for it. Now's your time.'

'Is war declared?' Hastings asked again.

'Yes,' roared the other in reply. 'War's declared! Hurrah! Come and join us. We shall sail in less than a week.'

The street was full of excited people. Stranger questioned stranger. Men who had never seen each other before shook hands upon the news, and cheered. Some doubted, some denied, but all were wild at the prospect, and the general heart beat with a fierce joy. Rickety clerks and pale shopmen felt the blood tingle in their thin veins, and were ready to march and fight and die. Most people after this lapse of a quarter of a century have come to believe that the Crimean War, that terrible and splendid crusade, was a huge blunder; but in '54 the large soul of England was throbbing to the old heroic music, and beat to another measure than that mean tune of '77, which still jars on our ears. It was the old great mission on which the sons of this Mother of the Nations were going—to lay the Oppressor low, and to succour them that had no other helper, and to hold Europe clean of tyranny. A great purpose, and howsoever it failed or fell, carried through with a great spirit. Ay! and even you—pale shopman and rickety clerk—had a right to cheer in such a cause; and it was well for you that your thin blood ran warm and tingled, and well for the land that bore you that your hearts responded to her call.

Hastings' chance acquaintance went eastward, cheering still, and left the two friends facing each other, pale and excited.

'I shall volunteer,' said Hastings, catching Will by the arm, and walking on rapidly.

'I wish I could,' said Will, sighing. He caught his breath at the thought. No; it was not possible. His father was dying. He could not leave him to bear the burden of his griefs alone.

'At last,' said Hastings, hurried by the excitement of the time into forgetfulness of his companion's sorrows and his own—'At last the world has something in it for a man to do. I'm told they fight—these fellows; and it won't be an easy business. But to think, Will, to think that at last we are let loose with leave to pull that bragging bully down! *Ca ira, ca ira, ca ira,*' he sang under his breath, and marched on wildly, with Will silent at his side.

Hastings went to work next morning; and before Will Fairholt left town, rushed in upon him with news that he was certainly going to the Crimea. Will heard him sadly, but congratulated him with all his heart, and envied him not a little. All he could do was to go home, and make the

poor old father's last days a little lighter than they could be without him. And he had within him—or so he held it—a greater enemy than the Czar of all the Russias could bring against him. So when the time came, he went back home, and soothed the old man's fretful grief, and buried his own, and lived in outward melancholy quiet, and prayed hard, poor soul, and did his duty, and found no rest.

When Frank read that terrible heading to the paragraph in the morning paper, he sat still for a moment, stunned. Then he smoothed the paper out mechanically, and folded it, and read the hard dry narrative through. It ran thus:

'Early yesterday morning, two men, named respectively Isaac Shakell and John Turner, were proceeding to work, when they were arrested by the sight of a well-dressed figure which lay prostrate in the mud in Spaniard's Lane, at a distance of about three hundred yards from the *Spaniard's Inn*. The figure was that of a man of about twenty-five years of age. He was quite dead, and had apparently lain there all night, for his clothes were saturated with mud and rain. Letters were found upon him, addressed to James Groves at the *Spotted Dog Tavern*, Bloomsbury. Inquiries were at once set on foot; and the deceased was immediately identified as the landlord of that well-known hostel. All that is known of this tragic incident is that, at a late hour on the previous evening, the deceased left the *Spaniard's Inn* in the society of two friends, who returned almost at once, and shortly afterwards left the house for that of a gentleman in the neighbourhood, with whom they spent the night. These gentlemen agree in stating that the deceased was in a condition to take care of himself. When the body was found, the head rested upon a large and jagged stone, upon which he had evidently fallen backwards. Except for the wound thus produced, which was clearly the cause of death, there were no marks of violence upon his person. A pocket in the breast of his overcoat was turned inside out, and a chamois-leather bag, known to have contained the sum of ninety-eight pounds ten shillings in notes and gold, had been abstracted. The police on visiting the spot believed that they could discern evidences of a brief struggle, and their attention being called to a breach in the hedge near at hand, they succeeded in tracing foot-steps for some distance. The most singular fact in the whole of this mysterious and tragic business is, that the bag above alluded to was found at the side of the field, at some distance from the track left by the footsteps of the criminal, and that a purse containing a considerable sum of money was found on the person of the deceased! The police have as yet no clue to the perpetrator of this apparently purposeless outrage.'

After this came another paragraph, headed 'Mysterious Restitution;' which set forth that a ticket-porter had delivered a package containing a sum of one hundred pounds in gold at the *Spotted Dog Tavern*, with the statement that the gentleman who borrowed it on the previous evening in Spaniard's Lane had sent it back again.

All this, understanding it quite clearly, Frank read over, and then laid the paper down. He put on a velvet wideawake, and left the house, and walked quietly away. Nobody paid him any

unusual regard, and he walked on, not knowing where he went, and not caring. He passed through Uxbridge and the two Wycombes; and night fell as he entered on that lonely stretch of country which lies northward on the Oxford Road. He had not tasted food or drink, although he had put thirty miles between himself and home since he started. Nor did he feel any want of food or drink, or think of anything but the one consuming terror which dwelt with him. The inexorable terrible Past set its pillar of cloud by day before him, and its pillar of fire by night. All day long the sordid and hideous crime of which he had been guilty enacted itself in shadowy form before him, and in the night it glared in fiery lines. Fire seemed within and without him as the weary automatic feet went on, hour after hour, hour after hour, until, before the eastern skies were gray, he sank from sheer exhaustion, and lay until the sun aroused him from dreams which enacted his crime with horrible iteration. He rose again, and once more the automatic feet carried him on. Where he had lain on the bare road, he was mud from head to heel. His eyes were bleared with the sleepless agony of his soul, and his knees bent beneath him. Country people passing him stared and laughed and pointed, believing him to be tipsy. He scarcely saw them as he staggered by. Coming to a little village inn, he entered, and called for bread-and-cheese and ale. He tendered a sovereign, and was going away without the change, when the host ran after him and placed it in his hand. He took it like a man in a dream, and roamed on again with all his senses clouded by the action of the food he had taken, and by the fatigue he had undergone, and the aching pains which followed his rest upon the muddy road. Yet the cloudy presentment of his tragedy was still before him in the cloud, and the dry fire of Remorse burned on within him. And he knew that though he lived beyond the uttermost span of human years, the fire would burn.

Thus with horrible automatic step, without volition of his own, he walked on slowly and more slowly, until he reached the little town of Thame. It was with no thought of escaping the detecting hand of justice that he avoided the better sort of inns. Exhausted Nature cried aloud for food and sleep; but he went wearily about the town until he came upon a little public-house in a by-street, and ate coarse food there ravenously and without relish, and then mounted the rickety stairs, and threw himself upon the uninviting bed and slept. Through the dark hollows of the night his dread walked with him, nameless, indefinable, full of unspeakable fear, unrecognised. When he awoke, he knew the companion of his sleep; and first as an added terror, and then as a first faint gleam of hope, and then again as an added terror came the thought, 'I shall go mad!'

The landlord and the landlady of the place had been discussing him, and when he descended the rickety stairs in the morning, the landlord questioned him.

'Might I make bold to ask where you're a-goin', mate?' asked the landlord.

Frank had not thought of going anywhere, but had started on that vainest of all vain enterprises, the attempt to outwalk himself. But he answered 'Liverpool,' thinking that would do as well as another place, and that he would go there.

'You bean't a seafarin' man?' said the landlord, pursuing his inquiry.

'No,' said Frank.

'Lookin' out for a job anywheer?'

'No,' said Frank again.

'Got money, maybe?' said the landlord.

'I have enough to pay your bill,' Frank answered, weary of the questions, but scarcely resenting them.

'That's right enough,' returned the host; 'a man's business is a man's business, and yourn ain't mine, and mine ain't yourn. But I suppose you can guess as it looks odd to see a man like you a-coming into a place like this.' Frank returned no answer, though the landlord waited. By-and-by he went on again. 'You've been on the loose, I reckon?'

'Suppose I have,' Frank returned, lifting his eyes for the first time. 'That gives you no right to question me. What do I owe you?'

'That's reasonable enough,' said the landlord; 'but a man like you can't help knowin' as it's suspicious-like, don't you see?—'

'Will that pay you?' Frank asked, laying five shillings on the table.

'For a gentleman as doesn't want no questions asked, and doesn't want to be interfered with,' said the landlord, 'I think an extra five bob ud be the handsome thing.'

Frank laid down two other half-crowns, and went his way without further question. The landlord looked after him, jingling the ten shillings in his hand as he stood. His wife looked over his shoulder at the retreating limping figure. 'Poor young gentleman!' said she; 'I wonder what's wrong with him? He's in some sort o' trouble.'

'Ah!' said the landlord, shaking his head with an air of prophecy, 'we shall hear of him again. He's done something;' and with this sage conclusion, the landlord walked indoors, and threw the ten shillings into the till.

'I thought he was a gentleman,' said the landlady, 'directly I set eyes on him, for all the dirt on his clothes.'

'Anybody could ha' seen that,' said the landlord, 'if he'd had a heavy launch o' mud on him.'

Frank went onward in the old mood. There was a gap between his common life and this which his mind almost failed to bridge; and he looked back dimly and with a lack of interest not easy to understand, on a happy life which somebody else seemed to have led a long long time ago. And all this time he never said to himself, 'I am miserable,' or 'My punishment is heavy,' or had any really conscious form of thought at all, except for instants of time, when Memory stabbed him, and then he always fell back into the dreamy horror which had before possessed him. Late that night it rained, and he was out upon a lonely road with only one light in sight, and that shone ruby red in the darkness. The road led him towards this light, and the telegraph wires made a mourning noise in the wind as he plashed along below them. Losing the red light now and then among the trees as the road twisted, he found himself suddenly below it, and near a railway arch. A set of wooden steps led towards the rustic railway station, and not knowing why, he stood before them in the rain until the far-off roar and whistle of an approaching train reached his ears. Still scarcely knowing why, he mounted the wet steps,

and faced a porter who was stamping down the platform in a gleaming tarpaulin cloak.

'Going by this train?' said the porter. 'She doesn't stop till Rugby.'

'Give me a ticket for Rugby,' Frank answered. It mattered nothing where he went, and he allowed chance to drift him.

The train came lumbering up, and he entered one of the carriages. But for himself it was empty; and as he sat there, the monotonous clank of carriage and engine sent him to sleep, and for an hour he was at peace. But Remorse stood ready for him with that Nessus cloak of torment which she carries, and wrapped him in the fiery shroud when he awoke. So in the rain, he turned into the streets of the familiar town. Rugby! he had spent the happiest hours of his life, the happiest years there, as many hundreds of English gentlemen had done before, and have done since his day. And as he walked about the silent rainy streets, the magic of things familiar laid a hand upon him, until recalling what he had been, he was seized with such a passion of self-pity that he laid his head down upon a garden-wall and wept as if his heart would break. As if his heart would break? His heart was broken.

Though pity for himself unsealed his tears—and few men ever weep tears of real passion, but at the bidding of their own sorrows, and not another's—his soul, unclouded for a moment, looked back, and saw all whom he had left and lost who loved him, and he wept for their sakes and for the tears which they would weep. And thereby—as I would fain believe—God's hand of healing for the first time touched that sinful and suffering soul. Shine out, Repentance, with angelic eyes, sweet opposite of harsh Remorse; shine out, and lead us to a purer stream than Lethæ's, which is all Remorse dare pray for!

## PROFESSIONAL ROBBERS OF THE PESHAWUR VALLEY.

PESHAWUR, which is about sixteen miles from the Khyber Pass, has a population of fifty or sixty thousand. Its position at the entrance of the chief gateway into Cabul gathers within its walls men from almost every district in India and every country in Central Asia. About two miles from the city is the military cantonment. It is perhaps the most important in the whole country. In general there are stationed in it nine or ten regiments and three or four batteries of artillery. It is not my intention to discuss the importance of its position or give a sketch of its history. My purpose is to give a short account of some of the robberies which took place when I was quartered in it some years ago.

Many soldiers who have been stationed at the cantonment have left Peshawur without any knowledge of the city itself. This does not arise from any unwillingness on the part of the British soldier to visit the city, but from a garrison order forbidding him to enter it without a written permission from his commanding officer. Such an order is seemingly a very hard one, but it is one which is absolutely necessary. In the bazaars are to be found men from almost every district in India; and what is more to our purpose at present, men belonging to the many tribes which occupy the neighbouring hills. These tribes in their form of

government and in their devotion to their chiefs are very similar to the Highland clans of Scotland in former times. Though they are at constant enmity with each other, there are two things which can band these tribes, and these are by them considered as one—a war with the English, and the defence of their religion. Such a people are readily excited, and street brawls in the native city of Peshawur are consequently by no means uncommon. The appearance of the British soldier has often a maddening influence on the more religious Mussulmans; and Europeans, at least those belonging to the military branch of the service, have not yet learned to take meekly any insult offered to them by natives. It is on this account that permission to enter the city is so carefully guarded by commanding officers.

Arms, horses, and money are the chief things sought after by the thieves and robbers in the Peshawur Valley and adjoining hills; and there is no breach of charity in stating that the men of the hill-tribes are professional robbers. To secure these articles, they adopt almost every conceivable plan, and shew no little skill and daring, as may be seen from the following illustrations, which, I may add, are given without any colouring, and are strictly true.

Mr Lowenthal, a well-known missionary, stationed at Peshawur, was one night sitting at his desk, when he saw his *dhurree* (carpet) quietly lifted up by a man's head rising apparently out of the floor. An exclamation of surprise and a call for help caused the head to disappear. On inspection, Mr Lowenthal found that his house had been entered in a way somewhat unusual, but by no means new. The thieves—there must have been more than one engaged in the affair—had dug a hole close to the study, and run a tunnel right under the wall to the middle of the floor of the room. Some idea of the skill of the miners may be learned from the fact that Mr Lowenthal was not disturbed by any noise until the head of the robber was actually in the room. A year or two after the above incident took place, this eminent oriental scholar was murdered in his veranda by one of his own servants.

Earthquakes are of frequent occurrence in the Peshawur Valley, and on this account nearly every house is built of mud mixed with chopped straw, the same material being used for out-house buildings, of which the stable is generally the most important. A mounted officer has perhaps two hundred pounds invested in horses, and it is therefore a most important matter for him that these animals should be protected from the hands of thieves. Many are the plans used for this purpose. Perhaps the most successful, and consequently the most popular, is to fasten an iron chain round each hind-leg of the horse, and padlock the chains to an iron bar driven firmly into the ground. This, however, does not always defy the thieves, as they know the use of a file as well as their pale-faced neighbours. There are instances known when the robbers, finding all their attempts fail to get rid of the chains, in their anger have had the brutality to cut the feet off the horse.

Many officers trust to *chokedhars* or watchmen; but these men are only to be implicitly trusted when there is no danger near. The Sikh watchmen are an exception, but they are difficult to

find. There has ever been a deadly feud between the Afghans and the Sikhs, and a sleeping Sikh watchman found by an Afghan prowler receives no mercy. A knife driven into his heart ends sleep and life together. In general the watchmen are natives of the district, and are quite aware that the most pleasant part of their duty is to draw their wages once a month. They may actually see the thieves loosening their master's horses, and the groom may be lying within a yard of the horses watching with fear and trembling every movement; yet neither will interfere. They will not even shew any sign of being awake, because any attempt on their part to disturb what is going on, or to raise an alarm, would make the thieves take notice of them in a way far from pleasant. There is, in fact, no plan to protect horses which has not occasionally proved a failure. The gallant General commanding the Peshawur Division at the time to which I am alluding, had a very valuable mule—an animal greatly prized in a hilly country—which he placed for security in front of a guard of native soldiers and within a few yards of the sentry's beat. It attracted the notice of some of the hillmen, and a little cautious daring made it their prize. Selecting a dark night for their enterprise, they crawled along the ground until they reached the animal. With one slash of their knives the head and heel ropes were cut; and before the sentry could do anything, one of the thieves was on the back of the mule, and both were lost in darkness.

The most popular plan of horse-stealing is, however, somewhat different. It requires at least three men to carry it out comfortably and successfully. One of them quietly steals his way into the stable, and lays hold of a cord which has been pushed through one of the air-holes in the wall by one of his friends outside. The two use the string as a saw, while the third man pours upon it a plentiful supply of water. The cord silently and speedily cuts its way down the mud wall. In a wonderfully short time the three craftsmen manage to saw round a portion of the wall, which when pushed outwards, leaves a space sufficient to allow a horse to pass out. This done, the remaining work presents no difficulty. The ropes which bind the horse are cut, and in a short time he is cantering to the hills with generally two and sometimes his three new masters on his back.

A somewhat bold and impudent exploit in the horse-stealing line was the amusement and the talk of the station for some days. The cantonment is literally a camp. At sundown a chain of sentries communicating with each other is posted right round it. This demands a great number of men, and all regiments, cavalry and infantry, European and native, nightly give their proportions. A native trooper on the occasion to which I refer, fastened his horse to the peg fixed about the middle of his 'beat;' and to keep up his courage and himself warm—the night was very dark and bitterly cold—walked pretty smartly backwards and forwards on his 'beat.' The extent of his walk was not more than thirty yards, and thus at no time could he have been more than fifteen yards from his charger. He was armed in the usual way with a short rifle and a tulwar or sword. While thus doing duty, a hillman was

watching him with an eye to business. He managed to crawl quite close to him without exciting notice; and waiting quietly until the sentry was near the end of his walk, and of course with his back to the horse, the robber cut the charger's rope, mounted him, and in a moment was galloping from the station. The sentry fired his rifle in the direction in which his steed had gone; guards turned out, and a lot of noise was raised; but the outwitted soldier never saw his horse again. To him the loss was a serious one, as the horses of the native cavalry regiments do not belong to the government, but to the troopers themselves.

The Peshawur robbers are not only daring fellows by nature and training—conscience being a commodity of which they do not know anything, and for which they have really no word in their language—but their courage in their enterprises is kept up by the careful preparations which they make before beginning any serious undertaking in their line. They strip themselves of every article of clothing, and then smear themselves over with oil or ghee, which is butter prepared in a particular way for keeping. Thus they can literally give the slip to any one attempting to hold of them. In addition to this precaution they carry a knife about the length of the arm, somewhat heavy, and of the keenest edge.

Farther 'down country' there prevailed a strange custom among the professional thieves, which I have not seen noted in any books. They fasten iron hooks—very similar in shape to our ordinary fish-hooks—to their fingers. Should they be disturbed in their operations, and attacked, they claw the faces of those trying to capture them, and thus inflict four terrible wounds.

One of the most common preparations to insure safety made by the hillmen when they intend to rob a house in the cantonments, is a very simple one. They provide themselves with ten or a dozen stones half the size of the fist, which they lay down on the ground at intervals on their approach to the house on which they contemplate operations. Should they be disturbed or pursued, they retreat on the line of the stones, and picking them up as they retire, throw them at their pursuers, and with such precision and force, that we have never heard of a capture under these circumstances.

Seldom indeed do the thieves, unless compelled, use violence, though they, like all their countrymen, hold life cheap. They prefer to carry off their booty quietly. I was in a camp on one occasion, when some thieves came into the regimental bazaar and lifted the tent in which the baker and his wife were sleeping without disturbing their slumbers, and carried it away. The silence of the movements and the gentleness of the touch of these men are wonderful. One has difficulty in believing the story about the native who climbed a tree and took an egg out of a nest without disturbing the bird which was sitting on it; and one has a little more difficulty in believing the addition to the story, that while the man was taking the egg, a second man climbed the tree and stole his trousers. But I have known servants who put the socks on the feet of their masters without disturbing them, before they awoke them for morning parade with, 'Sahib, Sahib, bugle gone;' and it is a well-known fact

that a good 'professional' will take the sheet from under a person lying upon it, even after he has given warning that he will do so. The plan adopted is ingenious. The performer folds very smoothly the one side of the sheet which is not occupied. He then tickles the ear or the nostril of the sleeper gently, but sufficient to cause him to turn round a little. The piece of sheet thus gained is added to the folds. The process is repeated until one half the sheet is in folds. The operator then goes to the opposite side of the bed, and with a delicate use of the feather he soon has the sleeper over the folded portion, and the delicate trick accomplished.

A very good illustration of the confidence which the hillmen have in their ability to do their work quietly, occurred some years ago. One of the highest military officials, whose name is well known along the western side of India, and who should have been a very prominent person in the late war, was promoted on account of excellent services to an important post 'down country.' A night or two before his departure, and after all his goods had been packed up, he and his wife were awakened from their sleep by a noise in their bedroom. Before them were several men coolly removing their boxes. The officer, with perhaps more courage than prudence, at once made an attempt to defend his property, but this quickly induced one of the robbers to fire a pistol at him, with fortunately a badly directed aim. They knew that the report would arouse the neighbourhood, and that further chance for that night was gone, and accordingly they took to flight. Subsequent inquiries shewed that the robbery had been deliberately planned, and that many were engaged in it. Men were placed at short distances from each other a considerable way along the road leading to the country, to hand the boxes one to the other. The men who entered the bedroom had the hardihood to light a candle, and the cunning to shade its light from the eyes of the sleepers by keeping the lady's parasol, which they had opened for the purpose, between them and it. It was found that some of the officer's servants had a hand in the attempt to rob him, and one or two were punished; but their accomplices were never caught.

I have only to allude to the way in which the hillmen try to get possession of firearms. There is nothing they prize so highly as the British soldier's rifle and some rounds of ammunition. Every precaution is taken to secure the rifles, but during the time I was in the station many were stolen. An order was given commanding every soldier to place his rifle under his cotton mattress and sleep upon it. Still the rifles were lost. There was a suspicion that some of the soldiers sold them; and accordingly strong presses were placed in the barrack-rooms, in which the rifles were lodged every night; but still now and then rifles were missing. The hillmen, finding that their chance in the barrack-rooms had gone, turned their attention to the guard-rooms. The guard consisted of a sergeant and twelve men at least. Each man had his rifle, and every sentry had his rifle loaded. The thieves easily managed to escape the notice of the sentry in a dark night, and slip into the guard-room; and there they generally succeeded in finding at least one rifle handy, and made off with it. If the sentry

discovered what was going on, he was unwilling to fire, because if he sent a bullet through one of the robbers, he was tried by a general court-martial. Though 'honourably acquitted' was always the finding, the trial nevertheless brought a great amount of trouble to him—a fact of which the thieves were doubtless aware.

## THE EVICTION:

AND WHAT CAME OF IT.

IN TEN CHAPTERS.—CHAPTER III.

My reverie was interrupted by the low prolonged sound of a horn, proceeding apparently from some point not far from the mansion. I at once extinguished the lights upon the table, and, going to the dining-room window, partially undid the shutters. From the point where I stood I had a view of a long strip of lawn, bordered on both sides by a dense wood. I looked and listened attentively. The night was very calm, and the moon lit up the whole place almost as bright as day. Soon again the dull booming of the horn could be heard; and immediately after, I saw three men emerge from the trees on the right hand at some distance from the house, cross the lawn leisurely, and plunge into the wood on the opposite side. This observation made me very uneasy. It was now well-nigh midnight, and all honest country-folk would be in bed long before that hour. I might have concluded the persons I had observed to be poachers; but poachers do not usually rally together at the sound of a horn. I remained standing at the window for some time longer; but, nothing more presenting itself, I closed the shutters again carefully, and went up to bed. All night long I was oppressed with sad forebodings, and sleep fled from my eyes.

Early next morning, Donnelly the bailiff came to me in a state of great excitement and alarm. He declined to utter a syllable till we were alone in the office. Then, after having carefully examined the doors and apertures, as if to preclude the possibility of an eaves-dropper, he returned, and remarked to me in a sepulchral tone: 'Mi Wharton, this affair of Scallan's is goin' to be a bad business. Me boy Mick brought me home a quare letter last night—the murderiest letter I ever read. It called me the stag Donnelly, an' wint on to say that the bhoys wor goin' to have me life for intherfearin' in the eviction, an' backin' Nesbitt for to get the farrum. It made me blood run cold. An' there was thrampin' o' men round me house the whole blessed night.'

'Could your son,' I asked, 'recognise the man who gave him the note?'

'No sir, barrin' that he was a dark low-set man, an' apparently a stranger in these parts. Ochone! I'm not the same thing at all at all since I got it. Here it is, sir.'

I took the letter from the bailiff's trembling hand, and perused it carefully. It was apparently written by the same hand as the letter I had received, but conveyed threats much more dire and peremptory. No wonder that it unnerved him; it would have unnerved many a stouter-hearted fellow than he apparently was. I strove to reassure him as best I could, assumed a jocular air, and told him that doubtless some folks were

trying to frighten him. But jocularly sat ill upon me in my present mood; and I utterly failed to reassure the unfortunate bailiff. He talked dismally about his wife and family—he asked me to make his will. He reminded me of a fact which I feared was but too true—that I didn't know the class of people I had got to deal with. He said it was easy for me to see my way. I could come and go as I liked; but he, in virtue of his little holding, was doomed to live among them, for better or worse; and the tenor of the letter left little doubt that it would be for worse. These were facts; and facts were stubborn things. As I was casting about for some device, it occurred to me that I might do worse than get young Mr Carnegie's advice upon the matter. No sooner said than done. I went to the desk and wrote a short note to him, stating that I wished to see him as soon as possible on some very urgent business. Having directed it, I gave it into the hands of Donnelly to deliver. He readily divined its purport, and appeared considerably satisfied withal, if I could judge by the alacrity with which he left the office to execute his errand. I had been careful to conceal as much as possible my own uneasiness, and of course forbore mention of the threatening letter which I myself had received.

Scarcely had he left the office when the Scotchman Nesbitt entered it. The latter came to tell me that he had changed his mind about the taking of Scallan's farm; that he had been over it, and found it generally unsuitable for his purposes. 'The land was as bare as a tin whistle,' to use his own expression. Besides, he had got an unco unpleasant epistle ower-nicht, full o' threatenin' an' murder; an' he, for fear that he wad get his 'head in his hand,' wad like to let the matter drop.

This view of things, so advisable from the Scotchman's point of view, put me in a very awkward fix. However, without loss of time I set myself to get out of it, by sending a special message to the two other competitors for the land, who luckily lived in the neighbourhood. They answered my call with sufficient promptness; but they also had caught the contagion. It was true, they said, that they wor lookin' for land, but each of them had got better offers since they wor spakin' to me about Scallan's farrum. An' forbye that, the farrum was in the height of dissolution, the ditches bruk down, an' not as much grass on it as 'ud graze a Tom-cat. Wid respect, they wouldn't go no farther wid the job, an' shure there was no harum done.

I was in a state of mind far from enviable, as a result of these negotiations, when the servant entering, announced Mr Carnegie. I hailed his arrival with extreme satisfaction. I felt that he was just the man to direct me in the present crisis. He knew the country, and he knew the people. His genial spirit was calculated to invite confidence; so I talked to him without restraint. I detailed to him the incident of the morning, and shewed him the two threatening letters. I asked him for advice in the matter; there was no one, I said, better qualified to give it. As for myself, I was at a dead-lock.

'Is there no prospect of applications for the land from elsewhere?' he asked.

'I fear not,' said I.

'And you don't feel inclined to hush up the business by giving back the land to Scallan?'

'Certainly not. Besides, even if I were ever so much inclined to that course, it is impossible to adopt it, after what has occurred between the parties concerned.'

'Well then, the farm must run to waste unless something is done.'

'I suppose so.'

'A happy thought strikes me. Why not stock it yourself? It will get you out of your dilemma, and prove a profitable way of investing your extra capital besides.'

'The idea is really very good, Mr Carnegie. But I don't know anything about cattle or fairs; and I would like to get the thing settled at once, if at all.'

'There is a score of bullocks down at my place, that I'm preparing for the Nobber Fair. You might step down and have a look at them. If they please you—and I think they will—we could get them quietly shipped over to Scallan's lands after dark without any unnecessary fuss.'

'I am sure I am extremely obliged to you for your suggestion; it is just the thing. I am quite satisfied to leave the entire matter in your hands.'

'Nothing of the kind, my dear sir. Friendship is all very well in its way; but business is business. Send your man Donnelly down; he is a good judge of cattle, and can drive a bargain with any cattle-jobber in the country. Between us, we can settle the value of the lot, and he can have them back with him. The whole thing is quite simple.'

'Take care, however,' I put in, 'that you don't allow the fellow to cut you down in the price of the bullocks. Their value to me is greatly enhanced by the circumstances of the case.'

'There is no ground for alarm on that score,' replied Mr Carnegie, smiling. 'I know how to take care of myself.'

'I certainly feel greatly relieved at having my difficulty solved so satisfactorily.'

'Oh, that is all well enough. I should be much better pleased to know that you realised your exact position. At this moment, you are in a state of extreme peril. By recovering tenders for Scallan's farm you have thrown down the gauntlet to the Ribbonmen; and doubtless ere this they have arraigned you before their dreadful tribunal.'

'Oh, I am not unprepared,' said I, throwing back my double-breasted coat, and displaying to his admiring gaze a Colt's revolver and a pair of pistols.

'All very well; but useless, sir—perfectly useless, if you intend to move about the country. You don't suppose that the Ribbonman is going to have a duel with you? No sir; he will have at you from behind a wall or a hedge. You must keep indoors this weather; it is your only chance. Leave the bailiff, or somebody, or anybody, to manage your business, and to come down periodically to report progress. The rascals may be, and probably are lying in wait for you at your own gate. I observe a number of very suspicious characters about the neighbourhood just at present.'

'But I am not my own master; it is absolutely necessary that I should go out. Besides, constant

staying in the house would be insupportable; it would be worse than imprisonment itself. What means of protection would you suggest for me to adopt out of doors—to employ occasionally, you know?'

'Well, the best thing you can do is to mount an inner coat of mail, one that's bullet-proof. There is such a one down at my place, which my poor uncle wore in the bad times. You are welcome to it, of course. I daresay you'll find it somewhat heavy; but that is a thing of small importance when life is at stake. I shall send it over to you this evening by Donnelly.'

'A thousand thanks. You could not have hit upon anything better. By the way, talking of arms and armour, don't you think that a little revolver practice would do me no harm—just to steady myself if any difficulty arose? It would give me something to do indoors.'

'It is a most excellent idea: I was on the point of broaching it. During the bad times, my uncle went in for three or four hours of it every day; it was his favourite pastime. He used to remark that every land-agent in Westmeath should be able to hit an ace of hearts twice out of three times at fifteen paces.'

'It will be a long time, I fear, before I arrive at such a pitch of excellence.'

'You can only do your best. Believe me, it is most important; for if in an encounter with those rascals, you happen to miss your mark, it's bound to be all up with you. Independent of that, it will give them a hint in season.'

'In what way?'

'When they come to hear that you are a marksman. There are spies about, who will be safe to report your movements to the fraternity; ay, spies where you least expect them—among your own domestics, perhaps. The fact is, every man in the country is a Ribbonman; he must be one, to be able to live in the country at all.'

'What about Donnelly?'

'Oh, he's all right; he's as true as steel. A bailiff stands on the same footing as a policeman in Ireland; and both are considered as the tools of English despotism. Donnelly might be trusted with untold gold; but he's a doomed man, sir, if there was ever one in Westmeath.'

'Poor fellow! he will leave a wife and family behind him,' I sighed, thinking of my own case.

'Ah, yes; that is the worst point about most of these occurrences. When a fellow is single and unencumbered, he doesn't mind running risks. But we must hope for the best; and if the worst does come to the worst, why, sir, it is the visitation of Providence. But I must be off. Don't forget to send Donnelly over.'

'Before you go, allow me to thank you again for your very great kindness. Believe me, I can never forget it.'

'Tut, tut, man—nothing of the kind. Put if anything does occur where my advice or assistance would be of use, be sure to let me know. By night or day, at whatever time the message comes, I shall be ready. Meanwhile, expose yourself as little as possible. So good-bye.'

That evening, the bailiff went over to Mr Carnegie's place; looked at the cattle; purchased a score of the best; and after nightfall, drafted them over into Scallan's meadows. He brought

the coat of mail back with him also. I saw him cast very wistful looks at the same as he handed it to me. For his own protection, I gave him a brace of pistols and an American bowie-knife; for which he seemed grateful. Poor man! he seemed to require such things more than myself. He went home in high feather.

When all the domestics had retired to rest, I went up to my bedroom and tried on the coat of mail. It was somewhat heavy, but appeared fully up to its business—that is, of stopping a flying bullet. The possession of such an apparatus should, I suppose, have eased my mind considerably. But somehow it did not. On the contrary, I felt as despondent as ever. I could not but reflect that such armour afforded a very poor protection after all. At that very moment, midnight assassins might be surrounding the house; perhaps might be lurking in the very next chamber. I slept very little that night; and what sleep I had was troubled with harassing dreams.

#### THE FATE OF THE SPANISH ARMADA OF 1588.

THE great Armada which in 1588 was prepared by Philip II. of Spain to conquer England and Ireland, in order to crush the Protestant religion in these countries and to punish Queen Elizabeth and her subjects for their apostasy from the faith of their ancestors, will always be considered an interesting historical event. As is well known, the preparations of Philip had lasted eight years, and were on a great scale. A fleet of one hundred and thirty-two large vessels, commanded by the Duke de Medina-Sidonia, carrying three thousand one hundred and sixty-five guns, and about thirty thousand soldiers and sailors, sailed from Lisbon; while an army of forty thousand men under the Duke of Parma was assembled in Flanders, to co-operate with the Armada. On the 20th of July, the Spanish Admiral, having received information that the English fleet had taken shelter in Plymouth, made for that port, in order to destroy it; but during the night the English ships glided out of the harbour, and on the following morning attacked the Spanish fleet in its rear.

After various vicissitudes, the Armada, as every reader knows, suffered dreadful disasters; but as the ultimate fate of many of the ships and their commanders may not be so generally known, we propose to offer a few words on the subject.

One of the squadrons, commanded by Don Juan Gomez de Medina, which consisted of about twenty ships, was wrecked on Fair Isle, between Orkney and Shetland, where those who escaped drowning suffered great hunger and cold for six or seven weeks. The commander having at length obtained a vessel, the shipwrecked Spaniards put to sea, and at last found themselves off the little seaport town of Anstruther in Fife-shire, where the officers landed, and asked for shelter and assistance. The bailies of the town, surprised at the arrival of so many strangers, notified this unusual event to their minister Mr James Melville, who happened to have some knowledge of Spanish, and who thus records what took place: 'Up I got with diligence, and assembling the honest men of the town, came

to the Tolbooth; and after consultation taken to hear them and what answer to make, there presents us a very reverend man, of big stature, and grave and stont countenance, gray-haired, and very humble-like, wha, after meikle and very low courtesy, bowing down with his face near the ground, and touching my shoe with his hand, began his haraigue in the Spanish tongue, whereof I understood the substance, and being about to answer in Latin, he having only a young man with him to be his interpreter, began and tauld ower again to us in gude English. The sum was, that they were come hither, as to their special friends and confederates, to kiss the king's majesty's hand of Scotland—and therewith becket [bowed] evin to the yird [ground]—and to find relief and comfort thereby to himself, these gentlemen, captains, and the poor souldiers, whose condition was for the present maist miserable and pitiful.'

The Laird of Anstruther entertained the commander and his officers; while the soldiers, to the number of two hundred and sixty—described 'for the maist part young beardless men, silly [weak], trauchled [worn out], and hungered'—received shelter and a supply of 'kail, pottage, and fish.' The names of the officers, besides Juan Gomez, were Capitan Patricio, Capitan de Legoretto, Capitan de Luffero, Capitan Mauricio, and Signor Serrano.

Melville also relates an interesting anecdote in connection with this circumstance, which was, that on his return home, the Spanish Admiral shewed great kindness to the crew of an Anstruther vessel which he found arrested at Calais. 'He rade to court for her, and made great roose [praise] of Scotland to his king, took the honest men to his house, and enquirt for the Laird of Anstruther, for the minister, and his host, and sent hame many commendations.'

It is interesting as connecting these remote events with the present time, that in 1870 a Shetland gentleman, Mr Edmonston of Bunness, presented to the Society of Antiquaries of Scotland a chair which belonged to the Spanish Admiral wrecked on Fair Isle. There is also preserved in the family of Mr Balfour of Trenaby a silver cup, given by the Admiral to a native of Fair Isle, named Malcolm Sinclair. It is also believed that the shipwrecked Spaniards instructed the natives of Shetland in knitting and dyeing the fine wool of their country, articles made of which are now so much esteemed.

On the west coast of Scotland, several ships of the Armada were wrecked. About the beginning of October 1588, one of the larger ones, in which there were five hundred men, sixty brass besides other guns, and a great deal of gold and silver, was driven ashore near the Mull of Cantyre. It was suddenly blown up with gunpowder, when two or three hundred men perished. Another ship having found its way into the Firth of Clyde, sunk near Portincross Castle, Ayrshire; but in this case some of the crew were saved. In 1740 several guns were recovered from this wreck by divers, one of which, having traces of the Spanish crown and arms, lay for many years beside the old castle. In 1855 a descendant of one of these Spaniards, who was said to have retained many of the peculiarities of his race, died at an advanced age at Ardrossan.

Another vessel of the Armada, called the *Florida*,

was blown up and destroyed off the harbour of Tobermory, a plot for that purpose having been planned and executed under the direction of Maclean of Dowart, for which he obtained a remission under the Privy Seal. Remains of this vessel have been within a recent period occasionally brought up. Part of the wood was presented by Sir Walter Scott to His Majesty George IV. on his visit to Edinburgh in 1822. Several attempts were made to recover the sunk treasure in the *Florida*; one in 1683 by Sacheverel, governor of Man, who tried diving-bells with success. The report of the country was that he recovered many valuables. Another attempt was made in 1740 by Sir Archibald Grant and Captain Roe to raise her by means of divers and machinery. This attempt was unsuccessful; but some guns were brought up. Within the last year or two the question has been again mooted.

On the coast of Ireland, above seventeen ships of the Armada, with nearly twelve thousand men, were wrecked or destroyed; and such of the crews as escaped shipwreck were either executed or murdered by the natives. In the beginning of October 1588, during a storm, a galleon of one thousand tons, named *Our Lady of the Rosary*, went to pieces on the coast of Kerry. Out of a crew of seven hundred men, five hundred had died, and the remainder—most of whom were gentlemen—there perished; the son of the pilot, who had lashed himself to a plank, alone being saved. Seven ships were dashed to pieces on the coast of Clare, and only one hundred and fifty men, who struggled through the surf, escaped. A galleon commanded by Don Lewis of Cordova surrendered at Galway, and other vessels went on shore at different points of Connemara. Any survivors of these crews were shot or hanged; the only exception being Don Lewis, whose ransom it was supposed might be valuable. A galleon commanded by Don Pedro de Mendoza ran aground behind Clare Island. The Don landed with one hundred companions, taking with them their chests of treasure; but the chief of the island, Dowdany O'Malley, set upon and killed them all; while a few days afterwards the ship itself was in a storm dashed upon the rocks, and all the crew were drowned. Another galleon was wrecked in the immediate vicinity of Clare Island, and the crew were either drowned or killed by the people. On the coast between Sligo and Ballyshannon, the principal destruction of the Spanish Armada took place. There the scene was one of the most frightful ever witnessed. Sir G. Fenton wrote at the time: 'When I was at Sligo, I numbered on one strand, of less than five miles in length, eleven hundred dead bodies of men, which the sea had driven upon the shore. The country-people told me the like was in other places, though not to the like number.' It was computed that eight thousand Spaniards perished between the Giants' Causeway and Blasket Sound. Any that the sea spared were killed on land. Sir Richard Bingham, the governor of Connaught, claimed to have killed eleven hundred! A man named Melaghlín M'Cabbe was also reported to have despatched no less than eighty with his gallow-glass axe. When a galleon came ashore, the natives flocked like wolves to the scene. As the crews were flung on the sands, some drowned, some struggling for life, they became the prey of the

savages who were watching for them. 'A stroke of a club,' says Froude, 'brought all to a common state, and stripped of the finery which had been their destruction, they were left to the wash of the tide.'

The fate of one of the ships of the Armada called the *Rata*, commanded by Don Alonzo da Leyva, one of the bravest and best loved of the Spanish officers, forms perhaps the saddest episode in the history of the expedition. To the care of this officer many of the noblest youths of Castile had been intrusted. His ship had been in the thickest of every fight, and although much shattered, found its way to Blacksod Bay, and anchored outside Ballycroy. In a storm about the beginning of September, the ship was driven on shore, and Don Leyva with his crew managed to land, and took shelter in an old castle in the neighbourhood. After a short time they fell in with another galleon and a galleass of the Armada which happened to be off the coast, in which they put to sea; but they were afterwards driven on the rocks, and again were shipwrecked. In October, however, a galleass that had gone on shore at Callibeg was repaired, and Don Alonzo taking the half of the survivors on board, at length ventured to set sail for the west of Scotland. The vessel, however, struck on a rock off Dunluce and went to pieces. Only five out of the whole number were saved, while Don Alonzo and the Castilian nobles at last perished. Two hundred and sixty of their bodies were washed ashore, and committed promiscuously to the grave.

Of the whole Armada, only fifty-four ships, with between eight and nine thousand men, returned to Spain; the latter in such a wretched state that it was piteous to see them. They were so overcome with hardships and fatigue, and so dispirited with their discomfiture, that all their country was filled with accounts of the desperate valour of the English, and of the tempestuous violence of the ocean by which their islands were surrounded. Nearly every noble family in Spain was thrown into mourning, from having lost sons, brothers, or other relatives, who had entered the Armada as volunteers in this holy crusade. 'They had rushed,' says Froude, 'into the service with an emotion pure and generous as ever sent Templars to the Sepulchre of Christ. They believed that they were the soldiers of the Almighty.' These delusions, however, were dispelled by the English cannon; while to complete their misfortunes, the elements hurled them upon the most dangerous coasts in the world.

## MY LITTLE SWEETHEART.

### A STUDY FROM LIFE.

WHEN I first knew her, she was fifteen years old; I was twenty-four. She was a schoolmaster's daughter; I, a schoolmaster's son. We first met one September evening. Her father was a struggling pedagogue, with a family of seven children to support, and few pupils. I had it in my head to become his partner, and went down first to see how things were looking. I arrived after a lengthy journey; and the first thing I saw when ushered into the room was a little girl seated in an old arm-chair, with a

big book upon her knee. Such a little girl, in short frocks, hardly up to my shoulders. She shook hands with me; and as she did so, I noticed her eyes were blue, her hair was a golden brown, escaping from its bonds in rippling wavelets; and that she had a curiously winning smile, smiling not only with her lips, but with her eyes and face and all. Later on, I was struck by the way her little head was poised upon her shoulders. She was upright as a dart; and when she moved, it was with an infinite grace, as some tiny queen.

Her name was Emily; to her friends she was always Em. I am not, and was not particularly susceptible; but in some strange fashion this little fifteen-year-old lady wound herself round my heart as no one ever did before or since. She was the greatest puss. She was full of mischief as an egg of meat. She was lazy; she was untidy; she was perpetually—and deservedly—in hot-water; but with it all, she was as some little maiden stepped down from fairyland.

She and I struck up a friendship. She always did make friends with all male creatures, whether five years old or fifty. I was a scribbler even then; and I fancy the pride of authorship, even in so small a degree, had a certain charm for her, which set me up in her eyes. She wrote her name in my birthday-book; and beneath it I wrote, 'My Little Sweetheart.' It lies before me at this moment. She was the most audacious talker; would prattle of all things under heaven, and was never happy if her tongue were still. She was full of the grandest projects; meant to do the greatest things; and in moments of enthusiasm would pour forth her ambitious soul. But she had no idea of anything beyond its commencement; she knew not what system was, and would take up a plan but to fling it from her, just like the idle puss she was. One thing, and one thing only, would she persevere in—mischief.

'Reform!' she would say, when very penitent, her sins being anew found out. 'Now, did you ever hear of anybody reforming at fifteen?' This with her hands behind her, and the most solemnly comical look in the blue eyes which waited for an answer to her question. 'I think,' she would say, if you could manage to be in earnest with her five minutes in succession, 'if you only give me one more chance, I will—yes, I will be better.'

But no. She would fly through her work like a bird flinging unwelcome showers from its wing. She could not see that life was real.

Yet had she good cause to see that it was so. It was the hardest struggle in the world for her father and mother to bring two ends together. Very little money was ever hers. Her wardrobe was of the scantiest. She knew nothing of pleasure, as some people understand it; she had never been ten miles out of the town where she was born. Yet there must have been some fairy present at her birth, for she was like a summer's day, always bright. Not that she could not be grave. That was one of her rarest charms—her gift of sympathy. Only let some one whom she knew and cared for be in sorrow, and Em would not be far away. Dark indeed would be that

sorrow which did not change to light when her sun was shining. Her voice, her eyes, her arms, all joined to drive the shadows away, and soothe the sufferer with the presence of her love.

Yet was it love? That is a question I have been long revolving. Did My Little Sweetheart understand what love might be? Hardly. There was no depth in her nature; and that foundation of patience on which love must rest, was scarcely there. Hers was a heart which felt for all the world, but only till it laughed with her. Absence never made her heart grow fonder; and if she sorrowed to part with you to-day, she joyed with your successor on the morrow. Constancy was more than she could fathom; and he would have been a foolish fellow who would have had her wait till he carved his way to fortune. She could not understand that life was real.

Time sped. I had now known her more than two years. I was going for a rambling expedition to foreign parts; and though I knew I was a fool for my pains, to me it was a bitter parting. And so for the time, I think it was to her; for in some way links had been joined between us without our ever knowing they were being forged.

'Well,' said I to her, the day before I went, we being alone together, 'Blue Eyes, how long shall I be missed?'

The only answer was to throw herself upon the hearth-rug, place her hands upon my knees, and turn her eyes up towards my face.

'Ah, Blue Eyes,' said I, trifling with her sunny hair, 'you'll have another sweetheart in a week.'

'In a week?' said she, in that curiously clear voice of hers. 'Do you think so?' She looked up at me and watched me for a moment. Then she turned and got upon her knees, kneeling in front of me. 'Perhaps so,' she said. 'But—leaning forward, so that her breath mingled with mine—he'll never be a sweetheart like you.'

What could I do? I knew her so well! I knew that this was just what she would say to any one by way of comfort. I knew that her words were as trifles, light as air.

'Make no vows,' said I, 'only to be broken. You and I have had happy times; why should I begrudge the same to another?'

She was silent. She was now nearly eighteen; but she was so small, that it never occurred to me to think of her as anything but a little girl. She put her hands out and took mine, still in the same quiet fashion. 'Would you like me to?' said she—'would you like me to—to take another?'

'Em,' said I, 'what does it matter what I like? Before the sun has gone down upon my going, another day will have dawned for you.' I looked at her. It came to me that this was very bitter, and however great a fool I might be, I could not entirely hide what was in my heart. 'Little Sweetheart,' said I, 'of one thing be sure—I never shall forget you.'

She came to me, and I kissed her. She still kept her face near mine. 'Bertie,' said she—it was the first time she had ever called me Bertie; it had always been plain Mister before, and the name rang in my ears—'Bertie, I'll not forget you in a week.'

I almost pushed her from me. I knew this dalliance was worse than folly—I knew her so well—and rose to my feet. 'No,' said I, with bitter mirth; 'not in a week, but in eight days.'

She made no answer, but still knelt at my feet. And so we parted; for the farewell on the morrow was but a formal one.

Two years passed by. Occasionally I sent her little notes, pictures of noted places, foolish curiosities. But I never gave her my address. I knew letter-writing was not her strong point, and for some reason I did not like to think that she would not write, although she could. Through it all I bore her memory with me, and wherever I might be, at times would come the shadow of her sweet face. I would not own it to myself; but now and again I hungered for a sight of her, and because I knew it was so, and that it was such foolishness, I stopped away longer than I had intended. But at last I came back. One of my first visits was to B—; for, try how I would, I could not deny the longing for another sight of her. I found that the position of the parents of Em had little improved; and her mother told me that she had gone into the world as a governess. Such had always been the intention; but I wondered what sort of governess she would make. A staid *gouvernante*? with those blue eyes, and that smile, that everlasting spirit of mischief which would be bubbling out? Fancy her a sober preceptress! And who were her sweethearts now? Was there a pupil old enough to be made the recipient of her favours? Or was there some one who was not a pupil, still more capable? Well, what did it matter to me? She and I had each our way to go.

Her mother told me her situation was in the neighbourhood of Ryde. Happening to have friends in that town, I made them an excuse for a visit there. Yet, on my arrival, I was in no hurry to find them out; and taking up my quarters in a quiet inn, I prepared to have a day or two alone. It was a Saturday afternoon, lovely weather; and I set out for a walk well known in years gone by, through the Lovers' Lane, past Quarr Abbey, to Fishhouse, nestling by the water's side. It was so warm, and the country was so alive with beauty, that I took my time and lingered, noting spots memory once held dear. Reaching Quarr Woods, I wandered through the brushwood to the water's edge. Along the shore there runs or ran a wall, an old moss-grown wall; and within this wall an ancient garden—so ancient it deserved no better name than wilderness. The weeds grew rank and thick, and no hand but Nature's had much to answer for in it. There was an old green gate at the bottom, which moved on rusty hinges; under the trees was a garden-seat, much the worse for weather and wear; and on the left was an old summer-house, damp and mildewy, with steps up to the roof, and seats upon it.

Now once upon a time when I was a tutor at Ryde, I was wont to linger with my young charges in this same garden. They would play upon the shore or among the woods; while I would lie upon the roof of the old summer-house, sheltered by the trees, looking out upon the summer sea, smoking, reading, or in a waking dream. So, partly because of old times, partly

because it was so fine a day, I entered the garden and climbed up to the old roof-seat. My pipe, in sympathy with the weather, was soothing to my nerves. Gradually substance became shadow; the soft wind sang sweet music to my languid ears, and a gentle charm came over me. I fancy it was sleep. Utopian to lie there, the wavelets rippling softly upon the shore; a dim suspicion of unclouded skies pervading my dreams!

Something woke me—a sound. I opened my eyes, dreamily conscious that voices were somewhere near. I lay listening with a sort of curiosity, and became aware that I was listening to the prattle of children; little voices were borne upon the breeze, children's laughter mingling with the rippling waves. But every now and then there was another voice, not a child's, yet childlike. It was familiar to my ears, and as I listened, its sound woke within me chords of forgotten music. Before many seconds had gone, I knew it was Em's voice I heard. But I did not move, nor did I turn to see. I lay as in a tower of strength; and it was a comfortable feeling to know that I had but to turn upon my elbow, and there before me would be the little lady who once was My Little Sweetheart. But at last I moved. I rose upon my elbow quietly, so as to make no noise, and looked over the side of the summer-house on to the garden below. And there I saw her. She was on the seat under the trees. About her were four children, two boys and two girls. They stood at her knees close together, watching her make a chain of daisy flowers. She had grown, but not much; she was still a little maiden, and it was plain she never would rank among big women. She was dressed in blue—a little blue cloth cap perched daintily upon her dainty head, still poised like a queen's upon her shoulders, and a blue serge dress, which fitted better, I noticed, than her dresses used to do. Even from where I was I could see her blue eyes flashing, and that wonderful smile upon her face. She was certainly prettier than of old, and she still looked like a maiden stepped down from fairydom.

I lay still and watched, content to be near her. I knew I had but to open my lips, and she would be with me on the instant. But I did not choose. I preferred, like a child, to play with pleasure, spinning it out to its full length. It was a summer's ecstasy, and for a while I would not break the charm. But then the thought came to me, what would she do if she knew that I was there? Wondering what the answer might be, softly, hardly above a whisper, I gently called 'Em!' But she, engaged with the daisy-chain and with her little ones, did not hear, and paid no heed. So, smiling as I watched her, a second time I called a little louder—'Em!' But still she did not hear. The daisy-chain and little ones seemed to engross all her thoughts, and my voice blew past her with the wind. How would it do, I thought, since she was so obstinately deaf, to rouse her by confronting her? If she would not hear, she should see, and her eyes, if not her ears, be opened. With some such fancy, I was just about to rise and intrude myself upon her presence, when I noticed the figure of a man coming down the path.

I had no objection to children witnessing our meeting, though I could have spared even them;

but a third party, and he a stranger, I did not want. So I waited till he should have gone. He was a young man, a gentleman beyond doubt, good-looking, dressed in a gray suit of Scotch tweed, and bright red necktie. His was a fair young face. He had a promising moustache, which he tended with one hand; and he was smoking a mighty meerschaum. Instead of passing as I expected, when he reached the wall he paused and looked at the group within. There was I, peeping over the outer edge of the summer-house, wondering what kept him there. There was he, leaning with one hand upon the moss-green wall. There was she with her daisy-chain, and children at her knees. Just as I thought he would surely be moving on, to my surprise he vaulted lightly over the wall, hiding behind the very summer-house on which I sat. Then quickly and quietly, he passed from tree to tree, as though he wished to do so unobserved, until at last he was behind where the unsuspecting maiden sat.

While I watched with angry eyes, he darted from his hiding-place, ran to her from behind, drew her head back to him, and kissed her twice or thrice upon the lips. The blood boiled within my veins. I did not doubt that this was a dastard outrage, and that my darling needed a defender. In a minute, vengeance would have been done, and he or I would have lain low. But her answer shewed I was mistaken. 'Charlie!' cried she, with that sweet smile I knew so well; 'how can you kiss me before the children!'

'Why not?' said he. 'Don't I kiss them before you?' And to prove his words, he snatched up a little girl and kissed her again and again, she laughing at the fun. Then he sat down by her side, and putting his arms about her, drew her to him. The daisy-chain dropped to her lap, and she looked at him as though he were all the world to her. 'Darling!' said he, not loudly, but loud enough for me to hear, 'I have spoken to my mother about you and me to-day; and she thinks I am very foolish; but since I always have been, and always will be so, she thinks I may as well take you to be my little wife—though you will be very foolish for letting me.'

Her answer was to lay her head upon his shoulder, and flash her blue eyes with a still softer blue upon his face. 'Charlie!' said she, 'are you sure you love me?'

'Love you?' he returned, and he meant it—'my darling, more than I can tell!'

'And you are sure,' she continued, 'your mother will not be angry? I could not bear to anger her.'

'Angry?' said he, closing her lips with kisses. 'Who in all the world could be angry with My Little Sweetheart?'

And so on. The children looking on, at what was a new experience to them. What mattered? They would have to learn themselves some day, though perhaps they were beginning early. And I—I had to listen to it all. Who could have shewn himself, placed as I was, at such a time? They cooed and cooed, and made love as love has so oft been made, until the afternoon was spent, and then they went. And I was free to go as well. Was I disillusioned? Partly, though the fault was all my own. Once I knew her well. The knowledge which for a time was lost, was only found again.

I have not seen her since. For some cause, her happiness stuck in my throat, and I left Ryde that evening. I may never see her again. Ere this, doubtless she is another's wife. But when I think of her, even to this hour it is as My Little Sweetheart.

#### BY A POET'S GRAVE

THE Spring has come and gone,  
Yet silent sleeps he on;  
His poet-heart unstirred  
By leaf or song of bird.  
Though daisies dot the lea,  
And blossoms crowd the tree;  
Though Earth responsive all  
Awakes from Winter's thrall,  
And finds restored what Autumn had decayed,  
No Spring-tide reaches where the dead are laid.

The Summer calls in vain;  
Not here he wakes again.  
The south wind's balmy breath  
Woos not the ear of Death.  
Not all the wealth of flowers—  
Not all the sunlit hours  
Making Earth glorious,  
Can bring him back to us.  
And for his sake, but half is ours, I ween,  
Of Summer's gladness and its golden sheen.

Then, pensive, Autumn come,  
With woodlands bleak and dumb,  
When garnered are thy sheaves,  
And shed thy flowers and leaves—  
Come, veiled, his grave to greet  
Who, laid at Nature's feet,  
Had listened rapt and long  
To learn her matchless song.  
Come, wail him, Autumn winds and weeping skies;  
Moisten the sod where our dead darling lies.

Yet let him sleep, nor rave.  
The boon we idly crave,  
That he might live again  
In mortal strife and pain,  
Though joy to us it brought,  
For him were dearly bought.  
Then let him sleep, great heart,  
Since but the grosser part  
To dust is given, and where his spirit wakes,  
The dawn of heaven's eternal Summer breaks—

And though his sun be set  
For us—a glory yet  
Beams on us through our tears,  
That all the after-years  
A light and guide will be—  
A hallowed memory.  
He liveth still—above,  
And lives he in our love.  
And though, alas, the cold grave lies between,  
That love will keep his grave for ever green.

## THE INFLUENCE OF WOMEN.

DURING the Lancashire riots of 1878, a mob of rough men went out of Burnley with the intention of wrecking one of the houses which stood a little way out of the town. The owner of the house, one of the employers, was away from home; but his young wife had remained, and was alone with her servants. Hearing that the dreaded mob was coming, she went out and stood at her door to receive the rioters. Seeing her, they paused; then she addressed them, told them that her husband was away, and that she was there alone at their mercy. She offered them what food she had, and asked them to go and leave her in peace. The result of this appeal was remarkable. The rioters threw down the stones which they had brought with them to cast at the windows, and went away quietly, leaving her house untouched. Such is woman's influence. Strong in her very weakness, she tamed the rude mob, which would have laughed at threats, and been deaf to any other appeal.

There could not be a better illustration than this of the strange power which a good woman can exercise over men. But the exercise of this power is nothing new, as the pages of history can testify. From the very earliest times, the influence of women has had a very marked effect for good or for evil over the lives of men with whom they have come in contact. It was through the influence of Marcia that the Christians were leniently treated by the vicious and cruel Emperor Commodus in the second century. Again, it is well known that no one had any influence over the passionate Emperor of Russia, Peter the Great, but his wife; as a celebrated writer says: 'She acted as mediator between the monarch and his subjects.' These and many other instances which must occur to the mind of any reader of history, only shew that there is a great amount of truth in the aphorism which states that 'men are what women make them.'

If the influence of women is so great—if their society has such a great effect on the lives and

characters of the men with whom they are associated—and if this influence is to be for good, it is very plain that they must be regarded as the social equals and not the social inferiors of men. One of the greatest mistakes that the world has ever made has been that of regarding women as inferior to men, simply because of their physical inferiority. In consequence of this mistake, men have at all times and in all parts of the earth seriously injured themselves. Instead of looking upon woman as a 'helpmeet' for man, the tendency has been to regard her merely as a slave or plaything; and so the true position of woman has been altogether lost sight of. In degrading woman, man degrades himself; therefore, by raising women—or rather by not allowing them to sink below the position which they were intended to fill—men in reality serve their own interests. The position of woman is fully recognised throughout the inspired writings, and in whatever place Christianity has been recognised, woman has been raised to her proper position of 'helpmeet' to man, and consequently permitted to develop her higher qualities, and exercise her refining influence unchecked. Thus the responsibility of women under the Christian régime is very great. With increased influence comes increased power for good or evil. And this power may be exercised in a variety of ways.

In many cases a woman is a 'helpmeet' to some particular person, such as her husband. As a rule, the influence of a wife over her husband is very great. Insensibly she guides him; with keen perception she detects his best qualities, and encourages him to develop them; with loving tenderness she points out the faults in his character, and with sympathy that none but a woman can shew, helps him to do battle against them. If he is despondent, she is hopeful; if he lacks perseverance, she animates him with her energy; if he is crushed with sorrow, she is strong for his sake; if he is distracted with anxious cares, she is his counsellor; and if all the world looks coldly on him, if friends fall away in the day of trouble,

she shares his lot, and clings to him still. Thus, a true woman may guide a man over the ocean of life, keep him in his best course, and bring him safely past many a dangerous reef; just as a single hand on the wheel can steer the strongest vessel over waves which would drift the rudderless bark to destruction.

Then a woman may exercise the most powerful influence for good over a father or a brother. How often has a daughter been the means of reclaiming a father from evil, and leading him to develop good qualities that have long lain dormant? Many a man has torn himself from vicious company—many a man has been reclaimed from the path of the drunkard, through the holy influence of a daughter; and in the same way many a brother has been kept in the path of honour and virtue by a sister's influence.

But a good woman's influence may extend far beyond her own home circle. When she meets her friends and acquaintances in social life, when she goes among strangers, her presence must make itself felt in some way, especially by men. A refined gentle woman exercises, unconsciously, a powerful influence for good over every man with whom she comes in contact. She wins respect—without which her influence can never be for good—because she is refined, gentle, and womanly. She holds men's passions in check by that strange and commanding power which virtue alone can give. And by shewing in her life, in her actions, and by her sympathy 'how divine a thing a woman may be made,' she elevates the tone of every man who knows her; and does more to promote purity and a real love of virtue than sermons from a thousand pulpits.

It is a great mistake to suppose that a woman can only exert her influence for good, as a wife and mother. There are some women who think that marriage alone can place them in a sphere of real usefulness. But it is to be hoped that women are learning better; for under any circumstances, a woman cannot associate with men or women without to some extent affecting their characters. Moreover, the influence of women is great in any station of life. Whether a woman is a princess or a maid-of-all-work, there are some lives on which her influence must tell for good or evil. The higher a woman's social position, the greater is her responsibility, it is true; but she cannot live in any position without being responsible in some degree for the way in which her influence is exerted. On the banks of a canal in Belgium, there is a chapel built in memory of a good and virtuous barmaid, so that even in such a calling, where women are exposed to contaminating influences and great temptations, it is nevertheless possible for them to win respect and use their influence for good.

There is no necessity to point out how fatally a woman's influence may be exerted for evil. As wives, unscrupulous women may suppress all that is noble in the characters of their husbands, and develop all that is base; as mothers, they may bring up their children to be worldly, scheming, and utterly devoid of principle; and as fast, pleasure-seeking girls, they may exercise the most pernicious influence on the men who admire them and seek their society. It is to be regretted that so many women in all classes are so careless about their responsibility, and so thoughtless

about the way in which they exercise their influence over others, especially men. If men are what women make them, it is time that women should learn to appreciate their position, and realise the great responsibility their influence entails upon them. There would not be so many fast and dissolute men, if women shewed (as they could if they chose) a disposition to shun the society of such men. If they were to treat dissolute men as they treat their erring sisters, there would not be so many rouds, and what is more important, there would not be so many women among their victims.

Among the lower classes especially, women might use their influence far more effectually than they do. There is no reason why there should not be more refinement among them, and why they should not use their influence to check foul language and drunkenness. If English women would keep the young men of our towns and villages waiting for wives until they gave up swearing and drinking, a very wholesome reformation would soon be effected among the godless and coarse youths of the country. 'Whatever may be the customs and laws of a country,' says Aime Martin, 'the women of it decide the morals.' The better this fact is recognised by women, and the more frequently women are found to act as if they understood its truth, the purer and better in every way will men become. But it is very certain that women will never increase their influence for good if they follow the example of that miserable minority among their sex who clamour for what they are pleased to term 'woman's rights.' It is a woman's right to be honoured, respected, beloved, so long as she remains, in the highest sense of the word, womanly. And if she retains this right, she needs no other; and will exercise a refining and purifying influence, that will continue to live and act long after the days of her pilgrimage are over.

## A LIFE'S ATONEMENT.

### CHAPTER XIX.—AUTOBIOGRAPHY.

*The mystery in which he moved was forgotten and unforgetable.*

THINGS went smoothly with me at Hartley Hall for many days. Maud was my tutor and my chief companion, and was still the same sad and gentle creature as at first. I learned something of her secret from herself and something from Sally; and looking back on myself at that time, I am inclined to believe that I knew the melancholy story of her lost lover as well as I know it now. It was Sally's one romance; and being at that time of somewhat a romantic turn myself, we fell continually upon it in our talk. Sally was especially fertile in suppositions as to the whereabouts of the lost lover, over whom so singular a mystery hung. She was sanguine of his return, and of Maud's final happiness; and sometimes amused herself and me by wild imaginations in which she pictured his coming back in a coach-and-four with outriders. After these flights, a reaction generally took place, and she cried, and had mournful thoughts of what would happen if Bob should disappear. At the close of one of these conversations, which had wound up in the common way, a housemaid tapped at the door of my room, and asked for Mrs

Troman; for by that name Sally was known to the household.

'There's a person at the back wants to see you,' said the housemaid.

'What sort of a person?' asked Sally.

'In black clothes, with a sandy beard on,' the housemaid answered.

'Say I'll be down directly, if you please,' said Sally; and the housemaid departed smiling. My faithful friend gripped me and kissed me, and laughed and wiped her eyes, blushing all the time, and said, as she smoothed her hair with her fingers: 'Master Johnny, I believe it's Bob.'

There was something so comic and so pleased in Sally's fluttered expectation, and I was so glad at the thought of seeing Bob again, that I laughed and clapped my hands. Sally laughed and clapped her hands; and we went down-stairs together. There, in a paved yard behind the kitchen stood Bob, attired in funereal, holiday black, and a tall hat, and white thread gloves—like an undertaker's mute. He saluted Sally by one nod of the head, sideways, and said to me: 'Well, young master,' as though he had seen me yesterday. I shook hands with him, and asked him how he did, to which he responded: 'Theer's nothin' the matter wi' me, so fur as I know,' and then nodded his head at Sally again. He was so very solemn, that I began to think he had some bad news to communicate; but just as the fear crossed me, he grinned very broadly and winked at Sally, relapsing instantly, and looking as solemn as before. The wink and the grin were accompanied by a backward jerk of the head; and the three taken altogether seemed intended as an invitation to 'a more removed ground.' That Sally accepted them in that sense, was evident; for with a brief injunction to us both to wait a moment, she retired into the house, and presently appeared with my cap, and a bonnet for herself. Then we all walked solemnly into the kitchen-garden, and Bob after his own manner unfolded his purpose. He spoke with a very broad Staffordshire accent and with great deliberation.

'Have yo heerd annythin' about the war as we am gooin' to have wi' Roosia?'

'I have heard tell of it,' Sally answered.

'Do yo remember Bill Hince, Becky Hince's brother?'

'Of course I do,' said Sally.

'He's 'listed for it,' said Bob, turning his head round slowly in his high shirt collar, and rolling his eyes on Sally, who said 'Dear me!' in a tone of some distress.

'Yis,' said Bob, still keeping a solemn eye on Sally across his collar; 'he's 'listed; an' he ain't the only one as ull 'list. Mind that.'

'No?' said Sally, in a questioning way.

'No,' said Bob, biting at the word; 'he ain't. I know a feller as wo't be long behind him, if things ain't altered. I know a feller as ull goo back to-night, an' 'list to-morrer, if things do't get along more prosperous-like.'

'Dear me!' said Sally in a tone of disinterested assent.

'Yis,' said Bob, ruffling his beard against his collar, and still keeping his eyes on Sally; 'I know a cove as ull be off to-morrer, if things ain't altered. An' what's more, he ain't fur off.'

'Really now,' said Sally, with an eminently artificial toss of the head; 'you don't say so.'

'I say so,' Bob returned with great gravity. 'Good-bye, Sally.' But Sally released my hand, and stood before him, crying with an hysterical break in her voice: 'O no, Bob; you couldn't!'

'I could,' said Bob stolidly; 'an' what's more, I wull, if things ain't altered. I hain't gooin' to be kep' danglin' no longer. Settle it how you like it. Say "Yis," an' I'll stay. Say "No," an' I'll be off an' 'list for the Roosian war to-morrer.'

'O Bob!' cried Sally, 'how can you be so cruel? Think of the child.'

'I've done little else but think o' the chile the last five year,' said Bob a little sulkily.

When things had gone so far, I understood the drift of the conversation perfectly. Sally would not leave me to marry Bob, and Bob was making it a question of choice between us.

'Why,' I asked in a sudden inspiration, 'couldn't Bob come and be a carpenter in the village? Higgs is dead.'

'Higgs is dead, is he, young master?' Bob responded.

Sally, who was on her knees, hugging me for the suggestion, looked up, and explained that Higgs now defunct had been the village carpenter; and that since his demise, there was nobody of the trade nearer than Wrethedale.

'Will that suit yo?' said Bob.

Sally swiftly and slyly snatched loose one of my boot-laces as she knelt beside me, and whilst she tied it up with her face very close to the ground, with only her red ears to shew how much she was blushing, made answer: 'Yes; it'll suit me very well, Bob, if it'll suit you.'

'That's all right, then,' said Bob; and Sally, rising from her knees, adjusted my collar and set my cap with unnecessary exactness; and finally, having kissed me in such a vigorous fashion as to rumple my collar about my ears and knock my cap off, she fell to wiping her eyes with her apron. The matter being thus happily adjusted, they began to discuss ways and means in a calm and business-like fashion, over the remembrance of which I have laughed a hundred times. But Bob had a surprise in store for us, which turned out to be eventually a greater surprise than he intended. When the time had come for him to leave—for he had availed himself of an excursion to the Cathedral city fifteen miles away to get a cheap journey over here, and was bound to catch the homeward train—he pulled out something from his pocket. It was carefully wrapped up in brown paper, and after the removal of numerous foldings it revealed itself as a gold watch with a handsome chain attached.

'I meant yo to ha' this,' said Bob, 'whether yo said "Yis" or "No." An' now I've got a bone to pick wi' you. Why dissent [didst not] thee call o' me when yo come down last time along o' young master here; eh?'

'Well, Bob,' said Sally taking the watch and chain, wonderingly, from his outstretched hand, 'I ought to ha' come, I know; but we was in such trouble, an' in such a hurry.'

'Trouble,' he repeated. 'What about?'

'Why,' she answered, 'there's a poor young gentleman from over yonder'—she pointed towards Island Hall—'as disappeared sudden-like, nobody knowin' why, an' Master Johnny saw him close by mother's cottage, in clothes like a workin'-man's; and we went there wi' the poor gentleman's

brother to see if we could hear anything about him.'

Whilst she spoke Bob regarded her with a look of wonder so remarkable, that she was impelled to take him by the hands; and they stood so, looking into each other's eyes for half a minute.

'Why, the poor creetur,' said Bob at last. 'O Sally, Sally, yo' ought to ha' come to me. We might ha' found him. He's gone to the war.'

'What does the man mean?' cried Sally, looking terrified and eager at once.

'Do yo' remember, Sally, the night as yo' left along o' Johnny an' the lady as come for him?'

'Yes, yes,' she said, and waited.

'That very night, as I was walkin' o'er the Waste, I found a mon i' the road, pretty nigh dead. I thought at fust as he was drunk, but I picked him up, an' found as he seemed nigh dyin'. So I carries him whum wi' me; an' mother, her gets him to bed, an' he lies theer for pretty nigh three we'ks wi' rheumatic fever. He was dressed like a workman, but his hands was all o'er wi' rings an' as pretty as a lady's. Well, one mornin' when we gets up we finds him gone, an' that theer watch an' cheen on the table, an' just a scrap o' paper wrote all shaky like, sayin':

'Thank you; keep it for your trouble.'

'It must be him,' cried Sally. 'But what do you mean by saying he's gone to the war?'

'Why,' said Bob, speaking to the full as eagerly as she, 'Joe Brittle come in one night when he was lyin' theer, an' see him abed i' the kitchen, an' about five we'ks later, he went into Brummagein o' business, an' see him again with a recruitin' sergeant, an' knowed him at once.'

'Come to Mr Hartley,' said Sally, laying hands upon him once more—'come to Mr Hartley. He'd gives a thousand pounds for this news.'

We passed into the house. In the eagerness of my interest, I followed Sally to the door of Uncle Ben's private room, furnished—like no other apartment I had ever seen at that time—in the fashion of a business-office. There Sally poured out an incoherent breathless story, finishing up by placing the watch in Mr Hartley's hands.

Uncle Ben rose in a state of great excitement.

'Bring the man here at once,' he said.—'Tell me what you know about this feller, Johnny.'

I told him briefly what I knew of Sally's sweetheart. There was very little to tell; but before I had well done, Sally, in defiance of all decorum, came bursting into the room with Bob behind her. The examination lasted but a few minutes. I was sent from the room whilst Bob told his story, and being called back again, told mine. Uncle Ben sat down at a table, and wrote one or two hasty lines, telling Sally to ring the bell meanwhile. He gave an order that a horse should be saddled, and that the groom should ride at speed to Island Hall with a note for Mr William Fairholt. Then we were all dismissed for the time, and as we left the room Uncle Ben took the watch to the window, where he examined it with great closeness.

I should be satisfied if I could convey only a hint of the manner in which this reappearance of the stranger whom I had seen beside the clay-pit affected me. I speak of this renewal of my memories of him as a reappearance advisedly, and without exaggeration. He came back to my mind as clearly as though I had only seen him yester-

day, with all the sense of mystery which belonged to him, and all the terror he inspired. And in a way which is common to imaginative children I began in fancy to associate my life with his, until for the time I was absolutely certain that by me, or in some occult manner through me, and only by or through me, the mystery would be cleared, and the lost man discovered. It would have been stranger than it was, if my enforced association with his history had not seemed strange. I had been deeply impressed by the discovery of his identity when I went down with Sally to our old home in the Black Country, but this last reiteration of my own part in the story made the mark deeper. I will not forestall the tale I have to tell, but it seems to me now not less marvellous than it seemed then. I, a child playing negligently in the Black Country, encounter, by what seems the wildest accident of chance, a relative of mine who for some inexplicable reason has thrown away the most brilliant hopes and snapped the promise of a happy life in two. Three days later, by what again seems but an accident of chance, I find myself, not knowing it, settled in the home he has for ever deserted. Further on, lest I should lose the remembrance of his face, he appears again, is identified, and so stamps his own portrait on my brain that I could not fail to know him if I saw him among ten thousand. Yet again I find the very garments he wore when I first saw him, and with them the link between the well-dressed and the ill-dressed stranger. Yet again through my migration here, I draw my old nurse's sweetheart to the only place in the world where the story he had to tell could have been even of the faintest service.

Henceforth Frank Fairholt and the mystery in which he moved were unforgettable and unforgettable.

Whilst I still pondered these things in my childish mind, Cousin Will, with the groom a little way behind him, came pounding along the avenue on horseback, and made straight for the hall-door, as if he would have ridden into the house. He pulled up within a yard or two of the steps, dismounted, and hurried in. He was closeted with Uncle Ben for perhaps a quarter of an hour, when Bob and Sally were sent for, and I was left alone. Before another quarter of an hour had gone by, he was away again. It was arranged that a bed should be found for Bob, and that he should leave on the morrow. I was not as a rule allowed to go about the servants' quarters, but on this occasion nobody interfered with me, and Bob and Sally being formally invited to the housekeeper's room, I invited myself thither, and we spent the evening together. The talk was all of young Mr Fairholt and Miss Maud; and the housekeeper described to us how clever and how handsome young Mr Fairholt was, and what a favourite in the county. She was a very stately old lady, was the housekeeper, and I had an idea that she would have rather looked down on Bob on common occasions, and that it was only the interest she felt in the singular story of which his narrative formed a part, which induced her so to condescend to him at all. But Bob was very respectful, and very communicative. He remembered all the things his mother had told him about the stranger's broken sayings in his illness,

and repeated some of them, which left no doubt upon our minds, and could leave no doubt upon the mind of any, of the sick man's identity. When the time came for me to go to bed, I thought all these things over and drifted into sleep with the strangest mixture in my mind of myself with them. In my dreams they mingled again with all the figures I had known. On all these confused and intricate fancies a red light seemed to fall, and I came back to my own bedroom again, and heard a voice say brokenly: 'It was God's hand that brought him here.' Looking up, I saw Maud and Uncle Ben regarding me together. There were traces of new tears upon her face, but there was a light of hope upon it too, by which it seemed almost transfigured. Uncle Ben put out his hand and stroked my hair when he saw that I was awake, and bade me go to sleep again. They both kissed me, and went away quietly with the lamp, leaving the suffering and hope of Maud's face somehow present with me. It touched me vaguely, yet keenly, into tears; and before I fell asleep again, I knelt in my bed and prayed that she might be comforted, and her hope fulfilled.

I was present on the morrow at another conference between Sally and her lover, in the course of which it was definitely arranged that Bob, who had saved a little money, should migrate to the village, bringing his mother with him, and that as soon as it could be seen how things were likely to turn out, they should be married, allowing always that the prospect seemed favourable. Before he went away in the afternoon, Uncle Ben sent for him, and after being absent for about five minutes, Bob returned, with a beaming countenance.

'I took the freedom, like,' said Bob, 'of tellin' of him, as a man may say, as I was a comin' here to settle down; and he gin me this.' Opening his hand, he displayed two or three gold coins cautiously, and closed his fingers over them again. 'He seems to be wonderful pleased at havin' come across anybody as knowed the poor young gentleman; and the young gentleman's brother is a-goin' down wi' me to find Joe Brittle, an' see if he can find the recruitin' sergeant.'

Not long after this, Cousin Will drove up in the dog-cart; and Bob taking his place behind with the groom was whirled away to the railway station.

Perhaps three weeks later, as nearly as, after this interval, I can compute the time, Mr Fairholt, Cousin Will, and a gentleman whom I had not seen before, were at Uncle Ben's table at luncheon. Mr Fairholt looked greatly aged, and the irritability of his manner had notably increased. Everybody treated him with an air of pitiful respect, and I thought I noticed that he resented this. The gentleman whom I had not seen before had blue eyes, and a complexion like a lady's. He wore his hair rather long, and it was parted in the middle and golden like a girl's. He had a long silky light-coloured moustache, with which he played with delicate and much jewelled fingers. He was dressed in black, and seemed very languid and quiet. I sat next to Maud, who somewhat to my humiliation minced my food for me as she was in the habit of doing. I could see that she was in a state of much agitation, and I noticed that Cousin Will glanced at her often with a pained and anxious look. There was but little talk

during the progress of the meal. There were no servants present, but the conversation on indifferent matters went very dismally, and nobody seemed inclined to eat.

'Well, Mr Fairholt,' said Uncle Ben at last addressing Cousin Will, 'I think you've taken the very best course as could be taken, and I wish you luck. Here's to you. And I hope as them above'll guide you, and bring you safe back again.' He poured out a glass of claret with a shaky hand, and his eyes glistened as he drank it.

'I would rather not discuss this question, now,' said old Mr Fairholt in an absent tremulous way. Then turning to me, he added: 'You can run into the garden, Johnny, and amuse yourself.'

'Oh, never mind the child,' said Uncle Ben, with a jovial loudness which it was easy to see was not quite natural to him at the moment; 'he's all right where he is. I think Mr William's right in not takin' a commission, Mr Fairholt. It might hamper his movements and keep him from coming back again with a good grace. If you find him,' he said turning again to Cousin Will, 'well and good. You can fight it through then, and get attached to his regiment, no doubt, and bring him to reason, an' anyhow he'll have somebody to look after him. If you want any influence used at home, let me know, and all I can do, I will do.'

'I am assured of that, Mr Hartley,' said Cousin Will.

'An' you'll sail together?' said Uncle Ben turning to the lady-like gentleman.

The lady-like gentleman nodded. 'The Lieutenant's out theer a'ready,' said Uncle Ben. 'If you meet him, you tell him not to be afraid of anythin'; not even of drawin' on his father. Tho' I never knowed him to be particular afraid of that, either.' He chuckled as he said this, and turned round on Mr Fairholt. 'That ain't a thing as they're afraid of as a rule.—Is it Mister?'

'There is a circumstance, sir,' said Mr Fairholt, 'of which you cannot claim ignorance, which might have restrained that question.'

Uncle Ben arose and stretching out his hand to Mr Fairholt, cried: 'I beg your pardon, sir. Nothin' meant, I do assure you. I wouldn't, for the world.'

Mr Fairholt arose stiffly, and feigning not to see the outstretched hand before him, said: 'I came to your house, Mr Hartley, at my son's request, to recognise what he chose to regard as a quite disinterested friendship for his brother, and a kindly interest in his unhappy fate. I was not ignorant, sir, of the motive which created your regard for my poor Francis, and it is a comfort to me in the midst of my sorrow to know that your plan is frustrated. But I should have carried my knowledge away with me silently, but for the open and gratuitous insult you have now put upon me. I wish you a very good-day, sir.'

He started to go, overturning his chair in his haste, but he paused at the sound of Uncle Ben's voice. Casting a frightened look about the table, I saw that the one stranger to me was regarding Mr Fairholt with a look of languid curiosity, and that Maud and Will and Uncle Ben were all pained, though evidently in different ways.

'You're an old man, sir,' said Uncle Ben, 'an' I've been told you're a gentleman, an' you've had a lot o' trouble, as I'm well aware. Now them's three claims as you've got on my respect, and I'll

bear 'em in mind. But don't you come into my house again, till you've changed your opinion o' me. As for what you may say about motives, why, look here: I can give my niece enough to make a Dook glad of her, if I like, let alone a country gentleman.'

'Mr Hartley!' said Will in a low tone of remonstrance. Uncle Ben's eyes following the direction of the other's glance, fell upon Maud, who was blushing painfully. She cast an appealing glance at her uncle, and hurried from the room.

'All the same,' Uncle Ben went on, 'I'm sorry if I hurt your feelings, and I didn't mean to do it; an' between man an' man, I won't and can't say more.'

'I am sure, father,' said Will, 'that Mr Hartley had no wish to offend.'

'I do not cure,' said Mr Fairholt, 'to be troubled with an endeavour which would probably be perpetual to distinguish between the desire to offend and the incapacity to avoid the commission of offences. I accept Mr Hartley's apology; and I believe he had no wish to hurt my feelings by his very inconsiderate speech. But I will take Mr Hartley at his word, and will not intrude again upon his hospitality.' With that Mr Fairholt left the room, with an air of quavering dignity, having first bowed to Uncle Ben, who regarded him with a stern and unbending countenance. Cousin Will stood for a moment as if uncertain how to act. Recovering himself, he spoke a few hasty words to Uncle Ben and hurried out of the room after Mr Fairholt. The lady-like gentleman all the time remained seated, and when Will had gone he faced round in his chair and looked at his host. Uncle Ben shook his head gravely, and quitted the room by the door through which Maud had passed. The stranger beckoned me across to him with his forefinger, and told me a fairy story, of which I can remember nothing now, but that there was a droll blue-bottle in it, whose singular sayings and doings convulsed me with laughter. He began his narrative with no sort of preface or exordium; and when he had finished it he rose gravely, shook hands with me with much ceremony, and walked to the door. I had been delighted with the fairy tale, but this curious behaviour rather disconcerted me. I suppose my looks expressed it, for he turned round gaily and said that I should arrive some day at man's estate, and that I was never to forget that the two things which made small boys happy were fairy tales and tips. Then taking a sovereign from a netted purse, he put it into my hand. 'Be this,' he said, laying one hand upon my head, and striking an extravagant attitude, 'the soldier's epitaph graven on thy young mind the veracious history of the comic fly, and tipped me a sov at parting.' Fare thee well! With that he patted my head rather heavily, and went out with a walk which I afterwards discovered to be an imitation of that of Mr Charles Kean, but which seemed to me at the time a very extraordinary performance. I was not at all sure that the lady-like gentleman might not be a harmless lunatic. I ventured that night to put the suggestion before Maud, who rebuked me for it, and told me that Mr Hastings was very clever indeed, and that he was going out, like a brave man, to fight against the Russians in the

Crimea—'and to try to find,' she said, but checked herself suddenly, and walked away. I followed her to the window and slid my hand into hers to comfort her. She drew me to her side, and we sat there whilst the mist and the darkness met each other and hid from us the trees which surrounded Island Hall. But when I looked, I saw a light upon her face, and as the shadows gathered round us, she sang to me.

#### PHOTOGRAPHIC PROGRESS IN 1879.

ALTHOUGH the year 1879, on account of its extreme wet and dull weather, was the worst possible for the purposes of sun-pictures, it will be ever memorable in the annals of the photographer because it has seen a marvellous revolution in the manner in which his work is conducted. The substitution of a film of gelatine for the time-honoured collodion, as a support for the chemicals sensitive to light, has already formed the subject of a short article in these pages; but the importance of the matter, affecting as it does many of the arts and sciences, thousands of photographic artists, and indirectly every one who cares to sit for his portrait, warrants a more extended notice of the new process.

The employment of gelatine in photographic manipulations is in itself not new; indeed it was used in one way before collodion itself. Glass-plates and paper coated with gelatine were sensitised in the silver-bath; but the results were so unsatisfactory that the process was soon abandoned. The first attempt at the gelatine process of to-day was that published by Dr Maddox in 1871. It was gradually improved by many different workers; and hints of its wonderful simplicity, rapidity, and general excellence found their way occasionally to the newspapers. But its practice was limited to the hands of a few experimenters and amateur photographers. Professional photographers would have nothing to do with it. The old collodion process gave them certain results—their clients were pleased with those results; and what was the use of trying a new process full of uncertainties, and requiring new chemicals and appliances? Perhaps the professional photographer was right; perhaps too, guided a little by that laziness common to us all, which lets the wheel run in the same rut year after year, so long as it serves our purpose to do so. It is true that the gelatine process was rather uncertain in its action; but this uncertainty was due not to any inherent defect in the process itself, but to the ignorance of its action and treatment which must accompany the adoption of all things new.

The year 1879 has, however, seen such rapid improvement in the gelatine method of photography, and the proofs of its work have been so marvellous in their nature, that the professional suddenly woke up to the desirability of giving it a trial. This he was easily enabled to do; for a new trade has sprung up having for its object the supply of sensitive dry plates for photographic purposes. These plates are supplied in boxes impervious to light, and are ready at a moment's notice for use in the camera.

Under the new process most of the difficulties are obviated. It is so rapid in its action, that a picture can be taken in very dull weather; indeed on a rainy day, with a leaden sky, the exposure in

the camera need not exceed one second. Indeed, on bright days the difficulty found is to make the exposure short enough; and many mechanical aids to secure this—to which we shall presently allude—have been devised. The sitter has merely to take his place; the plate is ready; the operator focuses the image in the camera; and while his customer is unconsciously laughing and talking, his portrait is instantaneously secured. The development of the image need not be proceeded with at once, as in the wet process, but can be postponed until next day—or next year if need be. This delay is of vast importance to a busy operator, who can leave this part of his work until the evening, when customers have heretofore ceased to present themselves.

The new process, however, affords the means of taking portraits at night, and some photographers specially invite this branch of custom. The electric light is of course sufficient in intensity for either the wet or dry process; but few photographers care to go to the expense of the plant necessary to produce it. Another artificial light has been devised for the photographer under the name of the 'luxograph.' This light is due to the combustion of a pyrotechnic mixture, in which powdered metallic magnesium plays a prominent part. But sufficient light can be obtained from coal-gas for the purposes of gelatine photography. The kind of burner used is that known as the Wigham light. This light has been adopted in many of the Irish light-houses, and is nightly to be seen in London shining, when parliament is sitting, from the summit of the Westminster clock tower. It consists of an assemblage of ordinary fish-tail burners, crowned with an oxidiser of tale. This insures complete combustion; and the light given is most intense. The fact that gas can be had at command, makes this light peculiarly convenient to the photographer.

It may be thought that extreme rapidity is not of great consequence in taking a photograph; but the man who has to earn his bread by the work will tell us that many of the subjects who daily come before him, require specially quick treatment. Nor does he refuse such sitters, for he knows well that they will go to some other artist who will prove more complaisant. Of these tireome clients, the one he most dreads is the inevitable baby. A dog is bad enough; but it can by certain deceitful noises more or less resembling rats and cats, its natural foes, be made to prick its ears and keep still for a moment or two. But the baby is not half so obedient. It will kick, squall, and do everything else common to babyhood, but it will not be photographed. Most photographic artists keep a small stock of toys, whistles, bells, drums, and other noisy artifices to delude fractious humanity into momentary quietude. Occasionally these pacific engines are effective; but more often the baby's picture turns out to be so excessively vague about the eyes and mouth, that it is at once condemned as a gross libel upon the 'darling little cherub.' This was often the case under the old regime. But now, thanks to gelatine, there is no need to keep baby quiet. He may jump, tear his hair if he has any, kick to his heart's content, in short comport himself in any way he may think proper; but whatever he does, the gelatine is too

quick for him. A string is pulled or a button is pressed, and baby's image is captured, 'a thing of beauty, and a joy for ever,' to his delighted parents.

As already stated, these necessarily quick exposures of the gelatine film to the action of the light in the camera, are obtained by mechanical means. In the old method, the lens had an outer cap or lid, which the operator removed and held in his hand until the image was secured. This cap is now commonly replaced by what is called an instantaneous shutter, which is placed within the camera. It may be a curtain of thick silk held down by india-rubber straps; a slight pull will raise it for a second, and the straps will immediately draw it back again. Or it may take the form of a little shutter with a slit in it, which will fall on being released by a catch actuated by the pressure of an electric button. Another plan is to blow it open by pneumatic means; the pressure upon an india-rubber ball held in the operator's hand, and connected by a tube with the camera, being sufficient to attain this end. The principal feature in all these contrivances is that the shutter can be acted upon while the sitter is quite unconscious of it. The photographer watches his opportunity, and when he notices that his model is not prepared, and when therefore the features and expression are in repose and natural, the picture is secured.

The really wonderful pictures which are possible by the new process, coupled with these mechanical aids, were well seen in the last autumnal exhibition of the Photographic Society of Great Britain in London, as well as in some which have since been submitted to our inspection. We will select one or two as examples. A group of fishing-boats tossing on gently rolling waves; every ripple of the water being clearly defined, and every spar and rope beautifully reflected on the glassy surface of the sea. This picture deservedly won a prize. Here is another, a silent pool overshadowed by trees. One bright patch of light is reflected from the sky on to the surface of the water, and above that bright background appears a veritable flying swallow, its shadow being cast below! Another prize was rightly bestowed upon some splendid pictures of the noble lions at the Zoological Gardens; every hair seeming to stand out upon their coats with marvellous clearness. Here we have the inverted image of a gunboat in the sky, appearing above a church steeple; this was the effect of a mirage seen at Tenby, and which would have probably disappeared long before an old-style photographer could have had his chemicals ready. Two more pictures may be noticed as examples of the marvellous celerity of the gelatine process. One, a representation of the Oxford and Cambridge boat-race in full swing, with its accompanying rabble of steam-boats and rowing-boats of all descriptions. And the other perhaps more extraordinary production—an express-train at full speed, passing through Chiselmhurst, on its way to Dover.

The extreme rapidity of the process opens up many new fields to the photographer. Portraits can now be easily and satisfactorily taken in private sitting-rooms; and we need hardly point out that such pictures with home surroundings must have additional charms. Dark interiors of public buildings as well as of private apartments

—and many such apartments in these days of art refinement are veritable gems of beauty—can now be secured in the camera. In the old days, the photographer would have laughed at the possibility of attempting such subjects; but now such feats are accomplished with comparative ease. The figure of a trotting horse in several positions, each position having been photographed while the animal was in quick movement, was recently published. The various positions were said to have been each secured in the two thousandth part of a second. This photography of muscular movements may possibly some day be applied to artistic purposes. What more valuable aid could an artist have than the varied movements of an athlete as he drew a bow or hurled a spear? The increased sensitiveness of the photographic plate will also no doubt be taken advantage of in other branches of science. The spectra of the stars have already been photographed; indeed the art of photography has had more to do with the progress of spectrum analysis generally, than most people are aware of. For instance, one scientist may remark certain lines in his spectroscope which may be totally unseen by another. But upon the photographic plate these lines are represented with unfailing accuracy. The truth of the old aphorism, that 'seeing is believing,' has long been questioned by most thinking people, for they know that sight is as liable to err as other human faculties. But the photographic lens stamps its records upon a retina which never forgets, and which, with due care, cannot make a mistake.

It is evident from what has been stated, that the introduction of the gelatino-bromide process marks quite an important era in photography. As usual, in cases where a new method of working an old art is discovered, there are many who will insist upon sticking to the wet process, just as there are said to be some old stagers—literally old stagers—who refuse to travel by railroad. These maintain that the results of the older method are better than the new, and that the time is not far distant when it will be made as rapid. Should this last prophecy come true, the wet process may perhaps still hold its own; but as we have already pointed out, it will never compete with gelatine in the question of convenience or aptitude for certain classes of work.

## THE EVICTION:

AND WHAT CAME OF IT.

IN TEN CHAPTERS.—CHAPTER IV.

ON the following day I was called away to Dublin, where certain rent-deposit business had to be transacted. Under the circumstances, it was desirable that my movements should be known to as few as possible; and save the bailiff, none knew of my departure. I went over to his house in the forenoon; gave the cattle into his charge; told him to keep an eye on things in general, and on Scallan's movements in particular; made my way to the railway station; and caught the train for Dublin. Having arrived there, and transacted the business for which I had come, I was suddenly struck with a happy thought. 'Why not go to the detective office,' said I to myself, 'and put the

matter into the hands of the detectives? The plan may succeed; and even if it does not, it is worth at least a trial.'

I wended my way to Exchange Street—the Scotland Yard of Ireland—and had an interview with one of the officers connected with the secret inquiry service. He was a very gentlemanly looking man, and extremely intelligent. A short time sufficed to put him in possession of all the details of my case; he saw at a glance everything that I wished to explain to him. Scarcely had I finished my recital, when he had his plan of action matured. It was as follows. He would go down to Castle Mahon at once, in the character of a visitor. Major Croker, an old friend of my family, has come over to Ireland on a tour. I meet him at the hotel in Dublin, and of course ask him down to stop a while at my place. He is delighted at the opportunity of seeing something of the Irish peasantry. We arrange to start by the evening train. At the last moment, business has cropped up to detain me in town overnight; the Major runs down to the country before me; and I arrange to follow as early as practicable. I write to the housekeeper, stating who he is, giving her directions to make him comfortable, and so forth.

Such was the plan he sketched out for himself. He informed me at the same time that extreme caution would be necessary; above all, that it was absolutely essential for the success of the scheme that his incognito should be strictly preserved. I was to divulge the secret to no one, not even to the wife of my bosom. It was a perilous game at which he and his coadjutors were playing, and it was only just and right that such precautions should be taken.

In dealing with such an intelligent officer, suggestions would have been idle; it only remained for me to accord with his arrangements *in toto*. He went down to Castle Mahon in his assumed character, on the evening of the same day; and I followed after, two days later. Certain repairs had to be made in my coat of mail; this fact, besides my anxiety to return at an unexpected moment, occasioned my delay in town.

Upon my arrival, I found Major Croker comfortably ensconced in his new quarters. He said he had been looking about him in a general way; but nothing of importance transpiring, he had been unable to attain any definite results from his investigations. However, now that I had returned, things would begin to look a little more lively. For myself, I sincerely wished that they would not. I asked him whether any persons had been inquiring for me. None, he said, except Donnelly the bailiff, who seemed to have something of importance to tell me, if one could judge by the frequency of his visits and the troubled aspect of his countenance. We concluded that it would be well to have him up as soon as possible. I sent a special message, which brought him to the castle half an hour later. I had him ushered into

the private room in which the pseudo-Major and I were sitting; the Major of course, as a friend of the family, not being out of place when such important questions were at issue.

## CHAPTER V.

'Well, Donnelly, what news?' said I cheerily.

'No good news at all at all, Mr Wharton. Last night, sir, no later, three of the bullocks wor houghed, sir, an' a fourth runnin' so lame, that I'm afeard he has got a touch too, sir.'

'I'm very sorry to hear that. But perhaps they got the injury some other way; by leaping over fences or the like?'

'O no, sir; there could be no mistake about it, for me own gossoon Pether caught the fellows doin' it. You see, every mornin' since you wint up to Dublin, I used to get up at sunrise, an' go over to Scallan's meadows to have a look at the bastes; but this mornin' not feelin' too well to stir out, I called Pether, an' he riz in me place an' wint out to see thim. An' shure enough, whin he kem in sight of the place, if there wosn't two min wid their faces blackened a-carvin' away at the blissed cattle! An' the momint they seed him comin', they dhropped the game they wor at, an' run like hares, an' him afther thim. An' whin the hindmost of the pair saw that Pether wos gainin' on him, what does he do but he turns on the gossoon wid a horse-pistol an' lets fly at him. An' only for an ould bit of a sack that Pether had round his shouldhers, to kape aff the dhrizzlin' ruin, he'd a niver cum back to tell the tale; fur the pistol wos loaded wid duck-shot an' slugs. But as it wos, it downed him; an' be the time he kem to, the raskils wor clane gone an' disappeared.'

'Bless me, this is a terrible affair! I hope your son was not much injured?'

'Not much, thank God; he wos only a bit scarified about the chist—jist skin-deep, that's all. It wor the blissed saints an' the sack saved him.'

'I'm glad to hear that, at all events. But this hain-stringing of cattle is shocking. Is it a usual thing in this neighbourhood? I thought that the Ribbon fraternity confined their tender mercies to the shooting of landlords, land-agents, and such meaner game.'

'No sir; it's not usual here; thanks be to Providence. An' I don't think that this wos done be the residenthers aither. I see a hape of quare-lookin' sthrangers about the counthry these last few days.'

'Where have you seen them?'

'Well, mostly about the O'Reillys', where Scallan an' the wife is stoppin' since they wor put out. An' av coorse, there's a lot of thim to be found at the public-house convanyent; where Scallan, they say, is thratin' all hands wid the money you gev him.'

'I must put a stop to this work, at all risks. Have you any idea of their recent movements?'

'No sir. Av coorse, thin boys wouldn't be for lettin' me know more nor shmits me, an' by the same token, that same doesn't shuit me less or more. Iver since you wint to Dublin, they've been houldin' their meetins to thry the case finally like. I got that out av one of thimselves, who warned

me to fly in time, an' tould me at the same time not to let out that he mintoned it to me; "for," sez he, "I'm your frind; but if I find you iver breathed it to man or mortal," sez he, "I'll be the first man to shoot you meself."'

'When was that?'

'The day afther you wint to Dublin, sir. An' forbye that, shure I heerd wid me own ears the blowin' of the death-horn.'

'The death-horn?'

'Yes sir. What they blow at night to call the boys together, whin a murder-case has to be thried. It was fit to dhrive me out of me senses; for it ned me think of poor Mr Park of Grange-gorman, that wos shot jist this time twelvemonth—shot sir, in his own dinin'-parlour, forninst his own wife an' family. Ochone! Mr Wharton, to think that I should live to see meself knocked down a dead corp, murdered in cowl'd blood! For me frind tould me that some owld hands—delegates, is what he called thim—has come from all arts an' parts to attind the meetins; an' among the rest, three or four of the very pick of Tipperary.'

So ran the report of Donnelly. It was clear to me that things were approaching the crisis. I resolved to bestir myself, despite Mr Carnegie's caution about venturing out of doors. Doubtless, his advice was good; still, I could not abide the idea of submitting to butchery in a passive manner, like a helpless lamb. And then there was the unfortunate bailiff, in a far worse predicament than myself. It was due to him that I should do something.

A council of war was then held, the Major taking part in our deliberations, such a part of course as a friend of the family would naturally take. Such was that gentleman's caution however, that even before the bailiff, he was anxious to preserve his incognito. The upshot of the debate was that all three of us, the Major, Donnelly, and myself, well armed, sallied out to make a raid upon the O'Reillys' house, where Scallan and his wife had been living since their eviction. It was the headquarters of the enemy. I wanted to shew the country-folk that I was not afraid; I wanted the Major to get a look at the parties, which might be useful in future for purposes of identification; I wanted to take the Scallans to task with regard to their delaying in the country; I wanted to find out how the land lay, as the phrase goes; I wanted to enconrage my almost intimidated bailiff. It was deemed advisable that we should keep our weapons out of sight, but yet concealed in such a manner that they could be brought into requisition at a moment's notice. The ostensible purpose of my visit was to adjust some claim with regard to bog which the O'Reillys had made to me. Donnelly, of course, as bailiff was an indispensable adjunct on such an occasion; and the Major was very anxious to see the interior of an Irish cabin.

## CHAPTER VI.

It was still early in the afternoon when we arrived at the O'Reillys' house. Save Mrs O'Reilly, there was none of the family at home. We found her seated by the kitchen-fire, presiding over some cooking operations, which apparently were on a large scale, as if she meant to entertain a goodly number of guests. Beside her sat Mrs Scallan, wife

of the evicted hero. In one corner lay Scallan himself, sleeping away a drunken debauch, or perhaps pretending to do so. In the other, a strange man in the garb of a travelling tinker. At our entrance, both of the women exhibited signs of confusion. As for the men, they retained their recumbent positions with apparent indifference. Addressing Mrs O'Reilly first, I told her that I had come to see about the bog. She said that her husband was out with a lot of men that he had working for him, and that he would not be home till night-fall. As for herself, she could do nothing in the matter; but if it would be all the same to me, she would send him up to the office on the next day. The bog question having been postponed, I proceeded to address myself to Mrs Scallan, who since my entrance had been standing by the side of her chair, fumbling uneasily with the corners of her apron. I did not deem it advisable to say anything to Scallan himself, though he was now sitting up, and striving to attract my attention by certain inarticulate grumblings. So turning my back to the corner which he occupied, I remarked: 'Well, Mrs Scallan, I am surprised to see you here still.'

'We'll go whin we like,' grumbled the occupant of the corner. 'Ajint nor bailiff won't grind us down no longer—do ye hear? There's bhoys comin' from Tipperary that'll see me all right.'

'What does your husband mean?'

'Och, yer honner, don't be aftler mindin' what he sez at all at all,' cried Mrs Scallan in a terror-stricken fashion. 'Shure, it's only fur the carts that meself an' him is waitin', to bring our flittin' away out of the place; an' that'll not be longer than three days at the furdest.'

'As you please, Mrs Scallan; but your money won't stand long at this rate.'

'Is it the money ye'll be wantin' back—yer durty thirty pounds?—Throw it to them, Biddy. No; ye can't, fur I have it meself. Ay, an' I'll keep it too, to thrate the bhoys wid, the sthrappin' bhoys av Westmeath. I like to stand thrate to daycent fellows—do anythin' at all I want, from pitch-an'-toss to manslaughter.'

'This is going a little too far, Mrs Scallan.'

'Och, Mr Wharton, yer honner, he's out of his twelve sines wid the whisky to spake to yerself in such a way. An' it's himself 'ill be sorry about it the morrow whin he comes to. Shure, I'm thryin' hard to get him out of the place as soon as I can; but the naybours come from all arts an' parts to see him afore he goes, an' he hasn't the heart to sind them home dhry, as long as he has money in his pockets.'

'I have a hundfred min in Westmeath that ud die for me this minit. I'm lavin' it; but I want to shew ye that I am a betther man than any agint or bailiff in the counthry.—Isn't that a fact, Joss?' added he after a pause, addressing himself to the occupant of the opposite corner.

The latter individual, who had hitherto been perfectly silent, replied to Scallan hurriedly in an undertone and in the Irish language.

'Who is that man?' I asked of Mrs Scallan.

'Shure sir, he's only a thravellin' tinker, sir, that Mrs O'Reilly brought in to mind her kittles. An' a good thradesman he is too, sir; but he doesn't know how to talk a word of English barrin Irish, sir. He's a grand hand at kittles, sir.'

'Ay, an' forbye kittles,' growled the incorrigible again from the corner, 'he's a first-class man in a pinch; yes, he's a frind an' a brother; that's what he is.—Aren't you, Joss, avick?'

Thereupon ensued a dialogue in Irish between Scallan and his friend Joss, under cover of which we thought it advisable to withdraw. Mrs O'Reilly was to send her husband up to the office next day to settle the bog difficulty; and so ended our interview.

'Rather unprepossessing folk those,' remarked the Major, as we quitted the house. 'Certainly not calculated to prepossess one in favour of the Irish character.'

I was too much annoyed to make any reply.

'They're a murderin' lot, the whole jing-bang of them, an' that's the holy all of it,' interposed the bailiff warmly. 'Did ye undherstand what that other sthrange chap was remarkin' in Irish about yerself, Mr Wharton? If ye didn't, all the betther; fur it was tarrible.'

'No, Donnelly. Scallan's English was quite enough for me; perhaps a little too much.'

'Do ye believe me what I'm goin' to tell ye, sir? That chap is here for nothin' good. He's no more a tinker than meself, or you, or the Major is. No sir; he's a Tipperary inan of the name of Kelly, an' high up in sthripes among the Ribbonmin. He carries the goods. But ye don't know what that manes, av coorse. It manes that he brings the new passwords from one lodge to another through the counthry. That's what he is, sir. I seen him in this naybourhood afore, sir, when poor Mr Park was shot.'

'Well, it's something to know that; it may be useful in future. In fact, I have a good mind to lodge an information without further delay, and have the whole pack up before a magistrate.'

'Och sir, what good ud that same be? Shure you could make nothin' out of them, good or bad. They'd jist be aftler snappin' their fingers at ye, if ye thried it on wid them. Why sir, last year there was hardly a week wint by widout an agint or a bailiff bein' popped. An' how many convictions tuk place accordin'? Why, sarra a wan at all at all, sir. They're as knowin' as foxes, sir, an' sarra a grip can ye git on them.'

'What do you say, Major? You have seen and heard the folks?'

'I am of the same opinion with your man,' replied he curtly.

'Deed an' deed, Mr Wharton, the law and the polis is no perfection whatsomdiver. An' if wan of the lot was tuk up, the whole counthry would gether round the house to murder us all, an' burn us alive preaps into the bargain. An' shure, Mr Wharton, darlint, if you had a hundfred pounds to spare, I'd say give me the lind av it, an' let me be aff to Ameriky or Liverpool or some other foreign land, before we're all kil't an' massacred. Deed an' word, sir, it's aff I'd have been long ago ony for the wife an' the childher. I want to bring them wid me, fur the ruffins ud slaughter them whin me back was turned, fur spite that I had got clane away from their claws.'

I was deeply impressed by the bailiff's pathetic appeal. I saw myself in no less helpless a plight; and

A fellow-feeling makes us wondrous kind.

I began to reason that if an appeal to the civil

authorities were useless in the present attitude of affairs, it might be made too late at some future time, when agent and bailiff had already fallen victims to the brutality of an organised gang of murderers. Surely it were better to follow my bailiff's example, and fly the accursed land for ever. But then, what would the world say? Public opinion would readily interpret such legitimate caution as cowardice. While I was thus vacillating, I caught the Major's eye fixed upon me in apparent disapproval; for he readily divined the state of my feelings. A look from him settled the business; so I dissembled, and told the bailiff to be calm. I reminded him that we were in a position of trust. Until we were reduced to the direst extremity itself, we would not be justified in abandoning the posts assigned to us. That time at least had not yet come. I sent him home with the assurance that every protection would be afforded him and his family.

When we were once more alone: 'What's your opinion now, Major, about the aspect of affairs?' I asked.

'Time, sir, is all I ask,' he replied. 'Do you merely keep yourself quiet, and trust to me for the rest.'

So we reached Castle Mahon.

Upon our arrival, I found Mr Carnegie there waiting to see me. Having heard about the hanging of the cattle, he had dropped over in a friendly way to learn the exact extent of the damage—which indeed had been greatly exaggerated by the country-folk—and whether there was a probability of bringing the miscreants to justice. I insisted upon his remaining to dinner. I introduced the Major to him, and all three of us spent the evening in a warm discussion of the question. The Major renewed his advocacy of a cautious defensive policy; Mr Carnegie was of the same opinion, and justified it by local experience. It remained for me to subscribe a mild assent. But I felt like Job sitting among his comforters. Some sort of action—no matter what—would have been preferable to the terrible suspense, which racked my very inmost feelings. But feelings apparently counted for nothing with my case-hardened advisers. I felt for once the disadvantage of being an Englishman.

On the stroke of ten our guest rose to leave. By our direction, he looked to his pistols before going out; remarking at the same time in a laughing way, that he at least was quite safe; he might go through any part of the country at any hour of the night. For a short time he stood at the outer door, to repeat his warning to me about venturing abroad; then he bade us good-night, and the great door closed behind him. We had not long regained the dining-room, when we heard the report of a shot fired outside, upon which we rushed back to the door, opened it, and, waiting for a few seconds till the butler procured a lantern, proceeded in the direction of the shot. We found Mr Carnegie lying prostrate on the ground scarcely a hundred paces from the house. He had been shot at! By the light of the lantern, we could see that his features were ashy-pale, and that his hand was pressed to his side in the convulsive manner of a man who is suffering mortal agony. To our eager inquiries he could make no answer; he was speechless. The absence

of blood on his person or on the ground, shewed that he had escaped at least the assassin's bullet; but his unconsciousness, his attitude of pain, all the circumstances of the case, made us fear that he had received some serious internal injuries. Carefully lifting him up, we carried him back into the castle, and stretched him on a sofa in the dining-room. We administered stimulants. Soon he opened his eyes. Never shall I forget the look of silent anguish which he cast upon me at that moment! He apparently did not as yet realise the fact that he was surrounded by friends.

We proceeded to make an examination; our every movement being followed by the anxious eyes of the sufferer. The result of it proved that we had been right in our conjecture. The ball had been aimed at his left side. Penetrating his thick ulster and the coat and waistcoat underneath, it had stopped just at the watch-pocket, having failed to reach his person. Never had escape been so narrow! We told him so, and the news reassured him greatly. In a little time he was able to talk to us, but very feebly at first. It appeared that, upon leaving us, he had been going down the avenue at a tolerably brisk pace, when on a sudden he heard a footstep in his rear, as if some one had sallied out from behind a tree. He turned round to see who it was, and observed at a little distance off, a stalwart fellow with a mask on his face in the act of presenting a pistol at him. The next moment he was conscious of a shot being fired; then, of his being hurled with violence to the ground. Then he felt a strange giddiness come over him; and—he knew no more till he found himself in the dining-room. There was no doubt but that our timely arrival had saved his life, so completely was he in the villain's power. The assassin apparently thought that he was dealing with me, from the frequent mention made of my name, accompanied with horrible imprecations.

Such was the gist of Mr Carnegie's statement. Now that the sufferer was sufficiently tranquil, the Major and I sallied out to revisit the scene of the catastrophe. On the walk, the gravel was in a torn-up state, as if a severe struggle had taken place there. Close at hand, lay a recently discharged pistol, and the half-burned shreds of a newspaper, which had probably been used in loading. Beyond these we could discover no evidences of the recent affray. As for the assassin himself, a systematic search would be perfectly idle in such a place and at such an hour. Besides, our delay had given him ample opportunity of getting clear off. So we returned to the castle.

I spoke to the Major about the advisability of calling in the police. To this he objected as a measure practically useless; at the same time hinting, *sotto voce*, that it was quite out of keeping with his plans. I appealed to Mr Carnegie. He was of the same opinion with the Major. In the midst of a population made up of assassins on the one hand and of their sympathisers on the other, the greatest caution was necessary; and in order the more effectually to achieve the ends of justice, the affair would have to be kept a profound secret. We should wait for a clue. When it was found, we could follow it up with effect. I had no relish for such delay. But of course there

was nothing left for me except to acquiesce in the opinion of two such competent authorities. At daybreak, we smuggled Mr Carnegie to his home, in a close carriage.

### MAN-EATING TIGERS.

OUR Indian government, as we have had occasion to mention in former articles, make a practice of publishing yearly a detailed Report shewing the loss of life occasioned among the natives of Hindustan by the ravages of wild beasts, and the still more terrible list of deaths attributable to the bites of venomous snakes and other dangerous reptiles. It is satisfactory to observe that although this melancholy total is still lamentably large, yet that the exertions of the government in recent years to keep down the numbers of wild animals and other pests so destructive to human life in British India have not been without good effect, for the Return last published—that of 1878—shews a steady improvement on those preceding it.

Unfortunately, however carefully these statistics may have been compiled from the information supplied by district officials, they cannot be accepted as altogether complete, or as furnishing the full number of deaths from the above-mentioned causes; and this remark specially applies to deaths from snake-bites. The natives of India are in general exceedingly superstitious, and are great believers in *kismet* or fate; and it is surprising how little notice is taken of any unfortunate who may be bitten, and in a few hours carried off, by the bite of some deadly snake. In large towns or villages under the direct supervision of the police the circumstance would undoubtedly be reported to the officer in charge of the district; but in out-of-the-way parts like the wilds of Central India—and still more so in large independent states such as Rewah and Gwalior—hundreds of poor creatures yearly perish whose deaths are not returned under the true heading.

Although the great majority of deaths—which have reached the enormous number of twenty thousand in a single year—included in this gloomy Report are rightly put down to the terrible bite of the cobra, the krait, or other venomous snakes, yet in spite of large rewards offered for their extermination, we learn that panthers, and others of the *felida*, as also bears and wolves, still roam through the jungles, and that tigers still carry off human beings. Happily, in our times this majestic creature, the royal tiger, is less common than formerly was the case, and indeed in many parts where once he ruled king of the jungles, he has now, from being constantly hunted and shot down, become almost if not altogether extinct. Still, in the wilder and more hilly tracts of country, or in parts where the forest, on account of the swampy nature of the soil, has not been cleared away, and where the land has not been brought into a state of cultivation, tigers yet hold sway, and constantly prey upon the herds of the poor

natives. These cattle-devouring tigers, however, though by their constant depredations they prove to be a sore tax and a source of constant dread to the people of the country, will yet, if left unmolested, as a rule seldom take to man-killing. And it may here be mentioned that it is a common mistake to imagine that the tiger, savage and blood-thirsty by nature as he undoubtedly is, will readily attack human beings, the exact contrary being the case. The tiger, like all other wild animals, has an instinctive fear of man; and unless pressed by hunger, provoked, or come upon suddenly face to face, when on the spur of the moment, and more from fear than anything else, he will sometimes make use of his terrible powers—the animal will on meeting a human being almost invariably turn aside from the path, and with a surly growl quietly slink off into the thicket. But if such is the general character of the royal tiger, how then, it will naturally be asked, is this lamentable loss of life yearly laid to his charge to be accounted for? and this question we will endeavour to answer.

We often read and hear about man-eating tigers; but most fortunately these terrible creatures, once so common, are nowadays exceedingly rare in British India. Probably not one tiger in a hundred is a professional man-eater. Now and again, however, one is heard of, generally speaking in Central India, or further south, towards the Madras Presidency. When once a tiger takes to devouring human beings, he will seldom touch any other prey; and consequently, unless the detestable monster be speedily sought out and destroyed by some English sportsman or native hunter (*shikary*), the awful roll of victims continues to increase with alarming rapidity, till at length many scores of poor creatures are carried off in a comparatively short space of time by a single animal. The husbandman ploughing his field is taken away in broad daylight. The village maiden on her way to the river with her water-pitcher, disappears mysteriously. The watchman posted to scare the flocks of parrots from the ripening corn, returns not at sundown.

In vain the poor oppressed villagers endeavour, by taking increased precautions during the daytime and securely barring their doors after night-fall, to guard against their common enemy. For a few days, perhaps for a whole week, nothing is seen of the tiger, and once more the inhabitants venture forth and resume their daily occupations. A renewed sense of security begins to be felt, mingled with a hope that the animal may have departed elsewhere; but the probabilities are that the cunning creature may yet be lurking in the neighbourhood, and only watching for a favourable opportunity to spring upon a fresh victim. Again the terrible foe, now grown bold from uninterrupted success, suddenly appears, and carries off yet another human being from the devoted village. At length matters reach a pass beyond all human endurance; a panic seizes upon the terror-stricken inhabitants, and hastily packing up their goods and chattels, they desert the spot, driving before them their flocks and herds, and depart *en masse* for some neighbouring town, leaving their humble dwellings to fall to ruin, and the ripe crops to perish unharvested in the fields.

This is no exaggerated picture; though happily it is, as already mentioned, becoming rarer. Still, scenes of misery such as we have described have frequently occurred amidst the wilds of Rajputana, in the Nagpore country, and in other districts bordering on Central India. Not only have individual villages been thus rendered uninhabitable for a time by the ravages of a single tiger, but in former days it was nothing uncommon to hear of several large villages being depopulated by these animals.

It is one of the many onerous duties incumbent on the magistrate and collector of a district to check by every means in his power the inroads of wild animals in his particular circle. Ever since the Mutiny of 1857, our Indian subjects have been disarmed; though, generally speaking, in villages bordering upon a forest country, one or two of the inhabitants are licensed to carry a matchlock; but this rude weapon, though useful in driving off crop-devouring deer and wild-hogs after nightfall, is altogether unsuited for tiger-shooting; consequently, when a roaring man-eater makes his appearance, and begins to make a practice of carrying off human beings, the poor country-people are altogether powerless, and unable to cope with their fell oppressor without the aid of their European masters. It then becomes the bounden duty of the magistrate or one of his subordinates to take immediate steps for their rescue.

Probably the district officer himself, or his police-officer, is a sportsman; if so, one or the other of them will at once take the field, pitch his camp somewhere near the tiger's stronghold, and in conjunction with the village people, use every endeavour to destroy the animal. Sometimes their efforts are successful; but often the contrary is the case; and in spite of the most carefully devised plans, the hunters are thwarted again and again by the extreme cunning so often displayed by the wily game. Unlike the generality of tigers, which during the hot-weather months can usually be discovered in certain favourite spots, and when once marked down are driven out and destroyed with comparatively little difficulty, the man-eater is almost invariably a skulking coward, who, as if conscious of his evil deeds, is ever suspicious and on his guard against danger, seldom shewing fight, even when closely pursued, fired at, and driven into a corner, and sneaking off on hearing the first shout of the beaters.

Not the least pleasing among the attractions of tiger-shooting is the value and extreme beauty of the trophies of the chase; and there are few prizes more coveted by the young Anglo-Indian sportsman or more carefully preserved when gained than the glossy striped coat of his first royal tiger; but the man-eater, when at last he has been outmanœuvred and met with his just deserts by a well-aimed rifle-bullet, seldom presents a prepossessing appearance. It may be a thin under-sized tigress, in poor condition, and altogether wanting the elastic form and graceful beauty of her sex; or perhaps an old decrepit male tiger, with decayed fangs and mangy hide, the latter hardly worth the stretching. But in spite of this drawback, which, however, is not always the case, the true sportsman who, after many disappointments, at length comes off victorious, and rids the country

of the most terrible of all wild beasts, feels within him the sensation of having done a really good action, which more than repays him for the time and trouble he has taken.

### LIVING BY THE WITS.

SOME time ago, professional pursuits took me about thirty miles from home, and kept me there until I had just time to catch the last return train. Although I knew every inch of the road, yet I somehow had made a false turn, the consequence of which was that albeit I made more haste than was prudent to retrieve lost time, I had the mortification of seeing the red light of the tail-lamp of the train pass out of sight around a sharp curve of the line. Coming to a dead-stand, I said (to myself I imagined): 'There! I'm in for it now. What is to be done?'

'Make the best of a bad job, sir,' said a voice at my elbow in a cheerful tone.

Looking round, I saw a middle-aged and kind-looking farmer, who seemed to regard my loss of the train with compassion; for before I had time to reply, he said: 'There's many a worse case existing at this moment than yours, friend; the saddest part of it is the disappointment of friends at home.'

'That's the very thing that troubles me,' I said; 'for I know I cannot wire my loss of train to them.'

'Bring your mind to your circumstances, friend,' was the philosophical advice of my newly-found acquaintance. Then added: 'As for yourself, you need not be long in suspense; for if you can put up with such accommodation as my house affords, you are welcome to it. What say you?'

Seeing that nothing better could be done, I gratefully went with my friend-in-need; and in about ten minutes I found myself at the door of the moderately sized farm-house of Mr Samuel Pitchforth. As we were about to enter, we almost stumbled over a man who was in the act of knocking at the door. He turned out to be a broker from the market-town at which I had done business, about two miles off, and had come respecting some furniture which my host had spoken to him about. It was not much past nine o'clock; and as the newcomer had ridden in a light-cart, he was not in haste to return; so it was not long before we all three were snugly seated in the farmer's best room, chatting merrily.

'I'll tell you what, Pitchforth,' said the broker in a somewhat testy tone; 'I have hardly got over the effects of a bad bargain I made the other day; it affects my feelings yet, and will do so, I guess, for a day or two longer.'

'It must be something serious, Barker,' replied our host, 'to affect you so much. I hope it won't drive you into the Insolvency Court.'

'I'm not afraid of its doing that,' said Barker. 'It is not the amount of money I've lost, as the thought that I've been *done*, that troubles me. I thought I was up to every kind of trick that could be played off on me, and so believed that I could not be taken in by the cleverest rogue; hence the fact that I've been swindled does not sit lightly on my mind, I can tell you.'

My host laughed heartily as he good-naturedly

replied: 'And so Jemmy Barker has met his match in craft and cunning!'

'He has indeed,' said Barker with a sigh and a few reconciling nods of his head.

'Come, come, Barker boy, cheer up!' said Pitchforth; 'even you may live and learn. But come; let us hear the tale of Diamond cut Diamond, and I will supplement it by relating a story of sharp dealing in which I was lately concerned.'

Barker, who was smoking his well-seasoned pipe, looked significantly towards the table, where it was pretty clear he had expected to see the usual accompaniments of a well-to-do farmer's sociality; but as they did not meet his gaze, he seemed ill-disposed to comply with our host's request. It was also equally clear that the latter had suffered a temporary lapse of memory; for uttering a good-natured exclamation, he asked me to be kind enough to touch the bell at my elbow. This was enough to put Barker into good-humour and a talking mood; for while the maid who answered the bell was getting the decanter and glasses laid on the table, the broker was refilling his pipe with complacent face. When he had got his pipe well a-going, he spoke as follows:

'I need not tell you, neighbour Pitchforth, that I am not so thin-skinned as many folks respecting what is called cheating the revenue; for if I can buy a bit of contraband on the sly, I scruple not to do so; and as the case in hand is one of that sort, you may be ready to say that I am right served. Well, I am not disposed to argue the point with you, but will just tell you the story as it occurred. It was last market-day morning. I was standing at my door, looking down the street, when a man rushed past me into my shop bearing a small keg or barrel on his shoulder. Lifting it off and placing it on my counter, he said in much haste: "Friend, do me the favour of letting this stop here an hour or so. It is a couple of gallons of brandy which has not done duty to the Queen. I have brought it at the request of a gentleman who promised to meet me here at ten o'clock. I've been all through the market looking for him, but have not found him. Just now, I got a glimpse of the exciseman; and as he has some little knowledge of me that is not good, I became afraid of being seen by him; so if you will let the keg abide here while I look for its purchaser, I will do you a good turn some time."

"You may put the barrel on the floor, and leave it there," I said. "But mind, if the exciseman should come and ask about it, I'll not say that it is mine."

"It will have to take its chance, friend," he replied, and went his way.

About three o'clock in the afternoon he came back. Rubbing his hands as he looked down upon the barrel, he exclaimed: "Good, good! So the receiver of the Queen's revenue has not found you out. So far so good." Then looking me in the face, he said: "I've had my trouble for nothing; my customer has not turned up. What to do with the keg of brandy, I know not." Then after a pause, he asked: "Will you buy it, friend? It is a drop of as good brandy as ever went into anybody's mouth. Come, you shall taste it. Just fetch a glass!"

'Having no objection to his offer, I got a glass.

Taking a small tap out of his pocket, and driving it into the taphole with a piece of wood he saw near him, he soon had drawn a glass, which he handed to me. It was really first-rate brandy.

"Now," said the rascal (I can call him by no better name), "as you have done me a good turn to-day, I'll put a few shillings into your pocket in the way of trade. You shall have this two-gallon keg of brandy for a sovereign."

'The brandy was dirt-cheap at that price. I knew where I could sell it, if I wished; so giving the fellow the money, I took my purchase into the cellar. At night, after I had shut up my shop, I bethought me of the brandy. Thinks I: "I'll keep it for my own use and comfort; and as it is not often we indulge, I'll draw myself and wife a glass; it will make us a good nightcap." So getting a couple of tumblers, I went down into the cellar, and soon drew a glass of brandy. But when I began to draw a second, scarce a drop could I get. "How's this?" I exclaimed, and gave the barrel a shake. It sounded all right. But not another drop would flow. "There's something wrong in the state of Denmark," I exclaimed aloud, and waxed very wroth.'

'That's just like you, Barker,' said my host, who seemed as if he had a license to say to him what he liked.

'Like or not like,' he replied, 'I was resolved to bottom the mystery. So putting the barrel on an end, I knocked off a hoop and took out one of the staves of the lid. I was almost petrified at what I saw. The barrel was nearly full of Adam's ale—clear water. "Where in the world did the brandy come from?" I exclaimed. Pouring out the water not in the best of tempers, the mystery stood explained before me. A tin tube had been fixed, one end in the bung-hole, the other end in the taphole; this had been filled with good liquor—scarcely half a pint. All the rest of the space contained water.'

There was such adroitness combined with novelty in this trick, that both my host and I burst into a loud laugh.

Ere long our host said: 'You are a wiser if not a happier man, friend Barker.'

'I have no doubt you both are saying inwardly: "The biter was bit, and serve him right;" but it has been a nettlesome piece of business to me, I assure you. However, it's among accomplished facts now, and so let it rest there.—But now, Pitchforth, let's have your story. It's dry work talking and smoking, I find,' concluded Barker, emptying and refilling his glass.

'My story,' began Pitchforth, 'is of another order, though it relates to an impostor who would have come over me to the tune of twenty-five pounds if I had not been too sharp for him. The facts are these. I had bred a fine young horse, which I valued at twenty-five pounds. Having no use for him, and needing a little ready cash, I took him to Sheffield fair to sell. I had stood all day without effecting a sale, when just as I was about to leave the fair, a fine good-looking man in top-boots and a velvet coat, with a riding-whip in his hand, stepped up and asked the price of my horse. I replied: "Twenty-five pounds." "I'll give you twenty-three pounds," he said. Thinking that I could not do better, as the fair was near its close, I closed in with his offer. He then took out his pocket-book, and presented me with

an accommodation bill for twenty-five pounds, and asked for the change.

"What is this, friend?" I said, looking at the paper.

"It is a genuine bill of exchange, which any bank will readily discount," was his reply.

"I don't know that," I said; and added: "Besides, the banks are closed for the day, so I can't test your paper. But," I said—a thought striking me—"if you will go with me to my house, where you can stay for the night, and my neighbours approve of the bill, I'll ratify the bargain." To this proposal he readily agreed; and mounting the horse I had offered to sell him, and I my mare, we trotted off from Sheffield. We had eighteen miles to travel; but as the evening was a fine one and our horses were in good fettle, we did very well. On crossing Criggleston Common, however, I felt rather timid, for the thought came—"What is there to hinder your companion making off with the horse he is riding, or, for the matter of that, giving you a knock-down blow, and escaping with both horses?" However, he did neither, and we reached home all right. We had a merry time of it, for he was a capital talker, full of horse-dealing adventure and other kinds of anecdote; and as we both made pretty free with the gin-bottle, we went to bed tolerably happy.

Next morning, I took the bill to such of my neighbours as were likely to advise me concerning it. Some said: "Take it; it is right enough;" others said just the contrary. The dealer in horse-flesh, however, grew impatient at my delay, and at last became cross; so yielding to the weight of advice given me, I closed with the bargain; and away trotted the horse with its new master on his back. He had not been long gone, however, before I began to feel uneasy, especially as my daughter, who was among the dissentients, continued to give me upbraiding looks. At last I got so wretched that I could not rest; so sending a man to saddle my horse, and hastily putting on my riding-suit, I set off after the horse-dealer as fast as my steed could gallop. I met one and another of my acquaintances, who really thought I had either gone mad or was trying to play Johnny Gilpin. But I neither stopped nor wavered until I came in sight of my quarry, who was giving his horse a drink at a roadside trough. I had marked out my course as I had gone along; so, pulling up at his side, I asked him quite calm-like, if he would buy another horse.

"Yes, if you will take another bill," was his reply.

"Then let us talk the matter over in a quiet way," I said.

Presently, seizing the bridle of the horse I had sold to the man, I said: "I rue the bargain we made a while ago; here is your bill; dismount, and give me my change." He was so nettled, that he lifted his hand threateningly.

"There's another that can play at that game, my man," I said.

"I know not what would have been the issue of this burst of passion, had not Mr Turnbull the brewer ridden up at that moment. To him I related the matter in dispute and shewed the bill.

"You can claim this man's presence at a bank while you present the bill," said Mr Turnbull;

"and my advice is, both of you ride on to Sheffield, and have the bill discounted or rejected as it may turn out to be good or bad.—Your friend"—addressing me—"can't reasonably object to this proposal."

The dealer in horse-flesh thought it best to fall in with this suggestion; and so we continued on our way. We had not gone far, however, before he came to a dead-stand, and making some lame excuse for not going on with the agreement, he offered, amid a host of angry expressions, to dissolve the bargain if I would allow something for loss of time. To this I agreed, and so we parted, but not before I had exhorted him to cease living by his wits and work like an honest man.

"I can't say exactly, but I think it was about three months after this that I took the same horse to Rotherham fair. As I was entering the fair-ground, I was astounded by a sight which met my gaze: there was the identical horse-dealer gyved to two policemen! Our eyes met. Drawing up my horse as the procession passed, I said aloud: "Did not I tell you that you would come to this, and advised you to work for your living as an honest man?"

"Too late! too late!" was the wretch's response.

"I watched the newspapers, to see the end of this matter. I found out that the rascal's name was Hunt; that he had been long wanted by the police for frauds of various kinds, and that for them he soon after got seven years' penal servitude."

This recital ended, Mr Barker took his leave, and soon after we went to bed.

I have had no reason to regret my having missed the train at Greenhead Station on that well-remembered night.

## SHAM BUTTER.

OLEO-MARGARINE, otherwise 'butterine,' otherwise 'bosh,' really only animal grease in disguise, is the outcome of an ingenious Frenchman's notion that the butter diffused through the milk of the cow is due to the absorption of the animal's fat. Taking some minced beef-suet, a few fresh sheep's stomachs cut into small pieces, carbonate of potash, and water, M. Mège subjected the mixture to a heat of a hundred and thirteen degrees Fahrenheit; and so, by the action of the pepsine in the sheep's stomachs, separated the fat from the other tissues. By hydraulic pressure this fat was again separated into stearine and margarine; and putting ten pounds of the latter into a churn with four pints of milk, three pints of water, and a little arnotto, M. Mège succeeded in turning out a compound sufficiently like butter to pass for that article.

Whether he had produced a deleterious stuff, containing the germs of disease and of all manner of loathsome parasites, as one set of scientific experts pronounced; or something far more wholesome than half the real butter in the market, as another set emphatically declared, was of little moment to the discoverer, so long as the thing was likely to prove profitable. He patented his process; and found no difficulty in selling licenses to work it in France, England, Holland, Germany, and America.

In the last-named country the manufacture of oleo-margarine developed so quickly and so enormously, that our own Board of Trade thought it necessary to request Mr Archibald, the British Consul-general in New York, to furnish all the information he could obtain respecting the manufacture and exportation of mock-butter.

His Report has been printed, and is now before us. From it we learn that the sole right to issue licenses for the making of oleo-margarine by Mège's process lies with the American Dairy Company, which has already granted such licenses to factories in Philadelphia, Pittsburg, Baltimore, Cincinnati, New Haven, and New York. One or two outsiders have embarked in the business without troubling themselves about paying for the right to do so; but the bulk of the trade is in the hands of the licensed firms—the Commercial Manufacturing Company, of New York, taking the lead, and being the largest manufacturers of mock-butter in the world.

In his Report, Mr Archibald says: 'The Commercial Manufacturing Company commenced operations in 1876, and their business soon attained considerable proportions, as much as half a million pounds of fat per week having been converted by them into oleo-margarine or oleo-margarine butter, which at the rate of two and a half pounds of fat to one pound of oil, would produce two hundred thousand pounds of oil or butter. This rate of production was maintained up to the middle of 1877, when it fell off, owing to two causes: one being the passage of an Act of the New York state legislature forbidding the sale of "oleo-margarine butter" as butter; and the other, the generally lower prices which have prevailed for butter during the past two years, which at times have rendered the manufacture of oleo-margarine butter unremunerative. For it is stated that when the retail price of genuine butter falls below twenty-three cents a pound, it does not pay to manufacture imitation butter. The average wholesale price procured here for oleo-margarine oil and butter since 1876, has been thirteen cents per pound for the oil, and fifteen cents a pound for the butter.'

'During the past two years, the quantity of fat manufactured into oleo-margarine and oleo-margarine butter by the Commercial Manufacturing Company has been about two hundred thousand pounds per week, yielding eighty thousand pounds of oil and butter. Of this, about seventy-five per cent., or sixty thousand pounds per week, was the oil product "oleo-margarine," all of which was exported in barrels or tierces, for the most part under the name of "oleo-margarine," but sometimes as "butter-fat," or simply as "oil." This would give a yearly exportation by this Company alone of about three million pounds; but it is estimated that nearly an equal quantity is now being made by the outside manufacturers, so that the total quantity of oleo-margarine exported from this port may be stated in round numbers as about six million pounds annually.'

Besides this quantity of oil for making mock-butter, a large quantity of the butter itself is exported, the United Kingdom coming in for the greater portion. Sometimes this is shipped as butter-grease, butter-fat, oleo-margarine, butterine, or possibly as butter itself. Very possibly indeed, we should say, since the article is put

up in half-butts or firkins in precisely the same way as butter; or made up into pound 'pats,' covered by muslin or thin cotton wrappers, stamped as genuine butter is stamped, and packed in boxes. We have seen it in this last shape and in the form of rolls in some London shops, ticketed one shilling a pound; while in others it is retailed under its proper name at tenpence and ninepence.

For the 'oil,' the great bulk finds its way to Germany and Holland, enabling the latter to keep up its reputation as a butter-producing country without troubling to keep up its stock of cows. Rotterdam receives the chief portion of the shipments of the Commercial Manufacturing Company; from thence the oil is sent to a place called Oss. There it is mixed with a certain proportion of milk, to give it a taste of the flavour of real butter, coloured to make the outward resemblance perfect, and then converted by churning into butterine. This butterine the Hollanders re-ship to France and England. Most of it comes here direct, to be sold as Best Dutch Butter; and what does go to France, eventually appears in our market as the product of the dairies of Normandy and Brittany, side by side with tubs of Irish butter, hailing originally from the same American factory.

These facts suggest the propriety of every housewife looking carefully into the nature of the butter she is in the habit of purchasing—her best protection possibly being that of dealing only with tradesmen on whom perfect reliance can be placed.

#### A SUMMER DAY.

The flowers lay sleeping beneath the dew—  
But the Mother had watched the whole night through.

The wild sweet carol of one small bird  
Was the sound that the weary watcher heard.

And the Summer dawn grew into the Morn,  
But still she sat weeping beside her first-born.

Life was fading from cheek and brow,  
And the Mother's heart was hopeless now.

Not one sound in the chamber of death  
Was heard—save the Maiden's labouring breath;

No word of murmur the Mother spake;  
Silent and calm are the hearts that break.

Morning passed—and the Noon so still  
Bathed in warm loveliness wood and hill.

Slumbrous airs from the West went by,  
And the Mother watched for her child to die.

Afternoon came—and the Maiden lay  
Lifeless and soulless—a mould of clay!

Rain came down as from eyes that wept,  
Watching was over—the Maiden slept.

Through the quiet falling of evening rain  
The bird's soft carol stole in again!

Then the Mother said—"Tis a message for me,  
To tell me, O child, that 'tis well with thee!"

And the Summer day ended, for 'late or long,  
Every day weareth to even-song.'

## BONAPARTE AND JOSEPHINE.

So much has first and last been written about Bonaparte, that it might seem as if nothing more could be said. Yet, there was something wanting. It was an account of his private habits and character, written from personal knowledge. This information has at length been furnished in the *Memoirs of Madame de Remusat*, a work in the French language, but which has been translated into English by Mrs Cashel Hoey and Mr John Lillie, and is now issued from the press in two octavo volumes. We have had the pleasure of its perusal, and may confidently say that besides being of considerable historical value, it forms an acceptable addition to entertaining biographic literature. The writer, Madame de Remusat, had the best opportunities for observation, and she was a good observer. She occupied the position of Lady-in-Waiting to Josephine, Bonaparte's first wife; while M. de Remusat was Prefect of the Palace, which gave him a general superintendence of the court in its domestic relations.

As a preliminary, it may be advantageous to give some little account of Josephine, on whom interest is very naturally concentrated. She was born 23d June 1763, in Martinique, a French colonial possession in the West Indies, where her father, Tucher de la Pagerie, was captain of the port of St Pierre. Josephine de la Pagerie had only an indifferent colonial education; but her amiability and beauty won universal regard. When about fifteen years of age, she came to France, and soon after was married to Alexandre, Viscount de Beauharnais, of which marriage there were two children, Eugene and Hortense. Beauharnais, her husband, like many of the French aristocracy, was condemned and beheaded during the Reign of Terror, 1794. Josephine nearly suffered the same fate. She was seized, and committed to the Conciergerie, and only escaped death by the fall of Robespierre. Alison in his 'History of Europe' mentions a strange circumstance, which he asserts to be on good authority, concerning Josephine. It is to the

effect that while she was a girl in the West Indies, an old negress prophesied that she should lose her first husband and be extremely unfortunate, but should afterwards be greater than a queen. The recollection of this sustained her hopes while in the Conciergerie; and she told the ladies, her unfortunate companions in captivity, that some day on rising to her good fortune she would name them as her maids of honour. The prophecy of the old negress came true; but of course it was no more than a lucky coincidence.

On occasion of the general disarming of the inhabitants of Paris, the sword of Beauharnais, who had served as a general in the army, was taken from the family. Soon afterwards, Eugene de Beauharnais, a boy of ten years of age, waited on Bonaparte, to request that his father's sword should be restored to him. Bonaparte was so much pleased with his appearance, that he not only returned the sword, but paid a visit to the boy's mother, the Countess Josephine de Beauharnais. Bonaparte was charmed with the Countess and her stories of the court at Versailles, where her husband, one of the handsomest men and best dancer of his age, had frequently had the honour of dancing with Marie Antoinette. This casual acquaintance with Bonaparte ripened into an intimacy. Josephine was so much interested in his history and appearance, that she exerted herself to facilitate his promotion to be the general in command of the Army of Italy, and she was married to him on the 9th March 1796. As Bonaparte's remarkable victories in Italy were the means of getting him appointed First Consul, Josephine's intercessions in his favour laid the foundations of his fortune.

It was shortly after Bonaparte was put at the helm of affairs as First Consul, that Madame de Remusat, at twenty-three years of age, entered court-life and became a confidential companion of Josephine, and further had the advantage of being intimate with Talleyrand, Minister of Foreign Affairs, also of being placed in constant communication with Napoleon's brothers

and sisters, and of Josephine's daughter, Hortense. From time to time she took notes of what she saw, and these, along with some other records, she retained after the fall of Napoleon in 1814. On his unforeseen return from Elba, she became apprehensive that her house would be searched, and without further reflection threw the manuscripts in the fire. This needless act was bitterly regretted. She could only draw upon her remembrance for the past, and write her recollections, in which she was wonderfully successful, for she possessed a more than usually tenacious memory. At her decease in 1821, her papers were bequeathed to her son, who, not being able to attend to their publication, left them to his son, M. Paul de Remusat, who now edits and brings them forth as a tribute to the memory of his grandmother. Such is briefly the history of these interesting Memoirs, to which we give a glance, with a view to stimulate public interest in the work.

Madame begins by describing Bonaparte as being of a moody contemplative disposition; he was fond of reverie, of twilight, of melancholy music, of the moaning of the sea, of the rhapsodies of Ossian. He was always meditating, planning, thinking. He cared nothing for the ordinary polite rules and manners in society. He went awkwardly out of or into a room. 'With great difficulty, he had acquired the art of shaving himself. M. de Remusat induced him to undertake this task, on seeing that he was uneasy under the hands of a barber.' In ceremonial processions within the palace, he hurried on, to the discomposure of all before and behind; and especially to the ladies, who, to preserve order, required to carry their trains over their arm.

In character, he was above all intensely selfish. His will was to be the universal law. He considered himself entitled to do what he liked, and how he liked. Moral principle was a chimera. 'He did not value sincerity, and he did not hesitate to say that he recognised the superiority of a man by the greater or less dexterity with which he practised the art of lying. "M. de Metternich," he added, "approaches being a statesman—he lies very well." One day he said to Talleyrand: 'There is nothing really noble or base in this world; I have in my character all that can contribute to secure my power, and to deceive those who think they know me.' As he was devoid of principle himself, so he believed every one to be the same. All good actions, so called, were in his opinion tricks to cover some selfish design. In his egotistic monologues, he was fond of being attentively listened to. 'Like an actor who becomes excited by the effect he produces, Bonaparte enjoyed the admiration he watched for closely in the face of his audience.' Having attained power by his military promptitude in suppressing revolutionary excesses, he made no attempt to create durable institutions independently of himself. On the contrary, his sole aim was to exalt his own name, forgetting after all that he was but a perishable being. We learn that 'On starting for his first campaign in Italy, he said to a friend who was editor of a newspaper: "Recollect, in your accounts of our victories, to speak of me, always of me. Do you understand?" This "me" was the ceaseless cry

of purely egotistical ambition. "Quote me, sing, praise, and paint me," he would say to orators, to musicians, to poets, and to painters. "I will buy you at your own price, but you must all be purchased." In other words, he placed his main reliance on being puffed.

Bonaparte, says Madame de Remusat, was simple in his dress, and 'could not endure the wearing of ornaments; the slightest constraint was insupportable to him. He would tear off or break anything that gave him the least annoyance, and the poor valet who had occasioned him a passing inconvenience would receive violent proofs of his anger.' His impatience was conspicuous in the most trifling circumstances. If displeased with any garment, he would burst into a passion, and throw it on the ground or into the fire. He would not even take time to have a fire mended in the usual way. When it burned low, he stamped on it with his feet. This bad habit cost him many pairs of boots and shoes. He could brook no opposition or contradiction in argument. The attempt to shew that he was wrong in anything he had done, threw him into a rage. He closed all remonstrance with *Je le veux* (I will it). That was his favourite phrase. Madame de Remusat says that, 'when the Emperor uttered that irrevocable *Je le veux*, the words echoed through the whole palace.' What he did or said was right, and it would have been at their peril for any one to object. With a temper so imperious, he held all about him in awe. Josephine had serious grounds for complaining of his depravities, but she could only remonstrate with her tears.

Bonaparte's treatment of his wife was indeed truly scandalous. As has been seen, when he was poor and comparatively unknown, she so successfully exerted her interest that he was employed to take the command of the Army of Italy, which was the beginning of his good fortune. As a young and beautiful widow, with two children, and moving in the first circles, she married him. In every point of view, he owed her a debt of gratitude. How mortifying then, to find by conclusive proofs, as narrated by Madame de Remusat, that she had to complain of his misconduct, and to have her remonstrative tears answered with bursts of rage and the eternal *Je le veux*. Had Josephine not been a singularly amiable being, there must have been a domestic explosion, greatly to the discredit of Bonaparte.

Madame de Remusat's description of Josephine and her struggles to endure and hide Bonaparte's indignities is, we think, the most interesting part of the two volumes. Some of the passages are very touching. Bonaparte appears to have had a contempt for women. He viewed them as a kind of inferior animals, not worth reasoning with. Paint, lace, jewellery, and fine dresses would be sufficient to keep them in good-humour. It is to be owned that Josephine's intellect was not of a high order. Madame de Remusat says she was frivolous, and never took up a book or a pen; but 'she was aware of her deficiencies, and never made blunders in conversation. . . She was deficient in depth of feeling and elevation of mind. She preferred to charm her husband by her beauty, rather than by the influence of certain virtues. . . She feared him, and allowed him to dictate to her in everything.' When Josephine became Empress, her extravagance in dress and

other outlays went beyond all bounds. 'She had a personal allowance of six hundred thousand francs, and every year she was deeply in debt.' She was the ready prey of tradespeople. 'Diamonds, jewellery, shawls, stuffs, and finery of every kind were continually being brought to her; she bought everything, never asking the price, and for the most part forgetting what she had purchased.' Her dress was magnificent. She changed every article three times a day, and never wore a pair of stockings twice. . . . She possessed from three to four hundred shawls; she sometimes had them made into gowns, or bed-quilts, or cushions for her dogs. I have known her give eight, ten, or twelve thousand francs for a shawl.' A thousand francs are equal to forty pounds; a twelve thousand franc shawl would therefore cost four hundred and eighty pounds. Though extravagant, she was exceedingly tasteful in all she wore. She studied her appearance to the minutest particular, and so far she was right. Some ladies by thinking only of fashion spoil their figure, and render themselves ridiculous. Bonaparte used to observe that 'Josephine was grace personified.' Madame de Remusat says that her love of dress never passed away. It survived her divorce and retirement from public life. 'She breathed her last sigh attired in pink satin, with ribbons of the same colour.'

Josephine laboured under the misfortune of having no children to Bonaparte. Here was a source of frequent bickering. Dispeace on this score was aggravated by the envy and jealousies of Bonaparte's brothers and sisters, more particularly of his brother Louis, who was married to Hortense, Josephine's daughter, and of Madame Murat, one of his sisters. Having no family of his own, Bonaparte looked upon the infant Napoleon, son of Louis, as his natural heir. He was quite entitled to do so if he thought proper; but Louis complained that he was passed over; and other members of the clan Bonaparte were equally indignant. In fact, as we learn from the present work, Bonaparte was tortured by his brothers and sisters. He had been the making of every one of them. They would never have been heard of but for him. After becoming Emperor, he, in the plenitude of his power, made some of them kings. But nothing satisfied them. They were all squabbling about what should fall to their share. Louis openly threatened that if he was passed over in favour of his son, he would quit France, and push on for himself. One almost pities Bonaparte. He remarked, that if he had to begin over again, he would dismiss his brothers and sisters on some pecuniary allowance, and give himself no further trouble about them. In these views, men who happen to have promoted the fortunes of brothers and their descendants, and got no thanks but rather ill-usage for their pains, will doubtless sympathise.

Disconcerted at having no children, but trustful that a suitable heir would cast up, Bonaparte suggested to his Council of State that he should be asked to be raised from the life Consulship to be hereditary Emperor. This was accomplished in 1804. In his own account of the affair, he left out any reference to the suggestions to the Council. He said: 'I found the crown of France in the dirt, and picked it up with the point of my sword.'

Madame de Remusat describes the magnificent display at the coronation. To this assumption of Imperialism the people at large made no objection. They were so much afraid that the Republic might revert to a state of Anarchy and Terror, that they gladly consented to a Despotism, which, though reducing them to the condition of slaves, at least kept their heads on their shoulders. Anything not to bring back the guillotine! Then, was superadded the pleasure of military glory with a series of conquests which laid nation after nation at the feet of France. There arose intoxicating visions of Paris becoming the metropolis of the whole earth, and of all the Kings, Princes, Electors, and what not coming to bow down before the great Emperor at the Tuileries. Such were the brilliant expectations formed in France from 1806 to 1809.

When the court was at Fontainebleau in 1807, hunting took place on certain fixed days. Each lady who attended was required to wear a peculiar costume, and in making her selection she was assisted by Leroy, the famous costumier. This afforded Josephine a fresh opportunity for exhibiting her taste. She wore a dress of 'amaranth velvet embroidered with gold, with a *toque* also embroidered in gold, and a plume of white feathers. All the ladies-in-waiting wore amaranth. Queen Hortense (wife of Louis Bonaparte) chose blue and silver; Madame Murat, pink and silver; Princess Borghese, lilac and silver. The dress was a sort of tunic, or short *redingote*, in velvet, worn over a gown of embroidered white satin; velvet boots to match the dress, and a *toque* with a white plume. The Emperor wore a green coat, with gold or silver lace.' The display on setting out on horseback for the chase through the glades of the forest was picturesque and magnificent. About this time, Bonaparte took a fancy for driving a *calèche*; but he drove badly, being too impetuous. In attempting to drive a four-in-hand, he turned awkwardly through a gateway and upset the vehicle. He escaped with a sprained wrist, and fortunately no other persons were injured.

At the summit of his glory, after the victories of Austerlitz and Jena, Bonaparte, without being aware of the fact, entered on his downward career. His first and most prodigious mistake was issuing Decrees designed to ruin England, by excluding British merchandise from all continental ports. This fatal step, from one thing to another, led to his final overthrow; for it was a quarrel on this point that produced the Russian campaign, after which the descent was marked and disastrous. Another of his errors which produced painful emotions in France was his divorce of Josephine. On this latter subject, Madame de Remusat has a good deal to say. She tells us that for several years the project of a divorce had been talked over at court. Bonaparte, in as delicate a way as possible, had occasionally hinted of such a measure to his wife, always dwelling on the importance of his leaving a direct heir to the throne. With all her weakness of character, Josephine shewed considerable tact in meeting his observations. She did not try to argue with him. In a calm and dignified tone, 'she assured him that she would obey his orders, but that she would never anticipate them.' The meaning of this was, that she might be turned out of doors, but would not go

of her own accord. She was his wife, and had in all cases done her duty.

In private conversations, Madame de Remusat, as her oldest and confidential Lady-in-Waiting, assured the Empress that she would loyally follow her in her exile from court; and she did so.

The decree of divorce was issued by the Senate 16th December 1809. M. de Remusat retained his official position at the court. We are not furnished with any particulars of the transaction. No doubt, there were many tears, on quitting the Tuileries, and taking up her residence at Malmaison. For his pushing forward the divorce precisely at this time, Napoleon had a sufficient reason. He had been victorious over the Austrians at Wagram, and Marie Louise, Archduchess of Austria, was ready to become Empress. The marriage took place April 1, 1810. We do not hear that Josephine repined in her forced retirement. She corresponded with the Emperor, rejoiced in his successes, mourned his misfortunes, and with a good state allowance, was ever treated as an Empress. When Bonaparte was exiled to Elba in 1814, she, like a faithful and forgiving wife, begged to be allowed to accompany him—his second wife with her infant son having already returned to Vienna. The request was not granted by the allies. Josephine died shortly afterwards, near Evreux, 29th May 1814.

With all his rudeness of manner and coarse habits, Bonaparte is admitted by Madame de Remusat to have been a man of commanding intellect. What he did for France ought not to be forgotten. He stamped out the Revolutionary frenzy, and established social order. He arrested the progress towards barbarism, by reintroducing education and religious worship, and giving encouragement to science and art. He abolished the absurd Revolutionary calendar, and re-instituted the calendar dating from the Christian era. For a chaos of ancient and unintelligible laws, he gave the country the Civil and Criminal Code, which is now in use in some other continental nations besides France. This is considered his greatest work. It has survived the disappearance of his dynasty. His attempt to secure a direct heir to his name and power by the divorcing of Josephine, proved a failure. The son of Marie Louise, who was taken to Austria by his mother, died young. The tomb of this blameless youth, the abortively designate Napoleon II., may be seen in the form of a metal sarcophagus, in the imperial burial-vault at Vienna. How the son of Louis Bonaparte and Hortense assumed the government of France as Napoleon III., and how he lost it and died in exile in England, need not be told. Nor is it necessary to do more than allude to his son, the unfortunate Prince Imperial, the best, as it seems to us, of his race, and whose sad fate, in being killed by savages, has been universally lamented.

There is some satisfaction in knowing that the death of the Prince Imperial did not blot out the lineage of his great-grandmother, Josephine. Her son, Eugene de Beauharnais, an estimable man and brave soldier, who pursued an adventurous career under his step-father, Bonaparte, died in 1824, leaving several daughters, who were married to royal personages, and whose descendants still survive. The amiable and beauteous Josephine is

now represented in blood-relationship in various courts of Europe.

What a romance in real life, and within living memory, was the whole of that strange affair of Bonaparte and Josephine! The wonder is that it has not formed the subject of an historical drama in the manner of Corneille or Shakspeare.

W. C.

## A LIFE'S ATONEMENT.

### CHAPTER XX.—HISTORY.

*'Does dog eat dog in your part of the country?'*

A VOICE had sounded in half-conscious ears for such ages of time, that when it broke upon the light slumbers of receding fever, it seemed altogether familiar. Yet the room in which the half-awakened man found himself was strange to him. The walls were whitewashed, and hung with cheap prints of Scripture subjects. From one of the rafters in the low ceiling hung a dried and withered scrap of mistletoe, and bits of dead holly were stuck about the pictures on the wall. It was night-time, and there was a red flicker of fire-light on the walls and roof, on which these objects reeled before his eyes. An eight-day clock ticked with slow remorseless monitory sound behind him. The voice talked on, and the sick man still half-drowsing, listened to it with a dim sense of wonder. Whose was the voice, and where had he heard it before? It had no associations for him. Yes; it asked him to drink long since, and came with the hands that smoothed his pillow, an hour or a year ago—which was it!—calling him 'Poor creature' with a pitiful accent. Another voice broke in, gaily and bas-oen-like, and the sick man became broad awake. There were two people seated at the fireside before him, a man and a woman. The man's body was turned to him; but he could see the woman's face. A good face and a kindly, with a widow's cap round it, and smooth bands of gray hair below the white border. She was looking at the fire whilst her companion spoke. The man's accent was quaint, and here and there the listener lost a word, but the meaning was plain enough.

'The poor creature,' said the man, 'might ha' done summat wrong for aught as we knowin'; an' if he's a-runnin' away from the police, it wouldn't be a nice thing for we to gie him up, do yo see?'

'I can't help thinkin', Robert,' said the woman, with her eyes upon the fire, 'as we ought to tell 'em as he's here. Becos you see, if his poor mother misses him—think o' that! What should I do, if yo was to goo a-wanderin' about the country, as he's a-doin', poor thing?'

'Yis,' returned the man; 'that's right enough. But s'posin' as I was to goo an' fatch the parson, an' let him see him, now he's gettin' better. Yo see, mother, it cen't our business to gie folks up to the police, specially when they've been a-lyin' in our house for three we'ks at a time. It wouldn't seem fair, like.'

'P'raps it'll be better to fatch the parson to him, as yo sayin', Robert,' the woman returned. 'An' p'raps it'll be better to wait a day or two till he gits a bit stronger.'

'He cen't well yit,' said the man, rising as he spoke and crossing over to the bed. The patient

closed his eyes and feigned sleep. His heart beat wildly. It was impossible that he should submit to the benevolent plot these people were laying for his welfare. But was it possible that he could escape? Could he muster strength enough to walk, before the day or two's respite the woman proposed had expired? For he knew that he was terribly weak, and that he had been a long time ill. The resolve grew up desperately in his heart, and he said within himself that he *would* be strong enough to escape, and that, whether he lived or died, he would take the first chance of flight.

The man bent above him and listened to the breathing of the patient. The patient knowing this, controlled himself, breathing regularly and softly.

'He's havin' a nice sleep,' said the gruff voice. 'Yo go to bed, mother, an' I'll sit up w' him for an hour or two, an' see if he wants anythin'.'

The mother kissed her son and bade him good-night. The patient heard her ascend the uncarpeted stair, and listened to her feet as they went to and fro in the room above until silence came again, broken only by the ticking of the clock, the occasional noise of ashes falling from the fire, and the shuffle of the watcher's heavy boots. After a dreary time the clock began a faint and dismal gurgle, indicative of a sleepy desire to strike the hour. This passed away, and came again, and passed away again, and at last the clock wheezed and tinkled eleven. The watcher arose and went out at the door, returning almost immediately with a great lump of coal, which he placed upon the fire. Having banked this all around with ashes, he made fast the door, took off his boots, and went silently up-stairs, pausing on the first stair to look back at his patient, and then closing the stair-door behind him.

The sick man lay in almost breathless silence and listened until the last movement in the house was still. Then with great pain and difficulty, he dragged himself into a sitting posture. Once as he struggled, the bed creaked loudly, and he lay down again, and made shift to pull the clothes about him, fearful lest his attempt should be discovered. He lay there sweating and panting for a while, and the clock behind ticked threats at him. The room was dark, and the shadowy corners held vague terrors. Suddenly a great tongue of flame darted through the bank of ashes, and made those recesses visible. Some of the ashes dropped into the fender, and the sudden noise sent another pang of fear to his heart. The flame broadened, and a ruddy glow played hide-and-seek with the shadows. The glow gathered strength, and the shadows faded until the room was light enough to read in. With painful slowness the sick man wrestled himself out of bed, and walked tottering to where a few rough garments lay thrown across a chair. They were a heavy burden to him as he went back to the bed. One by one, with great difficulty he put on these garments, pausing often to rest meanwhile, and panting heavily. Suddenly he looked at his hands, as if for the first time missing something. Searching the pockets of the rough clothes he had assumed, he found wrapped in paper several rings, which glistened in the firelight. One of these he kissed passionately, whilst tears chased each other down his face. After a pause he put them back again, and drew from another pocket a watch and chain and a purse.

For some time he regarded these thoughtfully, then returning the purse to his pocket, he took out a pocket-book, and wrote in it by the firelight, in a hand as shaky as that of Guy Fawkes after the rack, these words: 'Thank you. Keep this for your trouble.' He tore the leaf from the book, and laying it on the table, placed the watch and chain upon it. As he tottered back towards the bed, the flame which had hitherto lighted him shrank suddenly, and in the darkness he lurched against a chair, which jarred and scraped along the quarried floor. He listened for a full minute in an agony of apprehension; but no other sound following, he went feeling his way with his feet inch by inch along the floor until he found the bed again. All this time bodily pains racked him until he could have cried aloud. The flame rose again, and once more the little room was filled with broad light. He made search for hat and boots, and after some little trouble, found those belonging to himself. Boots in hand he made for the door, carefully and quietly loosed the primitive fastening, and in another moment was out in the night. A distant church clock chimed the half-hour as the first cool breath of the open touched his forehead. He pulled the door close again, fixed the hasp, drew on his boots, and stole cautiously away. Every movement cost him an inexpressible pang; but he went doggedly on, not caring whither, so that the road led him from discovery. The full moon hung pale and watery amongst ragged clouds, and lent a faint light to his steps. All the low-lying sky to east and west and north and south was aglow with the colour of molten metal, and he was belted round with fires that leaped with flickering tongues towards that sullen and lurid heaven. As he dragged his miserable body along, memory was busy with him; though how he had come to the house in which he had found himself but a few hours ago, and who were the people who had nursed him in his illness, he neither knew nor cared. His bodily pains gave his mind no ease, now that memory was once more awakened; but his heart was moved to pity for his father and his lover rather than for himself; for he said, sitting in judgment upon himself, that these things which he endured were for him but a slight penalty. And so, in agony of body and grief of heart and remorse of soul unspeakable, he went his way.

It was an hour after midnight when he paused before a pair of great gates of iron, and glancing through the bars, beheld a scene which looked as though it were translated clean from Pandemonium. In the glow of great fires, beneath low-pitched sheds open on all sides to the night, half-naked men toiled in the swink and sweat of a labour the like of which he had never seen. In the dusky light and half-opaque yet gleaming shadow of the place, the bare bodies shone like red-hot bronze. Out of one of the furnaces was drawn an enormous 'bloom,' which cast an almost insupportable light and heat to where he stood; and this being swung beneath a Nasmyth hammer, the ponderous weight crashed down upon it, and drove myriads of sparkles into the night. 'What a picture!' thought the wanderer outside, 'if one could only paint it;' and for just a minute he went free of sorrow, and thought of nothing, but the sight before him. The air was warm, and comforting to his sore limbs. He was weaker than he

knew, and as he stood there he felt his knees fail him, and with his hands upon the bars of the gate he slid helplessly down. A little door in the projecting wall beside the gate opened, and a man came out.

'Hillo, mate!' said the man gruffly; 'what's the matter wi' yo?'

Frank turned his hollow eyes and his pale face upon him. 'Can I go inside and sit down a little?' he asked. 'I am very weak and tired.'

'Yo look it,' the man made answer, not unkindly. 'Why, yo am as cold's death. Here; let me get my arm under thee. Now then; come along.' He helped the wayfarer into a sort of rough office, where a fire blazed brightly upon the hearth, and set him in an arm-chair before it.

'What's the matter, mate?' he asked.

'I have been ill,' Frank made answer; 'and I—I have lost my way.'

'Which way are yo gooin'?' the man asked again.

'To Liverpool,' Frank made answer, faintly.

'All right,' said the man, poking the glowing fire with a rough bar of iron. 'There's one of our boats gooin' on as fur as 'Hampton i' the mornin', an' yo can get a lift on that.' He settled the wanderer in the chair much as he would have handled a child, and added: 'Now, yo go to sleep theer; an' when it's time to start, I'll come an' wake thee.'

Before the kindly forgerman had well gone, Frank was asleep. He slept until the gray light of morning crept through the dingy window of the office; and would have slept on still, but that the forgerman returned and shook him by the shoulder, saying that the boat was ready. He rose and followed his guide, who led him along a path paved with crackling sheet-iron, and lined on one side by furnaces, and on the other by cumbrous machinery. A sudden turn to the right brought them to a canal, where a boat, laden with iron bars, was ready to start upon its journey.

'Here he is, Jim!' shouted the forgerman to a rough-looking fellow on the far side of the canal. 'Jump down,' he added to Frank; 'they'm ready to goo.'

Frank drew a shilling from his pocket and offered it to the forgerman. The man drew back with an offended air.

'Does dog eat dog in your part of the country?' he asked.

'I beg your pardon,' Frank said meekly; 'I am very much obliged to you. Good-day.' He held out his hand without the shilling. The man shook hands with him surlily, watched him as he stumbled awkwardly and painfully into the boat, and turned away. The boatman called to the four sturdy horses, who stood with each his nose buried in a tin of provender suspended from his head-gear. Frank sat upon the roof of the cabin; and the boat glided through the vile water, past wharfs piled high with coal in solid squares—past fleets of boats laden with coal and bricks and timber, and iron in every form, and harmless uncharged shells awaiting the order for the arsenal—past furnaces whose roar made the air tremulous, and huge steam-hammers, the noise of whose falling came with a shock upon the air like the discharge of siege-artillery—then past great spaces of waste land with dismal pools of weedy water festering in them, and here and there

a dejected leafless tree, whose barren branches drooping seemed to mourn their own decay—past long lines of chimney-stacks, whose volleying clouds insulted and obscured the heavens—past the clanking noise and rancid steam of colliery engines; and all the while, as the foul water gurgled at the bows, and slipped greasily along the side of the boat, the watcher saw these things, and did not see them, for his mournful self-accusing thoughts were far away. As he sat thus, a hand was laid upon his shoulder, and turning round, he saw a pleasant-looking brown-faced woman, who proffered him a cup of tea.

'It'll do you good, master,' she said kindly; 'an' I've put a drop o' whisky in it, as'll warm thee up a bit.'

He took it gratefully; and the woman nodding at him with a cheerful smile, went back over the roof of the cabin and into her small house below. The tea was a mere excuse for hot grog, as Frank discovered on tasting it. But it sent warmth through his starven frame and comforted him. He set the cup down after emptying it, and sleep came upon him again. When he awoke, he found himself snug and warm beneath a blanket and a heavy tarpaulin. He heard the rain pattering without upon it, and lay still. 'If these people knew,' he thought, scarcely daring to give his terrible reflection even a mental form, 'that they were harbouring a highway robber and a murderer, how they would shrink from me!'

But my reader will know that these thoughts were always with him in his wanderings, and I will not weaken my story by driving repetition into the region of commonplaces. It is enough to know that such a man had fallen to such a crime. Every instinct in him revolted from himself, and stood there in passionate hatred and detestation of his crime. Every fibre of his soul thrilled with intense desire after an impossible revolution. When the Psalmist cries, 'The pains of hell got hold upon me,' be sure that the pangs which racked him were the bitter fruit of his own remorse. In the one hell which mercy has made possible for the human soul, the criminal lives in companionship with his own crime, and loathes it with an inexpressible loathing.

Wolverhampton was reached at last, and Frank's offer of payment was again rebuffed. He bade those who had entertained him good-bye, and crawled up the wharf into a dirty and narrow street in the rear. Along this he walked feebly, and found by-and-by a strange object at his side keeping pace with him. It was a man apparently about fifty years of age, bent and gnarled and grizzled almost out of human seeming. A black patch obscured his left eye, his hands were yellow and claw-like and dirty, his clothes were a heterogeneous jumble. Half a sack with three holes in it—one for the head and one for each arm—served as a coat. The sleeves had served a broadcloth garment once, and in the breaches of their shabby junction with the sacking shewed the man's bare skin: His feet were shoeless, but wrapped in fold on fold of rags, so that his steps fell noiselessly on the muddy pathway. Torn corduroy trousers much too large for him, and a silk hat which would better have become a dunghill than a human head, completed his attire. A bristly beard and moustache of dirty white stood in uncompromising straightness from lip and cheek.

and chin, a full inch long, without the symptom of a curl.

'On the road, young man?' said this apparition. 'So am I. You don't seem to get along in a very lively way.—No answer? Well, companion, you may be a swell in your own line, and you may be as lofty as you like with me. I'm used to meeting lofty people. I was lofty myself once. Got a bit o' bacca?—No? Then I shall be compelled to use my own. Have a pipe?—No again? Neither civility nor conversation. Perhaps you're a decent working-man, and don't care to be seen walking with a scarecrow. All right. Wait till we come to the end of the road, and I'll relieve you. But I'm fond of society; I always was. Society has been my ruin, I do assure you. I'm a monument erected by Providence to warn the whole human species against the wiles of their brothers and sisters. That's what's the matter with me, I do assure you.'

Frank stopped short. The man's insolent flippancy was intolerable to him.

'Choose your way,' he said with some faint reflection of his old manner, 'and I will choose another.'

'A gentleman!' cried the creature with a grating laugh. 'Buono giorno, eccellenza! A swell, and nothing short of it. An plaisir, monseigneur. I wa a swell myself once, but it's so long ago that I'm almost ashamed of the remembrance. Not quite ashamed, you know, because I'm hardened. Yes, my friend, I'm hardened—quite hardened I do assure you.'

'Oblige me by choosing your way,' Frank answered. The old man leered up at him, laughing, filling his pipe meanwhile. Frank resumed his walk, not looking behind him. He came into a more populous street after a time, and looked about him for some humble place of refreshment into which he could venture without exciting surprise by his attire. He saw at length a cook-shop which seemed to belong to a rather better class than he had hoped to find in such a neighbourhood, and entering, sat down at an unclothed wooden table. A slipshod slatternly girl appeared before him and asked what he wanted. He ordered food; and she went away, returning by-and-by with a woman, who repeated the girl's inquiry.

'You don't look none of the most respectable,' said the woman, glancing at him scornfully. 'I should like to see the colour o' your money first.'

Frank drew out his purse, thinking he would have to change gold some time, and that he might as well change it here as elsewhere. What was to become of him when his slender store of money was gone, was a question which had not yet occurred to him. He drew a sovereign from his purse, and handed it to the woman, who bit it and rang it on the table, and then handed it to the girl, bidding her go for change. With an altered manner, she proceeded to lay a cloth upon the table, and after a time brought in a mutton chop and a cup of tea. These Frank despatched; and feeling a little stronger, took his change, and went away again. He made no inquiries as to the road, but took that which lay before him. The day cleared as it grew older, and by noon the air felt warm and pleasant. He had often to rest by the wayside, and was so weak that he had not

made more than four miles when night began to fall. The lamps were already alight in the town he came to; and he felt more desolate and alone than ever as he entered the uninviting streets. A grating voice rose from near his elbow, and looking down, he saw the man who had addressed him in the morning.

'Well, my gay companion,' said the intrusive tramp, speaking past a short black pipe which he held between his teeth, 'how do you find yourself now? I can't say you're the best pedestrian I ever met with in my life. It's my belief, sir, that Captain Barclay would have beaten you off your legs. Where are you going to? Don't know the town, I'll bet a tanner. This is the town of Bilston, my eminent stroller; and I am a welcome and a well-known lodger at the best crib in the place. Come along; capital accommodation. The beds are threepence, and clean, for a wonder. Cooking gratis; but you do your own; and they won't keep me waiting for the frying pan. This turning—third door to the right.' Saying this, he took Frank by the sleeve, and led him into a dismal entry, and through an open door into a large quarried kitchen, where two or three people sat talking round a great fire.

'Sit down there,' he said, in an undertone, forcing Frank to a seat on a bench. 'Nobody will notice you.—Hallo, mother! Got a couple of nice beds for two gentlemen-wanderers, eh?'

Frank was too weary and exhausted to resist, and was almost too weak to have a will in the matter at all. Why, he thought, should one place seem worse or better than another, now? After a little space of time, during which the man had bargained with the mistress of the place, and Frank had almost fallen asleep, he felt himself pulled gently by the sleeve. His unwelcome comrade whispered to him: 'I've paid for the beds, companion, and I'm cleaned out. Just lend me a shilling, and I'll get some grub, and make tea for both of us.'

Frank gave the man a shilling, inwardly resolving that he would take train to somewhere next day, and escape this fellow. The tramp went out; and returned with an ounce of tea and two ounces of sugar wrapped in separate screws of paper, a halfpennyworth of milk in a cracked and discoloured half-gallon jug, a loaf, and a rasher of bacon in a scrap of newspaper. Of the banquet prepared from these materials, Frank declined to partake, and the man in the sack made unto himself a plenteous feast. As the evening waned, the society in the kitchen thickened. Had Frank been less miserably circumstanced, the people amongst whom he sat would have been full of picturesque interest for him; but he only felt now the shame of mingling with them, and the deserved wretchedness of his own lot. He drowsed often in the course of the evening, and lost his surroundings and himself. He was awakened at last by the mistress of the place, who handed him a diminutive scrap of candle, which adhered by its own grease to a shard which had once been part of a willow-patterned plate. The old man led him up-stairs and pointed to his bed. It was one of a dozen in a large low-roofed barrack-like apartment. The thought of undressing in such a den was repugnant to every nerve in him. He drew off his boots, and lay down in the rough clothes he wore, and fell into the dreamless sleep of pure

fatigue. When he awoke in the morning he was alone; and he left the house without speaking to any one, and took the way once more. Two or three hours later, he discovered that his purse was gone, and that his whole stock of money was represented by twenty-two shillings in silver.

### THE VERNE CITADEL.

THE national song which complimentarily tells us that 'Britannia needs no bulwarks, no towers along the steep—her march is o'er the mountain waves, her home is on the deep,' will require some modification. At this moment there is preparing a formidable bulwark, defiant of everything, on the south coast of England. It is a fortress or citadel of considerable dimensions, crowning the summit of a height in the small island of Portland on the coast of Dorsetshire. The height or hill is known as the Verne. In front of it are a breakwater and harbour, of which the fortress is designed to be the defence. So here, as may be said, are preparations on a considerable scale for any attempted hostility.

A stranger taking a trip westward from the Isle of Wight would be surprised at Verne Citadel, as it is called. Perhaps the most remarkable features of this stronghold are the enormous bomb-proof barracks, which are arranged to accommodate a war garrison of no fewer than ten thousand men. The barracks consist of large arched casemates or rooms, approached from the parade-ground—round two sides of which they stand—by doors, and are lighted by immense fan-lights. Doors also lead into a long corridor running at the back; and as each room is fitted with two fireplaces, by putting up a central partition, two separate and commodious apartments can thus be obtained. The whole range is completely protected from the effect of bomb-shells by roofs of enormous thickness, constructed in the following ingenious manner: The arched roofs immediately covering the barrack-rooms are four feet thick of solid brickwork; above this two feet of concrete, which is again protected by a stratum of one foot of asphalt. Over this is a layer of one foot thick of shingles; and above all a depth of eight feet thick of solid earth, covered with neatly trimmed green turf. The magazines are roofed in the same manner—whilst the walls are of enormous thickness.

These buildings are nowhere visible from the outside, and therefore can only be assailed by vertical fire, from which, as we have shewn, they are completely protected. Damp is guarded against by raising the floors of the chambers several feet above the rocky ground, by which means ample storage-room is obtained; and water is now laid on to almost all parts of the fortress from a spot about two miles to the south of the Verne, where a pumping-engine has been erected, and the water conveyed, by underground pipes, into several immense tanks in the citadel, each said to hold sixty thousand gallons. But besides this, there is

another vast tank cut in the rock beneath the parade-ground, and stated to be eighty feet long by fifty-six feet wide, and eighty feet deep, intended as a reserve, and only to be used in the event of a siege. Smaller tanks are also provided for rain-water; and the whole are shot-proof. Whilst a gymnasium, racket-court, and bowling-alley have been provided for the healthy, the sick have been carefully remembered in the erection of a bomb-proof hospital for five hundred patients, with medical quarters and stores adjoining. In short, almost everything that care and forethought can suggest has been done to render the interior arrangements of this fine citadel as nearly perfect as possible; four of the great necessities of life—namely, light, water, air, and drainage—having been specially cared for.

As the east and north-east faces of the citadel look out over the Roads and Harbour from the top of the perpendicular cliffs, they are to a great extent protected by nature; but on the south-west side the Verne Hill falls abruptly, leaving a kind of long narrow valley, leading direct downwards to the West Bay, just above the village of Fortune's Well. To guard against a landing or assault on this side, a magnificent fort of thirty-six guns has been erected, which completely commands these slopes and the West Bay beyond. Besides this formidable battery, an ingeniously constructed stone parapet-wall runs along the summit of the cliffs, which is loopholed above and below; so that a constant fire of rifles could be kept up in every direction over the sloping ground of the East Weir, immediately below, right on to the decks of any ships within range, whilst the riflemen would be protected from all but vertical fire.

The outside defences of this extensive fortress consist first of an enormous ditch, or artificial ravine, said to be the largest defensive work of the kind ever undertaken, being from seventy to one hundred and twenty feet deep, according to the irregularities of the ground above—for the bottom is one dead level throughout—with an average width of one hundred feet, and perpendicular scarp and counterscarp.

A somewhat curious geological fact may be here stated—namely, that in cutting this great fosse, at regular intervals of about thirty yards, commencing twenty feet below the surface, a series of vertical fissures or 'faults' about two feet wide, were discovered. These are supposed to penetrate to the lowest substrata of the island, and to traverse it completely from north to south. In these curious clefts, human bones, with those of wild-boars and the bones and horns of reindeer, have been found, *not fossilised*. Besides these, the bones of saurians, sharks' teeth, shells now only found in Asia, large ammonites of stone and copper, and even gold coins, British weapons, and Roman pottery, were brought to light. These long gaps have all been carefully filled in with solid masonry, so as to render the walls of the ditch smooth and even throughout.

This great fosse nearly surrounds the citadel, except on its north and east faces, where the inaccessible cliffs before referred to are quite defence enough; but on the south and south-west, towards the land, it protects the fortress, by completely surrounding it on those two sides. Two

small entrances from the floor of the great ditch lead upwards on to the parade-ground, one from the west side, the other from the East Weir outworks. This latter reaches the ditch by a subterranean gallery, directly connecting it with those outworks. In each case the parade-ground is gained by long steep narrow ways cut in the rock, which are loopholed on all sides for rifles. Besides being loopholed for rifles, three small batteries of four or five guns each defend the interior of this mighty fosse, every part of which is thus completely commanded.

On the rocky sloping ground below the cliffs, called the East Weir, outworks, consisting of a series of open batteries, have been erected at different elevations of one hundred feet and upwards on the eastern side facing the Roads, but to the south, or outside the Breakwater. These batteries, five in number, are beautifully constructed of earth and stone, and carry from three to seven rifled guns each, whose long range would cover the approaches to the Breakwater and Harbour from the Channel.

The great Verne Citadel with its outworks—if all proposed are ever built—will constitute the whole of the defences of the harbour of refuge and Breakwater, at least as far as the isle is concerned; but the Breakwater itself is fortified by a small circular battery of five guns on its shorter arm which runs out from the shore; whilst an immense round fort has been reared at the outer termination of its longer arm, on a vast foundation, consisting of a hundred and forty thousand tons of rubble stone, 'dropped' from a staging into the sea, which is here twelve or thirteen fathoms deep. It is expected that the works here will greatly add to the defensive character of the place. The design is that every part of the harbour of refuge, as well as Weymouth Bay itself, would be commanded by guns on all points, and their cross-fire would render the position of hostile vessels inside the Breakwater quite untenable, always supposing the—very questionable—probability of such vessels getting there at all, by managing to run the gantlet of the East Weir batteries, the Verne Citadel, and the Breakwater forts, the fire, in fact, of something like eighty heavy rifled guns at almost point-blank range—a very doubtful possibility indeed.

Portland Isle, from its peculiar situation midway up the English Channel, and nearly opposite to Cherbourg, is becoming in the eyes of military engineers a place of much strategical importance. It is believed that when the whole of the grand works are completed around the great Verne Citadel, and on and off the island, for the defence of the harbour of refuge and the naval dépôt of Portland, we may point to this 'New Gibraltar' as a fortress practically impregnable. Whether eventualities absolutely warrant these elaborate and costly defences, or whether defences anywhere of a fixed nature are desirable, are questions we would rather not go into. We remember the time when enormous sums were lavished in building martello towers along the coast of England and Scotland, which have proved utterly valueless; and this suggests by no means pleasant reflections concerning the stupendous affair at Portland. It strikes us, in a common-sense point of view, that if ever a hostile

invasion is attempted on the coast of Great Britain, it will not be where there are towns, guns, or citadels, but in wholly defenceless situations, where a landing could be effected.

## THE EVICTION:

AND WHAT CAME OF IT.

IN TEN CHAPTERS.—CHAPTER VII.

DURING the two following days I did not move abroad at all; truth to say, I was afraid to do so. I had several conversations with the Major about the advisability of calling in the aid of the local authorities; but he was very strongly opposed to this measure. He had pushed his investigations in the neighbourhood to some purpose, and he only wanted time to bring them to a successful termination. Police interference would spoil all. This view of things brought very little satisfaction to me in my present condition; but he advocated it so stoutly that, though puzzled, I felt compelled to give in.

The Major's habits were very peculiar. During the day, he would move about the place with all the bearing of a distinguished veteran in Her Majesty's service. When night came on, he, as true to the habits of barrack discipline, would retire early to his bedroom, which was situated in a wing of the castle. From his apartment, which was on the ground floor, a means of exit to the grounds was afforded by a private door, opening to a latchkey. The moment he had retired to his bedroom, the character and costume of Major would be laid aside, to be replaced by disguises of different kinds, as seemed most suitable for his purpose. The transformation effected, he would sally forth into the darkness; but whither he went or what he did, I knew not. From certain trampling upon the gravel-walk, which used to awake me from my uneasy slumbers at unconscionable hours, I came to the conclusion that he spent most of the night abroad. But his 'Bohemian' propensities stopped at that; and he always turned up for breakfast at nine o'clock with strict military precision, on the following morning.

The third day at length arrived, and found me still, to all intents and purposes, a prisoner in my own house. I did not neglect the revolver practice, as directed; indeed I had little else to occupy myself with. But much revolver practice is apt to become monotonous to most people; to me, situated as I was, it soon became absolutely disgusting. The fact is, my close confinement was gradually making me ill. I felt that I must venture out of doors, no matter at what risks. After all, it would make little difference whether I were slain on the open field, or met my death by slow degrees submitting to the horrors of a close siege. So, despite the warnings of Mr Carnegie and the gallant Major, I sallied out for a short stroll in the grounds, to breathe the fresh air that I needed so much. I had not forgotten to mount my coat of mail under my ordinary walking apparel; the Colt's revolver I held in my coat-pocket ready for use at a moment's notice; a brace of pistols I put away carefully in my breast-pocket, as a sort of reserve. My route was down a back avenue which ran parallel

to the wall of a kitchen-garden. Turning the corner of this wall, I came face to face with a man half-sitting, half-lying at the foot of a beech-tree. It was the strange tinker whom I had seen lying in O'Reilly's kitchen. The moment he saw me, he leaped to his feet; but I, holding the revolver to his head, told him calmly that if he moved another inch, or uttered a syllable till I gave him permission, I would shoot him like a dog. I feared he might have firearms himself, or armed accomplices not far off; but neither of these appearing, I ventured to cross-question him.

'Who are you?'

'I'm a tinker, sir—only a tinker, sir; that's all I am, sir, at all at all.'

'What's your business here?'

'O sir—I'm' [confusion]—'I'm lookin' fur a job of coorse, sir. The grove was a short-cut, sir; an' wid respect, I med bould to take it, sir. An' I jist sot down awhile at the fut of this here three, to rest meself like; so I did, yer honner.'

'Where do you belong to?'

'Shure sir, I don't belong to no place in partic'lar; but I go about wheriver I can get a job. The likes of me must make a shift to live whatever way we can. Ye see I'm no scholard, like yerself, yer honner, an' I have to rough it.'

'Still, you have managed to learn a new language since I saw you last—in O'Reilly's kitchen three days ago. You could speak nothing but Irish then.'

'Shure, yer honner, that was only business policy of mine. I niver spake Irish barrin' whin English wouldn't shoot; an' I could git twinty jobs in Irish fur the one I could git in English. An' I niver use the English talk barrin' whin I am spakin' to the quality. But Ireland fur the Irish, an' the Irish fur Ireland; an' shure yerself wouldn't spake agin that same.'

'Now, my fine fellow, the law only gives me the power to order you off the grounds this time; though you are here under very suspicious circumstances. But I may as well warn you—and your coadjutors as well—that if you are found within this demesne after this notice, without being able to give a better account of your business than you have just now dohe, I shall prosecute you with the utmost rigour of the law. So now be off; and thank your stars that you are able to do so with a sound carcass.'

'I'm aff this mortal minnit. Good-bye to yer honner; an' I hope that the next time we meet, we'll be able to come to a better understandin'. So saying, the rascal disappeared through the trees. Under the circumstances, I did not feel inclined to continue my walk any farther; so, turning on my heel, I sought the friendly shelter of the castle without delay.

I met the Major at dinner, and mentioned the recent adventure to him. He heard the details of it with provoking coolness; only suggesting to me that such dangers might be avoided by keeping within doors. This would be only for a few days at most; for he flattered himself that he had discovered a clue. But what prevented that I should not be shot meanwhile? Where were the grounds for believing that it would come out all right in the end, when I was not sure that even a good beginning had been made in the business? I began to lose faith in the Major.

Dinner over, the Major retired unusually early,

to resume his masquerading rambles, and I was left alone. The post came in, bringing a number of letters, including one from my wife. The sight of it reminded me that I had not written to her except once since my arrival. But what news had I to give her except bad news? My silence, however, was not the only thing calculated to make her uneasy. Inclosed in the letter, I found a clipping from the *Times* newspaper of the same date, giving a short notice of the recent eviction, the threatening letter, and the hamstringing of the cattle. The letter itself was full of pathetic appeals to me to come back at once before I was massacred by those Westmeath savages. Had I lost my regard for a loving wife, or for her helpless infants? It was not proper for me to peril my life any longer; it was foolhardy; it was positively sinful. I had done my duty faithfully hitherto; and the Earl could not but accept my resignation under the circumstances. As for herself, her life depended upon mine. So the letter ran.

'Bother take those penny-a-liners! Nothing can escape them. What a state they have left that poor woman in, to be sure!' thought I. She had learned facts—hard facts! How was I to gloss them over to her?

I turned to the other letters. Amongst these I found one marked 'Immediate,' 'Most Important.' I opened it, and read as follows:

This is to warn you of your danger in regard of stoping in the country any longer. I am a family man myself that gives you this Notice, for I hear as how you have a wife and children in England, and do not wish to draw down the curse of the Widow and Orphant on to my head, so wish to give you timely Warning of the same. No use to keep under cover no more, else Cassel Mahon will be Burnt over your Head. Yon were tryed, and Sentence of Death was brought in against you in a regglar sitting of the Lodge, and know that Eight (8) men was appointed to shoot you and the first man (1) failed in his purpose through his being a Stranger, and shot Mr Carnegie a good man's nephew which gives us all though no business to interfere in what did not concern him. I am Number Two (2) and a Residenter. So no mistake this time, for I am bound to shoot you or to be shot myself. And if I fall there is Six (6) more to follow suit. So make up your mind that you can't escape from me as I am an Old Hand at the Work and have put down a good many landlords in my time. There is spies all round the house to watch your movements. Fly before it is too late.

(Signed) THE MAN THAT MUST SHOOT YOU.

Reader, put yourself in my place, and consider the proper course for me to pursue. Two threatening letters in succession—my cattle hamstrung—the evicted rascal threatening me to my face—my guest-friend murderously attacked at a few paces from my own door—the whole country impanelled to try me for my life—eight desperadoes bound by the most solemn oaths to take it—ruffians lurking about the house with murderous intent—my health failing—my poor wife and children—Reader, what course was open to me, but to accept the friendly warning, and flee? Before another sun should set, I was resolved to bring matters to a crisis—one way or another.

## CHAPTER VIII.

On the following day, I was much more easy in my mind than hitherto, owing perhaps to the prospect of a speedy release from my present misery. Since the hamstringing affair, I had not ventured down to see the cattle; so, without apprising any one of my intentions, I ventured out about noon to inspect them. The time was very suitable, and I considered that there was less risk in the open country than in the castle grounds. I reached Scallan's meadows all right; inspected the bullocks; and was in the act of regaining the road by which I had come, when I heard the sound of loud voices not far off. A little farther along the same road was situated the shebeen or public-house which had been pointed out to me as a favourite resort of the Ribbonmen in general, and of the evicted Scallan in particular. It was from this public-house that the noises in question were issuing, as of persons engaged in angry altercation. It did not seem to be a common drunken brawl. What with the vehemence of angry threats, and the earnestness of pathetic expostulations, it seemed nothing less than an affair of life and death. Pausing in the act of stepping into the road, I stood still and listened.

'Get out of my house, I say. I'll have none of you murderin' work goin' on here. Settle yer scores outside; but I'm not goin' to loss my license for the downin' of a bailiff.'

'Och, for the love of mercy, Mr Connolly darlint, save me from thim. Don't throw me out to be massacred on the hard road. Don't, Mr Connolly, as you hope for hiven; fur they're bint on me life.'

'Among you be it. Whatever you'll get, you can't say but you brought it on yourself, wid your meddlin' ways. Out you go!'

'Merciful hivens, the dure shut in me face! But shure, bhoys, it's not goin' to kill me, yez are. Shure, yez are only goin' to give me a batin'. Isn't that all, bhoys?'

'Sorra a bit of it. We'll make an example of you that'll be heard of all through Ireland—so we will.'

'Oh, murder, murder, bhoys! It's not fair-play, two agin one.'

'Don't touch him, Joss; I'll be able fur the spalpeen meself. May I swing fur it, if I don't settle him—the owdacious evictor of widows and orphans.'

There was not a moment to lose. With revolver in hand, I leaped into the road and ran to the rescue. My bailiff was engaged in a mortal struggle with the rascal Scallan, and apparently getting the worst of it, if I could judge from his earnest appeals for mercy. The irrepressible tinker stood by looking calmly on, whilst his fellow-conspirator was wreaking a cruel vengeance. Nobody else was visible. Mr Connolly the inn-keeper did not care to interfere in political questions. The noise I made by leaping into the road, diverted the attention of Scallan so far as to make him let go hold of his victim. Nor was the latter slow to avail himself of the diversion, but fled towards me, till he got within shelter of the friendly revolver. Then he sank at my feet exhausted. As for Scallan and the tinker, they fell back at their ease, and, entering into the court-yard of the public-house, disappeared from view.

'Donnelly, my poor fellow, what's the meaning of this?' I exclaimed.

'Och sir, the holy saints—sent you, Mr Wharton—this blissed day—to save me life,' answered Donnelly, panting for breath. 'They wor goin', sir—to massacre me—in could blood—on the king's highway! They thought they had med shure of me—this time, so they did—but your revolver scared thim; so it did—the murderers!'

'Let us pursue the rascals. I suppose you have got your pistols, eh?'

'Och, shure, I forgot thim—left thim behind me in the house. An', jist whin I want thim, I haven't thim.'

'Well, here are my own. Be quick, or the fellows will escape.'

'Och, Mr Wharton, fur hiven's sake, don't ax to follow thim till we get help. Shure, you wouldn't be fur puttin' yer hand into the lion's mouth that way? If we dared to go down, we'd be champ'd to pieces, sir; fur the whole place is swarmin' wid Ribbonmin, so it is.'

'Well, let us go down to the police barracks at once; it isn't far off. Let us go down at once, I say, and put them in possession of the facts. It would be a positive crime to let those scoundrels escape.'

'No good, sir; they'll be in hidin' afore this, mebbe. They're ould hands at the work, Mr Wharton.'

'I observed them just now going quite leisurely into the public-house yard. If we let the police know at once, they will have a good chance of catching the rascals.'

'You may thry, sir; but I tell you, it's no use at all at all. As for meself, it's sick sore an' tired of the job I am, so I am. I'll go back home, an' not lave it till I lave it for good, wid respect to you, sir, an' no offiuce meant. An' shure, ye can't blame me, afther what ye seen wid yer own eyes the day.'

'My life is fully as precious as yours; but I am determined to have these ruffians brought to justice.'

'Let me lave the counthry clane work, Mr Wharton. Shure, three days ago, afore this happened, I was on for it; an' ye worn't for lettin' me, becase there was a chance of things mendin' like.'

'I am just as tired of the whole business as you are; but those fellows I must have; that I am determined upon, at all hazards. If nothing comes of it, I shall resign my post as agent, without subjecting you or myself to any further peril. God knows that I have suffered enough to kill twenty men, since this unfortunate eviction was made.'

## RECOLLECTIONS OF AN EQUESTRIAN MANAGER.

BY C. W. MONTAGUE.

FIFTH PAPER.

LEAVING Brighton, my memories transport me to a far-distant and different town, Hanley in the Potteries. While there with the circus, I made the acquaintance of Mr Taylor Ashworth, Chairman of the Board of Guardians; and during our conversation one day, the question of a treat for the paupers was discussed between us. Mr Ashworth was much pleased with my proposition, but

he added: 'Stoke Union is a good three miles away from here, and the great majority of the paupers are either too young or too old to walk that distance. How can you get over that?'

It certainly was a drawback; but after thinking the matter over, I said: 'If I can provide a sufficient number of vehicles to convey them both ways, I presume I have your consent to go on with my arrangement?'

'Certainly,' replied Mr Ashworth. 'And after the performance is over, I will find them all something to eat and drink before they return to Stoke.'

As there were about seven hundred inmates, men, women, and children, to be provided for, I had imposed upon myself no slight task; and it was necessary to set about it at once and briskly too. I commenced my quest with those gentlemen who, I thought, would most readily consent to lend me their vehicles, and once having a good list of promises, I got along famously, the charitable object in view pleading powerfully for me. It was not long, therefore, before I was in possession of promises for an ample supply of broughams, landaus, phaetons, gigs, and open traps of all kinds from all the leading gentry of the district; among others, from Mr Lichfield, Mayor of Newcastle, and Dr Hayes, physician to the Duke of Sutherland. In addition to those thus obtained from private sources, we had omnibuses, cars, and cabs from the various owners of such vehicles. In each case, definite instructions were given as to the precise time at which the driver was to be at the doors of the workhouse.

The day arrived. At the appointed hour, an immense array of vehicles of every description blocked the road for a considerable distance right and left of the entrance; and it caused some trouble to reduce them into starting order. It was arranged that the children should go first, and the adults follow. The rear of the procession was closed by myself, riding in state with an old lady who had never seen the outside of the workhouse for twelve years, and whom the matron had confided specially to my care. Arrived at Hanley, I shall never forget the unexpected reception which greeted our procession. The entire population had turned out to meet us; and the cheers that burst from the dense crowds, as each vehicle passed by with its load of their poorer brethren, were such as it did one good to hear. The old lady who rode with me was particularly moved by the stirring scene; so full indeed was her heart with childlike pleasure and emotion, that, finding no readier way of expressing her gratitude, she must needs insist upon embracing me in the most demonstrative manner, before a delighted multitude of cheering spectators! Each juvenile upon passing into the building was presented with an orange and a bun; each adult received a packet of tobacco or snuff. Respecting the entertainment itself, nothing need be said, except that the delight of the children and the old folks too was more than sufficient reward for all the trouble that had been taken.

After the performance was over, the entire body was marched into the town-hall, hand by hand, which had kindly been placed gratuitously at our disposal for the evening by the Mayor, Colonel Roden. Here the paupers found an abundant spread awaiting them: good rich cake and milk for the youngsters; bread and cheese and beer for

the old people—as much of each as they could eat or drink. For this glorious winding-up of their outing, the feasters were indebted to Mr Taylor Ashworth, who had displayed the greatest liberality and genial kindness of heart throughout. As the medley array of vehicles deposited the poor people once more at the workhouse gates, the day's treat was over. But the pleasant memories arising from it helped to cheer their sad and uneventful lot, and afforded to both young and old an unfailing topic of talk for months afterwards.

While at Hanley, I drove over to Trentham Hall, the seat of the Duke of Sutherland, to ask his Lordship if he and the Duchess would honour our circus with a visit. With his usual condescension, the Duke received me very kindly; and in answer to my request informed me that they were expecting the Prince of Wales for a short visit in a few days' time; and not only promised that the Duchess and himself would attend, but stated that I might safely reckon upon the presence of his royal guest as well. This was indeed good news, and I returned elated with the successful result of my journey. Special arrangements were immediately commenced in order to do full honour to our august visitors. The decorations were overhauled, flags and banners placed in readiness, the 'Royal Box' prepared, and some very nice programmes printed in gold and blue and red upon a satin ground. Everything that we could do was done. The eventful day arrived; and in order to clench the undertaking that the Duke had made me, it was arranged that we should follow his Royal Highness to the Hall, and obtain a confirmation of the promise that had been given in his name. A pair of horses were harnessed to an open carriage, in which Mr Newsome and I drove to the station. Arrived there, we found hundreds of vehicles, whose occupants, hearing of the expected arrival of the Prince, had gathered together from the district for miles round, to see and welcome him. Mr Newsome alighted and passed into the station, in order to learn at the earliest possible moment that the Prince had actually arrived; thus enabling us to take our place early in the long file of vehicles which would follow on to the Hall. The train steamed into the station; our expected guest stepped from the saloon carriage in which he had travelled; ringing cheers greeted him, and were heartily acknowledged; and then we all scrambled into line, and followed as well as the crush of carriages would permit. Arrived at the Hall, a card was sent up at the earliest opportunity, and we waited patiently for the response. Should any of my readers consider that we were a little too brisk and pressing in this affair, I would submit that nothing pleases the leading members of our royal family so much as promptness and alacrity in the arrangement or management of all matters in which they are personally concerned. 'Business before pleasure' is with them a guiding maxim; and to find others business-like around them, materially lightens the burden of the large share of public duty they are always so willing to perform. An answer was shortly sent down to us. The Duke was sorry to have to inform us that a telegraphic message, announcing that something of a very painful nature had happened to a member of the royal family, had reached the Hall

shortly before the Prince's arrival, and necessitated his immediate return to town.

We came back to Hanley oppressed with this painful news, though unaware of its nature. But soon the tidings of the catastrophe flashed with lightning speed throughout the length and breadth of the land; and the entire nation heard with an indignant thrill of the dastardly attempt upon the life of our Sailor Prince, the Duke of Edinburgh, during the visit he had made to our fellow-subjects on the distant shores of Australia.

Lord Lindsay, eldest son of the Earl of Crawford and Balcarres, resides, or did reside, at the beautiful estate of Haigh Hall, near Wigan. In the year 1868, when we had been in the town of Wigan some eight or ten weeks, we heard that Lordovic, Lord Lindsay's eldest son, would shortly attain his majority; and the people of the district were in high hopes that the celebration of the event would take place at Haigh Hall. In due time intelligence came to hand that it had been decided to hold the festivities there, and that preparations for the event on an elaborate scale had already been commenced. The details of the arrangements were soon known in the neighbourhood. We learned that the festivities would be held on three successive days—one for the peasantry and poorer tenants, one for farmers and shopkeepers, and the grand day of all for the nobility and gentry who were invited to take part in the proceedings. Jennions, the well-known fashionable caterer of Manchester, were to find everything for the hundreds of guests, gentle and simple, with the one exception of butcher-meat; and this was forthcoming in unlimited quantities from the estate itself. Games of all kinds were provided; and illuminations, fireworks, and the various attractions and diversions appropriate to an occasion of this nature had been duly arranged.

We were also informed, among other items, that a former Lord Lindsay, a great lover of horse-racing, had constructed a capital racetrack in a part of the Park adjoining the Hall, well adapted for the purpose, and offering excellent positions for a large number of spectators. It at once occurred to me that if we obtained permission to hold an equestrian fête on the racetrack, it would furnish a very notable addition to the attractions already provided. Upon discussing this with Mr Newsome, the question arose, To whom should we apply? Lady Lindsay, we heard, had just arrived at the Hall, and we knew there was nothing like going to headquarters. But then we were fully aware that her Ladyship had given general instructions to the steward, and had left all arrangements in his hands. Now this same steward happened to be a frequent visitor to the *Victoria Hotel*, which being immediately opposite the circus, was a convenient house of call for myself and other members of the company. The steward being a most important man in these parts, and holding himself, as well as his office, in no slight esteem, looked down upon 'those circus people' with undisguised contempt—in other words, he snubbed us. Could we then expect much favour at his hands? We thought not, and decided not to give him the chance of refusing us. Putting a pair of spanking horses to the carriage, Mr Newsome and I started for the Hall, and requested the favour of an interview with Lady Lindsay. This being granted us, we preferred our request in

person, pointing out that we considered ourselves in a very good position to materially add to the attractions of the fête. Her Ladyship thanked us for our offered services; but regretted that, as the superintendence of everything had been left entirely to the steward, who had already made ample provision in the way of amusements, it would not be convenient for her, even if desirable, to interfere in any way with his arrangements. We hastened to assure her Ladyship that we did not presume to question the excellence or completeness of the steward's arrangements as far as they went. But it would be impossible for him to provide an entertainment at all approaching in character to what we could give, without incurring an outlay of two or three thousand pounds; whereas we, being on the spot with our entire company of picked performers and a numerous stud of trained horses, were well prepared to do justice to the occasion at a comparatively small cost. After further consideration, her Ladyship asked us what we could do for five hundred pounds; and together we sketched out a tempting programme, comprising flat races, hurdle-races, Roman-car races, hippodrome performances, and a host of novel equestrian feats. Her Ladyship seemed pleased with the projected entertainment, and ultimately engaged our services for the principal day of the coming festivities.

At the appointed time we repaired with the full strength of our company to Haigh Hall, where we were most kindly received by the hero of the day, the young nobleman who had just attained his majority. Accompanying him were the butler and the head-groom, to take instructions respecting the bestowal of ourselves and our horses, and our bounteous treatment during the day. In effect he said, after Hamlet, 'Will you see the rulers well bestowed?—Do you hear—let them be well used.' And certainly the young Master's injunctions were liberally observed; for while we ourselves were feasted upon the best of everything, our stud was also well stabled and cared for until the time for our departure came.

The day's sports passed off brilliantly—triumphantly, without a breakdown of any kind; and we had the satisfaction of being assured that our part of the proceedings was by no means the least appreciated by either host or guests. The Master owed to the unbounded pleasure he had experienced in witnessing our outdoor sports; and we afterwards received an autograph letter from Lady Lindsay, expressing the great satisfaction our performances had given her.

A curious practice had obtained in Wigan for some years, and its annual recurrence came round during our stay there. It was the custom of the entire population (or close upon it) to make a general holiday of one summer's day; and instead of spending their holiday and their money in their own town, all the good people cleared off by early morning train, lavishing their earnings at a distance, and returning to Wigan late in the evening, too late at all events to come to the circus.

My friend Mr Jonathan Hallam, landlord of *The Three Crowns*, in discussing the approaching festival with me, complained of the loss thus inflicted upon the trades people of the town; indeed it touched his pocket, and his interests and ours were thus identical.

I said to my friend: 'We must not let them go.' 'That's all very fine,' replied Mr Hallam. 'But how are you going to keep them here?'

'We must try what can be done,' I answered; adding after a little reflection: 'I suppose you have various benefit societies in the town—Odd-fellows and the like?'

'O dear, yes; any quantity of them. There are Odd-fellows and Foresters and Shepherds, and trade societies of all sorts. What about them?'

'I'll tell you, Mr Hallam. These societies must take it into their heads to make a grand "walking-day" of the coming holiday; a monster procession must be organised; and Mr Newsome must be asked to allow his company to join the procession with their horses and band; and then the town must be paraded with banners and flags and music; and I'll warrant you won't find many folks leave the town that day.'

Mr Hallam at once approved of the idea; and being a gentleman of considerable influence, and well known in the town, he set to work in the proper quarters to initiate the movement, and to make it public by means of advertisements and placards.

On the appointed day, the streets of Wigan began at an early hour to assume a decided holiday aspect; but it was at first uncertain whether the bulk of the pleasure-seekers were bent upon wandering forth, as in other years, to spend their holiday in other towns, or staying at home to witness the unwonted scene of the grand procession. But as the day wore on, a universal bustle was observable about the streets; men with a coloured rosette in their button-hole, or otherwise 'dressed in a little brief authority,' were hurrying to and fro, full of the importance of the occasion; while the rank and file of the different societies soon commenced to troop steadily from various parts of the town towards the spot at which the procession was to form into line. Then the crowds of holiday people began to throng the streets through which we were to march; and by the time fixed for the start, it was abundantly evident not only that Wigan had stayed at home to a man, but that hundreds, perhaps thousands of visitors had poured into the town from the whole neighbouring district. The procession started, and perambulated the thoroughfares as arranged beforehand, our company in full parade bringing up the rear, while our band enlivened the proceedings with music specially selected for the occasion. The town held high revel all the day; and when evening came, instead of finding ourselves without an audience, as we certainly should have done without this staying of the yearly exodus, our trouble in connection with the procession was amply repaid by a crowded house.

One day while at Wigan, the waitress of the hotel where I was staying came up to tell me that a seedy-looking man was below at the door and wished to speak to me; and upon going down, I found him to be a London actor of the name of Dale, whom I knew to have seen much better times than those that appeared to have then fallen upon him. Having first of all seen to the wants of his inner man, I asked him to explain the causes of the miserable plight in which he found himself. (But first let me state that I knew the man through having seen him act a part in the

favourite play of *Richard Cœur-de-Lion*, in which he appeared as the English monarch; while another equally tall and finely built man, N. T. Hicks, a well-known actor, took the part of Saladin. Hicks being a 'powerful' player, was a favourite with the gods; and whenever he appeared, he was invariably recognised by those exulted critics, and saluted with cries of 'Bravo, Hicks!' Hence the sobriquet by which he was afterwards known.) To return, however, to my story. It appeared from Dale's statement that he had started a theatrical booth on his own account, and begun to work the neighbouring colliery districts. But times were bad; colliers were on strike and without money, and the state of the theatrical exchequer was anything but flourishing. In this emergency, the most useful members of his little company began to leave him; the venture was irretrievably ruined; and poor Dale, after honourably paying off his debts, found himself absolutely penniless and friendless. In this emergency he wrote to Mrs Theodore Martin—more widely known to the general public as Miss Helen Fancit—and explained his position to her. By return of post a letter of sympathy was received from the kind-hearted actress, and with it a cheque drawn and signed by her husband. Dale judged that now certainly he was out of his difficulty, and should be able to tide over till he found work. But his troubles were not yet over. Dale tried at various shops and other places to change the cheque; but in vain! His woe-begone appearance told against him, and made people suspicious of the genuineness of the document he held, or of his title to it if genuine. Thus the cheque—Theodore Martin's cheque!—went begging all over the town of Wigan; while as for poor Dale, seedy of garb and feeling hunger's pinch, 'amid profusion still he pined;' until at length he chanced to apply personally to my friend Mr Hallam, who at once sent him round to me. I gave Dale the amount of the cheque; and the poor fellow went on his way, rejoicing at this happy termination of his troubles.

[We take this opportunity of making the *amende honorable* to Mr Richard Chapman whose name was mentioned—in a recent instalment of these *Recollections*—in connection with the large barn at Harrow. The inference was that Mr Chapman was an ignorant and unrefined man, who could not speak correct English, whereas we are assured by one who knows him well that he is a gentleman of education and refinement.—ED.]

#### MAKING AMENDS.

A WRONG confessed is half redressed may be a sound saying from the wrong-doer's point of view; but the wrong-sufferer is likely to think differently, and decline to accept a bare acknowledgment of indebtedness as equivalent to a fifty per cent. dividend. Much depends upon the manner of confession. It is possible to admit a wrong in such a way as to add to the original offence—a method of making amends often adopted by the too ready writers of the press when victims to their inventiveness claim reparation at their hands.

Not long ago, a South London paper amused its readers by informing them that the officials of the

Southwark County Court had, in expectation of a visit from the newly appointed judge, 'put on clean shirts and had easy shaves.' The gentlemen concerned did not appreciate the pleasantry, and let the editor know it; whereupon he announced that 'the officials did not put on clean shirts nor were they shaved on the day in question,' and expressed the hope that everybody would be satisfied. Strangely enough, the officials of the County Court were not.

A French journalist made no attempt at justification when an irate novelist, known to be as clever with the pistol and the sword as he was with the pen, gave him the choice of apologising for a certain satirical sketch, or meeting the subject of it in the field. Not desiring to permanently vacate the editorial chair, the offender took the alternative; and after disclaiming any intention to annoy the romancist, went on: 'Rest assured, sir, that I will not repeat the offence; for I most solemnly promise you, that never by any chance, or under any circumstances, shall your name appear in my journal.' And yet the aggrieved author was not happy.

American editors are not of an apologetic order; but that they can, if necessity compels, make the *amende honorable* let this specimen shew: 'There is a fly in our office, one particular aggressive fly, distinguished from its brethren by a pertinacity and untiring energy that if properly directed, is enough to make him President. Other flies we can dispose of by whisking a paper at them or putting them out of the window. But this fly we can't manage. We don't like to kill flies. There is something so confiding about them, that it seems like a breach of hospitality to kill them. That fly tumbles into our inkstand, crawls out, and dries his little feet by walking over our paper as we write. The compositor has hard work to decipher our manuscript sometimes. And in this connection we would make a slight correction. In the last number of our paper we called the Hon. Mr — "an unprincipled demagogue;" we should have said "a high-toned patriot." It was all the fault of that fly. The honourable gentleman's brother came into our office this morning with a new and substantial-looking cane, and reminded us of the misprint.'—If this worthy was liable to having his ingenuity much taxed in this way, he would have done well to have imitated an accommodating brother who gave notice: 'If any subscriber finds a line in his paper that he does not like, and cannot agree with; if he will bring his paper to the office and point out the offending line, the editor will take his scissors and cut it out for him.'

The judge, addressed by an apologising counsel with, 'Your lordship is right, and I am wrong, as your lordship generally is,' might reasonably be uncertain whether the learned gentleman was complimenting or disparaging the court; but Mr Commissioner Kerr could have no doubt respecting the sentiments of a witness who persisted in addressing him as 'my lord' and 'your lordship,' and when told he must not do so—'I am not a lord, and you must not call me so'—replied: 'Then, my lord, if your lordship isn't your lordship, your lordship ought to be!'

'Well, soldier,' said Daniel O'Connell to an

officer he was cross-examining. 'I am no soldier; I am an officer,' exclaimed the indignant man. 'Well,' said O'Connell, 'well, officer who are no soldier,' &c.

Captain Bugbie of the United States army was not only an officer but a soldier, and a good one too; notable as a strict disciplinarian, and as notable for his fondness for creature-comforts—a fondness he found great difficulty in indulging when marching through a wild bit of country. One day the column had just left a small hamlet, when the Captain noticed that one of the drums gave forth no sound. He expressed his anger very emphatically, and ordered a lieutenant to go and rate the delinquent well. By-and-by the subaltern returned, and whispered to his superior that the drummer had got a couple of roasted chickens and two bottles of whisky in his drum—one bottle and one chick being for the captain. 'Why didn't the poor fellow let us know his legs had given out?' cried Bugbie. 'I don't want men to march if they're dead-lame. Put him in the ambulance immediately.' The order was obeyed; and having thus made amends for his injustice to the drummer, the Captain took the earliest opportunity of going to examine more particularly into his condition.

A dramatist sitting by a friend at a theatre, contrived to extract a handkerchief from his pocket and transfer it to his own. Presently, a man behind him, tapping him on the shoulder, whispered: 'Beg pardon; here's your purse. Didn't know you belonged to the profession; all right!' at the same time slipping into the amateur's hand the purse he had extracted from his pocket. The story may pass, for although honour and thieves has no existence, it is probable that regular practitioners act on the principle that dog should not eat dog. That they ever go an inch beyond that we do not believe, even though we have it on the authority of the *Gaulois* that Charles Dickens once lost his watch at a theatre in Paris, and found it at his hotel with a note running: 'Sir—I hope you will excuse me; but I thought I was dealing with a Frenchman, and not a countryman. Finding out my mistake, I hasten to repair it by returning herewith the watch I stole from you.—I beg you to receive the homage of my respect, and to believe me, my dear countryman, your humble and obedient servant —A PICKPOCKET.'

If the anecdote be true, we should rather attribute the restoration to the pickpocket's appreciation of his victim's genius, than his consideration for his nationality.

Thieves do occasionally make the best of all amends—full restitution. Even an umbrella has come back to its owner because it 'praid' on the purloiner's conscience. A banjo mysteriously disappeared from the door of a dealer in musical instruments at Eastbourne. Some months afterwards, he received the following unique epistle:

NEW CUT, LONDON.

DEAR SUR—I am taking the liberty of riting to you to tel you as i av sent you the gitar as I borred from your chop in easbun wen i was done ther as I mens to be onest for the tin comin i was ard up wen i tok it and my mats didnet give me mi chare so i left em so i hop you think i am onest cos I sent It bak and i ant dun much wi it

since I did it it is a good wun an i fels sorry as I tok it and i ant got no money to pa carrege so i carat an i hops as you send the wod case bak as it cost me a shillin and i hops as I av bin onest as you wud send me a shillin if you ples i am very ard hup hand you wunt mis it I paked it in paper an i dont think as it ul be broke and i knos you wud send me a shillin if you wud ples send it to the post office in Chandy St new Cut London and i can cal fur it i ant hyrt the gitar as it as ben in porn al the tim and il never do it agen i mens to be onest in the tim to cum. I remane Yours truly, M. R. wich i hop youl cal me wen you rite.

The banjo, surely enough, arrived in due time.

A well-educated young Irishman filling the post of cashier in a Liverpool house of repute, decamped one fine day with three thousand pounds of his employers' money. Nothing was heard of him for some years, when the firm received a packet by post from the long missing one, containing an order upon a bank for three thousand pounds, and five per cent. interest on that sum, calculated from the day the sender had decamped. The packet also contained an account of his career since. On reaching America he had obtained a situation in a New York dry-goods store, and remained in it till the outbreak of the Civil War. His 'governor' was an enthusiastic Republican, and offered to advance a large sum of money to any of his clerks who volunteered for the army. The Irishman was the first to close with the offer; saw service at Fredericksburg, Seven Oaks, and other hard-fought fields; was with Sherman, under whom he held a subordinate command, in the famous march to the sea; and wound up by marrying the wealthy young widow of a Northern General who fell at Gettysburg; the last exploit enabling him to make amends for the misdeed of his hot youth.

Not quite so genuine was the repentance of an inventor of a tobacco-stick, whatever that may be, who, the *Raleigh News* tells us, was summoned to appear before the brethren and sisters of his church to answer sundry charges of drunkenness. He pleaded guilty; expressed profound penitence, and implored forgiveness in such pathetic tones, that the deeply moved congregation acceded to his prayer with one accord. Then the pardoned one rose to his feet again, and said: 'Brethren it is seldom I have the opportunity of seeing together so large and intelligent an audience, and I shall take advantage of the occasion to say that my patented tobacco-stick, recently invented by me, is of so superior a model, that everybody is using it; and I would be glad to exhibit a sample one to any brother who wishes to see it in operation.'

Triflers with feminine affections do not always get off cheaply. A young clergyman, wise enough to choose well, but foolish enough to allow himself to be ruled by his friends, after proposing to a young lady, declined to fulfil the engagement; and being sued for breach of promise, was cast in damages—five thousand pounds. This brought him to his senses. Seeking the plaintiff, he owned that he had behaved infamously, but vowed that he had loved her all the while and loved her still, and prayed her to forgive and

forget. 'My friends,' said he, 'can make no objection now; they cannot say you are without a penny, since you have five thousand pounds of your very own.' His pleading proved irresistible, and the lady and money were soon his own again. Marriage made amends for all.

### THE AUDIPHONE.

IN our review of Science and Arts in the April part of this *Journal*, we gave a short account of an ingenious American invention called the *audiphone*, by which not only persons hard of hearing were enabled to hear distinctly, but even deaf-mutes were made to hear musical sounds. Since then, we have had numerous inquiries made to us for the name of the makers of these instruments; but this we are as yet unable to give. In a recent number of *Nature*, however, we observe that improvements are being made on the original invention, which will have the effect of both cheapening and simplifying its construction. The *audiphone* of Mr R. G. Rhodes, of Chicago, the original inventor, consisted, as already described, of a thin sheet of caoutchouc, fixed in an elastic frame, about the size and shape of an ordinary palm-leaf fan, and furnished with a handle. Strings attached to the upper edge served to bend it into a curving form, a small clamp fixing the string at the handle. When thus strained into shape, the instrument is pressed against the upper front teeth by the deaf operator, the convex side being turned outwards. The sounds received upon the thin sheet cause it to vibrate, and the vibrations are thus conveyed through the teeth and bones of the skull to the auditory nerves. Its use is therefore confined to the partially deaf, or at least to those in whom the auditory sense is not entirely absent, or the nerve atrophied. The caoutchouc or ebonite rubber of which Mr Rhodes' instrument was made being costly, a French Professor, M. Colladon, had, as mentioned by us in April, discovered a cheap and efficient substitute in the form of a strip of elastic cardboard. Mr Thomas Fletcher, of Warrington, a most ingenious gentleman, has since effected a still further improvement. After a long series of experiments, he has found the best material of which the *audiphone* can be made is birch wood veneer. If cut in an oval about twelve by eight and a half inches, and steamed and bent to a curve, it does not require the cords of the Rhodes' pattern, and is more convenient for use than Colladon's form. Mr Fletcher states that a disk of half the above size suffices for a musician who may, in consequence of partial deafness, require such aid, and who cannot use a hearing-trumpet on account of the inconvenience of holding it while playing his instrument. The disk of veneer is so light that it may be held between the teeth without effort, and almost without consciousness of its presence. If stained black, it is less visible. We are disposed to think, from the simplicity of Mr Fletcher's instrument and the accessibility of the material used, that those of our readers who may be anxious to test the invention for themselves need have little difficulty in the construction of an *audiphone* after this pattern.

## PROFESSOR NORDENSKJÖLD AND THE NORTH-EAST PASSAGE.

THERE have been numerous attempts to ascertain whether there is dry land, open sea, or impenetrable ice at the Pole. Many attempts were made before Parry's remarkable sledge journey, and many others since; but still the ice blocks the way long before the Pole can be reached. The latest was the most noteworthy of all—that of Captain Sir George Nares. His ship the *Molt* reached a higher northern latitude than had before been attained by any vessel, while his sledges penetrated farther north than any other human beings are known to have reached. Nevertheless there were three or four hundred miles of unknown region between the sledges and the veritable Pole. Sir George has declared his belief that any further attempts will be quite hopeless. The Americans, however, do not give up hope; they believe, from the explorations of Kane, Hall, Hayes, and Morton, in the existence of an Open Polar Sea.

Far more numerous have been the expeditions in search of what is termed a North-west Passage from the Atlantic to the Pacific round the north coast of the American continent. Almost to this day the search has been kept up, and with considerable geographical success. The gallant, ill-fated Sir John Franklin virtually realised this result, although he died before the fact could be recognised in its fullness; while McClure has in later years discovered another passage between the islands that fringe the northern coast of the New World. But though geographically valuable, these discoveries possess little commercial importance, seeing that ice blocks the way.

The stage is now clear for noticing in a rapid way the third class of Arctic expeditions—namely, those connected with the *North-east Passage*. Here it is that the learned and energetic Swede, Professor Nordenskjöld, achieved a result which will always be associated with his name and fame, and in which his brave and stout steamer the *Vega* will be recorded as the first vessel that

ever circumnavigated the Old World of Europe and Asia.

The vast region of Russia and Siberia has for many generations been believed to be bordered on the north by an ocean bound up in thick ice during the winter and partially thawed during summer; but whether the land is continuous, or is fringed and broken with islands, is an item of knowledge that has had to be groped for. Among many rivers, three of grand dimensions flow through Siberia nearly from south to north, all having their rise in little-known regions of Central Asia, and all emptying their waters into the still less known Arctic Ocean. The Obi, one of them, flows through Tobolsk, the Yenisei through Yeniseisk, and the Lena through Yakoutsk. Siberia, although in loment and almost unbearable in winter, has bright skies, warm sunshine, and fertility during the short summer. Corn, hemp, and other crops ripen; forests grow good timber; flocks and herds furnish skins, hides, and tallow; the trees facilitate the making of tar, resin, and turpentine; fur-bearing animals furnish peltry which is much valued in Europe; while the mineral wealth comprises gold, silver, platinum, and other choice metals. The natives gradually placed small vessels on the rivers, and conveyed cargoes to the sea, where sale and barter took place with other traders hailing from other rivers. This was really the groundwork of what is now known as the *North-east Passage*; for the traders cautiously creeping on a little east and anon a little west, discovered small portions of the Arctic coast of the Old World.

Nordenskjöld, a naturalist and scientific man, took part in many minor expeditions to Greenland and Spitzbergen before he turned his attention to the *North-east Passage*. It was during one of these journeys, undertaken mostly for scientific purposes, that he shared in an incident which has so much amused the readers of his animated narratives—that of *four men sleeping in two bags or sacks*! These sleepers, two Swedes and two Greenlanders, had nothing but a waterproof cloth between them or their bags and the snowy ice,

and nothing over them but the heavens; the proverbial 'three in a bed' far from equals the closeness of their packing; and the Professor, though anything but a grumbler, admits that they all four passed a very comfortless night. Nordenskjöld's experience during these minor expeditions led him to a conclusion that, however interesting for the researches of naturalists and scientists, they were not likely to develop a commercial or mercantile route. He therefore began to turn his attention, about the year 1875, to an eastern or north-east route.

The Professor knew what the Russians and Siberians had done, in tracing several of the great Asiatic rivers to their mouths in the Arctic Ocean. He furthermore formed a happy conjecture that these rivers carry a vast body of warmish water to the sea during the summer months, and that this water is diverged into an east current by the diurnal rotation of the earth—offering facilities to vessels sailing or steaming parallel to the coast. This conjecture proves to be correct, and has had much to do with his subsequent success. He formed a scheme for steaming along the whole distance from Norway to Behring's Strait, passing on his way the wide-spreading coasts of Sweden, Finland, Russia, and Siberia, and emerging at the Strait into the Pacific Ocean—thus accomplishing the *North-east Passage* from the Old World to the New.

Being simply a scientific man by profession, he was unable to bear the cost of such an enterprise. The king subscribed to a fund, the Swedish parliament voted a small supply, and a Russian gentleman named Sibirakoff assisted; but the main prop and stay was M. Oscar Dickson, a large-hearted Swedish merchant, who came forward with the munificent sum of twelve thousand pounds. Thus guaranteed, Nordenskjöld proceeded in 1877 to organise his plan by degrees.

The first thing to do was to provide a vessel; and a fortunate choice was made. The *Vega* is a whaler of about five hundred tons, painted black; it carries a small steam-engine capable of developing, without the aid of sails, a speed of five miles an hour; and bunkers capacious enough to hold coals for the whole distance of four thousand miles that intervene between Norway and Behring's Strait. These coals, however, were not all in the ship at one time; subsidiary vessels went part of the way as tenders or store-ships. Attention was next paid to the provisions, of which enough was taken, wholesome and varied in quality, to last nearly two years in case of need. Ship's stores of every sort were ample, and the *Vega* became gradually filled in every corner.

It was in the summer of 1878 that the expedition started. Many naturalists and cultivators of the physical sciences eagerly took part in it; while Captain Palander was intrusted with the command of the ship and its navigation—Professor Norden-

skjöld being leader or director of the whole. On July 21, the *Vega*, with a crew of about twenty-four men, started from Tromsøe, nearly at the extreme north of Norway. She was accompanied by the small steamer *Lena*, intended to go up the river of the same name to Yakoutsk, and there be employed as a passenger and cargo vessel.

On the 23d of July they passed between Waigatz and the mainland, where they were joined by the *Fraser* and the *Express*, English vessels intended to trade on the Yenisei. August began, and matters went on so steadily that by the 19th the *Vega* had reached and rounded Cape Tchelquiskin—the extreme northernmost point of the Old World, about midway between the Atlantic and the Pacific; they had a warm current of fresh water from the Obi to the Yenisei. On the 27th the *Lena* parted company from the *Vega*, and started for Yakoutsk, taking letters and telegrams from the expedition.

September set in, and with it the troubles of the *Vega*. Low temperature brought snow; and then came the last day of hoisting sail, for the floating ice, increasing daily in quantity, required a very cautious use of steam and paddle to pass safely between the masses. In truth the summer had come to an end earlier than had been anticipated, and much earlier than officers or crew wished. After the middle of the month the temperature was continuously below zero—itself 32° F. below the freezing-point; and the speedy approach of winter was evident to all. Would the *Vega* be able to reach Behring's Strait in time to beat round into the Pacific Ocean, where a warmer temperature might reasonably be expected? This question was anxiously discussed by Nordenskjöld and Palander; but the climate soon settled the matter, for the *Vega* became so hemmed in with ice that she could no longer move. The 28th of September 1878 was a day which neither officers nor crew will ever forget; seeing that it marked the beginning of a detention that was destined to continue no less than ten months. Bitter indeed was the disappointment. Calculations showed that the position was only about one hundred miles from Behring's Strait, a distance that the *Vega* could have steamed in a couple of days had she not been hemmed in immovably by ice. Professor Nordenskjöld is not the man to make the worst of troubles; but he speaks most feelingly of this sudden quenching of sanguine anticipations.

What to do during the rapidly approaching winter, with its dismal darkness and piercing cold, had now to be determined on. The scientific men on board soon decided on a plan so far as they were concerned. Being naturalists, astronomers, meteorologists, magneticians and electricians, geologists and mineralogists, they knew that even the ice-bound Arctic coast of Siberia would yield a harvest for those who sought it sedulously. The proceedings they adopted were as follow: They built an observatory on the coast in a curious

way; the sailors sawed lumps of ice into brick-shaped pieces, made walls of these, and constructed a little house as well as an observatory. A staircase cut in the ice led up from a small anteroom to the observatory, which was only six or seven feet square. From the roof of the place bearing this dignified name hung a never-extinguished lamp. In the middle was a little table, on each side of which was a gutta-percha air-mattress laid on a sack filled with straw. In the angles of the chamber were the magnetic instruments; while near at hand were books, diaries, and various documents. A stove was ready to prepare hot coffee. The whole building was covered with reindeer skins and woollen blankets in the coldest part of the winter. Magnetical and meteorological observations were continued with great regularity. Sometimes the fog was so dense that it would have been very possible to lose one's way on passing to and fro between the ship and the shore; to prevent this a long avenue of a hundred and seventeen ice pillars was formed, and a rope stretched from pillar to pillar to keep the wayfarers in the right track. The worst tribulation to bear was that of the terrible storms of wind, which blew the snow along with furious violence. These were the times to keep housed as comfortably as possible. In quieter weather, officers and scientific men alike indulged in skating and various kinds of ball-play, healthful to the system and invigorating to the spirits. The whole proceedings illustrated the good effects of alternate work and play.

Nor were the crew neglected in the various arrangements for making the winter-quarters as comfortable as possible. The ship was in the ice, about a mile from the shore, to which it was attached by a strong rope. The sides of the *Vega* were composed of two strata of wood, with an intervening lining of felt. At the stern, hot air was made to pass through an open space left between the wood and the felt. By this means the cabins could be maintained at a temperature fifty or sixty degrees higher than the external air. Five stoves were kept constantly heated in different parts of the vessel. Food was good and plentiful, scurvy was 'conspicuous by its absence,' and the general health of all on board was satisfactory. The men had books and simple games, they could sing, and they passed through the long winter cheerfully.

Thus came to an end the year 1878, and thus began the year 1879. The months of October, November, and December gave to the inmates of the *Vega* a taste of Arctic darkness; January, February, and March had the advantage of presenting a gradual renewal of daylight, but with the accompaniment of much more intense cold. April, May, and June ushered in beautiful spring; snow melted and greenery made its welcome appearance on the land, or rather, as Nordenskjöld and Palander tell us, winter burst out into summer without any spring at all. Nevertheless there was the *Vega* still ice-bound, quite immovable.

At length the day of deliverance came. About the middle of July the ice was observed to loosen around the ship. The engine fires were lighted, steam was got up, and on the 18th the paddles set the vessel in motion. Oh, the joy of all on board! Oh, the delight of escaping from the three hundred days of icy imprisonment! To shew how tantalising had been the frustration experienced

in the previous September, it may suffice to say that the *Vega* reached Behring's Strait from the wintering-place in two days, and soon afterwards went round into the great Pacific Ocean, having Asia on one side and America on the other.

During this prolonged detention the *Vega* was seen at some distance by a few men engaged in the whale, seal, and walrus fisheries, and visited by a few native Siberians who found their way to the coast. Letters and telegrams were sent by Nordenskjöld through two or three of these natives to Europe: a handsome reward tempting the messengers. But the distance travelled was so immense, extending over so many thousands of miles, on foot and on sledge, by boat and by posting, that Europe knew nothing of the messages till many months afterwards. When the lapse of time and the statements of natives made it evident that the *Vega* was hemmed in by ice near Behring's Strait, schemes of rescue were planned; but as the ship escaped from her imprisonment unaided, we need not describe them.

Nor is it needful to dwell on the triumphant return of the good ship to Europe. Nordenskjöld was under no necessity to hasten his voyage; he sailed leisurely down the Pacific on the Asiatic side, making stoppages at Kamtchatka, Japan, China, and so on to Singapore. Then came the voyage across the Indian Ocean to Ceylon and Aden, followed by an advance up the Red Sea and through the Suez Canal to the Mediterranean. On reaching European shores quite an ovation was in store for Nordenskjöld and his trusty companions. The second half of 1879 and the first quarter of 1880 were consumed in these proceedings; until at length all the civilised world knew something about the discovery of the North-east Passage.

## A LIFE'S ATONEMENT.

### CHAPTER XXI.—HISTORY.

*'It's a very curious case, ladies and gentlemen. Notice two or three things about it.'*

For the first time, Frank began to think of the future which lay before him. Despair has no capacity for fear, and the time to come looked blank, but not terrible. There would come a time before long when his last penny would be spent, and after that he would die of starvation. If he were found, an inquest would be held upon him. So then he must destroy the last trace of his identity. As he crawled along the road in the chill sunshine, he took out his pocket-book, and tore from it carefully all the leaves on which any sort of memoranda had been written. These he scattered in fragments at long intervals; and the remnant of the book he dropped into the sluggard waters of a canal. Though he was still in great pain, he was stronger than he had been at starting, and still walking without care as to the direction he took, he came at nightfall to Hockley Hill, and found himself on the outskirts of the great mid-land capital. He had walked nine miles that day, and felt quite broken down with fatigue. He had not penetrated far into the town when he saw the sign of a pawnbroker, and a new idea occurred to him. The rings he had about him would surely serve to identify him. Some of them were valuable, were even costly; and he had an indefinite

sort of fancy that though he had a right to die when his last coin failed him, he had no right to hasten death for his own relief, or to avoid any such open means for prolonging life as the rings afforded. Dim and undefined as this feeling was within him, it was yet the first dawn of a sense of returning duty. He entered the pawnbroker's shop, and proffered the rings—all but one. That was Maud's gift, and he would not part with it until he knew that the end of all was near. Then he resolved that he would bury it in some quiet place in the fields, and lie down near that last relic of his love, and die there. Whilst he thought of these things, and seemed to see in fancy the place where he should lie, the pawnbroker was examining the rings through a glass. He laid them down on the counter and looked at the man who proffered them. He saw a man who, in dress, looked like one of the poorer sort of labourers from the outlying mining districts—a man haggard with a month's beard, pallid with sickness, bent with fatigue and pain, hollow-eyed, unwashed—a melancholy spectacle.

'How did you come by these rings?' he asked, taking in all those mournful characteristics at a glance.

'They are my own property,' Frank answered, and you need not be afraid to take them.'

'H'm!' said the pawnbroker. 'Where do you live?'

'I have no address,' Frank made answer; 'I am going to Liverpool.'

The man looked keenly at the rings and at the owner. 'I'll lend five pounds on 'em,' he said, and drew them towards him.

It was with no care for the money, but only for the dim thought that he had no right to lay down the burden of his punishment before his time, that Frank, taking up one of the rings, responded. 'I gave forty-five pounds for this alone.'

'Daresay,' said the man briefly. 'I don't know that I ought to take 'em in at all, unless you give some account of yourself. I won't give more than five pounds for 'em.'

Frank assented wearily; and the pawnbroker without asking further questions made out, at the cost of a penny, a ticket, and paid four pounds nineteen shillings and elevenpence across the counter. The pawnbroker was something of a fictionist, and having given his imagination scope, had invented the name and address of 'Joseph Jones, Summer Lane.' 'If I am discovered,' Frank thought, 'inquiries will be made here.' He tore the ticket stealthily bit by bit in his pocket, and dropped a piece here and there until it was all gone. Then not caring to inquire of any one he met, he wandered down street after street, looking for an advertisement of the rings. He saw many, but avoided them all, for some no reason, until some no-reason drew him into one. The old man who kept the place came forward and demanded his fee; and being satisfied, marshalled his visitor to the fireplace, where in a shadowy recess sat the intrusive tramp of yesterday. There were perhaps a dozen people in the kitchen; and Frank, neither observant nor observed except by his yesterday's acquaintance, took the seat pointed out to him. That one should enter dejected, travel-soiled, and weary, was not a thing to excite attention there, and he was glad to be unnoticed. The men and women about him discussed the

things which interested themselves. They were all professional tramps and cadgers, and though they might be strangers to each other, they had common friends in the trade. Thus the wooden-legged miner had met the one-armed warrior's particular friend at Leicester the week before last, and the one-armed soldier had recently made the acquaintance of the wooden-legged miner's ancient companion and sworn brother at Worcester. The talk drifted hither and thither, until a new-comer, who had walked from Dudley, brought news of a dreadful murder committed there the night before. On this they all seized with avidity. The new-comer was a hero for the time, and told his tale with sickening amplitude of nauseous circumstance. The chief point of the story was that not the slightest clue to the murderer had declared itself; and from this point the talk flowed on in an unbroken stream of reminiscence of undiscovered crime. Frank sat in his shadowed corner with bent head and folded arms, until one began the story of the mysterious murder and robbery in Spaniard's Lane. He listened to the talk like a man in a nightmare. It was not wonderful to know that the history of his crime was public property; but as he sat with closed eyes and eager ears and trembling heart, he seemed to feel a strong and resolute hand approaching him from the darkness, whilst invisible walls narrowed in upon him, and invisible fetters held him from escape. He learned that the two men who had accompanied the dead—the speaker put it in that way every time he made mention of the murdered man—had been arrested and discharged.

A woman broke out with 'Throth, thin, if 'twas meself had done the murder, an' another was he'd for it, I wouldn't lie aisy in me grave till I give meself up.'

'Thine for you, Nelly,' said the woman's husband. 'It's base conduct.'

What human creature's opinion could Frank Farholt afford to despise? He had never until now contemplated the possibility of another being charged with his crime, and the knowledge that these innocent men had been suspected laid an added weight upon him, although he told himself, and that truly, that he was not hiding from Justice for his own sake. He would have welcomed any atonement, however fiery, if the shadow of his sin might fall no more heavily than it had done upon his father and his brother and Maud. When the last madness of his flight was gone he had resolved on suicide, and since then his only hope had been that he might die obscurely and be forgotten. He could think more clearly now, not because the night of his trouble was more lightened, but because he was used to its thick darkness, and could see a little further through it. A plan of life grew slowly up within him as he sat in the shadow, and these male and female scoundrels discussed his deeds and speculated on his identity and his whereabouts, and the chances of his detection. He was bound to elude Justice still, if that were possible. It was his clear duty not to denounce himself, and it was just as clearly his duty to live till God should call him, and to make such poor atonement as lay in him to make. As he sat thinking of these things, a voice broke harshly on his ear.

'It's a curious case—a very curious case, ladies and gentlemen. Notice two or three things about

it. The police found the purse, evidently thrown away by the thief. That makes it clear that the man had changed his mind, and repented of the robbery. Next day, a trifle over the amount taken by the thief is sent to the dead man's house, with a message to the effect that the man who borrowed it had sent it back again. That proves two things—first, that the man knew the amount of money in the purse he stole, and next that he didn't believe he had killed the man he stole it from. It proves another thing. It proves that the thief had money. Then you'll ask me, why did he turn footpad? Doesn't it stand to reason that he was pushed for money—that he was afraid he wouldn't get it in time—that he found out somehow that this man had money about him—that he knocked him down, and took it, finding a chance to do it in a lonely place like Spaniard's Lane—that he repented directly he'd done it, and threw the purse away—that he got his own money and some to spare next day, and sent the amount stolen back to the owner, and that he never knew the man was dead till he saw it in the paper, most likely? Doesn't that stand to reason, ladies and gentlemen?

'Faix,' said the Irishwoman, 'it's you for the long head, anyway, darlin'. There was the fine lawyer spoiled when you was made.'

The listener in the shadow caught his breath. Did these things lie so plainly on the surface of the story, that any one who chose might find them there, or did the man who so closely hit the truth know more than he professed?

'The lawyer wasn't spoiled when I was made, my dear,' said the harsh voice, with a chuckling laugh. 'He was spoiled five-and-thirty years later.'

'Then you wor a lawyer?' said the Irish tramp.

'Yes,' said the man in the sack, for it was he who spoke; 'I was a lawyer, and a pretty good lawyer too, till twelve men entered into a conspiracy against me, and blackened my character.'

'What was you tried for?' asked the one-armed soldier, piercing this transparent metaphor.

'Having a short memory,' said the reprobate in the sack. 'But I studied at Botany Bay, ladies and gentlemen, and improved it, and I never forget anything now.'

Was there a threat in that? thought the listener in the shadow. Did the man know anything? *Could* he know anything? He turned slowly round, and looked across the light to where the ugly old reprobate sat sucking his pipe in the opposite corner. Was it only by chance that the old man's eyes were fixed upon him with so keen a look? Frank received the gaze calmly, or with outer calmness, and closing his eyes, sank back into his old attitude. He had been robbed the night before, not improbably by this man, and it might be that the tramp himself feared suspicion, and wished to disarm it by effrontery.

'You don't seem to know me again, companion,' said the harsh voice. 'We chummed together last night at Bilston.' Frank bent his head a little lower, and returned no answer. 'There's a comrade for you!' the tramp went on. 'Won't own his friend because he wears a peculiar coat.'

Nobody took verbal notice of this appeal, but one or two turned lazily and looked in the direc-

tion indicated by the old man's outstretched finger, and then turned lazily back again. When the time came for bed, it fell again to Frank's miserable lot to lie in the same room with this intrusive acquaintance whom he feared. The wretched night wore itself away, and with the first dawn of light the wanderer rose and stole softly from the room. The outer door was fastened by a bolt, which he drew back carefully, yet with now and then a rusty shriek, and the door itself scratched noisily upon the brick floor. He drew it after him, and came upon the street. He heard the voice of the man he had feared to awake, above him. Looking up involuntarily, he saw the silk hat and the tramp's face below it projecting through the window.

'You're leaving early, companion,' said the tramp. 'Wait a bit, and I'll join you.'

Frank turned without an answer and walked on, sickening. But his limbs were weak and stiff, and he travelled so slowly that before he had gone a hundred yards, his aversion came panting up beside him and jogged on grotesquely at his side.

'You can see,' said Frank, 'that I wish to avoid you. Why do you follow me?'

'My dear young friend,' returned the tramp, pantingly, 'I'm one of the tenderest creatures in the world—one of the most impressionable, and I've taken a fancy to you.'

Frank put himself to his best speed; but the other kept pace with him. They walked on until they were clear of the town, and the leader without knowing it struck on the Warwick road. The tramp's pursuit of him strengthened the hapless young artist's fear into certainty; and when they had gone in silence for more than an hour after quitting the town, he turned upon his follower.

'You shall dog my steps no longer,' he exclaimed.

'No?' said the old tramp, leering at him. 'Why not?' His dirty features creased themselves into a laugh. 'Who's to prevent me from going where I please?'

'You have some reason,' said Frank, with a deathly sickness at his heart, 'for dogging me in this way. What is it?'

'I'm pleased with your society,' the tramp answered with a horrible smile. 'It does me good to think that I'm mixing with people of my own rank again.—Well, if that isn't the true reason, shall I try another? Don't be impatient, my dear young friend. Will you walk on again? Then, I'll come with you. Here's the other reason. I'm a sort of modern Autolycus, you must know—a picker-up of unconsidered trifles. Ah! It's quite refreshing to be able to refer to these poetic memories, and to know that you're in the society of one who understands them. Well you know, my young friend, I take an interest in you, and I've picked up a trifle or two about you.'

Frank stopped short again and looked at him. He could not have spoken a word then for life's sake.

'You're rather a heavy sleeper,' the tramp went on, his ugly features creasing themselves into a laugh once more, 'and I'm a light one.' A friend of mine stayed in the same room with us the night before last—a gentleman whose chief mental characteristic is a passionate curiosity. He *will* know things. He won't allow himself to remain

in the dark. Now, that's quite a commendable characteristic, quite a commendable characteristic, my dear young friend.—Where was I? O yes! My curious friend was anxious to know what you had in your pockets. I had mentioned to him—I confess it freely—I had mentioned to him that I had seen you receive change for a sovereign, and he felt quite a burning longing to know what you had in your pockets. So he looked. And I believe, if my memory serves me right, that he found a purse there, and I think—mind, I'm not sure, but I *think* that he forgot to put it back again. He found some things there besides, some trinkets—rings I think they were. And they looked valuable. My friend put *them* back again, and remarked to me—and that's why I remember them so clearly—that they weren't safe things for a poor man to have about him, because they looked suspicious.'

There the rascal paused, and laughed once more. Frank could not have answered for his life, and so stood there, wordless, with a beating heart.

'Now,' the tramp went on, 'when a gentleman with hands like those—I'm sure the rings would have fitted them—is going about the country in your peculiar way, and when he has money enough for decent clothes and decent lodgings, and when he never says a word to the police about being robbed—for that's the word, you know—it seems to stand to reason that he has very particular grounds indeed for keeping quiet, and for not mingling in that gay circle of which he may have been the ornament. I hope I'm putting it pleasantly, and not in a way to wound your feelings. I wouldn't do that for the world, I do assure you.'

'And now,' Frank answered, drawing himself together by a supreme effort. 'What does all this lead to?'

'Lead to?' cried the tramp. 'Why, to this pleasant little explanation, and the formation of a partnership. I'm sure I shouldn't be surprised if you turned out quite generous. I do assure you that I should regard without a shadow of amazement an offer on your part to share the proceeds of those nice rings. I believe you're going to make the offer now?'

'And so, having robbed me already,' Frank answered, striving to speak steadily and to belie his fears, 'you wish to rob me again.'

'I rob?' said the tramp. 'What an erroneous estimate of my character you must have formed, to be sure! Rob you? Nothing of the sort, my dear young friend. I offer silence. Silence is golden, my young companion, and I offer that, in return for a share of the proceeds of those nice rings.'

'Silence about what?' asked Frank, once more breaking the bond of fear which held him like a nightmare.

'You don't know,' said the tramp, with the old repulsive laugh, 'what a knack I have of putting two and two together, and making four of 'em. Perhaps you heard me put two and two together last night about that curious affair in Spaniard's Lane. You may have noticed the compliment the Irish lady was good enough to make me. Well, my young friend, it may be worth your while—I don't say it is, mind—but it may be—to ask me not to put two and two together about you.'

Were there only vague suspicions in the man's

mind, or was the allusion to Spaniard's Lane renewed of set purpose? Frank, fighting down the fears which beset him, tried to face that dreadful question calmly. After what seemed a long pause, he said, looking straight into the tramp's evil eyes: 'I am not the first broken gentleman the world has seen, by many. If there be anything suspicious in my being here, and I suppose there is, I cannot help it, and I do not greatly care to help it. I shall not try to purchase your silence or your complicity, because I know that even if your silence were worth buying, you would only pretend to sell it, and would sell me afterwards if you could. Now, for the last time, choose your road, and let me choose mine.'

'You dream out loud,' said the tramp, with the same unchanging ugly smile. 'And when my friend looked at your pockets—an unwarrantable liberty, no doubt, but prompted by a laudable thirst for knowledge, I do assure you—he found a pocket-book with a name and an address in it. A swell address it was too, my dear. Perhaps they'd pay more there than anybody else would.'

'Take your own course,' said Frank, thinking the bold way the best. 'Suspect what you please. Do what you please; but choose your way now, and let me choose the other.'

'If Maud should know! If Maud should hear of it!'

When the tramp spoke those words, Frank staggered as though a blow had struck him, and a pallor like that of a corpse overspread his face. A second later, moved by a fiery impulse, he advanced upon his torturer, who leaped backwards with more agility than might have been expected of him, and cried out: 'Hands off, or take care of yourself!' Frank stood still, shuddered, sickened, and fell. His hardships, and his illness, and the tempestuous agitation of his mind, had so dragged him down, that he swooned like a girl, and lay there dead white on the miry road. The tramp bent down over him.

'That little quotation from his dreams appears to have hit the young gentleman hard,' said he, plunging a hand into one of Frank's pockets. 'You're as good as an income to me, my dear young friend, I do assure you.'

'Whoa!' shouted a coarse voice, which sounded almost in the ruffian's ear. Behind the hedge came a ploughman with his team. Scattering a few silver coins in his haste upon the ground, the tramp made off as fast as his legs could carry him townwards. When he found that he was not pursued, he paused, and looking at his haul, discovered that he had something less than a pound's worth of silver. Thereupon, he stood still and blamed his luck. Half an hour later, a farm-labourer passed Frank lying on the road, and being a soul with an eye to the main chance, and seeing the scattered silver, he picked it up, and sped with eager feet and fearful heart down the road, leaving the man helpless in his swoon behind him. When this amiable person passed the tramp, that scoundrel was still blaspheming over his small gains. 'I know he pawned 'em,' whined the tramp, 'because he walked into My Uncle's straight under my nose. And just when Providence led him afterwards into the very crib I was staying in, and when I had him in a dead-faint under my fingers, that clumsy idiot of a yokel comes and frightens me away. Well, well, well. The cup and the

lip—the cup and the lip. I never *did* have luck like other people. It was well played, and I frightened him about the address. I wish I'd seen it, but I hadn't time. I wonder what he'd been up to? It might have been the Spaniard's Lane business after all, though he never gave a sign when I mentioned it.'

The next man who passed poor Frank as he lay upon the highway was a gentleman-farmer on horseback, in a hurry to get to town. He acquitted himself of duty's call by riding carefully on one side, and objurgating the senseless man for a drunken scoundrel. Then came a carter, with less brains perhaps, but more heart; and he, taking the helpless figure in his arms, set it in a comfortable posture on the bank at the side of the road, and having twice or thrice sniffed at the patient's breath, took to slapping the slender soft hands with his own horny digits until the fainting man awoke, looked dimly round him, and staggering to his feet, went blindly on.

'Hillyho, mate!' called the carter; 'you hain't fit to walk. Get into my cyart, an' have a lift.' Frank paused. He was yet half-unconscious. The carter helped him into the rough vehicle, and spread sacks for him to lie on, and then taking his seat upon the shaft, jogged on without inquiry or observation. In an hour's time, Frank sat up and looked about him, at the broad white road, and the green fields, and the bare trees and hedges. The carter turned round upon his shaft: 'D'ye feel better, mate?'

'A great deal better, thank you,' Frank replied. 'I will get down here.'

'Why?' asked the carter. 'Where be you goin'?''

He had walked quite blindly for the last two days, and was altogether ignorant of the topography of the country. He could not tell for the moment whether he were going east, west, north, or south, and the question confused him. He could only say again: 'I will get down here, thank you.'

'D'ye belong anywhere about here, mate?' asked the carter. How was he to know that his questions were embarrassing, and that embarrassment meant torture? His passenger was silent; and the carter was a little offended at this, and whipping up his horse, started a droning tune. Wishing to conciliate the man, Frank asked him how far he was going.

'As fur as Warwick,' the carter answered. 'How fur be you goin'?''

'I am going on to Warwick,' Frank answered. He passed now into a condition of sheer vacuity. He was quite purposeless, and in some sort at rest. There was a cloud about him, and he knew that he was miserable, but he had but little bodily or mental pain, and he cared for nothing. The carter had a great tin bottle of cold tea with him, and a plentiful supply of bread and meat. He shared these with his passenger, and the two sat in the cart together eating and drinking as the slow horse plodded on. When the meal was over, the cart stopped before a wayside public-house, and the horse had a feed and the carter a drink, for which Frank paid. Then they plodded on again until they reached Warwick, after nightfall. At the entrance to the town, Frank descended and proffered money to the carter, who at first refused it, and finally took it, and having gravely spat

upon it and pouched it, lumbered off in the darkness. It suited the wayfarer to be lonely, and he wandered heavily about the streets, looking for a house in which to pass the night. He saw no announcement of lodgings anywhere. The night was late, and most of the houses were in darkness; and caring little, he wandered through the town and out of it. The skies were clear, and the moon was nearly at the full. The words came into his mind as if somebody had whispered them—Purposeless, hopeless, lost.

(To be continued.)

### SOME SINGULAR CHARACTERS.

EVERY generation has its eccentrics, its curious characters, its mysterious men; exciting the ridicule, wonder, and curiosity of more commonplace people. Here are a few for the entertainment of our readers.

The year 1866 saw the end of René Lartique, a Parisian of more notoriety than reputation; a man of regular habits, who had spent the best part of the last fifteen years of his life in the Palais-Royal. Every morning at ten o'clock, clad in a patched coat, buttonless waistcoat, ragged trousers, and a rusty old hat, he would install himself in his particular corner at Tissat's restaurant; there to remain eating and drinking until three in the afternoon, by which time he would have got through half-a-dozen bottles of wine. He then walked up and down the garden until the clock struck five, when he returned to his seat for another meal, which occupied him until half-past nine, his time of departure. Such a customer might reasonably expect a little favour at the restaurant-keeper's hands. He did not meet with it. One day Lartique craved credit for his dinner; the lady presiding at the *comptoir* demurred to complying with his request; whereupon calling one of the waiters, Lartique went with him into the office, and unbuttoning, took off a broad leather belt, and shewing the astonished garçon two hundred gold pieces of a hundred francs each, tossed one of them into his hand to settle his bill—and Tissat's knew him no more. Thenceforward his patronage was bestowed elsewhere; but he continued to visit the Palais-Royal as regularly as before, and eat and drink in the same fashion, until he fell, as he deserved, a victim to over-indulgence.

The Mysterious Oriental—so dubbed by the Parisians in default of knowing his proper patronymic—did nothing to call forth astonishment or disgust. He was simply a Persian gentleman, to be found wherever lovers of gaiety congregated, of whose antecedents nobody apparently knew anything. Upon his death, however, the mystery which had surrounded him was cleared up by M. Chodzko, Professor of Oriental Languages at the College of France, furnishing *Galignani* with the following account, professedly taken from the official annals of the empire of Persia: 'In the year 1219 of the Hegira (1802 A.D.), the Shah sent an embassy to Bombay; and the envoy, Hadji

Khalil Khan Kazbini, was received with great consideration. Two hundred soldiers of the East India Company's army were given as a guard of honour to the mission, which was lodged in the most splendid palace of the city. Unfortunately, the servants of the ambassador, in seeking to amuse themselves, shot some adjutants—birds held sacred by the Hindus. A disturbance occurred, and words soon led to blows. The ambassador seeing all from his window, tried to interpose; when a bullet, probably unintended for him, killed him on the spot. On receipt of the news, the Governor-general hastened to send a representative to the court of Teheran to declare that he had remained neutral in the affair. The Shah believed that statement; and consented that the matter should be compromised between the Company and the family of the deceased. All was arranged in a friendly manner; and the Indian government undertook to pay a certain sum to the son of the ambassador. This child was no other than Ismail Khan, the Persian who lately died in Paris, and who for so many years had received a pension of a thousand pounds a year from England.

Taking the Professor's account of the Mysterious Oriental to be authentic, its subject had no real cause for keeping his history secret. It was different with the 'Man in Green,' who for many years spent his afternoons parading the Gallery at Brussels, never interchanging a word with man or woman. In 1871, the familiar figure failed to put in an appearance for three successive days, and the police set about inquiring what had become of him. They found him, only to see him carried to his last lodging before the week was out; but not before he had made a confession, unless the story made public regarding him was a pure invention. It was a strange one. Serving under the Russian government in the Caucasian diamond mines, he had in the course of his duties come into possession of a stone of such extraordinary size and beauty, that the temptation to appropriate it proved irresistible. That was easily done. To get away with it was not so easy. Making an incision in his neck large enough to receive the diamond, he waited until the skin had grown over it. Then he asked for a holiday on the score of ill-health, and escaping the vigilance of the searchers, reached Amsterdam with his spoil. There he disposed of it for something like twelve thousand pounds; the diamond eventually passing by purchase into the hands of its proper owner, the Czar; while the thief, keeping his own counsel, lived quietly on the proceeds of his crime in the Belgian capital.

About three years ago, a Frenchwoman calling herself Madame Lambert took a large house in Jersey. She dwelt in it quite alone, and allowed no one to cross its threshold; and all her neighbours knew about her was that she seemed to be a lady of between forty and fifty, that she was rather handsome, and wore a semi-monastic habit. On

New-year's Day 1878, this female recluse was found lying insensible in King Street, Jersey; and she died soon afterwards. Upon searching her residence, it was found she had left behind her a quantity of valuable jewellery, a large sum of money in French notes, and sundry bills of Parisian jewellers, one of which amounted to about fifteen thousand francs. Photographs of the dead woman were forwarded to Paris; and the jewellers recognised them as portraits of Madame Regnier, Madame Gordon, and Madame Bernier; but they all agreed that she was a queer customer, who, whenever she bought anything, paid in notes, taken from the recesses of her under-garments. She was also well known at Nice. But the French police could give no information as to her real name; and there being no identification, a coroner's jury, four months after death, returned a verdict accordingly.

A rare good fellow, a man of infinite mirth, was butcher Wilson, the fattest and funniest man in Romford, albeit he was eccentric alike in his shop-keeping, eating, and worshipping. His bills were written in various colours and divers hands; for he was an admirable penman, and delighted in exhibiting his proficiency that way. Instead of sitting down to dinner like anybody else, Wilson would take a joint in his hand, put a quantity of salt in the bend of one arm, a small loaf under the other, and stroll through the streets until he had eaten all he carried. He was a capital singer, and went early to church on Sundays, to amuse himself and the congregation by singing psalms until the minister took his place in the desk; and one fast-day distinguished himself by remaining in church in the long interval between morning and evening service, going from pew to pew repeating the Lord's Prayer and singing appropriate psalms, until he had performed his devotions in every pew in the church.

Tobin's Rolando would have applauded the young fellow of independent means, who, more than fifty years since, taking apartments over a breeches-maker's shop in New Bond Street, expressly stipulated that no woman was to put foot in the rooms while in his occupation; and to obviate all excuse for feminine entrance, had whatever he required placed outside his door. In other respects, Mr Sturgis was a model lodger, paying liberally, and giving no trouble, going off to his club regularly every day at the same hour, returning only to dress for the evening, which he invariably spent abroad. Time sped on; the breeches-maker died, leaving business and lodger to his son; after some years, he too died; and at Mr Sturgis's urgent request, the widow kept on the house, until the woman-hater's turn came to die, in the lodgings he had occupied for fifty years; leaving behind him a fortune of a hundred and sixty thousand pounds.

Even more afraid of woman's wiles was Anthony Tripp, who, for aught we know to the contrary, still exercises the rights of citizenship in New York state. So unsociable a mortal was Anthony, that he held intercourse with his own sex only when it was inevitable; but if a woman approached his domicile, its door was instantly barred, and the proprietor made for the cellar. This hater of womankind was a man of so little curiosity, that

although he dwelt within a mile and a half of a railroad, he had never set eyes upon it. He might have met a friend to his liking could he have made the acquaintance of a certain resident in Lambeth, London, who boasted that he had never slept in any house but that in which he was born; and that in his fifty years of life he had never seen Buckingham Palace, the British Museum, or the Crystal Palace; never been on the Thames, or entered a railway carriage.

People not infrequently talk as if intemperance were confined to drunkards, instead of its being a vice taking many shapes, all having the characteristic of rendering a victim oblivious of the duties and decencies of life. Magliabechi with all his wondrous knowledge was but a poor creature; and men of lesser note have made themselves worse than ridiculous by their eccentricities connected with books. Mr Ryan, librarian to the Kilkenny Library Society, made books his idols, denying himself every luxury and not a few necessities in order to add to his collection; the well-furnished library of which he was custodian being insufficient to satisfy his literary cravings. He lived in the upper part of the Society's premises, but admitted no one to enter his rooms for any purpose whatever. On his sudden death in 1866, their privacy was perforce invaded. His bedroom, or what passed for such, was found to contain nothing in the way of furniture save an old sofa, which had served him for a bed, upon which lay a pair of old blankets, his sole nightly covering. Piles of books were heaped up promiscuously in every direction. So in his sitting-room there was scarcely space to move for dust-covered volumes, of which the owner had apparently made very little use, contented, like many another collector, with merely having acquired them.

A wealthy eccentric living in a French provincial town was not open to that reproach. He dwelt alone in a secluded house, admitting no one but a charwoman, who prepared his meals; and a news-agent, who brought him thirty or forty journals at a time. One day even they could not obtain admission, and the police were called upon to intervene. Upon entering the solitary bedroom in the house—a room as squalid as it well could be—the recluse was found dead on the bed, which could only be reached by passing through a ravine, the sides of which were composed of thousands of newspapers and novels, whose perusal had been the sole delight and occupation of his wasted life.

## THE EVICTION:

AND WHAT CAME OF IT.

IN TEN CHAPTERS.—CHAPTER IX.

No time was to be lost. I went straight to the adjacent country barracks, and put the affair into the hands of the police. Unfortunately, most of the men had been drafted off, to quell some disturbance in Mullingar, the day before; but the three remaining men were put at my disposal. Under my guidance, they marched down to the public-house, effected an entrance without difficulty, and searched the place from top to bottom. Scallan had disappeared; but we found the tinker

calmly smoking a long clay-pipe in the kitchen. The nature of the crime and the vagrant character of the culprit suggested to us the importance of securing him at once in barracks; so, without pushing our investigations any farther for the present, we had one offender safely landed at the barracks, before we went any farther to capture the other. Indeed, as the head-constable informed me, the law required that my bailiff or I should lodge an information before a magistrate with regard to Scallan, and get a warrant out for his body. Previous to that, it would be advisable to have the tinker searched; as something calculated to throw light on the affair might be discovered about his person. I saw at once the importance of this. We had our prisoner brought into an inner room, where we subjected him to a rigorous overhauling from head to foot. Even the budget itself was not forgotten. We were successful far beyond our expectations, and made some very startling discoveries indeed. In one of his inner pockets we found a letter without date, signature, or address; circumstances which in themselves were calculated to excite suspicion. The contents of the letter were as follows:

Meet me in Scallan's meadows on to-morrow (Saturday) night at about half-past eleven, and we'll give the Saxon's bullocks another thinning. This will answer our purpose of chasing him out of Ireland just as well as the shooting at him or his friends would. And it is far less dangerous; for he is getting quite too good at that revolver practice, and too confident from wearing that coat of mail, which I'm told he has on him constantly. The next thing we'll hear is that he has taken to sleeping in it. Remember Scallan's meadows then, at half-past eleven on Saturday night.

So much for the letter. Encouraged by our success, I resolved thereupon to see the matter out. The time had come for action; and with this important document in our hands, it would be idle to dally any longer. It was impossible for the Major any longer to preserve his incognito; so, with the consent of the head-constable of the barracks, I despatched a policeman to request his immediate attendance there on a matter of importance. This having been done, we continued our search. In the pockets of our tinker we found twenty-five shillings in silver; an unusually large sum for an itinerant mender of pots. There was also a crumpled piece of paper, on which something almost illegible was written. It appeared to be a sort of rude programme of Ribbon meetings, from the occurrence of the names of days in the week, followed by the names of certain farmers in the neighbourhood who were suspected of being connected with the Society. The programme for every day in the week except Saturday appeared to be quite full; but, as the head-constable remarked to me, that omission was explained by the letter we had just read. We overhauled the budget last of all. In it we found a map of Castle Mahon house, demesne, and neighbourhood, with certain markings in red ink scattered through it. This I readily divined to be points of vantage, from which I could be attacked

with safety. I shuddered to observe among other spots thus marked out, the very spot where Mr Carnegie had received his bullet, as also the spot where I had surprised the tinker, waiting presumably to catch me off my guard. We found also an old rusty pistol, some gun-wads, and a handful of percussion caps. The pistol was apparently of very little use; for, besides its ancient appearance, it wanted a nipple. However, we discovered two or three such nipples at the bottom of the budget; so we came to the conclusion that the firearm in question was about to undergo repairs at the tinker's hands.

At this point of our investigations, the Major arrived. Leaving the prisoner under guard, the head-constable and I went out and spoke to him, now no longer as a Major in the army, but as a Superintendent of the detective force. He heard all we had to tell him with great attention.

'I have been leading up to this for some time,' said he. 'The crisis has come sooner than I expected, owing to this lucky chance.'

'Well, yes; the detective force has to thank chance for a good share of their boasted successes,' remarked the head-constable, who was rather dissatisfied to find that a detective had been prowling about the district without his knowledge.

'You are very hard on us,' returned the Superintendent.

'Not a bit. Mr Wharton is entitled to all the credit that's to be got out of the affair; he took the short-cut. You detectives are a slow, round-about lot.'

'Wait a while, Mr Head-constable,' answered the Superintendent, with strange self-possession, 'and I'll give you a specimen of what we are able to do. Has the prisoner disclosed anything yet?'

'No; of course not; he has not so much as opened his mouth since we arrested him.'

'Well then, to make a beginning; let me have a private interview with the fellow; I have an idea that I shall be able to squeeze some information out of him.'

'As you please, Mr Detective; but I'm afraid you'll have your pains for your trouble, as the saying is.'

'Oh, as far as the trouble goes, I don't mind. —But what do you say, Mr Wharton? Will you make it worth the fellow's while to confess? Of course, I must be able to answer such questions if he put them to me. The Queen's pardon, for instance, and a respectable sum of money to make him easy for the rest of his life? Something in that way, you know.'

'I think you may safely offer him in the Earl's name,' I replied, 'anything you like up to three hundred pounds. As for the Queen's pardon, I and my friends for me shall leave no stone unturned to obtain it.'

'Enough. After that, I think I sha'n't be long detained with him.' With these words the Major entered into the inner room where the prisoner was in keeping.

After having been closeted with him for about a quarter of an hour, he returned with a triumphant smile upon his face. 'Our prisoner has surrendered,' said he, 'and is now prepared to turn Queen's evidence. I have gleaned from him the facts of the case. These are too numerous to be at present recapitulated. Suffice it to say, that there

is to be an attack upon your cattle to-night at half-past eleven o'clock. We must be in attendance there, and catch the villains *flagrante delicto*, catch them red-handed. Meanwhile we must discharge the prisoner.'

'With what view?' asked the head-constable.

'To avoid suspicion on the part of his former accomplices. They are to suppose that our examination has failed—that, in fact, we could make nothing of him.'

#### CHAPTER X.

Night came down upon Castle Mahon. All our plans were arranged by the Major in a quiet business-like style which served greatly to allay my excited feelings. Everything about the place went on as usual; a thing which of course was vitally important to the success of our scheme, with so many lynx-eyed Ribbonmen about. On the stroke of ten o'clock the Major, true to his usual habits, retired to his bedroom. Soon after, I followed his example, and having extinguished the light, lay down upon the bed with my clothes on to await the summons for sallying forth. The household had retired for the night, and perfect stillness reigned in the mansion. At eleven the Major tapped gently at my door. I rose and let him in. The time had come for starting. By the light of the moon I could see that he was fully accoutred. The only thing that remained was to complete my own martial preparations. It was a grim enough toilet, supervised by a still grimmer *valet de chambre*. In a few minutes more I was ready. We made our exit from the Castle by the private door which the Major had availed himself of in his nocturnal rambles. *En route* for the scene of action, we were joined by two stalwart policemen and—the tinker. This latter worthy the Major absolutely insisted upon bringing with us; his presence, he said, would be important for the purposes of identification. I had no alternative but to concur, though I was far from satisfied at the position of things. I knew that I was in a strange country, amongst a strange people, whom I had infuriated by certain acts, which they had been taught to look upon with the greatest abhorrence. I knew that there were only five of us at best; and that one among our number might possibly be a traitor, luring us on into the jaws of some hostile ambuscade. Night too, added to the horrors of my situation. What was there to protect us from being riddled by the cross-fire of assassins, lurking behind the hedges along which we passed? What to prevent us from being annihilated by a horde of Westmeath savages, pouring down upon us from all sides? Absolutely nothing. I began heartily to wish myself safe out of the entire business.

But we reached the meadows without harm. Once there, we noiselessly and rapidly took up our positions according to a preconcerted plan of the Major. The particular field which the cattle happened to be occupying was square, and skirted by dense thorn hedges; lying behind which a person might be concealed from view and at the same time be able to observe everything going on about him. It was also hilly and of considerable extent; so that to invest it completely would be a matter of no small difficulty, even for numbers much greater than our own. But in the centre of

the field lay the cattle which were to be attacked ; and the Major wisely distributed us in such a manner that, from our several positions we might have them in full view, and at a given signal be able to surround an attacking party on all sides. His dispositions having been made, the Major came and lay down beside me without any further ado. Pointing out a gap in the hedge opposite to ours, he told me to watch that, as the attacking party would most probably enter by that way. This was the only remark he vouchsafed to make.

And now all around us had resumed its usual appearance. It was almost midnight ; and save the barking of a dog from some distant farmhouse, there was nothing to break the silence. In the centre of the field the devoted cattle lay huddled together, sleeping the sleep of innocence, unconscious of the doom that awaited them. The time passed slowly ; every minute seemed an hour.

At last twelve o'clock boomed stroke after stroke across the intervening valley that separated us from the far-off towers of Castle Mahon. The sounds died away on the midnight air, and all was still once more. Suddenly my heart began to palpitate with nervous excitement ; I began to hear sounds, as of persons approaching from the opposite direction. But I lay close. A few moments more, and I could distinguish in the moonlight the forms of two men entering the field through the gap which the Major had indicated to me. I saw them take a few paces into the field ; then pause for a moment and look all round them, as if to reassure themselves that they were not being watched ; then advance boldly towards the object of their fiendish purpose, the poor helpless cattle. My excited feelings prompted me to rush out from my concealment, and to surprise the wretches ere they accomplished their horrid mission ; but the strong arm of the Major, who divined my thoughts, restrained me. At last I heard a deep groan, almost like that of a human being in an agony of pain. One of the cattle had been stabbed ! Instantaneously, the Major started to his feet, and uttered a shrill prolonged whistle. In answer to this signal, we rose up simultaneously on every side, rushed upon the delinquents, and hemmed them in, so as to preclude the possibility of escape. They, paralysed with guilty fear, seemed as it were rooted to the ground, and made no attempt either to flee or to resist. Coming to close quarters with them, the Major directed the light of a bull's-eye lantern first upon one of the delinquents, and then upon the other.

Reader ! imagine my astonishment at recognising the well-known features, first, of Donnelly, my own devoted bailiff ; and secondly, those of Mr Carnegie, my quondam friend and adviser ! I could hardly believe my eyes ; but such was the fact. My surprise abating, a feeling of righteous indignation succeeded to its place ; for I now saw clearly that I had been hoaxed by two designing knaves. Yes, reader, it was all a gigantic hoax, and one, too, that had almost proved successful in its aim. This was, of course, to frighten me out of Ireland, by imposing upon my ignorance of the country and the people. The terrors with which I had been haunted for the past few weeks—they seemed like years—were all imaginary, all utterly groundless. Yet in my

own defence I must say, that the two rascals played their parts well, and might have succeeded in deceiving far more subtle men than myself. Added to this was the fact, that all the incidental circumstances of the case gave colour to their misrepresentations, and harmonised with them in a manner the most surprising. It seemed like a veritable dream.

But the Major appeared to treat the event as a matter of course—a thing to which he had been leading up all along. In a cool, matter-of-fact way he slipped a pair of handcuffs over the wrists of his prisoners, and gave them into the hands of the policemen, to convey them off to barracks. To officers of their intelligence a word was sufficient. Without more ado they marched off the ground with their captives, a glorious spoil ! the tinker, apparently in high glee, following close behind. The Major and I brought up the rear. *En passant* he remarked to me : 'You seem to be somewhat astonished at the result of our campaign, Mr Wharton.'

'Well, yes, Major,' I replied. 'I must confess that I am astonished—in fact was never more so in my life. To think of it ! Carnegie the devoted, who was at my service night and day ! And Donnelly, who wanted me to draw up his will for him ! I declare, it's enough to make one despair of humanity.'

'Clever rascals they were, Mr Wharton ; and concocted a very neat device indeed. I must do them that much credit. But then they played their hands quite too boldly, to succeed against old rookers like us.'

'You speak in the plural number, Major, despite the fact that I am as ignorant of the whole affair as the babe unborn.'

'Oh, I mean myself and that other fellow,' cried the Major, pointing to the tinker ahead of us, who, appropriately enough, had taken to whistling the *Rogue's March*.

'What, that fellow ! the tinker whom we suspected of being a Ribbon delegate !'

'The very same, sir. He is Detective Sergeant Nugent ; alias the Impenetrable, from the fact that his disguise has never yet been seen through in his conduct of a case. He is one of the shrewdest officers in the detective service.'

'Well, well ! But what about that letter which we found in his budget ?'

'Oh, only a note from Carnegie to Donnelly, which he picked up to-day somewhere about the tavern where Scallan had that drunken squabble with your worthy bailiff. You see, Carnegie was afraid that this letter might by some mischance fall into the hands of yourself or of the police, and so wrote it obscurely and without any signature. Of course Donnelly would readily understand this.'

'Just so. And Scallan didn't want to murder my bailiff after all ?'

'Nothing of the kind. There had been a long-standing feud between them, which had been aggravated of late by certain misrepresentations which Donnelly made to you regarding Scallan. The latter of course came to hear of it, and seized the opportunity afforded, to have it out in a fair fight.'

'But how did you come to guess the authorship of the letter ?'

'We guessed it from the resemblance of the

handwriting to that of the threatening letters, which frightened you so much from time to time.'

'Yes; I understand. But what am I to make of his sympathising with Scallan, and his conduct towards me when I came upon him in the demesne? Even when he was being searched in barracks, he was as defiant as the most arrant Ribbonman in the country.'

'Mr Wharton, we knew well that we had to deal with a pair of consummate knaves, who, under the guise of friendship and devotedness, were plotting your ruin. Under the circumstances, we thought it better to leave you in total ignorance of what we were at, and whom we suspected. We knew, of course, that there was no immediate danger to your person.'

'You were quite right, Major. But then there was a great deal of unnecessary humbug about his turning Queen's evidence, and so forth.'

'Well, Mr Wharton, the fact is that that rustic head-constable over there annoyed me a little when he talked about detectives and chance. I wanted to open his eyes a bit.'

'But tell me—what about that attack on Mr Carnegie the other evening? You won't be able to explain away that affair so easily.'

'Has it not occurred to you, Mr Wharton, that the gentleman in question *attacked himself*, so to speak—that he plugged a bullet through his own coat for the express purpose of alarming you? From the moment I saw him, I guessed his little game; and every successive step confirmed me in my suspicions.'

'Well, well, Major; however you may fare with the head-constable, you have opened my eyes at anyrate as to the efficiency of yourself and your assistant. He won't lose his promised fee by changing his character; and, as for yourself, if my influence can do'—

'Pray don't mention it, sir. We are greatly obliged to you for your kind opinion, but must decline your offers with thanks. We have only done our duty.'

So we reached the barracks. Next day the culprits were brought up before the local magistrate; and by him transferred to the county jail. A fortnight afterwards, they were tried at the assizes, in the presence of a crowded court. They were sentenced to penal servitude for four years—a decision which was received with universal satisfaction.

Beyond the temporary surrender of his liberty, Carnegie sustained no loss by the affair. For many years, he had been hopelessly embarrassed in money matters by a course of bad living, and had looked forward to getting the Castle Mahon agency as a *dernier ressort*. And indeed, as I afterwards learned, his chances of success would have been very good, if I had not come in to prevent them. Now, of course, all such hopes were out of the question. Accordingly, upon being liberated from prison, he did not care to return to the scene of his crimes and disgrace; but, giving his numerous creditors the slip, set sail at once for Canada. What have been his fortunes there, I know not; for he has never since been heard of.

With Donnelly, however, the case was different. Under the system of misrule which had been maintained by my predecessor in office, he had fattened upon the spoils wrung from the unfortu-

nate tenants under various pretences; or, what was still worse, obtained from them as bribes, under no pretence at all. No application for a farm was considered safe, unless an understanding had been come to with the all-potent bailiff; and no surrender of land near his place was ever made without his coming in for a corner of it some way or another; so that, from being originally a poor cotter under Mr Carnegie senior, he had risen in time to be one of the most extensive tenant-farmers in the county. By the scheme which he concocted with Carnegie, he had hoped to banish from the agency a man most unsuitable for his purposes. Again, Scallan's meadows were adjacent to his homestead; and he had a promise of them from his fellow-conspirator, as a sort of reward, in case the latter came to be appointed in my place. But fortune, so long favourable, had at last turned. To crown all, was the fact that a number of documents had been brought to light, implicating him in fraudulent acts towards both landlord and tenants. A friendly hint was given to him that an attempt to return to the neighbourhood would lead to his rearrest. He was wise enough to take the hint, and emigrated, as his partner in crime had done, to Canada. Thither his wife and family followed him, after having realised their property; a thing, indeed, which they did with all speed possible. Now that all their ill-gotten power was lost, they were glad to escape from neighbours who regarded them only with feelings of hatred and derision.

On the second day after the arrests, Scallan and his wife left the neighbourhood. The carts had at last come from Tipperary. Previous to their departure, they both came up to Castle Mahon to pay me a sort of farewell visit. As Scallan himself even in his most sober moments was not much of a talker, Mrs Scallan undertook in his name the task of apologising for the bad language he had used to me some time before. To reproduce her own words—she saw the merits of the case as plain as a pikestaff. There was no better man in the world than Scallan; but it stood to sense, that the sweetest-tempered man in the world was apt to lose control over his tongue, when under the influence of a villainous whisky combined with that of a still more villainous bailiff. So she delivered herself, and they took their leave. I have since heard that they are faring much better in their new abode than they ever did before. As for the vacated homestead, it has been allotted by me to one of Mrs Scallan's relatives—a 'daycent' Maginnis.

My wife and children have long since joined me here, to reside *en permanence* in Ireland. By the courtesy of her noble kinsman, we occupy the charming seat of Castle Mahon. Lit up by their presence, it has lost all its former dreary looks, and seems transformed into a perfect Elysium. I have got a brand-new bailiff, who does his work honestly, fearlessly, and, what is of especial importance in the case of sentimental Ireland, *with tact*. The time I do not spend at home, I devote to acquainting myself with the individual concerns of the tenants; and the result I find is, that the relations between them and myself are becoming more and more satisfactory every day. My experience is, that an intimate acquaintance with the affairs of each one on his

estate is nothing more than the duty of a land-agent. Be that as it may, it is certainly the best means of preventing such ludicrous occurrences as attended my first—and last—eviction.

### THE MONTH. SCIENCE AND ARTS.

THE opening out of the St Gothard Tunnel, the meeting of the two excavating parties within a few inches of the true direction, the behaviour of air-currents in the long alley, with other attendant circumstances, are beginning to lose the charm of novelty, and are passing into the matter-of-course category. A tunnel through Vesuvius or under the Channel would perhaps revive the interest in long subterranean borings; but the projected piercing of the Arlberg, the Simplon, or Mont Blanc will be mere feats of hewing and blasting. Meanwhile the question, How to provide proper ventilation? waits for solution. The air of tunnels is notoriously disagreeable. This objection it is thought may be overcome; and a means for keeping the Gothard Tunnel free from hot stifling fumes and pungent steam is talked about. It is to make use of dynamo-electric machines for the passage through the mountain, instead of the ordinary locomotives. The locomotives would bring the trains to the entrance of the tunnel, and being there detached, the dynamo-electric machine would be hooked on, and haul the train to the opposite entrance, where a locomotive would be waiting to take the train on. Of water-power at each end, to be had for nothing, there is no lack. This would drive the turbines employed in driving the electric machines and producing currents powerful enough for the work required. This seems, therefore, to be a fine opportunity to develop all that is advantageous in the use of dynamo-electric machines on a large scale, and to shew that they do not vitiate the air of a tunnel.

The rapidly moving comet which appeared in the southern hemisphere in February last had a head described as a faint nebulous mass with a slight central condensation, while its tail was a bright streak about twenty-five degrees in length. It was watched by observers in South America, in Australia, and at the Cape of Good Hope. It took astronomers by surprise; and slipped out of sight all too soon to allow of satisfying their curiosity, or enabling them to determine its orbit. The President of the Royal Astronomical Society points out a resemblance between this comet and one which appeared in 1843; and he asks in a letter addressed to the Astronomer-Royal: 'Can it be possible that there is such a comet in the system, almost grazing the sun's surface in perihelion, and revolving in less than thirty-seven years?'

The astronomer at the Liverpool Observatory states in his last Report that more than three thousand chronometers have been tested in such a way as to supply the necessary data for calculating the corrections required by changes of temperature. Among them are the chronometers

of the Pacific Steam Navigation Company. 'Each ship,' we are told, 'is furnished with three chronometers, which may be called *a*, *b*, *c*. The rates of these instruments are supplied from the Observatory for every five degrees of temperature from 45° to 95° inclusive. By means of these rates, the Greenwich time for each chronometer is obtained daily by merely adding the rate for the observed temperature to the error of the instrument for the preceding day; *a* is then first compared with *b*, and then with *c*. In this way the differences of Greenwich mean time between *a* and *b* and between *a* and *c* are found daily.' A few minutes suffice for the operation; but the result is important; for the ship which carried the instruments 'crossed the equator twice, and passed twice through the Straits of Magellan, and the error of longitude by the mean of the three chronometers appears scarcely to have exceeded two or three miles at any time during the voyage.'

The Academy of Sciences at Paris have conferred their Lalande prize on Mr Peters of Clinton, United States, who, by his own persevering watchfulness, has discovered forty-three of the now large group of minor planets. When the elderly men of these days were boys, four very small planets were known as occupying a position between Mars and Jupiter. By subsequent observation (in which Mr Peters has borne excellent part) the number has been increased to more than two hundred. The more the number is augmented, the more interesting do these tiny stars become to the astronomer; for they are regarded theoretically as the relics of a large planet, of which they occupy the place, subject to the general laws of our planetary system. Thus it is that the plodding observers prepare the way for the theories of philosophers.

A remarkable fact noted during Nordenskjöld's north-east voyage was that no displays of aurora were seen similar to those which so frequently appear in European latitudes. All that the hardy explorers on board the *Vega* saw was a faint luminous arc, apparently always in the same place in the latitude of the magnetic pole.

At Harvard College Observatory, Cambridge, Massachusetts, a work of some magnitude, as Mr Pickering the Director states in his annual Report, has been undertaken. It is the determination of the light of all the stars visible to the naked eye in that locality. A catalogue of four thousand stars was formed, and as each one is to be observed three times, that is on three evenings, it is obvious that the observers will have to be patient and persevering. The photometer employed in measuring the light is a horizontal telescope with two objectives. By means of two prisms mounted in front of the telescope, the pole-star is reflected into one object glass, and the star to be measured into the other. The cones of light being made to coincide, both are seen in the same field; and thus the star under examination can be compared with the pole-star, and its quantity of light ascertained to a nicety. By another series of observations, the transparency of the air at different altitudes is to be determined, and thereby it will be possible

to detect progressive changes in the light of the pole-star. It is worthy of mention here that the observatory having become cramped in its operations through want of funds, a number of persons, including ladies, have promised to contribute an annual sum of five thousand dollars during five years, and thus revive the old place into vigorous activity.

A French physicist, after study of the records of earthquakes from the beginning of the last century, finds that the disturbances are most frequent when Jupiter and Saturn are in certain positions; and from this he predicts that the number of earthquakes will be large in 1886, 1891, 1898, 1900, and onwards to 1930, where his calculations stop for the present. In one sense it may be regarded as fortunate that the world must wait six years before the prediction can be verified.

Forestry is a subject much more studied in France than in England. One of the Under Secretaries of State is Director of Forests, with control of a large body of foresters. It has been arranged that these men shall make notes of such natural history phenomena as fall within their observation, to be delivered to the central Meteorological Office at Paris. It has been said of meteorologists by an eminent Frenchman, that they too often neglect observations of animal or vegetable physiology; and he recommends that 'the dates of the arrival and departure of migratory birds, the leafing and flowering of plants, and the ripening of corn, should be noted in each district. And, in the interests of agriculture, there should be careful registration of the date of sowing and harvesting the principal crops, and of cutting the hay near the observatories. This would soon give for each department facts of considerable practical importance; for it would be possible to predict more than a month beforehand, within two or three days, the date of the harvest, and furnish agriculturists with other data of equal utility.' Long series of observations of plants would yield evidence as regards slow changes of climate: an interesting question in pure science. The employment of hundreds of foresters as observers is a good step towards gathering in the results indicated in the foregoing suggestions.

At a meeting of the Essex Institute, held at Salem, Massachusetts, an account was given of the pine-trees, which are the principal forest-trees of that county; and the speaker expressed a hope that America would follow the example of Europe as regards the planting of trees and rearing of woods and forests. He recommends that the important functions performed by forests in relation to the health, wealth, and proper development of a country, should be brought into the common schools of the State as a subject of study. Then, as he remarks, 'in the half of a generation, the young men and women of the land would be prepared to understand the justice and wisdom of State enactments, which now almost all would consider hardships. To educated intelligence, rather than to force of law, should the community look to see the pine-tree respected and valued.'

Mauritius, it appears, is taking pains to introduce trees from other countries and rear plantations. Among the most thriving are the eucalyptus, teak, and mahogany; but it is found

necessary to protect them during their early years from hurricanes by barriers of bush.

Among the plants classed by botanists as Euphorbiacea, one variety which grows abundantly in Natal yields a gum which after careful trial is found to protect iron from rust, whether on land or in the water. An iron plate coated with this gum was sunk during two years in one of the docks at Chatham; and was as clean when taken out as when first put in. Judging from this result, an iron ship coated with the euphorbia gum should be safe from corrosion and from foulness; that is, the clinging of barnacles and weeds under water. The gum when laid on and dry, is said to have a glassy appearance; and we are told that when applied to woodwork, it prevents the ravages of the white ants.

At the last annual meeting of the Entomological Society, the Chairman made a few remarks, which are significant when taken in connection with what precedes. The number of members is too few. 'Do we not,' says the Chairman, 'ride our own special hobby-horses a little too hard, and so deter those who are not specialists from joining us? Could we not organise a series of periodical Reports on injurious insects, and so secure the adhesion of agriculturists and horticulturists? Can we not obtain for our *Transactions* more papers of an anatomical or philosophic character, more papers on classification or distribution, on the morphology and development of insects, on the light thrown by entomology on the problems of general biology? Papers like these would be readable by naturalists who are not specially entomologists.'

That Australia is rich in flowering plants and shrubs becomes more and more evident as botanists pursue their researches in that country, and publish the results in the *Proceedings* of the Linnean Society of New South Wales and other journals. In one of their recent numbers, an interesting account is given of the flora of tropical Queensland, with description of certain magnificent aquatic plants, among which are the grand Pythagorean bean—or pink water-lily, as the Australians call it—which in ancient days was so plentiful in Egyptian waters. The appearance of the lagoons when this plant is in bloom is especially beautiful. Of another species, with double white flowers, we are told that its leaves, instead of lying flat on the water and floating wide, stand up above the surface in a close cluster, giving one the idea of their having been blown in a heap by a high wind, presenting a singular effect far as eye can reach.

The Rev. Professor Houghton, of Dublin, has published a second edition of his interesting and instructive work, *Principles of Animal Mechanics*, in which, though it contains nearly five hundred pages, he has not been able to use more than a tenth part of the materials at his disposal. His object is to shew 'the mutual advantages obtainable by anatomists and geometers from a combination of the sciences which they cultivate.' Anatomists will gain by the increased precision which numerical statements must give to their observations, and geometers will find in anatomy a new field of problems opened out to their investigation.

'I have met,' says Professor Houghton, 'in the course of my investigations with numerous instances, in the muscular mechanism of the verte-

brate animals, of the application of the principle of least action in nature; by which I mean that the work to be done is effected by means of the existing arrangement of the muscles, bones, and joints, with a less expenditure of force than would be possible under any other arrangement, so that any alteration would be a positive disadvantage to the animal. If, as I consider probable, this fact should prove to be of much wider occurrence in nature than these instances shew, it may serve to give us some slight glimpse of the mechanism by which the conservation of species in nature is secured.

Sheep-disease is a subject which has been much discussed notwithstanding the turmoil of politics. By naturalists and graziers, one disease produced by a parasite termed distoma, is known as 'flukes;' and the way in which the sheep become infested by this and other parasites is an exceedingly interesting question in natural history. Interesting too as a question of profit and loss; for the saving of our woolly flocks would be enormous if a remedy could be found. Is there no one among the many aspirants for fame and fortune who will set himself earnestly to work, make out the whole history of the case, and find a remedy? He would be in every sense a benefactor.

Another question is water-supply, an important question for Londoners, who are called on to pay heavily for water 'still unfit for dietetic purposes,' being 'excessively polluted with organic matter.' In some quarters it is thought that one central authority would be able to bring in pure water—water absolutely free from the slightest taint of sewage, at one-third of the cost of taking over the property of the water-companies. That which was possible to ancient Rome, ought not to be impossible to modern England; and if our rivers, as appears from official evidence, must be sewage drains, there are springs enough in our northern and western hills and under our southern chalk to supply an endless stream of bright pure water.

It is refreshing to learn that there is at least one uncontaminated river—the Uruguay, which has been found by analysis to be perhaps the purest stream in the world; for the water thereof contains somewhat less than four parts of solid matter in one hundred thousand, even at a distance of five hundred miles from its source. The Parana, on the contrary, which, uniting with the Uruguay, forms the great estuary known as the river Plate, is of very muddy appearance, from the large quantity of clay which it holds in suspension.

In a paper on 'Explosive Agents applied to Industrial Purposes,' read at a meeting of the Institution of Civil Engineers, a compressed powder was described which has great advantages over granular powder, 'on the score of convenience and comparative safety, as well as of greater efficiency.' A new class of nitro-glycerine explosives, devised by Nobel, was also described. Of these, the so-called blasting gelatine may be taken as the type. It is preferable to dynamite, being more potent, and less liable to danger in actual use.

The advantages of circular saws with movable teeth are more and more appreciated in America, and are thus set forth. The teeth being drop-forged, from bar steel, are regular in size and shape, and of better material than it is possible to use for the whole saw; they pass better and more

smoothly than solid teeth through wet and fibrous wood; the loss of time in filing is obviated, as also the loss in diameter of a solid saw consequent on the filing. If a tooth is lost from a solid saw, the mill must stand still until the saw has been refilled into working order; but the sawyer who has a bag full of little 'bits' (movable teeth) which cost three-halfpence each, is independent of accidents, and can replace a lost tooth without delay. The advantage thus gained in places far away from a saw-factory may be easily seen and understood. There are many such places in our own colonies.

Shell-mounds containing relics of the primeval tribes of Japan have been found at Omori, near Tokio. A full description of the mounds and of the articles collected has been published by the Science Department of the University of Tokio, with ample illustration in eighteen plates, wherein ethnologists may find examples for comparison with the relics discovered in other countries. A kind of wheat which was cultivated in Egypt in the ancient days has been found in the Lake-dwellings of Switzerland, also the seeds of a species of flax; from which the conclusion has been drawn that the Lake-dwellers were of African origin.

Mr Gillman of Detroit, in writing on 'The Ancient Men of the Great Lakes,' makes a few remarks about skulls, which anthropologists generally would do well to remember. 'Cranial capacity,' he says, 'must not be implicitly regarded as of physiological import. Otherwise we should have the anomaly of the civilised, refined Peruvian with a skull the cubic contents of which are nearly identical with those of the Australians and Hottentots, and are largely exceeded by those of the brutal North American Indian. Unless the *quality* of the brain can be represented at the same time as the quantity, brain measurement cannot be assumed as an indication of the intellectual position of races any more than of individuals.'

Beaumontague—a substance which has recently been brought prominently before the notice of the public in connection with the ironwork of the ill-fated Tay Bridge—is a composition of borings, brimstone, pitch, sal-ammoniac, rosin, and beeswax. The borings—that is, the particles of cast-iron cut away in the boring of a cylinder or any other casting—are small and fine. For the preparation of beaumontague, all the above substances, added in equal quantities—save the sal-ammoniac, of which but little should be used—are placed in an open vessel over a fire, and there allowed to remain, with occasional stirrings, until the mixture melts down into a thick viscid body. The vessel is then taken off the fire; and the contents, when somewhat cooled, are poured out, and rolled by hand into small balls about two inches in diameter, while still hot and viscid. These balls rapidly cool and harden, and are then laid aside until required. The method of filling a hole in an iron casting with beaumontague is performed without much difficulty. The balls are broken up into small lumps, and the operator having filled the hole with these lumps, presses them in with a red-hot iron, upon the application of which the beaumontague is rapidly melted by the heat, and speedily fills up the angles and crevices of the hole. When this operation is completed, the surface is filed smooth, a little foundry-sand rubbed over it; and in five minutes the beau-

montague has set hard, and all traces of the former flaw have been removed.

It will be thus seen that Beaumontague is a substance used for disguising defective castings, a fact which ought to demand judicial inquiry.

### FLEUSS, THE DIVER.

We lately presented an account of Mr Fleuss's discovery of a method of diving and living under water without recourse to air-tubes. As corroborating what we stated regarding this remarkable person and his discovery, the following appears in the *Times* of April 27.

'Mr Fleuss made his first appearance at the Royal Aquarium, Westminster, last night, in the large tank built for the whale and used by the seals. His remarkable performance under water was better seen than it has been elsewhere either during the few months of the exhibition of his apparatus at the Polytechnic or at Brighton. He can stay under water for five hours without an air-tube or any other communication with the surface; and this absence of encumbrance gives him much greater freedom than other divers possess. He can, for instance, lie down and bend his body in any position without fear of being lifted or floated up, and without suffering from the obstruction of the long pipe which usually connects the head of a diver with a boat above. In short, he possesses the principal advantage which distinguishes an animal from a plant; he moves independently instead of being rooted to one spot. Fore-shortened in the water, he presents a curious appearance, with great goggle eyes in his burnished helmet, a strong water-tight dress, and water-boots. The spectators amuse themselves by throwing pence for him to pick up, or by writing messages to him on cardboard, which he reads and answers on cardboard, always under water. He sharpens his pencil under water, gives and receives signals with a cord, and is to experiment on the submarine use of the telephone. At Ryde he walked for a quarter of a mile under the sea; at Brighton he went down in five fathoms by the chain pier in rough weather. If he could eat under water, Mr Fleuss says he could stay for a longer period than the five hours which he gives as the ordinary limit. Yesterday afternoon he remained two hours and seven minutes under water in the Aquarium, and again went down for half an hour in the evening. In a short lecture on his apparatus which Mr Fleuss gave in the evening immediately on returning to the upper air, he stated that his method is no secret, that it is patented, and that the specifications are accordingly published. In every draught of breath we draw we take in a certain amount of oxygen with four times as much nitrogen. A little of the oxygen becomes fixed in the form of carbonic acid, and the air thus deteriorated becomes unfit to breathe. If, however, the place of the missing oxygen is taken by a fresh supply, the mixture becomes again fit for breathing. According to Mr Fleuss, he takes down compressed oxygen to supply the place of that which is breathed: in other words, he has invented a set of anti-lungs, which perform a function precisely the reverse of that of the lungs

proper. This was confessedly a rough, popular, hasty, and generalised explanation. A more scientific account may be expected from the lecture on the subject which Dr B. W. Richardson, F.R.S., who is specially qualified for the investigation by his well-known experiments on ozone, is to deliver at the Society of Arts. It will be remembered that it was to the same Society that Professor Tyndall explained the fireman's respirator, which has since proved in practice so valuable an instrument in straining the bad air at fires before it reaches the lungs, and so enabling the fireman to breathe what air is left among smoke and noxious vapours. Mr Fleuss's method is still more effectual, because he carries his own supply of oxygen with him in a compressed form, and has thus been enabled to breathe in an atmosphere in which there is no appreciable quantity of air at all. He states that he has gone through fire-damp (carburetted hydrogen) and choke-damp (carbonic acid), and could exist in the charged receiver of a gas factory. In the great helmet and in the hollows of his armour there is room for a certain quantity of air, and this is kept fresh and constantly renewed by a stream of oxygen, the pressure of which he regulates by a tap at will. To refresh himself, he increases the flow of oxygen; and when he requires no stimulus, diminishes it. Mr Fleuss is a young and vigorous man, who has served in the steamboats of the Peninsular and Oriental Company. His apparatus is certainly very ingenious and effective, and well worthy of attention.'

### THE LEAFY TIME OF JUNE.

The leaves are green upon the bough;  
The swallow's on the wing;  
The cuckoo's note, from yonder wood,  
Doth all melodious ring.

It is the time when every bird  
His mellowest pipe doth tune:  
Of cloudless skies, of summer flowers,  
The leafy time of June!

The lilies white, upon the pool  
Their golden stamens show;  
Their snowy cups bright-mannered in  
The silver stream below.

And like a meteor flashing swift  
And sudden from the sky,  
Darts, arrowy, across the reeds  
The jewelled dragon-fly.

The rose's scent and meadow-lay  
Perfume the summer air;  
The buttercups and cowslip bells  
Their yellowest vestments wear.

For 'tis the balmy blossom time,  
When Nature doth attune  
All hearts her beauties to enjoy—  
The leafy time of June!

## ENCOURAGEMENTS TO UNTHRIFT.

THE public discussions that have lately taken place with a view to promote the cultivation of thrift, would seem to indicate a belief that things have gone a little too far in the way of mis-expenditure of means and want of foresight. Possibly there may be some adventitious object to serve in these oratorical displays; but at all events they are the echo of what we have been endeavouring to inculcate for a long course of years—a reasonable thriftiness in living, along with the pleasant consciousness of self-reliance. Unfortunately, everything that can be said by the press or by public speaking in this direction is largely neutralised by a vast organisation of charitable aid in all great centres of population. Through the well-meaning but heedless operations of philanthropists, the humbler and other sections of the community are systematically depraved by offers of succour under the pressure of such difficulties as happen to overtake them. The persons so operated upon may very fairly say: 'What is the use of being thrifty? When the worst comes to the worst, we have hundreds of charities to fall back upon. For every disease that may afflict ourselves or our families, medicines and medical attendance can be had for nothing. Trying to save would deprive us of our comforts, and be ridiculous. Carry on! It will be all the same a hundred years hence. As the old song goes:

When the house is running round about,  
It is time enough to flit;  
For, we've aye been provided for,  
And so will we yet.'

There, in defiance of Solomon's proverbs, of the apothegms of Franklin, and admonitions without end, lies the whole philosophy of the thriftless. They know they will be provided for somehow, and give themselves no concern about the future.

Among all the public charities that are habitually abused, those dedicated to the alleviation and cure of disease are the most conspicuous. Whether these charities are supported by endowments or

by voluntary contributions, the result is the same. They are shamefully taken advantage of. While beneficently rendering aid to those who from no fault of their own are unable to pay for medical treatment, they offer an encouragement to unthrift and pauperisation. This we pointed out a year or two ago in an article entitled 'Mischievous Philanthropy;' and it is made more abundantly evident in the recently published work on 'Pay Hospitals,' by Mr H. C. Burdett (Churchill, London), in which the facts rest on unchallengeable authority. The matter has become so flagrant, that propositions are being made to set on foot Hospitals and Dispensaries for the benefit of which a reasonable sum is charged. We shall select a few from the many instances of abuse in the free hospital and dispensary system as presented by Mr Burdett.

The first important case is that of the Royal Free Hospital, London, where 'it has been shewn that the out-patient department is abused to the extent of seventy-four per cent., if we include the whole of those patients who are able to pay to a provident dispensary. In other words, out of six hundred and forty-one cases investigated, one hundred and sixty-nine, or twenty-six per cent., were found to be fit objects for the charity.' This was the hospital which George Moore, the philanthropist, so strenuously promoted. What would he have said to the facts just quoted? 'Everywhere,' says Mr Burdett, 'the number of patients applying for free medical relief has increased to the extent of nearly fifty per cent. in our large towns during the last ten years. Thus, in London at the present time, one in four of the whole population receives gratuitous medical relief when ill.' In the space of ten years in Birmingham, the number of patients treated gratuitously rose from sixty-six to a hundred and four thousand. In Liverpool, in 1877, one in two of the population relied on medical charity. 'It thus becomes evident that the present system of medical relief must be remodelled. It injures all classes. It demoralises the patient, deprives the poor of their lawful inheritance, defrauds the

medical profession, and hampers the hospital finances. It is hopeless to expect that people will put aside even a penny a week for medicine and a doctor's attendance when they can get as much for the mere asking. As long, therefore, as the hospitals give their relief so freely and indiscriminately, we must expect that the people will use this stepping-stone to pauperism, and be deprived of that happiest of results, the healthy feeling of self-help and independence, which belongs to those who do their duty in providing for the necessities of life.'

It is curious to observe how some large towns make enormous efforts to increase the size of their free hospitals, and encourage all and sundry to frequent them, as if they were performing a great work of beneficence, when probably a half or a third of all who are received as patients are able to pay for medical attendance. The boast of some hospitals is that no applicant who on examination requires to be medically treated will be turned away. In one sense, it is a noble principle of action; but closely considered, it includes a disregard of how many persons in decent circumstances are pauperised. That people who are tolerably well off are admitted to these free and easy hospitals, is obvious from the newspaper obituaries. As if signifying a break-down in independent principle, families do not seem to think there is anything derogatory in announcing that one of their members died in a hospital supported by charitable contributions. It may be presumed that in such cases the feelings have been so blunted, that medical treatment for nothing is taken not as a charity but as a right.

There is a certain drollery in these misconceptions; but they go beyond a joke. The rearing of huge hospitals to meet the increasing demands of patients forms a heavy though voluntary tax on the community, and not less onerous is the annual expenditure. Lately, a very grand new Hospital, styled the Royal Infirmary, was opened in Edinburgh. It was built, and will be supported, by private contributions. According to a public statement, the buildings have cost three hundred and forty thousand pounds. The number of beds that can be provided for patients is six hundred. Reckoning the interest on the cost at four per cent., and the cost of maintenance, the outlay on each bed will be about seventy-eight pounds per annum. If fewer than six hundred beds are fitted up, the cost of each will be proportionally increased. Any one, therefore, who remains in the Infirmary for a month costs the public at least six pounds; without reference to the value of medical attendance, which in the interests of the medical school is gratuitous so far as patients are concerned. Facts of this kind should lead to some sobering reflections.

With a view to limit the number of applicants for gratuitous board, lodging, and medical attendance, the plan of charging a registration fee of one shilling has been tried at several free hospitals; but it is found to introduce fresh evils. Idlers go about begging for money, under pretence of procuring a shilling to pay the fee. This plan has besides the demerit of excluding the absolutely poor, who ought properly to be the recipients of the charity. Everything considered, it comes to this, that the right thing to do is to set up Pay Hospitals and Pay Dispensaries on the plan of Provident

Societies. That is to say, by paying a small sum per week or month, a family would receive medical succour in the event of any ailment. Any such scheme properly worked would encourage thrift, and be the means of relieving the public from enormous claims now made on them for charitable contributions. It is mentioned that Provident medical schemes, varied according to circumstances, have proved successful in France, Spain, Italy, Norway, Sweden, Germany, Austria, America, and the Colonies. Schemes of this kind are in operation in some parts of England, and it would be satisfactory to see them more generally extended.

Other economic plans commend themselves for support. As, for example, attaching Pay-wings to free hospitals. An excellent Pay-wing has been attached to a free hospital at Montreal. Wherever they have been rightly begun, hospitals of this useful description have proved to be of immense use to isolated individuals who have no dwelling-house of their own, and who sensitively shrink from encroaching on a charity. In some quarters, objections may be raised to Pay-wings. It may be urged that they are not sufficiently detached from the charity departments, and would prove a failure. In that case, let Pay Hospitals of moderate dimensions and of different varieties to suit the means and tastes of applicants, be tried. In this species of minor hospitals, under the name of Sanatoria, Paris and its environs offer good specimens, generally, we believe, the property of physicians. They are in fact private boarding-houses for medical treatment; the accommodation and the charges made being adapted to the different classes of persons who take advantage of them. In some cases, the inmates of Pay Hospitals are not excluded from employing their own medical attendant. Mr Burdett's book may be consulted as to experiments of one kind or other that have been made respecting schemes of payment both for hospital treatment and for the dispensing of medicines. To our mind, the subject is involved in no material difficulty. Where there is a will there is a way. The chief obstacle, as we apprehend, to the introduction of any such schemes for lessening dependence on charities, may be expected to come from existing institutions. Over a long course of years, interests and prejudices have grown up, and are tenacious in their vitality. We happen to know a case where an energetic attempt in a large city was made, for the sake of economy in management, to coalesce the public charities into kindred groups. The idea met with general favour; but it also incurred formidable opposition. Interests in charities were viewed as trade interests. The attempt was worse than a failure. It ended only in a fresh organisation.

It would be absurd to affect an ignorance of the progress of thrift, notwithstanding the many powerful influences exerted in an opposite direction. The tokens of improved habits meet us in all directions. The vast sums now deposited in the Savings-banks. The numerous instances of workmen buying and inhabiting neat and salubrious dwellings, a circumstance largely owing to Provident Building Societies. The diffused taste for reading. A higher style of dress among both sexes. The universal culture of the young by means of compulsory education. We would add, the greater leisure to think, and disposition to

inquire. On the bare surface of society, the change for the better is at once manifest in comparison with what we remember two generations back. The human being, so to speak, is of more value. On the whole, things are going on very well, though they might be better. We still observe, especially on the occasion of holidays, a prodigious mass who, delivering themselves up to idle and mischievous habits, seem not to have advanced one iota. They have relatively gone back. In their rough looks and ragged wretchedness, their vacantly staring about with their hands in their pockets, their pouring in streams into public-houses, their fights and brawls, of which we hear enough in the daily newspaper reports—in all this, and in more that could be mentioned, we have the flagrant proof that society is yet a good way from the millennium. In plain terms, in the midst of a higher civilisation there is a conspicuous stratum of barbarism, that as a heavy drag retards everything.

If let alone to experience the consequence of their improvidence, this dark mass might possibly be diminished; but on the contrary, it is pampered and kept alive in all its hideous recklessness by the meddlesomeness of philanthropists, who cherish it as a choice field of operations for their crotchets. Misery is rendered perennial instead of casual. We hold that as long as every species of misexpenditure and bodily ailment is liable to be succoured by charitable associations, there will, of course, be Encouragements to Unthrift.

W. C.

## A LIFE'S ATONEMENT.

BY D. CHRISTIE MURRAY.

## CHAPTER X.—AUTOBIOGRAPHY.

*It was a conscious smile, which recognised its own charming existence.*

WHY do I always think of Wrethedale as I knew it in the summer-time; and why am I quite baffled now that I try to recall it as I first saw it on that dismal winter-night? An old west-country friend of mine, hunting me up the other day, found me inwrapped in fog within two hundred yards of Temple Bar, and his very mention of the place created in these gloomy chambers a sense of sunshine and green fields. You may seek in vain for Wrethedale now. The quaint cross-timbered houses with their thatched eaves and diamonded windows have disappeared, and trim villas line the road. The lilac's bloom and the laburnum's dropping gold no longer overhang the dusty, crooked, little highway. The swinging tavern-sign has at length taken the flight which on gusty days it used to meditate of old, and the tavern has followed it. The big tree on the green—the green itself—they are as clean gone as that by-gone self of mine who knew them. I sometimes feel so regretful over these changes, that I mourn for the little village as though for a friend departed.

The place is opulent and new-fangled. A line of railway with sides of bare earth intersects the lovely landscape, and shapeless bridges offend the eye. The sweet quiet is broken by hoarse screams and pantings. Rural silence has fled from the very heart of its home, and if you would be in

the country, you must leave Wrethedale behind you. I have a right to be aggrieved at all this.

In my Black Country home I had had but little chance of falling in love with Nature, whose countenance was so torn and scarified as to be scarcely lovely. Not even there, of course, could the heart of a child go without some recognition of the brightening of the sky, and the softening of the air in spring-time, some gladness in the languor of the summer afternoon, some welcome for the solemn peace of autumn's skies. But here Nature wore the loveliest of faces always, and most lovingly wooed me.

My schoolmates for the first week or two were just of the average caste, exciting neither special likings nor dislikings. I discovered to my own surprise on one occasion that I could be roused to fight in self-defence; and having fought and conquered, and established my footing, lived in tolerable peace and comfort. The Rev. Charles Davies was a good little man of consumptive tendencies. He was eminently painstaking and pious, and for the rest, commonplace. A good little man who did his work dutifully according to his lights, which were not brilliant. He had a good little wife, who coddled him and us, and spent herself wholly—the good little soul!—in kindly offices for all about her. But they are phantoms here, and have no purpose to fulfil in this story. The good little clergyman's good little wife took a natural interest in my forlorn condition. Sally's first visit was made on a Saturday afternoon, and she was admitted to see me in the schoolroom, at that time deserted by its usual occupants, who were romping and shouting to their hearts' content in the gravelled ground outside. While Sally and I were in the full flow of mutual confidence, Mrs Davies came into the schoolroom, and entered into talk with Sally, and drew from her my little history. This was a subject over which Sally always cried; and Mrs Davies, who was not a strong-minded woman, cried a little with her, and told her she was a good kind soul, and said she should always be welcome to come and see me. I also cried a little, I remember, and was a good deal petted and generally made much of. I missed Sally heavily at first, but grew gradually reconciled, and found a friend in the manageress of our childish affairs. Life glided along smoothly enough for a while in this quiet place and under these happy auspices.

It was the first of May, and we were promised a half-holiday. The Reverend Charles and his two ushers were in the best of earthly humours; and I, with some half-dozen others, was lazily reciting the products of Madagascar, when Mrs Davies entered the little side-class-room in which we sat and summoned her husband from the school. When he returned, as he did in a few minutes, he brought a new boy with him. 'This, young gentlemen,' he said, 'is Master George Gascoigne.—You will learn the names of your companions, Gascoigne, by-and-by.'

The new boy was a slim and pallid youth, with long golden curls and handsome blue eyes and a girlishly beautiful face. He was quite self-possessed, and inclined his head towards us at this introduction. I, remembering my own awkward advent, and the painful shyness which overmastered me when the Reverend Charles delivered

himself of his little set speech on the occasion of my introduction to the school, was almost awed by the pleasant and easy smile of this new-comer. The smile was a genuine bit of sunshine, and gave the face, for the moment that it dwelt there, both warmth and colour. Perhaps I mix my memories here once more, and confuse first and later impressions; but I have often thought since then, that any grown-up creature, looking at that lad's face, should have seen what great things lay within him, and how easy it might be to turn them all to evil. Any grown-up creature with the slightest faculty for observation might have gained some knowledge of the boy's character from his smile, and having gained the knowledge, might have used it for his good. For as I knew afterwards, he was keenly susceptible to all opinions, and as ductile-hearted as a girl. But nobody saw or cared, and he, my best and dearest friend, and my worst enemy and his own, grew up; to fulfil his destiny perhaps.

I have spoken of his smile. Let me try to say what I observed in it then—child as I was—and noticed in it many a time afterwards. It was perfectly frank and spontaneous. But it was a conscious smile, which recognised its own charming existence, and recognised your appreciation of it; and in its pleasure in itself, and in your pleasure at it, lived a little moment longer than it would otherwise have done. It captivated me at once, I know; and that afterlight in the face which seemed to recognise my sensation and to gladden in it, was sweeter than the smile itself. He was five years older than I, and was tall for his age. It was significant of the best and the worst of him that he signalled me out for friendship from the first. It was significant of the best of him, because he was always kindly to the weak, and disposed to cheer such as were alone. It was significant of his worst, because half of all he did was done for the sake of admiration and applause, and because he chose me mainly for my unreasoning worship.

There are men who have forgotten that they were ever children, and who seem to fancy that boyhood is an almost characterless age. In such cases an appeal to memory would be useless. Let them give themselves for an hour to the study of a group of school-boys, and discover to their astonishment that the finer marks of human nature are there developed as well as those broad and simple lines of characterisation, which have alone accredited themselves to their unobservant eyes.

The fashion after which the Reverend Charles Davies treated his pupils to a half-holiday was about as significant of him as the term by which our small diversion was known was significant of it. The pupils were duly marshalled in orderly military fashion, were told off by fours, wheeled into fours, and solemnly marched through some three or four miles of country road, which led nowhere in particular, except that the circuitous windings of our march always landed us at the school-gates. I had already made three of these stiff and monotonous excursions, and looked forward with no great joy to the fourth. Yet, as became the first of May—which is not always so sweetly smiling as in justice to its poetic fame it should be—the fields were thick with flowers, the hedges were already giving sign of that fair bloom which bears the name of the month it owes its life

to, the skies were clear, the wind was fresh and balmy, and things generally were vastly more inviting to the school-boy soul, outside the school than in it. Even in one of those foolish rows of four, it was possible to taste the sweetness of the air. Even if forbidden to dash at large through those floral fields, one could look at them. There was a certain jolly old blackbird who in the course of our last walk had flittered after us, and taunted us with our want of freedom, along a good quarter of a mile of road, keeping himself carefully behind the hedge meanwhile. Surely *his* society was worth something, though one shared it as a close-bound unit in fifteen monotonous rows of four.

We were all marshalled in the playground and arranged in order when the Reverend Charles emerged from the house accompanied by Gascoigne. We stood there in solemn row whilst the meek little clergyman walked along the rank and inspected us front and rear, like a general among troops on a review day. Gascoigne followed him; and when the little man had completed his inspection and had come round to our front again, the new boy slipped his hand into the master's and stood there by his side. The Reverend Charles looked down upon him with an air of rebuke, as I fancied; but Gascoigne met his glance with a smile of such confident affection, that the small man patted him on the shoulder and smiled in return.

'With whom will you walk, Gascoigne?' asked the Reverend Charles. 'You may choose your own companion for to-day.'

It was a little thing perhaps, but it won my heart at once. Gascoigne left the master's side and took his place by me, and touched me lightly on the shoulder. It was a little thing, but I had been busy with fancies concerning him, in my imaginative childish way, and he was so much older and stronger and taller and handsomer than I; and altogether, as I have said, the action won my heart. I looked up at him with a shy gratitude; and he looked back upon me with that splendid aspect of affectionate protection which I learned afterwards to know so well, and to take so much delight in. Our ways are differently ordered now, and wide apart; but if I could undo the past—his past and mine—and stand beside him again with that unquestioning acceptance of his worth, how gladly I would do it!

We were the chief institution of Wrethedale, and the village was proud of us. It is just possible that we robbed here and there a garden now and then, and that we were upon occasion a nuisance. But on these public days of holiday display the village turned out and audibly admired us; and one or two of the oldest of Wrethedale's inhabitants used to bid God bless us as we passed. They were unused to processions in Wrethedale, and a very small show excited the good folk's emotions. So we tramped with fair regularity of step through the winding village street. The smith and the landlord of the *Wrethedale Arms* took off their caps to the Reverend Charles, and old crones courtesied at the cottage doors. The children ran after us and before us and beside us, and turning suddenly round upon us, stared shyly and ran on again. The wagoner, gay in honour of the sweet month's advent, touched his tanned forehead as we filed past him, and drew his ribboned team

aside to let us go by in unbroken order. The road was firm beneath our feet, and neither damp nor dusty. The hedges were green on either side; and now and again, where a gate broke in upon the hedgerow, we had glimpses of the pleasant western country right or left.

I suppose the May weather touched the juvenility which was certainly still vital in him somewhere, for just as we reached Old Bunn's strawberry gardens—a favourite resort of the people of the little country-town hard by—the Reverend Charles halted and addressed us. 'Young gentlemen,' said the Reverend Charles, 'you may now walk out of rank.'

There was a rush and a yell. The mob of young gentlemen went headlong down the lane.

Let me recall the place and the time. Beyond Old Bunn's gardens run three or four cottages, each with its pleasant little plot in front. On the opposite side of the lane, a pond full of tadpoles and young frogs, and strange creatures neither tadpole nor young frog, but in various intermediate conditions. I remember them keenly because of Gascoigne's lecture. Then beyond the pool a gate, over which one mild young heifer pushed an inquiring head, as if to ask what all the noise was about. Beyond that a barn at a corner of the highway, all ivy from base to roof, except for the great oak-doors. Beyond the barn, a dense mass of willows, white in the May-day wind. And over all the May-day sunshine, and the sense of liberty, and the freshness of the spring; and over even these the exultant gladness of the school-boy heart. Round the corner to the left, hidden until now by the thick-blossomed hedges, an old farmhouse—rackety, tumble-down, picturesque. A broken gate opening on a littered fold-yard. To the right that dense mass of willows, white in the May-day wind, feathering off gradually, with glimpses of the country between. And then a sudden swerve, and a brook with a fallen sapling across it, making its silver wavelets brawl a little; and beyond the hay-meadow on the other side such a stretch of country as you may seek in vain elsewhere. And over all the May-day sunshine and the sense of liberty and the freshness of the spring; and over even these the exultant gladness of the school-boy heart.

I write this after midnight, on a cold March night. The sound of London's latest traffic is in my ears. A market-cart goes rumbling towards Covent Garden. Yet a minute ago I was back in those glad fields. The brook rippled and the birds sang again. My old schoolfellows were calling one another round about me. My new friend was by my side. I shall take his hand no more; but, O Gascoigne, before I lay my pen down for the night, let me sit awhile and fancy that you too are back in those old scenes, and that you think of them and of all the broken history which followed them, with such repentance as matches my forgiveness.

I dwell upon that day because it belongs to him and has grown for me to be a part of him. We spent the whole afternoon together, and he charmed me. Even in those early days he charmed everybody, and exercised a subtle influence over all with whom he came in contact. Below the fallen sapling an old wooden baulk ran across the brook, accompanied half-way by a

decrepit hand-rail, which failed just where it might have begun to be of service. At the far end of this baulk rose a magnificent elm, which overshadowed the water, and mixed its boughs with those of the willows on the near side. The Reverend Charles had given up his scholars for the moment, and had resigned himself to the situation. He was peacefully walking along the road which ran by the brook-side. He had his hands folded behind him, and his hat very much at the back of his head, and he was evidently giving up his good little heart to the serene enjoyment of nature. Gascoigne pointed to him laughingly, and fell into so ludicrously accurate an imitation of his gait that I laughed in return. Mimicry I soon discovered was one of Gascoigne's special faculties. We sat down on the baulk together at the water's edge, and fell into conversation. To speak more accurately, Gascoigne cross-examined me and drew me out, and most skilfully and pleasantly manipulated me.

'You and I,' he said, 'are going to be friends. What's your name?'

I told him.

'I shall call you Jack.'

I was really honoured beyond measure. I told him my little story. I described Sally and the little Black Country cottage; and told him of the young carpenter, and of Aunt Bertha and Mr Fairholt and Uncle Will and Polly. There was a feeling of freshness and even a little feeling of daring in making these revelations to a stranger. He had put his arm about my neck with a caressing protection which was natural to him, and as he had said, we were friends. I quite despair of conveying to any reader who may not have a similar remembrance the strength and rapidity with which my affection for him and my admiration of him took root and grew. He listened with such an unaffected pleasure; he questioned with so delicate and natural a tact, and with such a kindly interest, that my story was told quite easily and without embarrassment.

He returned my confidence, and told me all about himself. I gathered as the result of it that his parents were not wealthy, but that he was an only child, and had great expectations from somebody, who meant to send him to college and to make a man of him. He told me that he meant to be a clergyman. Like Mr Davies? I ventured to ask him. No, he answered laughingly; not at all like Mr Davies.

There we left the brook and wandered back a little, and he told me all about the frog and tadpole metamorphosis. We gathered wild-flowers, and he knew the names of all—the scientific names of some. His father, he told me then, was a scientific man, and amazingly clever. He had written books, and knew a great deal more than Mr Davies. This last in answer to my queries. Then he led me on to literature, and listened with a smiling friendly interest while he drew me out on that point. One of his chief charms then and always was that he had in perfection the art of putting an inferior at ease. In after-days, when his wish was fulfilled and he took his first curacy, I have seen him exercise that art with farmers and farm-labourers and the dull mechanics of the village. They were all charmed with him; as indeed how could they have been otherwise?

Our talk went on until the Reverend Charles had

gathered his strayed flock together, and was continued as we marched in military order home. He gave me a lift over a rough bit of Valpe's *Latin Grammar*—on whose mazes I had just entered—that evening; the first of many. To my infinite delight he took the spare bed in the room I slept in. Circumstances conspired in favour of our friendship. School-hours parted us of course, for he was far ahead of me, as was only natural. But in the playground we came together again, and in those games in which I was unable to join I had at least the satisfaction of seeing him outshine all our companions. He was an Admirable Crichton, and as good as he was clever and handsome. Some of the meaner spirits envied him; but even Envy was shortly silenced. He took and kept a place among us from the first which seemed to have been either reserved or created for him, and in our young republic he was president. His popularity never weaned him from me. From the promise made on the first afternoon of our acquaintance he never deviated. We were friends.

The holidays came at last, and with the groom came Sally to escort me home. Gascoigne and she had grown to know each other long before this, of course. Sally was in love with him; and he, as much for her own sake as for mine, was quite impressed with Sally. We parted most affectionately, and met again much sooner than we had hoped. For it turned out that Gascoigne's father was an old friend of Mr Fairholt's, and that after having left him unvisited for many years, as old friends will, he came over one day in the first week of the holidays, bringing Gascoigne with him. I was by this time—the first shyness of our reunion having disappeared—reinstalled as *jongleur*, and Polly had again assumed her regal state. A wild legend, into which I had pitchforked Gascoigne as knight-deliverer, and which I regret to say was afterwards imperiously set aside by Polly in favour of The Three Bears, was interrupted by Sally, who ran up to tell me that Gascoigne had arrived. I blush to admit that love and fealty were alike forgotten for the moment, and that I fell precipitately down-stairs to greet my friend, leaving Polly lonely with that weird and incomplete legend.

The house and its inmates alike seemed changed since that misty winter-night on which I had left for school. Mr Fairholt, who never noticed me, now went about in a slow, listless, broken way. Uncle Will was less cheerful than of old; and a settled melancholy had fallen on Aunt Bertha. Even Sally was saddened in some way that I could not understand. When I reached the hall, Mr Fairholt was greeting his guest, and Aunt Bertha was talking to Gascoigne. Uncle Will entered at the same moment, and with a momentary cheerfulness took my companion and myself in charge, and shewed Gascoigne the stables and the dogs. When we returned to the house we found that it had been arranged that the visitors should stay until the following evening, and Gascoigne and I settled down thereupon into talk. In the midst of it I remembered Polly, whom I straightway produced and introduced. He took her up in his arms and kissed her—a proceeding at which she feigned to be displeased. She overlooked Gascoigne's error shortly afterwards, and trotted after him everywhere, with a wondering

admiration of the things he did, and an admiring wonder at him, which satisfied me completely.

In consideration of Gascoigne's presence, I was allowed to sit up a little later than usual. We sat together as it grew dusk in the little room commonly used by Aunt Bertha, and I was relating the story of the first appearance of the face. Gascoigne had his arm about my neck as usual, and I was looking up at him as I spoke, when I noticed that he had ceased to listen, and was peering into the dusk with a somewhat alarmed expression. I stopped; and he pointed through the window, asking in a whisper: 'Jack, what's that?'

I looked out also, and saw the figure of a man, who came silently and with a stealthy crouching run across the lawn. I was just about to cry out in fear when I recognised the crouching figure as that of Uncle Will. But almost before I was assured of this I was again frightened. A hand was laid upon the window-sill, and a head slowly rose above it. The head turned from side to side, as if in suspicious watchfulness.

'A burglar!' whispered Gascoigne.

Uncle Will came nearer, with a slower step and with still greater caution, until he was near enough to lay a sudden hand upon the shoulder of the man who crouched beneath the window. At the touch the man started to his feet, and I fell back from Gascoigne's hold with a shriek. 'The face!' Horrified as I was by this sudden apparition of my phantom, I saw all that happened outside and heard the one word spoken. All that happened was that my phantom, turning round, threw his hands upwards and backwards and recoiled. In a flash of time he recovered himself and fled, and melted like a shadow in the shadows of the night. Uncle Will's first gesture was the same. He also recoiled with his hands thrown back and up, and so for the merest fragment of a second they faced each other. As my phantom turned to fly, the other precipitated himself towards him as if to seize him. He was too late, and lost his footing. Recovering himself, he followed that flying shadow with a cry:

'Frank!'

#### THE QUEEN'S GUARD.

THERE are many ancient customs still kept up in London which are more ornamental than useful, and amongst them we might class that which provides military guards to certain portions of the metropolis, despite the existence of a police force which is more than sufficient for all ordinary purposes.

In the days when regal splendour was deemed to be part and parcel of the life of a nation, such guards as were placed over the various palaces of the sovereign were really necessary to impart a martial and imposing appearance; but in these times of comparative simplicity in the matter of court ceremonies, and in the midst of loyalty so universal, their real usefulness has in a great measure departed.

Whether the sovereign is in or out of town, however, the visitor to London is absolutely certain of witnessing a military spectacle on any day of the week in the usual 'Guard-mounting' which

takes place at St James's Palace. This, as our readers are aware, is the old palace of the kings and queens of England, and the building in which official receptions, such as 'levees,' 'drawing-rooms,' &c. are frequently held.

As the clocks chime half-past ten in the morning the sound of martial music in the distance warns us that the 'Queen's Guard' is approaching; and presently one can descry the tall bearskin caps of the 'Household Brigade' towering above a motley crowd of onlookers, to many of whom the enlivening strains of the band are as good as a breakfast. Indeed it is averred that amongst the crowd there are persons who have never missed one 'Guard-mounting' for many years past, and who are as conversant with the military customs of London as the most veteran Guardsman.

As the 'Guard' comes nearer, we are able to tell which of England's famous regiments it is whose turn of duty has again brought its members along the 'Mall,' which has been trodden and retrodden by them or their predecessors for more than two hundred years past. In fact, as we gaze upon the present scene we may very easily picture to ourselves another of a similar character, by substituting for 1879 the year of grace 1679, when the 'King's Guard' in its cavalier costume and large standard, marching along surrounded by a crowd of dainty courtiers, presently halts and lowers its colours as the Majesty of England passes by with its accompanying *spaniels*! The Park itself is very much changed since then, and in its present beautiful aspect would scarcely be recognisable to the noble loungers of the Restoration period, though perhaps the sturdy soldiers who are now treading its malls are not one whit different from those who fought at Worcester and Dunbar.

The Queen's Guard consists nowadays of five officers and about one hundred and forty rank and file. This is divided into three portions, or to use a military term, sections—namely, the St James's Palace Guard, or 'Queen's Guard' proper, which numbers three officers, four fifers and drummers, three sergeants, and sixty rank and file. It bears in its charge for twenty-four hours one of the colours or standards of the regiment; the Queen's colour on royal birthdays or if Her Majesty is in town, and the Regimental colour on ordinary days when the Court is absent.

The other sections form the Buckingham Palace Guard, and the Tilt Yard Guard—now called the 'Horse Guards' Parade,' the site of the tournament ground in olden times—each consisting of an officer, a bugler, and about forty rank and file. At one time there was also a number of smaller guards, which used to be posted on the British Museum, the National Gallery, the Duke of York's School, and other places of minor importance. The police have, however, long since been substituted for the military in these places, to the evident relief of the latter, and without detriment to the public welfare. In summer-time, and more especially on the day when Her Majesty's Birthday is kept, an impressive ceremony takes

place on the Horse Guards' Parade previous to the mounting of the guard, which is called 'trooping the colours.' Then the State colour of the regiment whose duty it is to furnish the Queen's Guard that day, is brought out of its hiding-place in the regimental orderly-room, and given over, with much pomp and circumstance, to the custody of the Queen's Guard for the next four-and-twenty hours; after which it is generally cased and returned to its former resting-place by the drum-major, escorted by two duty-sergeants.

At the Birthday parade some members of the royal family are usually present, the Prince and Princess of Wales having been there on nearly every occasion since their marriage; while the Duke of Cambridge, as Commander-in-chief, is always surrounded on this day by a numerous and distinguished suite, including all the foreign military *attachés*. The bands of the three regiments are brigaded together; and as the troops present on the review-ground consist of the picked men of the famous brigade of Foot Guards, together with the Life Guards, and their band in its State dress, the military spectacle is exceedingly imposing.

After the ceremony, the musicians—many of the members of which are celebrated artistes—march with the Queen's Guard as far as St James's Palace, playing all the way; and performing opposite the Prince of Wales's residence, some of the choicest *morceaux* from their musical repertoire, the programme commencing with the performance of the National Anthem. While this is being played, the two guards which are relieving and being relieved, present arms and lower their colours. The regiments take their new clothing into wear on this day; and the drum-majors don their State uniform, the costliness and gorgeous character of which we mentioned in the article on 'Drummers and Fifers,' in our number for 30th September 1876.

The officers of the Queen's Guard consist of a Captain (ranking as Lieutenant-colonel); Lieutenant (ranking as Captain); and a Second Lieutenant. We have already explained in these columns how it is that the officers of the Guards bear a double rank—that is, an officer who would be simply a lieutenant in the line, would be in the Guards a 'lieutenant and captain,' and so on through the other ranks. This strange custom is, under the Warrant of 1871, abolishing the purchase of commissions, to be allowed to die out. It was an anomaly which has frequently caused confusion and jealousy.

In the old days prior to the Crimean War, the Queen's Guard used to 'mount' in the Old Palace Yard of St James's; and when the old guard had marched away, the colour of the new guard was placed in a post in the centre of the yard, where it remained flying till sunset, under the charge of a sentry. It was then removed into the officers' messroom, and brought out again in the morning. The post stands there still, but its 'glory has departed,' as the colour is seldom displayed except at levees. On 'Waterloo Day,' a surviving veteran from Chelsea Hospital used to attend at the Palace and tie a bunch of laurel on the colour with a piece of the Waterloo medal ribbon; but the later battles of Alma and Inkermann having eclipsed the splendour of Waterloo, the custom was discontinued.

On royal birthdays, every member of the

guard under the command of the captain, is allowed a sum of money—to drink the health of the Prince or Princess whose birthday it is—which averages about fourpence per man. The officers receive a guinea each. On Her Majesty's birthday the sum is doubled. Every officer on mounting guard for the first time, and on promotion, is expected to pay his 'footing' in a sum which is distributed among the non-commissioned officers of the guard. This, however, is an old custom, which is now sometimes more honoured in the breach than the observance.

Within the precincts of the old Palace stands the Guard-room, the former discomfort of which has now been partly remedied by certain improvements; and here the rank and file have to make themselves as comfortable as they can under the circumstances, through a long dreary day and night, each man taking his turn every four hours to do two hours' 'sentry-go' on some dull and lonely post in the vicinity of the Palace and Park. On mounting guard the senior sergeant reads aloud the standing orders for the guard, and the orders for the sentinels on the different posts; and this reading is repeated by one of the other sergeants to the first batch of sentries when they have been relieved. Each sentry before being relieved from his post is supposed to repeat to the new sentry *verbatim* the orders of the post; and some amusing incidents often happen in this way, especially when the sentry is a recruit, and being uneducated perhaps, is unable to remember the exact terms in which the order is couched.

Next to the privates' guard-room is that of the officers—or speaking more correctly, the officers' mess. Here the officers of the other sections of the Queen's Guard, and the officers of the Cavalry Guard, which also mounts at the Tilt Yard every morning, come to dine in the evening; the government allowing an annual sum of about two thousand pounds for the purpose of keeping the mess up. The luxurious fittings of this place and the comfortable bedrooms are in strange contrast with the cold passages and dreary walls of the privates' guard-room. The only duty which these officers have to perform is to inspect a batch of sentries once or twice during the day, and to go the 'rounds' once during the night, the remainder of their time being passed in lounging to and fro between the 'Guards' Club' in Pall Mall and the guard-room mess.

The 'rounds' take place at eleven o'clock P.M., and at one and three o'clock A.M.; the officers going in the order of their rank, the captain of the guard (the colonel) being first. The eleven o'clock rounds are called the 'Grand Rounds,' when the colonel is accompanied by a sergeant, a drummer carrying a lighted lantern, and two privates; the sergeant bearing the keys of the Palace gates. The officer certifies the next day in his guard-report that he personally visited the sentries at such an hour and found all well.

Upon their approach, the sentry challenges, either by word of mouth or a stamp of the foot. The sergeant replies in the same manner, and the sentry presenting arms says: 'Advance, grand rounds! All's well!'—the word 'grand' being omitted in the case of the one o'clock and three o'clock rounds.

People were once in the habit of endeavouring to frighten sentries who were posted in a lonely

spot; and not only were these silly jokes practised by civilians, such as domestic servants and others, who imitated the tricks of the notorious 'spring-heeled' Jack, but by some of the officers themselves, who should have known better. The conviction of an officer for an unmanly offence of this kind, put an end to all such foolish proceedings.

One of the most curious 'guards' in London is that which is termed the 'Bank-Piquet,' and which proceeds to take up its nightly quarters inside the Bank of England every evening at seven o'clock all the year round, remaining there until seven the next morning. It is an officer's guard, and consists besides of a drummer, two sergeants, and over thirty men. Each man receives a shilling from the Bank authorities immediately on his arrival, the sergeant's share being two shillings. The officer is allowed a dinner, laid for two, with three bottles of wine, and is permitted to invite a friend. The guard or piquet is comfortably housed, each man being 'served out' with a watch-coat and a blanket; and sentries are posted during the night at the bullion vaults and the counting-house parlour.

In the Opera season, a small sergeant's guard is posted at Covent Garden, for which duty the men also receive a shilling each, although they are there not more than four hours. At the magazine in Hyde Park there is also a sergeant's guard, where the sentry 'paces his lonely round,' prepared for anybody who molests him at his post or attempts to injure the building.

With the exception of the Opera guards, which are more for ornament than anything else, these military guards are the relics of turbulent times; though none can deny that the 'Queen's Guard' is to a certain extent useful as well as ornamental; for it gives amusement to the country visitor, and a free musical entertainment to the idlers of the Parks; while the sentries themselves impart a certain liveliness to the many gorgeous though empty palaces which adorn the busiest city in the world.

## JACK QUARTERMAIN'S VISION.

IN THREE PARTS.—PART I.

'You will remain my friend, Val; won't you; and if anything should turn up, you will let me know, old fellow?'

'Of course, Jack. You may rely upon me. But is it really necessary for you to go? Can't we patch up a peace somehow, old boy?'

Jack Quartermain shook his head sorrowfully. Things had gone too far for an honourable compromise. Mr Verschoyle had openly said, in the presence of all the clerks, that he considered Mr John Quartermain culpably negligent, if not actually guilty of the loss of several valuable deeds and papers from the inner office of Verschoyle and Saunders. These papers all related to the property of Jessie Hamilton, Mr Verschoyle's niece and ward. And what made it hardest of all on poor Jack was that he and Jessie had quarrelled a short time before; they had had hot angry words about Val Saunders, Jack's 'guide, philosopher, and friend,' and fellow-clerk.

Jack Quartermain was Mr Verschoyle's nephew,

his only sister's only son. A poor, friendless, delicate, orphan baby, he had been left with the wealthy solicitor, and brought up by him as his own child; and Jack repaid the care and kindness he had received, with the warmest gratitude and esteem. Love, where Harry Verschoyle was concerned, seemed out of the question. Even Jessie Hamilton, with all her sweet winning ways and tenderesses, could awaken no stronger feeling than tolerant affection in the grim, stern old man whom she called uncle, and who was her sole guardian.

Lawyer Verschoyle's life was an unusually sad one. In his young days he had loved and married like other men, and his wife was the very idol of his existence. A sweet, gentle, timid, home-loving little woman was Ella Verschoyle; a woman who found all her happiness in her husband, her children, and her home, and had no thoughts, hopes, or ambitions beyond. One great nervous horror of Mrs Verschoyle's life was water; she could not bear either to go on it or walk by it. She had been born at sea in the midst of a raging tempest; and a deep-rooted aversion to ocean and river seemed a part of her very nature. Harry Verschoyle thought it would be a famous thing to cure his sweet little wife of her childish nervousness. They lived at Putney, in one of those pretty houses overlooking the river; and in the long pleasant summer evenings, Harry and his fellow-clerk and chum, Tom Saunders, used to thoroughly enjoy a pull up the river to Richmond, or down to Battersea. Sometimes Ada Leslie—an aquatic young lady from Hammersmith, who not only loved the river, but could handle an oar dexterously, and who was engaged to Tom—joined them; and it used to be a real grief to Harry to leave his young wife standing on the shore looking wistfully after him.

'Ella, I'm positively ashamed of you,' he said one evening as Tom Saunders and Miss Leslie pulled past. 'How jolly it would be if you could handle an oar like Ada. Do, darling, come for a little row with me, just as far as Hammersmith.'

'Do you really wish me to, Harry?' Ella asked with a nervous little shiver. 'I have such an unconquerable horror of the water!'

'Yes; and it's so childish, dearie. I'm on it evening after evening, and nothing happens. And look at Ada Leslie and lots of other girls. You don't think I would willingly take you into danger, Elia?'

'No, Harry; but I feel so frightened at the river.'

'Then you must try and be a little braver, for my sake, little woman. Let's follow Tom up the river; he'll be so surprised!'

'Very well, darling, since you wish it,' Ella replied. 'But may I take the children, Harry? I shall feel braver if Madgie and Bob are with me.'

'Certainly. They'll enjoy it immensely. Madgie will put you to shame, I'm sure; and Bob is a regular young duck. But wrap up well; for though the evening is so fine, it's rather chilly. Put a thick shawl over your head, darling; and

tie something round Madgie's neck, while I get out the boat.'

In a few moments Mrs Verschoyle and Madgie—a sturdy, sunburnt little body of four—and Bob, a daring mischievous lad of six, took their seats; and Mr Harry Verschoyle was pulling vigorously up the Thames. It was a glorious evening, late in September, with a clear purple sky, dotted with a few faint silver stars, and a great yellow moon climbing lazily up the dusky arch. The boat glided along smoothly, for Harry was an accomplished oarsman; and little Madgie fairly screamed with glee as she leaned over the side and held her tiny hand in the clear cold water.

Before they had been on the water half an hour, a fog began to rise, and in a few minutes everything was obscured by one of those thin floating gray mists that come and go so capriciously on the Thames. Harry turned back at once—he knew the river thoroughly, and was not in the least nervous; but his timid little wife fairly trembled with terror, and folded little Madgie close in her arms. Bob, in the bow of the boat, was singing in careless childish unconcern the refrain of a song he had often heard his father and Mr Saunders sing; and occasionally Mr Verschoyle himself would join in Bobbie's chorus of:

Row, brothers, row; the stream runs fast;  
The rapids are near, and the daylight's past.

About half the return journey was accomplished in safety, when suddenly, without a moment's warning, the boat came into violent collision with another boat and—capsized; and in an instant Harry Verschoyle, his wife and children, were struggling in the dark cold water. After the first moment of panic, Harry recovered himself, and struck out in search of his wife, calling her and his children by name, but without receiving any reply. At last, through the gloom—for the fog had grown denser—he thought he saw his wife's form rise to the surface; and seizing her in one arm, he struck out boldly for the nearest shore. By the time he reached it, he was too faint and exhausted to perceive that the woman he had saved was not his wife, but Ada Leslie. Ella, Madgie, and her brother were at the bottom of the river; and Tom Saunders, whose boat had run into Harry Verschoyle's, was picked up lower down more dead than alive.

Verschoyle never quite recovered that tragic occurrence. For many months he was so ill that his friends despaired of his recovery; and when his physical health began to improve, his reason seemed to be seriously impaired. Time, however, that does all things well, brought physical and mental strength; but even that great healer failed to bring back the sunshine and joyousness to the prematurely aged, broken-down, remorseful man. At seven-and-twenty he was gray and grim and hard, a cold, stern, almost repulsive man of business. His pleasant house by the river-side was sold, and he went to live over the office, in which he became junior partner, in a great dark silent house, in a gloomy street near Westminster Abbey. Ten solitary weary years passed away, and he became senior partner, head of the firm where his father had worked for thirty years; and Tom Saunders, his old chum, was first his head-clerk, and then his junior partner. They had a steady, intensely respectable business; and

Harry was unremitting in his attention to it, and made the names of Verschoyle and Saunders a synonym for honour and integrity.

After ten years' utter isolation, spent in toil and care and loneliness, Mr Verschoyle received into his house the only surviving sister of his wife, and her little daughter Jessie; but for nearly two years Mrs Hamilton failed to effect any change in the stern, austere life of her brother-in-law. He kept to his own apartments, and took no part in the domestic concerns of the little household. Then his late sister's husband, Lieutenant Quartermain, lost his life while with his regiment in India; and his little boy Jack, now an orphan, was left to the guardianship of his uncle and the motherly care of Mrs Hamilton.

For a few years things were brighter; the ring of childish laughter echoed through the house. Jack's unblushing face would greet Uncle Harry at the hall-door every evening, and his hands drag him into the drawing-room. Jessie, demure and modest, would slyly smile approval and encouragement through her thick auburn curls, or from behind her sampler, and almost unknown to herself. Lawyer Verschoyle was becoming domesticated, and almost affectionate; when, to his renewed grief, Mrs Hamilton was smitten with a fever, which carried her to her grave; after which the lawyer relapsed into his stony solitude. The children went to school, and only at vacation-time did they visit the office at Westminster, and not always even then, for both Jack and Jessie made personal friends amongst their schoolmates, whom Uncle Verschoyle always gladly gave them permission to visit, though he sternly forbade their ever inviting any one home.

And so the years passed away till Jessie was seventeen and declared 'finished;' and Jack Quartermain sixteen, and thinking seriously of a profession. Then Mr Verschoyle offered him a stool in the old established office, a home in the house, and a partnership in perspective; a post which Jack accepted gratefully. The routine of the lawyer's office was not at all distasteful to him. He had a good deal of application and a fair capacity for business, and gave very general satisfaction to his employers.

The years that had passed since Mrs Hamilton's death had confirmed Uncle Harry in his grimness and taciturnity. It was almost impossible to draw him from his dingy study and unceasing labours. The cheerful sound of Jessie's piano and Jack's well-cultivated baritone only caused him to lock his door impatiently, and drove his thoughts back to Madgie and Bob and his never-forgotten wife. He allowed his niece and nephew to amuse themselves pretty much as they liked—a liberty which had resulted in a closer tie than mere friendship between the two young people—and in the long winter evenings Val Saunders was a frequent visitor. He was the younger son of the other partner of the firm, and had a post, not of great trust or pecuniary value, in the outer office. Val did not love the law, or anything else which required work or thought. He would have made a capital butterfly; for the only thing he seemed fit for was to flit joyously and brightly through existence, sipping every sweet as he went—lingering over every pleasure, and skipping over every disagreeable with the most enviable ease and unconcern. A frank, happy disposition, a hand-

some face, a manner in which merry, boyish audacity and frank, eager confidence were happily blended, made Valentine Saunders a favourite wherever he went. His laugh was musical, his smile pleasanter still, his voice soft and sweet like a woman's, and he had a way of looking up at you when he spoke which was altogether charming. Nothing could exceed his good-humour except his good spirits; and his stock of both seemed unfailling.

Jack and Val were close friends in spite of the fact that the latter's thoughtless magnanimity and generosity not unfrequently got the former into pecuniary difficulties; but Jessie Hamilton, who was the repository for all Cousin Jack's secrets and troubles, didn't quite believe in Val. It was not altogether clear to her lesser intelligence why Jack should do the greater part of Val's work, and Val spend, or rather squander the greater part of Jack's money. Besides, Val's behaviour to herself was not at all satisfactory. He knew that she and Jack were long since pledged to each other; still he paid her the most ridiculous compliments, wrote sentimental verses in her scrap-book, and sent her valentines, which she put in the fire; and otherwise made himself objectionable, in spite of his handsome face and fascinating manner. Once Jessie ventured to question the prudence of Jack in having such an expensive, inconsiderate friend; and he flew into a fine temper, as a young man sometimes will when the young lady of his heart presumes to see a fault in the friend of his youth.

Jessie, he reasoned, was like all the rest of her sex, jealous, suspicious, and unreasonable! She hated his friends, and was intolerant and overbearing; and Val Saunders was the best, the dearest, the jolliest fellow on the face of the earth; and forsooth, it was rather soon for Jessie to begin to find fault with his friends yet! This, and much more to the same purpose, Jack blurted out in the heat of his wrath; and then he rushed off and told Val all about it; and that young gentleman innocently let Miss Hamilton know, and then was dreadfully sorry for having done so. Jessie was angry, of course—angry with herself, with Jack, with Valentine Saunders; and though incapable of sulks in a general way, she was certainly very cold and haughty, and a little scornful in her treatment of Mr John Quartermain for a few days. At the end of the week the climax of poor Jack's troubles was reached. Mr Verschoyle missed some papers from his office relating to the very modest fortune of Miss Hamilton. No one had access to the safe in which they were kept but Jack and the junior partner, Mr Saunders. But as the latter denied all knowledge of them, Mr Quartermain alone was held accountable.

'Perhaps Jack has hidden them for a lark,' Val said to Mr Verschoyle when he heard of the loss. 'He and Jessie have had a rumpus, and he may have done it to tease her.'

Mr Verschoyle puckered up his eyebrows into a very ominous frown. Val's suggestion formed itself into a certainty in his mind; and before he even questioned his nephew about the missing deeds, he felt quite convinced that he had abstracted them, for fun or for malice, as the case might be. Jack indignantly denied having

done any such thing. He was a man of business, and never carried practical jokes into the office. He knew nothing whatever of Miss Hamilton's papers; and as his uncle seemed to mistrust his words, and accused him of culpable negligence before the whole office, he then and there resigned his situation.

Jessie did not believe him guilty. She was very sweet and tender and sympathetic; and wept copiously when Jack spoke of going abroad; but after a little she saw that it was really the best thing he could do. Mr Verschoyle accepted his nephew's resignation in grim silence. It was in his opinion another proof of his guilt. He made no attempt at reconciliation, offered no advice or assistance; in short, simply ignored John Quartermain's existence from the day he left the office till the day he started by the *Scotia* for New York en route for California, where he was going to make his fortune and come back for Jessie.

Miss Hamilton was not a very demonstrative young lady; she did not make frantic vows of eternal constancy, or promise impossibilities in the way of correspondence; but there was a quiet earnestness about her that was reassuring. She said she would surely let Jack know if the deeds were discovered or if Uncle Harry relented. She bade him be of good courage, faithful, loyal, honest, and persevering, and he would command success. For herself, she could wait. Besides, she could not think of leaving Uncle Harry for years and years.

Jack went away more hopefully and cheerfully than might have been expected. Poor in purse and character—for many of those who had known him all his life more than half suspected him of having abstracted the deeds—friendly, and almost aimless, his prospects were not very bright; still he started hopefully, resolved to conquer the most adverse circumstances, strong in the consciousness of his innocence, and fully satisfied that he left behind him the truest love and the truest friend ever man had. With Jessie and Val to watch over his interests at home, he had nothing to fear; and so he set off one dismal November evening, with the unalterable resolution of returning to London a rich man, or never returning at all.

'Good-bye, old fellow. I'll write every mail and tell you everything,' Val said, dashing away the tears that kept brimming up in his eyes. 'Whoever fails, you may rely on me, Jack!'

'Good-bye, old fellow. God bless you!' returned Jack huskily. 'I never had a brother, Val; but if I had, I couldn't care more about him than I do about you. Take care of yourself—and of Jessie. And don't forget me in my exile, Val. And mark my words—the deeds will turn up all right yet.' And then they had a final hand-squeeze, and then the train which was to convey Jack to Liverpool, writhed slowly out of the station, and was gone.

Valentine Saunders gave himself a shake, buttoned up his ulster, thrust his hands into his pockets, and walked away from Euston Station. But presently the mud underfoot and the fog overhead became too much for him, and hailing a hansom, he jumped in, and desired the man to drive to Westminster. 'Poor Jack! What a wretched night for travelling,' he mused. 'He'll be half-dead, super-ultra frostified before he reaches

Liverpool. I'll miss him. But after all, he's better away. And now to tell Jessie.'

But to Mr Val Saunders's intense amazement, Miss Jessie Hamilton refused to see him.

### THE METAMORPHOSES OF INSECTS.

AFTER many centuries passed in observations, the words of the poet Ovid are confirmed by modern science: 'Our bodies are transformed; what we were yesterday, what we are to-day, we shall not be to-morrow.' Living beings only exist under the conditions of perpetual change. Put an animal or plant into the scale, and carefully determine its weight; very shortly after, the equilibrium alters, the body becomes lighter as the result of life and living, and until new matter in the shape of food be received, the original condition of matters cannot be reproduced. From the time when the egg is broken, the functions and forms of the young creature are ever varying. In the marvellous edifices which we call organised beings, that rush of life-giving principle which animates nature is perpetually demolishing and reconstructing.

Among new-born insects there are two distinct groups—those which resemble their parents, and those which differ materially from them. The first have only to grow; the second are to be changed in almost every respect, and to submit to some very curious transformations. These have been watched with the most patient care by well-known naturalists; and we propose giving a few instances among familiar insects, such as the Coleoptera or beetles; the Libellulæ or Ephemera, dragonflies and dayflies; ants, &c.; the Hymenoptera, bees and wasps; the Lepidoptera or butterflies. The eggs of these, as a general rule, pass through three metamorphoses—the state of the caterpillar, the chrysalis, and the perfect insect; but in some the changes are much more marked than in others.

Let us take one of the species which, thanks to the extreme apparent brevity of their lives, seem to exist but one day, and are therefore called Ephemera or Dayflies. On the banks of rivers, just above the level of the water, small round holes may be noticed, generally grouped two together. They are the entrance and exit to winding galleries, which are inhabited by the larvæ or caterpillars of the *Ephemerella albidipennis*. Two very large eyes, a pair of strong mandibles with which to dig, and jaws fit for grasping the smaller fry which serve them apparently for food, are Nature's provision. The abdomen is terminated by three long leaflike organs, bristling with hair, and covered with wide fringed layers, which the little creature agitates with great velocity. They are the organs of aquatic respiration leading to the tracheæ or air-tubes which extract oxygen from the water and carry through the body the air necessary for the life of the insect. For a lengthened period, varying in duration, the ephemeron thus lives as a larva; then passing to the state of the chrysalis or nymph, it inhabits the same home, and differs only from the larva in the appearance of rudimentary wings. But every year at the same epoch, unless the variation of temperature exercise a very marked influence, from the eighth to the eighteenth of August the ephemera undergo their great meta-

**metamorphosis.** Between eight and half-past eight in the evening some nymphs leave their galleries; as soon as they are on dry land the skin breaks in two, and the perfect insect throws off its envelope as rapidly as we do a dress. In a moment it flies away, leaving its organs of aquatic respiration attached to its skin, to be replaced by others of a different kind. Soon joined by myriads of its companions, the air is filled with them; from nine to half-past they form great clouds, surround the passer-by, and fall over the earth and water like a deep snow. At ten o'clock, scarcely any are to be seen; for in one hour these insects, which had been grovelling in mud for many months, have been changed into sportive flies provided with four wings of fine network, have laid masses of from seven to eight hundred eggs, and then died; fit emblem of the life of man, to which they have often been compared.

We have all seen the white cabbage butterfly, yellow beneath and spotted with black, on some fine August day flying with its mate, waltzing, pursuing, and careering together. The dance lasts but half an hour, which counts for much in a butterfly's life. When it is ended, the female chooses a leaf, upon which she lays many hundred eggs, and then dies. The eggs are artistically arranged beside each other, carefully glued at the base, and left to a thousand chances. The greater number perish; but some always do well, and are in due course hatched into small green caterpillars.

The egg is like a very small seed; and the young caterpillar when hatched is of a proportionate size; but the rapidity of its growth is really enormous, and does not seem to be gradual, like that of other insects. It eats with voracity; but after a few days its appetite is gone; it languishes; the colour fades and dries, and it seeks a shelter. Watch it in its retreat, and it may be seen pinning its feet to the ground, contracting and swelling its body for hours together. After these fatiguing exertions, the skin breaks about the fourth ring; the caterpillar first pushes out its head, then emerges the rest of the body, and the being finally appears in a new and bright-coloured dress. At the same time the size is greatly increased, and it would be an impossibility to return into the envelope just cast aside. This phenomenon of the change of skin is repeated many times, until the caterpillar has reached its full size, which is about October or November.

Then is the time to prepare for its first metamorphosis. The voracious caterpillar ceases its operations upon the gardener's cabbages, and seeks the hollow of a tree or a hole in a wall, where the place seems to be suitable to begin its preparations. There is apparently no necessity for it to spin a cocoon like the silkworm, but it lays a platform of fine strong silky threads, crossed in every direction, upon which its feet can fasten. Then bending its head and body to the middle of the back, like an acrobat, it attaches a thread to one of the sides, spins it out to the opposite one, and continues this work until it has formed a kind of girth composed of fifty strands. That ended, the skin is cast for the last time, and what a change ensues! The creature that now emerges is no longer a caterpillar, but a chrysalis, which, supported by the hooks of the tail and the silken girth, is suspended horizontally in its retreat,

very much as fishes and reptiles are hung in museums.

Who would believe that under this form we could trace the butterfly? The skin is quickly dried; it is like a horny coating, of an ash colour, spotted with yellow and black; and though it has gained in thickness, it is shortened by one-third. Yet knowing what this inert mass will eventually become, it is possible, as development proceeds, to distinguish under the covering the traces of organs such as the wings, antennæ, and proboscis; just as the form of the mummy may be perceived in its swathing bands. The final metamorphosis begins about the middle of spring; then the covering cracks down the centre; the imago or perfect form emerges, and the butterfly in its beauty appears. Yet in the first moments of the new life the soft feet can scarcely bear the light weight; the wings, folded in microscopic zigzags, refuse to act; and the trunk extends in a straight line. But soon, under the vivifying action of the air, the superabundant moisture evaporates, the legs grow strong, the wings spread; and the insect, once an egg, then creeping as a caterpillar, then immovable as the pendent chrysalis, flies to the nearest flower, to enjoy its first honeyed repast.

To the Hymenoptera belong the family of the Ichneumons, which render the most important services every year to our gardens, fields, and forests, by feeding on their most redoubtable enemies and destroying other insects and their larvæ in myriads. Among these little creatures we will choose one because its history is so closely allied to that of the butterfly whose metamorphoses we have been describing. The *Microgaster glomeratus* resembles a small fly, with four wings, a black body, yellow feet, hairy round the eyes, and antennæ or horns which move without ceasing. Every female is also provided with an apparatus, formed of three pieces, the use of which will be soon apparent. When one of these flies wishes to lay her eggs, she starts in quest of a caterpillar belonging to the tribe of the cabbage-butterfly. As soon as it is found, she darts down upon it, fastens herself firmly to the back, pierces the skin with her ovipositor (egg-layer), burying the instrument deeply in the flesh, the jointed pieces forming a kind of canal. An egg is then detached from the ovary, and gliding down the tube, is laid safely in the tissues of the caterpillar. The ovipositor is then withdrawn, the insect advances a few steps, and continues the operation.

Vainly does the poor caterpillar try to free itself from its ruthless enemy by twisting the body in every direction; the fly calmly pursues her work of egg-laying until all is finished, and from forty to fifty eggs have been placed in safety. That done she flies away, and her life is soon closed. After her departure, the caterpillar betrays no sign of suffering; the wounds heal, the skin is changed at the usual time, and the first metamorphosis takes place as if nothing had occurred. But her life is never prolonged to the second change, for there issue from the chrysalis not a butterfly, but as many small larvæ as the ichneumon laid eggs. Prior to this, and with wonderful instinct, these larvæ have fed upon the caterpillar, avoiding the essential organs at first with great care, and only attacking the fat which envelops them. Then

becoming stronger and more voracious, when their unwilling nurse has reached her full growth and is transformed, they soon devour the whole, after which they emerge from the now empty chrysalis case, and spin for themselves little cocoons. In these homes they pass the winter without change of form, becoming in spring so many nymphs; reappearing after a few days as winged ichneumons. About half are females, who soon set about to sacrifice as many caterpillars for the sake of their future brood. Réaumur calculates that at least nine-tenths of the cabbage-butterfly thus perish; and in some years, of two hundred watched by M. Blanchard, three only arrived at the butterfly stage; the other hundred and ninety-seven having been eaten by the terrible fly. Gardeners owe an immense debt of gratitude to this little insect, which saves their plots of vegetables from the destructive jaws of the butterfly-larvæ.

Among the Coleoptera, the cockchafer will afford a good specimen of the various changes passed through. About the end of April, just after sunset, the female flies in search of a plot of light ground, sown and well manured, a piece of market-garden being preferred, in which she digs a hole, lays about thirty eggs, and dies. In a month there issues from every egg a little white maggot, armed with a powerful apparatus for mastication; the soft oblong body divided into twelve rings, and eighteen very apparent stigmata or breathing apertures. At first they live as one family. The dead vegetables buried in the ground, and the roots of plants that are growing, suffice for the requirements of the young brood during the first season. Nor does the cold separate them; they dig down still deeper, where a spacious apartment shields them securely from the frost; and thus they pass the winter. Spring finds them, like all larvæ, stronger and more voracious; so that when they cannot get support in one place, they separate, and each hollowing its own special gallery, approaches nearer to the surface of the soil towards the young roots.

It is now that they become the terror of gardeners, ravaging their grounds as well as fields of wheat, and even killing shrubs by injuring the roots; an invisible enemy, but none the less dangerous when the results appear. Happily, England is free from great numbers of them, but France and Germany suffer severely. As soon as the cold weather returns, they bury themselves again, to recommence the following year a life that is prolonged for three years or more. Having at length reached their final growth, each larva hollows for itself a last gallery, deeper than the preceding ones, constructs an oval space plastered with earth, well worked by a viscous substance; and in this nest it is transformed into a nymph or chrysalis.

For five or six months the cockchafer rests benumbed in its new form. Towards the end of February, it awakens in its lair, but not yet ready to meet the perils it may encounter outside; for still soft and colourless, it remains in the earth until its integuments are strong, and ventures—a perfect insect—into daylight only in the middle of April. It immediately flies to the nearest tree; and now that it has become a perfect insect, it begins to eat leaves just as voraciously as it did roots when a larva. Hundredweights of these pests are in some places gathered into sacks by

women and children, and burned in immense fires.

The order of Diptera or flies forms a kind of transition between those insects which we have noticed as going through a complete metamorphosis and some which shew an incomplete one. Take one of the flies upon whose history Réaumur spent so much study, the *Stratiomys chameleon*. It is a beautiful insect, a little longer and larger than a bee, of a yellow colour, the abdomen brown spotted with white. The fleshy proboscis which serves to draw honeyed nectar from the flowers, is hidden when at rest in a cavity in the brow. Such is its perfect state. Let us look at the larva, which we shall perceive is a kind of flat worm, brown in colour, divided into twelve rings, without any trace of feet, and a rough pimpled skin, which strongly resembles wet parchment. Roaming previously through the air, its home is now in stagnant pools, where it moves about much like the leech; but obliged to breathe the free air, it is provided with a curious piece of mechanism. The last ring of the body, much lengthened, ends in a tuft of silky hair like feathers. These surround an orifice communicating with the two large breathing tubes extending from one end of the body to the other. The insect usually keeps this orifice closed and the hairs well together; but when it wishes to breathe, it mounts to the surface, spreads out its bouquet of feathers, and supported by it, remains suspended head downwards, whilst the air freely enters, penetrates into the trachea, and spreads through the whole body.

About the beginning of summer, some of these worms have become immovable and stiff. If they are cautiously opened, the fully formed nymph will be found. At the moment of metamorphosis the *Stratiomys* has burst its skin like other insects; but instead of emerging from it, it remains within, thus sparing itself the trouble of hollowing a nest or spinning a cocoon. The skin is in fact a very large habitation, which is far from being fully occupied; for in changing its state, the body has shrunk, until it scarcely occupies the space corresponding to five of its rings. On the other hand, the proboscis, the eyes, feet, and wings have pushed to the outside; and not less considerable changes have taken place in the interior. Thus lightened, the skin of the larva serving as a shell, it floats on the surface of the water. In about five or six days the awakening nymph stretches herself in her coffer, bursts open the upper part, and disengaging her limbs one by one from the enveloping crust, issues from the floating cradle. More fortunate than many aquatic larvæ, it fears no shipwreck; and walking on the water as on dry land, it frees its body from the last folds that imprison it.

The Orthoptera—which include locusts, crickets, and grasshoppers—undergo a series of imperfect metamorphoses, since on leaving the egg they already possess most of the distinctive characters of the perfect state. The larva of the locust leaps, and eats grass like its parents; the organs of locomotion and digestion have their definitive forms and proportions; the future female has a kind of two-edged sword at the extremity of the body, which is nothing but a dibble, destined to dig a hole in the earth where her eggs are to be buried and safely sheltered. Nothing is wanting for the

perfect insect but greater size and wings. At each casting of the skin it increases in bulk, and the organs of flight soon shew themselves under the form of rudimentary folds. Even when it assumes the state of the nymph, nothing changes in its way of life; development goes on, and when the last coat is shed, the wings have reached their full size.

There is one remark which may be made in conclusion as to the increase of weight and size, which goes on in the earlier stages with such extreme rapidity, gradually lessening as the insect reaches the final type. In twenty-four hours, as Redi tells us, the larva of the flesh-fly (*Musca carnaria*) becomes from a hundred and forty to two hundred times heavier. Lyonnét, drawing his conclusions partly from direct experience and partly from calculation, says that the willow caterpillar (*Cossus ligniperda*), when ready to assume the chrysalis form, weighs no less than seventy-two thousand times more than when it issues from the egg. On reaching the imago or perfect stage, insects in general cease from growing, and are often smaller than the larvæ. But the larva of an insect before changing into the chrysalis has laid up all the materials necessary for growth; an abundant fatty tissue surrounds the organs, of which no trace remains in the perfect state. It has all been used in the rearrangement of the various parts; and when the crisis is passed, the worthless remains are cast out. In some butterflies this matter is coloured red; and when issuing from the cocoon, the spots it leaves on walls, stones, or branches are so numerous as to make the observer fancy that there has been a shower of blood.

As a last reflection on the meaning of these curious changes in development, we may add, that one sees in such phases a clear proof of that uniformity of structure, and probably of origin also, which connects all the jointed animals or *articulates*, from the worm upwards to the lobster, in one great type or series. Such uniformity is a fact of nature, and it seems nowhere more clearly shewn us than in the fact that an aerial insect begins its existence as a crawling worm inseparable from the lower orders of the great group of animals just mentioned.

#### AN INCIDENT OF WAR.

THE war I refer to was not one of those which we have lately had upon our own hands, but that which a few years ago raged so long, so fiercely, between the Northern and the Southern States of America. It was my fortune to serve on the medical staff with a portion of the Northern army during most of that terrible struggle; and it is needless to say that many personal incidents came under my notice, which will never leave my memory. Not one of them, however, made so painful an impression upon me as that which I am about to describe.

Towards noon on the day after one of the fiercest of all the war, a young soldier was brought in from the battle-field, where by some mischance he had been overlooked and abandoned, while comrades of his far less grievously wounded than he, had been sheltered and tended before

nightfall. The poor fellow had lain all night and during the long scorching hours of the morning, amid heaps of dead, both men and horses, suffering from the loss of an arm, and other wounds. An army surgeon is not as a rule a man prone to undue sentiment or to feminine softness at the sight of physical suffering; and I am not conscious of any weakness that makes me an exception in this particular. There was, however, in this youth's expression of countenance something which struck me irresistibly, and with the strong glance of his large bright eye, fixed my attention and awakened my eager interest. He was a slender youth, tall, yet gracefully made, with a head which, as the novelists phrase it, would bring ecstasy to the soul of a sculptor; and every feature moulded to the true type of manly beauty. A single glance gave me this summary outline of my patient before I had time to ascertain the nature or extent of his injuries. A very brief examination soon told me that the life which for hours had been ebbing so painfully away, was well nigh spent; and he must have read the awful truth in my face, for he whispered to me faintly and sadly as I rose: 'Is there, then, no hope?'

Alas! there was no hope; but I had not speech to tell him so; for something was rising into my throat and choking me, and a moisture in my eyes was blinding me; and the only reply I could give him was a shake of my head. The brave spirit which had nerved him through the fight had kept him up till now; but now, when the dismal truth had broken upon him, there passed over his pallid face a look of mingled disappointment and resignation which it was painful beyond expression to witness. I lost no time in giving him such surgical aid as his desperate condition called for and his waning strength could bear. I had hardly done so when an unexpected voice addressed him: 'My own dear boy! my brave heroic boy!' The tone was of cheery encouragement, yet feebly disguising the woe of a breaking heart; for it was his mother's voice that spoke, and her lips that kissed his fevered brow. Gently she turned back his disordered and blood-stained locks, dissembling with evident effort the mother's anguish, lest she should add another sorrow to the pangs of his dying hour.

'My mother!' he cried, with almost frantic delight. 'Is it you, my mother? How came you here? Is it you, or am I dreaming?'—and as he spoke he threw his only remaining arm around her neck, and kissed her with all the rapture of a child. 'Thank God!' he continued in snatches, as his failing strength allowed him—'thank God for this blessed joy, that I see your face once more, my mother. All last night, as I lay amid the dreadful sights around me, I prayed one prayer in all my pain, and only one. I prayed that I might look once more upon your face, my sweetest mother, once more hear your voice. I seemed to pray in vain, yet still I prayed.'

'My poor, poor boy,' she said; 'a curse upon the hand that has brought you to this!' and her tears at length broke from her control.

To the amazement of all, there appeared to be something in this exclamation of his mother that

stimulated the dying youth to a final effort of speech and motion. He half raised himself from his bed, and with that unaccountable energy which sometimes marks the closing moments of life, he said: 'No, no! don't say that. Don't say accurst. You know not the words you are speaking. Oh!' he cried after a moment's pause, 'how shall I tell her the horrible tale? How can I smite her down with such a blow, at such an hour?' and he fell back exhausted upon his pillow. The effort had been too much for him, and for some moments we doubted if the spirit had not fled. It was only a passing weakness, however, and before long he rallied again. Again he spoke, but with a kind of dreamy half-consciousness; at one moment gazing into his mother's eyes, at another seemingly forgetful of her presence.

'Truly it was a bloody field,' he said. 'I had been in several hard-fought fights before, but they were all children's pastime compared with that of yesterday. No sooner had we come in sight of the enemy, than the ringing voice of the General was heard: "At them, my boys, and do your duty!" What happened after that I know not. "Know not," do I say? Oh, would it were true that I knew not! Begrimed with dust, each man was confronted with his own individual foe; and if there be fighting among fiends, then surely did our fighting resemble theirs. I was myself wounded, when a fair-haired man bore down upon me from the opposing line, if line it could then be called, and I received his headlong onset with a terrific bayonet-thrust, and as he fell I thought of Cain, and of that deed which has made the name of Cain a name of malediction for ever. I know not why, but I felt myself compelled to halt in the midst of the mêlée, to kneel beside that fair-haired man and look at him. I turned him over, and looked upon his face—his dear dead face. Ah! mother, it was—it was my brother's face, and my own arm had slain him!'

The scene at that moment it would not be easy to describe. In an instant the weeping mother's tears were dry and her face became passionless as marble. My own emotion, which I have already acknowledged, I took no pains to conceal. Rough, hard favoured soldiers standing by listened with bated breath to this more than tragic narrative, while big tear-drops welled from their eyes unchecked and undisguised.

'Yes,' he continued, soliloquising, 'my own arm had slain him. Dear darling brother Fred! I laid my face upon his, and it was cold—that face which in our boyhood seemed but the mirror of my own; ever near me—at home, at school, at meat, at play—which laughed when I was glad, and wept when I was sorrowful. Oh, would we both had died in those fresh bright days of innocence. I kissed his pallid lips; I looked into his eyes, but in them was no responsive glance. He was dead. I had slain him! The very thought was a burning madness in my brain. I heeded not the carnage around me. I thought not of my own wounds. I even knew not when my arm was gone. Oh, the arm that had done such a deed deserved to perish. Forgive me, O my brother! How gladly would I give my life to bring back thine again!—Stay, friends; do not shut out the blessed light. Let in the light. I cannot see my

mother.—Fred, sweet brother, put up your sword, and let us play with flowers once more upon this pleasant grass.'

And so he passed away—to join his brother, let us hope, in a land where bloom the flowers that never fade, where strifes and wars are unknown, and where the mysteries and misunderstandings of our present state are dispelled by the light that never dies.

Reverence for the childless mother's grief, as well as the many-voiced call of duty, prevented my making at the moment the inquiries which thronged my mind both as to the history of this strangely sorrow-smitten family, and the means by which the poor mother had come to know of her son's condition and whereabouts. I have often since tried to trace her; but the search has always been fruitless. They certainly belonged to the better class of society; and I think it likewise certain that they were Southerners. The younger brother—which I took him to be—whose sad narrative is here given, had probably resided for some time in the North, and becoming imbued with the sentiments and opinions which charged the atmosphere around him, found himself eventually in the ranks. In a word, I look upon the whole episode as one of those awful coincidences of fate which are generally thought to take place only in the pages of romance, but which a pretty wide experience has taught me to believe are by no means infrequent among the unrecorded realities of life.

### STRONG JAMIE, THE CENTENARIAN STUART.

IN an article under the title of 'Centenarianism,' we gave an account of the remarkable tests which experienced men have recently applied to the well-known stories of persons who have lived not only to a hundred years, but to a much more advanced age. We wish to add a brief supplement or appendix relating to a man who unquestionably survived to an exceptionally great age, and was withal a very notable character.

There have more than once been claims put forward for certain persons, each as having been 'The last of the Stuarts.' These claims, however, are not of much value, unless taken simply in reference to the *direct* line of descent; seeing that those in the *indirect* line must of course be more numerous and less interesting.

One of the statements or reports of this kind is under date 1844, when the Scottish borderers spoke of the 'Last of the Stuarts' as having just died. The man was in every way remarkable, let him have had blue blood or not in his veins. James Stuart, according to the account which he was accustomed to give of himself, was born in 1728. His father was General John Stuart, reputed to be a near relation to the elder Pretender, son of James II.; his mother was a daughter of Lady Airlie. The parents having gone to America, the child was born at Charlestown in South Carolina. The father dying in 1733, the child was brought by his mother to her native Scotland. Landed in the old world, James Stuart commenced his chequered career. He received his education at Aberdeen. According to his own story, told in later life, he recollected

having been present at the battle of Prestonpans in the year 1745; witnessed the death of Colonel Gardiner, and the flight of that Johnny Cope who has been so unmercifully quizzed in Scottish song; been a spectator of the triumphal entry of Prince Charles into Edinburgh; and seen if not joined in the battle of Culloden. In 1748 he enlisted in the 42d Highlanders, and went to Canada, where he fought at the battle of Quebec, and witnessed the death of General Wolfe. His good conduct earned for him an ensign's commission; but when he returned to England a few years afterwards, he sold out.

We next hear of James Stuart as a seaman, perhaps a petty or warrant officer, under Admiral Rodney. Next he became a sailor in the merchant service; then a midshipman. At last, about the age of sixty, he left off warlike adventures by land and sea, and became a wandering fiddler, which he continued to be for the remaining fifty or sixty years of his life, picking up a living in the country districts of the south-east of Scotland, but making Tweedmouth his general home. He and all admitted that he was a wretched fiddler, a mere scraper; but as he was honest and truthful, never begged, and never got tipsy, he was everywhere welcome. When George IV. visited Edinburgh in 1822, Sir John Sinclair fitted out James Stuart (at that time aged ninety-four) with a new uniform, in which to be presented to the king as a real veteran—possibly also as the 'The last of the Stuarts.' Stuart was far from being a Malthusian; he married in succession five wives, and had twenty-seven children, of whom as many as ten sons were killed in battle by land or sea.

The Berwickshire journals in 1844 gave much information concerning this remarkable man. Though short of stature, he possessed prodigious strength, which earned for him the familiar cognomen of 'Jamie Strang' or 'Strong Jamie.' A writer in the *Berwick Advertiser* said: 'We have heard him state that the greatest weight he ever lifted from the ground was one hundred and five stone, and that he had lifted eighty-five stone with one hand. When the Forfarshire militia was encamped at Eyemouth, he went to see an acquaintance among them. While there, a dancing-master was boasting much of his strength; whereupon one of the soldiers, knowing Stuart, engaged to provide a drummer who would lift more than the boaster could. Stuart, dressed as a drummer, was brought in. A piece of ordnance was lying before them, which the dancing-master raised to the perpendicular, and then allowed to fall. He asked the drummer whether he could do that? Stuart pretended that he was not very sure that he could; but placing his arms round the cannon, he raised it entirely from the ground, and carried it to some distance. At another time, when at Velvet Hall, near Berwick, some countrymen were labouring to get a cart laden with hay out of a miry hole into which by some accident it had stuck fast. Stuart was appealed to for assistance. He desired them all to stand aside, and going underneath the cart, removed it with its load to the opposite side of the road.'

This extraordinary man (it is averred in many quarters) actually went fiddling about the country till nearly one hundred and fourteen years old. A small sum was then collected for him, towards which the Queen and the late Sir Robert Peel con-

tributed. Stuart declared that he 'hadna been sae weel aff this hunder year.' At length his career closed. He died at Tweedmouth on the 11th of April 1844, and was buried on the 14th in the presence of a vast concourse of spectators. The *Berwick Advertiser* a few days afterwards contained an advertisement relating to statuettes of the veteran.

Probably none of the critical investigators of centenarianism would absolutely deny the truth of the assertion that James Stuart lived to the advanced age of one hundred and fourteen; they would simply suspend their belief until corroborative testimony had been brought forward—testimony supporting the verbal statements of the old man.

#### WHERE SHALL WE ROAM?

WHERE shall we roam, O maiden mine?  
To North, to South, to East or West?  
Raise but thine eyes, and give the sign;  
Where shall we roam!—which way is best?

See! to the North the clear, cold star  
Would lead us, where the icebergs rise;  
Where Silence reigns, and from afar  
The snow-flakes falling shroud the skies.

No, no; the North is bleak and bare:  
Too cold the wind, too chill the sea;  
The sun itself is icy there.  
The North is not the land for me.

Then seek the South, where skies are bright,  
Where flowerets kiss the wand'rer's feet,  
Where whispering zephyrs woo the night,  
And but to live and love is sweet.

Or turn thee to the dawn of day,  
Land of Romance and sacred tale;  
Fair is the scene, nor far the way.  
Thither, O loved one! let us sail.

Nor South, nor East! Then turn thee last  
Where evening star-girt doth appear—  
Ah no! the evening fades too fast;  
The night beyond is dark and drear.

Then, maiden mine, we will remain,  
We two alone; no need to roam,  
Nor ever wander forth again  
Afar, if Love but stay at home.

## JUDGE BATHGATE'S EXPERIENCES OF NEW ZEALAND.

CONCLUDING ARTICLE.

JUDGE BATHGATE, to whose Experiences of New Zealand we referred a few months ago, has since been lecturing on the subject in different parts of the country, and now issues from the press a cheap and handy compendium of information concerning 'NEW ZEALAND; ITS RESOURCES AND PROSPECTS,' which will go a great way towards satisfying the wishes of intending emigrants. The interest which is felt in New Zealand has, it seems, been exemplified in the number of letters of inquiry addressed to Mr Bathgate in consequence of our articles. He informs us that he has received and answered as many as six hundred letters, from different parts of the United Kingdom and from foreign countries—a fact to which he adverts as affording a striking proof 'that CHAMBERS'S JOURNAL penetrates everywhere.' In accepting the compliment, we are happy to think that, through our means in the first place, Mr Bathgate has been able to address such a widely scattered audience, and is therefore likely to realise an important object of his mission, namely, that of making New Zealand as thoroughly known as it deserves to be.

As the book, which may be called the sum and substance of Mr Bathgate's Lectures, is accessible for a trifle in every bookseller's shop, we do not need to do more than point out a few of his more emphatic remarks. In all cases, as we understand, he has declined to recommend any one to emigrate to any part of New Zealand. His duty has consisted in giving all needful details, and leaving every one to judge for himself. This is exactly the policy we should have expected from a man of his prudence and sagacity. People must think for themselves. Among those who think of emigrating with a strict regard to farming operations, there will probably be some hesitation in making a choice between Minnesota and Manitoba in Western America and New Zealand. To the

agriculturist with capital, either Minnesota or Manitoba offers a wide scope for enterprise. But the misfortune of these extensive western domains is that the climate is in extremes. Cold in winter far below zero, which one shivers to think of, and a degree of heat in summer that is equally intolerable, for with the heat comes the plague of insect life, of which it is difficult to form a just estimate. There is something more than professional success to be thought of in this world. We have to think of bodily comfort. What signifies immensity of crops, when everything about you is covered with swarms of black flies that do not give you a moment's peace? Matters of this kind may seem trivial at a distance, but they are not to be neglected in weighing the pros and cons when making a choice of a new home for life. As shewn by Mr Bathgate's explanations, the climate of New Zealand is mild and equable, with nothing in the form of insects or reptiles to give us personal uneasiness. For an enjoyable life all the year round, we should certainly prefer New Zealand, selecting more particularly the northern part of the South Island, which in point of temperature resembles the south of France.

That New Zealand is a comparatively small country, is quite undeniable. It must soon be filled up. By-and-by, it will be well populated, and then its land rising in value will be tenaciously held in property as in old countries. These are circumstances, however, that do not concern the proposing emigrant, further than as regards the future increased value of land. No man, we suppose, emigrates to the United States because of the vastness of that country. As far as regards personal considerations, a small country may be as good as a large one to go to. We should think rather better, for the less would be the chance of being swamped by numbers, or tormented by political factions.

Mr Bathgate holds out no hope of successful emigration to barristers or any of the learned professions; and he says that the ordinary shop-keeping classes are already well represented in

the colony. He proceeds to say: 'Any young man without means, and who has not been trained to some special employment, must therefore be prepared to undertake the ordinary duties of a farm-labourer, and expect to be treated as such. If he be fit for honest labour of this kind, he will be well remunerated, wages being a pound a week and board. From this he may, by industry and sobriety, save in the course of a few years several hundred pounds, with which he may start farming on his own account. There is no road to success for such youths but by dint of sheer hard work in the humblest capacity. There is no "getting on to a farm," or being employed "on a run," and becoming a manager, or riding about as overseer. In early days, when hands were scarce, young men were often taken on a run, and a few of these obtained situations of trust. But as a general rule, the majority did not succeed in becoming masters. At present, settlers and run-holders are chary of employing strangers who have not been thoroughly trained for their work, and who are not prepared to take their place among the ordinary hands working on the farm or station. It is next to impracticable for a youth to get on to a farm or station for the purpose of learning his business, unless it be in some places where a high premium is charged. It should never be forgotten that, even when a youngster has learned his business, there is little hope of his advancement afterwards unless he has capital to purchase and stock land on his own account. Two classes only in general do well—those who have sufficient capital to enable them to occupy land advantageously; and the hard-working labourer who is frugal, sober, and industrious. We wish to impress on youthful aspirants after colonial life that, unless they are physically and morally fit for the work of a labourer in this country, they are not fit for similar work anywhere else. Division of labour is fully carried out in the colony, and every man is expected to be fully qualified for the special duties he undertakes to perform. As we previously stated, working-men in the colony work harder than their fellows at home. The advantages on the colonial side are, that they are generally better treated, better paid, and better fed, and the working time is limited to eight hours a day.'

Ladies with a limited income have asked him what might be their prospects. 'A lady by birth, education, and position, speaking French fluently, musical, cheerful, domesticated, and skilled in housekeeping, has expressed her willingness to take a situation as "governess-housekeeper," or any place of trust. Several equally accomplished have made similar inquiries. In our opinion the colony is scarcely sufficiently advanced to offer many openings of this kind. Ladies who have had boarding-schools in England find their success affected by the new educational system. The same difficulty exists in the colony. In several instances, ladies' boarding-schools have been very successful; but now that there are numerous

public and some private schools in the colony, at which the highest education for young ladies can be obtained, we fear much that the success of any new adventures would be somewhat doubtful. For female domestic servants there is an unlimited demand. Young women who are able to use their hands in house-work, or have a moderate skill in cookery, need never fear of obtaining a good place where they will be well paid, well cared for, and much respected. Many an educated girl in Britain who finds it hard to make headway here might with advantage enter into service in the colony. After a short experience, she will be able to secure a situation where she will be comfortable and feel herself on a higher platform than if she were to go into service here. The demand in New Zealand is continually increasing, along with increasing settlement; and the ranks are also constantly being thinned by marriages.'

Mr Bathgate can offer no encouragement to incorrigible ne'er-do-weels. 'A word of caution must be added to parents and guardians in reference to young men who, owing to some fault of behaviour, imperfect education, or mental weakness, are unable to make their way in this country. Such youths are often sent to the colony to get rid of them, or in the hope that by some unknown process they will succeed better there. In general, these unfortunates sink to a lower depth than they would have done at home, where friends operate as a check to a certain extent. Many fall to the lowest position, and not a few become inmates of our jails. The career of one may be described. An ex-officer of dragoons came out in the same ship with a friend of ours. Of good family, having a university education, and of fair ability, he might have risen in the army; but he was poor, and had not the moral courage to resist rivalling his more wealthy comrades in their expenditure. His debts were paid twice over, and at last he had to sell out. His relatives paid his passage to New Zealand, hoping he would find something to do there. Our friend recommended him to study book-keeping on the voyage, to qualify himself for the situation of a clerk. He thought the idea a good one, and resolved to do so. One month, two months passed away, and the rollicking and card-playing amongst the other young men on board were too strong for him. Our friend was vexed to see the precious time slipping away unimproved, and said to Mr Sabreur: "You have only a month left. Don't you think you should be seeing to your book-keeping?" "Book-keeping!" was the reply; "what's the good of it?" He was left to his fate, and when last seen, the accomplished militaire filled the situation of billiard-marker in a colonial public-house, his highest enjoyment smoking a short pipe.'

So rapid has been the progress of New Zealand as an attractive place of settlement, that already

within the space of forty years it begins to assume the character of an old country, and to hold out temptations to others than those who are pushing about in search of a livelihood. It has towns with elegant mansions in the environs, where capitalists may settle down in as much comfort as in the neighbourhood of London. There are roads as well adapted for carriage-driving as any one has been accustomed to. Well-appointed steam-vessels carry passengers with precision from one point of the coast to another. Railways are now widely ramified and extending. For travellers and tourists, excellent hotels offer every desirable accommodation. Mr Bathgate pictures a run to New Zealand and back again as a pleasant variety in the life of those who are at ease in their circumstances, or who desire to benefit by change of air and scene.

The traveller, he says, 'may rusticate at Waiwera hot springs, where his rheumatism, and many other ills which flesh is heir to, will bid him farewell. He may turn aside to witness the industry of the Thames gold-field. He may be pulled along in a Maori canoe to see the wonders of the pink and white siliceous terraces at Rotomahana, and revel in the luxury of a bath in the tepid waters of the lake. He may spend a day or two at each of our chief cities with advantage, and judge for himself of the manners of the inhabitants, as well as experience their hospitality. Everywhere he will find comfortable hotels with an excellent *cuisine*. If he has a friend to introduce him to the clubs, he will be sure to be well entertained, and to make agreeable acquaintances. He may ramble through the South Island, and relax himself in the dreamy gardens of Nelson, be refreshed by the cheeriness of the truly English city of Christchurch, and be stirred up by the commercial activity of Dunedin. He may explore the grandeur of the glaciers of Mount Cook, towering untouched as yet by the alpen-stock of rambling Club-men, fourteen thousand feet high. The river and forest scenery of both islands is in many places of exquisite and unusual beauty. The umbrageous tree-ferns, the tall and graceful fronds of the nikau palm, the towering pines, the delicately foliaged mapau, and the glossy-leaved broad-leaf, will reveal to him new features of silvern loveliness. He can get by rail to Lake Wakatipu, and take a seat on board its steamer, to be arrested with the view of the majestic and rugged peaks which environ its dark waters. The glorious landscape at the head of the lake, with its wooded islands, its romantic hills, and the dazzling snow-clad summit of Mount Earnslaw in the background, will imprint itself as a brilliant mental photograph never to be obliterated. He can finish his explorations with a summer trip to the fiords or sounds on the west coast, and be wonder-struck at the precipitous grandeur of the Mitre, ascending sheer from the sea to an altitude of several thousand feet, and descending to an unfathomable depth. These and many other objects of surpassing interest will be a source of permanent gratification, in the pleasing recollection of them, to the traveller, who will carry home with him lively ideas of the impressiveness of the scenery he has visited, and of the kindness and intelligence of the frank and vigorous people among whom he has made his short sojourn.'

We conclude by quoting from Mr Bathgate's

last paragraph. 'With a climate which renders life positively enjoyable, with a fertile and grateful soil to cultivate, with a country having all the elements necessary to build up a free, a prosperous, and a happy nation, the labours of the colonist are a pleasure to him. There is no vista before him shrouded with the dark shadows of an overgrown, under-fed population. There are no political animosities rending friendships asunder. On every side he perceives manifold signs of the rapid development of the varied resources of his adopted country, and he is nerved for greater exertions by the knowledge that the fortunes of himself and his children must advance with its increasing progress. There is no strife, no crowding out, from the multitude of competitors in the struggle for existence. There is room for all comers of the right sort for many generations. He rejoices in his independence, and in feelings previously unknown to him. Much as we love the land of our birth and manhood, numerous as are the kind friends there to whom we are attached, prickly as some of the thorns in colonial life we have had to encounter have been, we candidly declare we have never regretted for a single instant the choice of New Zealand as a new home.'

We understand that Mr Bathgate designs to return to his duties as District Judge at Dunedin in the course of the approaching summer. It will be unnecessary for any one to write further to him letters of inquiry. His book, as we have said, gives all requisite information on New Zealand that can be sought for, along with a number of practical hints regarding the best methods and cost of transit.

W. C.

## A LIFE'S ATONEMENT.

### CHAPTER XI.—HISTORY.

*A good safe vengeance in the way of business.*

MR TASKER, seated at his table in his own private room in Acre Buildings, communed with himself. No great amount of Mr Tasker's energies were at any time absorbed by the actual transaction of business. The spider's little affair with the fly is rather a matter of pleasure than of business—to the spider. It is in the spinning of his web that that wary creature expends his powers. So it was with Mr Tasker. At this time he was spinning most warily, and he did his work with a relish also. It was a pleasant summer afternoon. Acre Buildings were so far back from the main thoroughfare that the hum of traffic came soothingly and pleasantly upon the ear. The sparrows chattered about the roof and in the trees and on the pavement. Things had a rural look and sound and scent thereabouts. There was a long box of mignonette on the ledge of Mr Tasker's window. That window was open, and the exquisite perfume of the flower filled the apartment. The sunlight fell in broken flecks upon the floor and danced on the roof, reflected thither by a carafe of water which Mr Tasker had just laid down. A glass of brandy-and-water stood at his elbow. He held a big Havana between his finger and thumb, and lost in reverie, forgot to light it.

'We shall see,' said Mr Tasker with his pleasant smile. He roused himself, lit his cigar, placed his feet upon the table, and with the tumbler in his hand, lolled there, a picture of careless ease. Yet

the brain of Mr Tasker was busy, and its theme was vengeance. Not vengeance after any tragic fashion, for to such height Tasker was too prudent to rise, having a soul to save and a neck to take care of; but vengeance in a good safe usurious profitable way, and in the way of business. And his thought was: 'Can I get Mr Frank Fairholt in my hands again, and grind him down, and make him ask for time, and flout him and expose him to his friends?' The answer just then to this amiable inquiry was 'Yes;' and Mr Tasker evolved his plans, and enjoyed his victory in anticipation. Those outspoken allusions to Shylock and his pound of flesh rankled in Mr Tasker's mind. They were displeasing allusions, apart from their personal application, because they bespoke a good game played in vain—a checkmate to a compatriot. Tasker, half enveloped in smoke, looked through the window into the thick-leaved branches of the nearest tree with half-closed eyes, and sipped his liquor relishingly. A note lay upon the table, and Tasker dug at it with his heel as he leaned back there. 'You shall help me,' said he with a chuckle. 'And I will throw you both into the same boat, and you shall both sink or swim together.' He lay back again and chuckled enjoyingly over his own reflections; then sipped again and resumed his cigar. 'He is little better than a fool,' he continued, following out his own train of thought—'he is little better than a fool, that Hastings. I shall use him as I like when he comes here. We shall see—we shall see.'

At this moment Tasker's boy knocked at the door and announced a visitor. Tasker took his feet from the table, and turned round to welcome, with a nod of the head and a left hand outstretched sideways, Mr Hastings. That young gentleman sauntered in languidly, and put a little finger into the proffered hand. 'And how is Egypt, my chosen Israelite?' he asked, seating himself on the table.

'Egypt is fat and well and flourishing,' responded Mr Tasker with a gay good-humour.

'Is Israel well and fat and flourishing?' asked Hastings.

'Pretty well—pretty well,' answered Tasker, in the best of tempers and the most charming of good spirits.

'Pretty well is very well,' the other responded, with a solemn languor of manner. 'I'll take a weed, Tasker. Yours are always good, I know.—Thank you.'

'You have come,' said Mr Tasker, smilingly holding forth his cigar-case, and speaking with that little effort to be clear and sharp about his Cs and Ss, which shewed him most keenly watchful of himself—'you have come most punctually. You are here to time, Mr Hastings, like a clock.'

'I am here punctually, as you observe,' returned Hastings, lighting his cigar and speaking leisurely as he does so. 'I am, I regret to say, less like a clock than a clock-case—empty.'

Tasker was in admirable spirits. 'You will have your little choke, Mr Hastings.'

'I deserve my little choke,' said Hastings, accepting Tasker phonetically, 'for coming here at all.'

Tasker did not understand. But Hastings had said so many things which Tasker did not understand, that one more or less made little difference.

He knew that this flippant and careless and impudent young man used him and despised him. But he knew also that he used and despised the flippant and impudent young man. There was a little balance of hatred on Tasker's side, though he scarcely cared to shew it. A man who will one day have twenty thousand a year, was not to be insulted lightly, though he had something less than nothing now. Tasker knew that the allowance of the young gentleman before him was eaten up for the next three years; but he knew also that a single quarter's income from the paternal estate was just equivalent to these responsibilities, and that Hastings senior was old and frail. It was Tasker's cue to be astonished at the fact that his client was unable to take up a bill which fell due next day. In order that his astonishment might come with natural force, he took it for granted that business would go smoothly.

'If all my clients was so punctual,' said Tasker, 'my business relations would be quite pleasant.'

'Say "relatives," Tasker. Your business relations are always pleasant. Pleasantry is the badge of all your tribe.'

'I forget at this moment,' said Tasker, with a lifting of his arched and heavy eyebrows, 'what it is that you have got to pay.'

Hastings answered lazily: 'I am not about to remind you too rudely of the amount, by any payment of the money.'

'Goot heavens, Mr Hastings! I hope you are not in serious earnest?'

'Set your mind at rest. I never *am* in serious earnest.'

'I do not comprehend,' said Mr Tasker, rising. 'I hope you do not mean to say that you cannot buy me?'

'Unto that end, most valiant, am I come,' Hastings answered, thrumming lightly on the table, and regarding his companion with a look of solemn gravity. 'By the way,' he questioned with a passing gleam of interest, 'was that a quotation or an inspiration?'

'It was a bill at four months,' groaned Tasker.

'He is like the dyer's hand,' said the other, in abstracted soliloquy, 'subdued to what he works in.'

'You must not dalk in this way,' exclaimed Tasker with energy. 'I have debended upon you. I have engagements.'

'You remind me,' replied Hastings, taking out his watch, 'I also have engagements. Let us get our business over.'

'I have had too much of this,' said Tasker, with well-simulated wrath. 'I have ztood it too long. I will not ztand it any longer. I must be paid, Mr Hastings—I must be paid.'

'When the irresistible encounters the impregnable, what happens?' asked Hastings with an air of peaceful calm. 'It is an unfortunate conjunction of circumstances—unfortunate, but interesting—deeply interesting. Allow me to ask you to notice the situation. You must be paid. That is an absolute necessity? Very good. I cannot pay you. That is an absolute fact. Positive need on the one hand. Positive incapacity on the other.'

'Do you mean to zwindle me, Mr Hastings?' asked Tasker with an aspect of increasing anger.

'I am not accustomed to analyse my motives; but at a rough guess, I should be inclined to

answer "Yes." But I am so perfectly convinced that in the end you will swindle me, that my intentions are of little moment.'

It was a little curious that Tasker in simulating anger grew really angry. The gibes of his flippant client scarcely touched him, but his own presentment of wrath awakened wrath within him. Like a good actor, he threw himself into his part with thoroughness, and became that he seemed. It took him trouble to calm himself and bring himself down to the mere acting condition again. It would have been so pleasant to rend somebody, that it was dangerous to his interests even to play at doing it in this case, lest he should yield to the temptation to do it in good earnest.

'I do not want to quarrel with you; I do not want to take extreme measures,' Mr Hastings, Tasker resumed, having succeeded in mastering himself. 'There now!' He threw himself into his chair again, and relighted his cigar. Then with his glass in his hand, he leaned back and set his feet upon the table. 'I will be calm and quiet; I will listen to reason.'

'Your resolve is laudable,' returned the other, with the same imperturbable face and voice. 'When you say that you will listen to reason, you mean that you will listen to me. I accept the implied compliment. I think I may venture to assert that I am prepared to converse with equal ease and elegance upon any topic which may be introduced.'

'Aha!' laughed Tasker, the corners of his mouth a trifle tigerish—'it is all your good-humour. It is all your English fun. Now we will talk about this bill. I am tied up for money. You are tied up for money. Now what shall we do?'

'Let us toss up for it.'

'Dors up for what? Dors up for nothing?' asked Tasker, resolutely good-humoured. 'Now, what can we do? Can you pay me in a week? In two weeks? In three weeks?'

In answer to each of these inquiries, Hastings shook his head. 'Renew for three months.'

'Impossible!' returned Tasker, still smiling through his cloud of smoke. 'I tell you I do not know where to turn. Yet I am not a poor man. I have money enough, but it is all out. And now I am galled upon to pay away money to-morrow, and I have not got it. It is all out. Gentlemen will not pay. They all come here and say "Renew," as if I was *Græsus*.'

'Now listen and perpend,' replied Hastings. 'Three months from date I pledge you my honour either to pay or—to renew again.'

'I should like to keep my denper, Mr Hastings,' returned Tasker, 'if you will be so good.'

'I don't know what value you may set upon your time,' the other answered, 'but mine is valuable. Will you come to a conclusion?'

Tasker haggled for a while, and then came down with the proposition for which he had paved the way by all this manœuvring. 'It is in your power, Mr Hastings, to do me a favour. It is a favour very easy for you. A gentleman in the country, who is my very good friend, employs me to buy his bigtures. He has heard of a bigture which is to be great. He wishes to buy it. He instructs me. But my hands are tied. I cannot disoblige my very good friend in the country. But I cannot buy the bigture myself because the artist will not

do business with me. We are not on derms with each other. Will you go and see the work and make an offer for it? Will you so far oblige me, my dear sir, if I renew the little bill?'

'I don't mind,' answered Hastings. 'Who shall I say wants the picture?'

'Ah!' said Mr Tasker, smiling once more, 'my good friend in the country is vond of mystery. He does not wish it to be known that he is bur-chasing this work until it is his. Then he will say: "You have come too late, you people. The work is sold. I have been before you, and the work of the year is mine for a zong."'

'Does it occur to you, most ridiculous Tasker, that an artist might decline to sell to me for an unknown patron?'

'That is once more your fun,' Tasker responded, still smiling. 'You will go to your friend and say: "You are zending this work to the Winter Exhibition? Very goot. Will you sell it for four hundred guineas? Very goot. The money will be paid one week after the bigture has been hung. Very goot again." That is all to do.'

'Who is the artist?'

'The artist is Mr Fairholt of Montague Gardens.'

'I will execute your commission, my Tasker, with joy.'

'My name must not appear, you know,' said Tasker, with his tigerish smile in full play. 'He has quarrelled with me, and will not have anything more to do. We had a great zhindy—as you call it—in this very room. He was angry, and we quarrelled. I must have the bigture, Mr Hastings, for my friend in the country.'

'Your friend in the country shall not be disappointed, Tasker.'

Mr Tasker, smiling, renewed the bill; and Hastings went his way to mystify Frank. The usurer left alone once more, threw himself back into his chair; and again setting his heels upon the table, held inward communion. Mr Tasker thought in German, but his thoughts translated ran thus: 'Mr Benjamin Hartley intrusts me with this commission. I accept it, as in duty bound; and I accept it gladly, because it opens up a way to a sly and mean vengeance after my own heart. I will plague this impertinent artist by this means. I know how he was able to pay me last time; and I think he has pumped that well dry for a little while. If I could only get him into my hands again! If I could get him for a bill he could not meet, and could hold back the price of the picture, and plague his proud heart for a week or two. If I could have him here begging for time, and knowing all the while that he was independent of me if he only knew it, and knowing that he did not know it. I could keep Hastings from speaking. I could have out half-a-dozen writs against him, and send him over to Boulogne for quiet. Fairholt should not guess where he had got to. He should not know the purchaser of his picture. He should be waiting for money; and hoping for it every day; and he should trouble under my hand. He should beg my pardon. He should pay me such interest as was never paid before. He should cringe and sue to me; and then I would apply to his father for payment, and then I would send him Mr Benjamin Hartley's cheque. He should be humiliated, and exposed, and tortured with hope, and his hope should drop into

his hands an hour too late.' Thus thought Tasker, until his own pleasant imaginings became too tantalising for him. 'Himmel!' said Tasker with a sigh, 'it is too goot to be drue.' He rises and paces up and down the room. 'But it zhall not vail because I do not try it. I zould like to ruin him, to break him down and bring him into beggary. "My pound of vlesh." I can try for it at least.'

Dr Johnson liked a good hater, but he would have been enamoured of Mr Tasker, who was a decent hater as times go.

### TONTINES.

TONTINES are a species of lotteries, now generally exploded. They take their name from their inventor, Tonti, an Italian, who arrived in Paris early in the reign of Louis XIV., and was countenanced in his scheme of raising money for the state at a time when the finances of France were in a considerably depressed condition. Tonti proposed that a fund of twenty-five million livres should be raised by subscriptions of three hundred livres. The subscribers were to be divided into ten classes according to age. To each class a certain fixed annual amount of interest was to be assigned, which should each year be equally divided among the members of the class who were alive. In this way, while every member should at first get a fair annuity for the capital he invested, the profit that would come to the survivors as years went on would gradually grow larger, until at last the sole survivor would receive the whole annual rent of his class.

It was a scheme appealing to the confidence most men have in their own length of life, and one of which the advantages appear much greater than they really are; yet probably owing to the great unpopularity of Mazarin, the proposal could not be carried out. The Cardinal warmly adopted his countryman's idea; but the parliament refused to register the edict establishing the tontine, and the matter had to be laid aside for a time. Tonti had got a pension of six thousand livres in 1648, which he told Colbert he drew till 1660; during this time he appears to have spent the life of an active 'promoter' both of tontines and of such projects as a new East India Company, a national association for rearing silkworms, &c. He got the young king Louis to sanction a tontine in 1656, which he called the Banque Royale, to raise capital for a bridge across the Seine; and another shortly afterwards for a fund to pay the debts of the clergy; but so unpopular did Mazarin make everything Italian, that the French would have nothing to do with any of the schemes of Tonti's fertile brain. At length he got into disfavour at court, and was consigned to the Bastille, where for some years he was allowed to correspond with his friends; but suddenly the curtain dropped upon his life, and nothing is known of its end.

Fifteen years after Tonti's last appeal from the Bastille, Louis XIV. grievously in want of money, bethought him of the Italian's plan, and by royal

patent in 1689 established the first tontine which ever had a practical result, though only a part of the fourteen millions he wished to get was subscribed. The remainder of this sum, however, he got a year or two afterwards from another tontine, which like the first was to exist for forty years. In 1726, Charlotte Bonnemay Barbier, widow of Louis Barbier, a Parisian doctor, was sole survivor of a class in each tontine, and was, at the age of ninety-six, drawing an annuity of seventy-three thousand five hundred livres; an excellent return for an original payment of three hundred livres to each tontine.

Though Louis XIV. was the first to set a tontine in working order, he was very nearly anticipated by Dr John Houghton, F.R.S., a contemporary of Evelyn and Pepys, who record their high opinion of him. In 1683 Dr Houghton proposed to raise a large sum on a 'Subscription on Lives,' on the same principles of survivorship as Tonti's. In this proposal, addressed to the City of London, Houghton brings forward many curious reasons why all sections of mankind with five pounds to spare should put it into his tontine. Ill-treated wives would find themselves objects of tender care to their husbands as they went on towards the goal of sole survivorship; old people would be made much of; poor relations kindly looked after; for the longer they lived the more they would have. Landed gentlemen would find it a perfect provision for younger children; 'for if they die quickly, the estate will be free to the heirs; if not, it will be a considerable provision, and the estate shall not need to be clogged for maintenance.'

Houghton's reasons were not sufficient to float his tontine. Indeed such schemes never have been so popular in Britain as on the continent. However, several tontines were established both in England and Ireland during the eighteenth century, of which the most notable was that established in 1789 by the government. It was for a million, in shares of one hundred pounds each. The subscribers were divided into ten classes, according to age, and it was stipulated that the payment to each person should not exceed a thousand pounds a year, however few the survivors should be. Little more than half the shares were taken up. In *Notes and Queries* for 1872 it was stated that a life had dropped in August of that year at the age of ninety-three, whose last year's dividend had been two hundred and thirty-eight pounds, and it was estimated that there were about eighty survivors of the tontine.

In 1799 Sir John Sinclair of Ulbster wrote a pamphlet advocating the formation of a joint-stock company with a tontine capital of sixty thousand pounds to establish experimental farms in different parts of the country; but no practical result followed his suggestion.

About the same time, and in the early years of the present century, a number of tontines were set on foot, chiefly for the purpose of building hotels where they seem to have been required, and where no individual capitalist was inclined or able to go into such ventures. We have some personal recollection of one of these tontines having been

set on foot in Peebles in 1807 to build a hotel, since known as the Tontine Hotel. The number of shares subscribed was a hundred and forty-four, the price of each share being twenty-five pounds. The principle acted on was that each subscriber was at liberty to name an individual on whose life he risked his share in the concern. The individuals so named were called the nominees, and had no interest in the affair, so far as nomination was concerned. Some, with a fancy that they had prospects of longevity, named themselves. Some named the Princess Charlotte, not only on account of her youth, eleven years of age, but that her life would be well cared for. As the Princess died in 1817, these shares were at once lost. The greater number staked on the lives of young children within their knowledge. It was thought to be a great day for Peebles when the foundation-stone of the proposed hotel was laid with all solemnity, and received the benediction of Dr Dalgliesh, the town minister, a reverend divine of the old school, with cocked-hat, powdered wig, buckles at his knees and his shoes, and frills at his wrists. As a little boy, the present writer was permitted to be close beside him on the occasion.

After a space of seventy-three years, it is interesting to inquire how the project succeeded, and what is its present position. The hotel throughout has been fairly managed by a succession of tenants, who have paid rent to a factor for those who claim an interest in the concern. As regards nominees, the original number of one hundred and forty-four had diminished to seventy-four in 1855. That is to say, about one-half had died out in forty-eight years. In 1864 the number had sunk to fifty-three. Now, at the beginning of 1890, all that remain are eleven. Each of these must of course be at least seventy-three years of age; and it might be assumed that the question of who is to be the last survivor cannot remain long undetermined. Looking, however, to the circumstance that individuals now occasionally live to a hundred, or at least to be upwards of ninety, it should not excite surprise if two or three of the eleven nominees keep up the game till the twentieth century.

From these explanations it is obvious that the holding of property on the tontine principle is to the last degree unsatisfactory. The parties concerned and their heirs cease to feel any interest in the result. The property staked for becomes a bad investment. It cannot be dealt with as a marketable commodity. If a hotel, it falls behind the requirements of the age; and as no one has any particular interest in it, fresh capital cannot be employed to enlarge or materially improve it. After reckoning cost of repairs and other expenses, it yields but an insignificant sum for division per annum. For these and other reasons the tontine system of holding property is about the worst ever invented. The idea of sinking money in a purely hazardous result some eighty or ninety years hence, almost goes beyond the wildest dreams of folly. In some instances, when only two nominees are left, a compromise takes place, and the affair is wound up. Of late years, attempts have been made in London to get up tontines on the principle of speculating on lives of persons not less than sixty years of age, or of dividing the property among survivors at not a very dis-

tant date. As far as we have heard, none of these projects has succeeded. Like everything in the form of a lottery, they do not commend themselves to public approbation.

## JACK QUARTERMAIN'S VISION.

IN THREE PARTS.—PART II.—NEBRASKA.

'DAN, Dan! Wake up, old man, quick! I say, Dan!'

Dan rolled himself over lazily, raised himself on one elbow, and glanced round the apartment; then sunk back leisurely on his pillow with a long deep sigh of gratitude.

'I say, you everlasting sleeper, will you rouse up!'

'Too soon, Jack—hours too soon; not near mornin'. All right, old fellow; I'll turn out presently,' murmured Dan drowsily.

Jack Quartermain jumped up from the rude couch he had been sharing with Dan Kennedy, and proceeded to dress himself by the light of the fire, which still smouldered on the hearth; then he piled on more logs, and throwing himself on a rug, looked steadily at the blaze, which leaped and danced and flickered as the fierce wind swept down the wide chimney. For fully an hour Jack mused by the fire; then he gave a long loving look round the rude Nebraskan cabin he shared with his chum, glanced at his tattered, battered, travel-stained leather portmanteau, which had been for nearly six years his faithful travelling companion, and calculated its capacity for yet another voyage; gave a passing look of regret and complacency at Dan's gorged, unwieldy, calf-skin trunk which contained their united savings; and then he heaved a deep sigh as his glance fell on the stalwart form of Dan himself sleeping peacefully on his hard bed.

Another half-hour was passed in study of the glowing logs, and then Jack produced from an old rosewood desk, which stood on a ledge in one corner of the log-hut, a little packet of letters, and read them over carefully by the light of the fire. Two of them were from Jessie Hamilton; tender, loving, womanly letters, full of trust, affection, and encouragement. They were written during the first few months after his departure, and were the only ones he had ever received. The others were from Val Saunders, cheery, chatty epistles, full of vows of world-without-end friendship, and gossip about their mutual friends and the doings at the office. The last of these was dated just a year after Jack Quartermain had sailed for New York, and contained the startling intelligence—told with evident reluctance and much sympathy—that Jessie was false. She had given her exiled lover up, and was engaged to be married to his successor at Verschoyle and Saunders's. This intelligence, coupled with Jessie's long silence, in spite of his earnest entreaties for a single line, convinced Jack that something really was wrong. So he had written one more letter, freeing his cousin from her engagement with him, and asking for the return of his letters, his carte, and other trifling mementos of their unfortunate affection. But even that brought no reply. And Val, to whom he had also written and poured out all his despair and

misery, was silent too. They would not even write and tell him if the deeds had been found, or if his uncle were alive and well.

Six months of utter misery and suspense followed; and then in a fit of sheer desperation, Jack had joined a band of daring adventurers bound for Nevada, and went in for gold-digging. He had been, from the time he had landed in the United States, a clerk in a great store in Jersey City, and was working his way into the esteem and confidence of his employers, when the gold-fever seized him, or rather the fever of discontent, and he rushed off to the West without a moment's consideration in search of wealth he did not want, and of peace he was certain not to find. A week of the wild lawless life at the Diggings was quite enough for Jack. A week was enough for another of the party also. These two, by a sort of natural selection, made friends with each other; and one night they left the camp without 'beat of drum' or saying farewell to anybody.

Dan Kennedy led the way in the retreat from gold-land. He proposed a sheep-walk in Australia, and peace and solitude, instead of the bowie-knives and braggadocio of 'the Roaring Camp' at Nevada; and so they sailed from San Francisco to Sydney, and were soon lost in the Australian Bush. For three years they had lived a not unhappy or uneventful life. They were not growing enviably rich, nor thinking of retiring from their labours. On the contrary, they worked hard late and early, and put what they could in the calf-skin trunk. Summer and winter, seed-time and harvest, these two men lived together in their cabin, their chief occupation their sheep; their amusement a skirmish with a band of natives or a few bushrangers; their intellectual food a Bible, a Shakspeare, and a copy of Burns, which Dan Kennedy always carried in his pocket. Then a sudden whim seized Jack; he wanted to go back to America; he was sick of Bush-life, and sheep were an abomination to him. Dan—the most complacent of men—counted the hoard in the trunk, and thought that they might manage it. Then he disposed of the farm and stock; and once more they crossed the sea and set out on their rambles.

After roving from state to state, and from city to city till their finances were almost exhausted, Dan resolved to settle in the territory of Nebraska; obtained a grant of land, built a log-hut, and declared that he had settled down for life. He was happy at last. Bound in by forests; out of the track of settlers; far from civilisation; a magnificent country, which supplied game in abundance; a noble river, teeming with fish; fruit and flowers in profusion. Surely 'Kennedy's Clearing' was an earthly paradise; at least so it seemed in the summer, when the trees were laden with fruit, the air with melody and fragrance. But in the autumn, when the rainy season set in, it was not quite so like a paradise; and in the winter the cold was intense. For a little while Jack was contented in Nebraska; but suddenly he was seized with the spirit of unrest again. He wanted to go somewhere he had never been, to do something he had never done—in short, he wanted a change. But Dan was deaf to his insinuations and hints, and turned a most unsympathetic ear to his murmurs. He was settled for life, he said, with his Bible, his Burns, his calf-

skin trunk, and his Shakspeare. He had taken 'Kennedy's Clearing' for better or worse; and he meant to stick to his bargain.

'Yes, my boy; I'm planted here, and took root I have,' said Dan, upon a certain cold December night. 'It's no use your putting out feelers. I ain't a-goin' to go off half-cocked again. So long as the clearing sticks to me, so long I stick to the clearing. You can move on if you like!'

'Why, you Turk!' Jack cried reproachfully, throwing more pine-logs on the fire, 'do you think I'm going to leave you here all by yourself, like Robinson Crusoe? No; old fellow; I'll stick by the clearing too; only, it's a melancholy consolation to grumble a little now and again—a Briton's privilege, you know!'

'Bad practice,' Dan remarked. 'Does no manner of good, any way.—I say, Jack, do you know what night this is?'

'Yes; Thursday. Why?'

'It's New-year's Eve, lad, and I've made provision for a jollification,' Dan replied. 'I gave one of my best axes and a pair of woollen stockings in exchange for five cigars and a bottle of Schiedam. What do you think of that, my son?'

'I think it was recklessly extravagant of you, old man. But as the temptations to that vice are so few, I think you may be pardoned. We'll smoke the old year out, and drink the new year in; and better luck to all of us!'

'Better luck! What better luck do we want?' exclaimed Dan. 'Ain't we as happy as kings here? Plenty of work; plenty of fun; enough to eat, drink, and wear. No master to serve; no servants to scold; not too many visitors to bore us; and besides, we're making money!'

'Yes; all that's very well. But a fellow is apt to get tired of his own inestimable society sometimes, you know,' grumbled Jack.

'I never do!' and Dan gave a tremendous stretch. 'I make it a point of always being on friendly terms with myself; there's nothing like it, lad. Jack, my boy, I wish you were married. Go down east, and bring back a missis for the clearing, and I'll play second-fiddle *di-rectly*!'

Jack shrugged his shoulders, knitted his brows, and bit his somewhat ragged moustache, as he invariably did when matrimony was mentioned. But he made no retort. It never entered his head to ask Dan why he didn't bring a 'missis' to the clearing himself, though Kennedy was the most thoroughly bachelor squatter in the territory, though the sturdiest, healthiest, handsomest young fellow, within a hundred miles. Dan had a dead-and-gone love affair, and he told Jack Quartermain all about it in the early days of their friendship; spoke tenderly, reverently, of his lost love, just as he might speak of his dead mother. Just once he gave his chum a peep into his heart, let him see below the surface for a moment; and Jack's honest eyes filled with sympathetic tears as he saw what a deep, raw, aching wound his friend so bravely carried and concealed. Once, and once only, did he attempt a little rough commonplace consolation; and he never forgot the look of agony which swept across Dan's face, never forgot the mute appeal of his eyes, and how he raised his strong right arm, as if to ward off a blow. Ever after that, Jack spoke many a time of his own love-affairs; but neither in jest nor in earnest

did he ever allude to Dan's—it was the one solitary forbidden subject between them.

It was, as we have said, New-year's Eve—the fifth since Jack Quartermain had left home and love and friends, and gone forth to seek his fortune, resting under the shadow of unmerited suspicion. For more than four years he had not heard a single word from England—not a line from his uncle, from Jessie, or from his old friend Val Saunders!

'I can't make it out, Dan,' he said, from the midst of a cloud of fragrant smoke—all that was left of two of the five cigars. 'I can't understand it, old fellow. Val must be dead, or he would have answered my letters. I'm not so surprised at Jessie—all women are false and deceitful; it's their nature. But Val was such a good-hearted, good-natured sort of fellow! He must be dead.'

Dan growled out something which might be taken for an assent, or might not.

'What do you mean by that?' exclaimed Jack a little impatiently. 'Do you think he's dead, or do you think he isn't, Dan?'

'Well—really I have no pleasure in conjecturing,' replied Dan slowly, as he puffed away at the last cigar, for which they had drawn lots. 'Mr Val Saunders ain't any particular friend of mine, you know; but it's my private opinion that if he is dead, it's a good riddance of bad value!'

'You're as bad as Jessie; just as jealous and unreasonable,' Jack retorted crossly. 'It did seem very hard that the only two people in the world he really cared about should each have an unreasonable prejudice against the person he liked next best.'

Dan, however, replied good-humouredly to his fretful grumbling, laughed at the idea of his being jealous of an individual he had never seen; and then after drinking farewell to the departing year, and a merry greeting to the new one, which was ushered in by a lusty north wind, which promised plenty of snow, the two men stood for a few minutes looking into the glowing embers on the hearth, wrung each other's hands with a hearty grip, and laid themselves down to rest with a none the less fervent because voiceless prayer.

Jack was the first to fall asleep. The unusual dissipation of Schiedam and cigars, added to the fatigue of a hard day's work and the genial drowsy warmth of the cabin, sent him off into a heavy slumber, from which he awoke with a sudden start, to find himself bathed in cold perspiration, and great drops of moisture standing on his forehead. His first impulse was to rouse up Dan; but that was very much easier proposed than done. He was a sound sleeper at all times; and his answers to Jack's repeated calls came dreamily and irrelevantly. Then, as was narrated at the beginning of this chapter, Jack got up, dressed himself, sat by the fire, read over his old letters, and then studied the fire again; and when Dan did open his eyes with the first gray dawn of the morning, he saw his chum staring steadily at the dull red embers. 'You up first, old fellow!' he exclaimed in amazement. 'Why, what on earth is the matter?'

'Oh, nothing,' Jack said, starting like a man who had been roused from an unpleasant dream. 'Nothing the matter, Dan; only I'm going back to England!'

'Back to England, Jack! When? Why?'

'When—to-day. Why—because, because I have

seen a vision, Dan. Don't ask me anything more about it, old boy, for I can't tell you; only I must go home at once!'

'Why, goodness bless my soul, Jack! have you seen a ghost?'

'Worse than that—ever so much worse than that. What I saw was a reality, Dan. I'm sorry to leave you, old fellow; but it will be only for a time. I'll come back to the clearing, if I live long enough; but I cannot put off my departure for a single day.'

'Look sharp, then, and rout up Abram, and tell him to get out the buggy. We'll have a sharp drive of it; and there's every promise of a heavy snow-fall!'

'But you're not coming, Dan?'

'But I am, though. You don't suppose I'm going to let you start on such a journey by yourself? If you will go to England, I'll go with you. But I think, you know'—

'Gently, old fellow. Don't offer an opinion till you know the circumstances,' said Jack gravely. 'It's awfully good of you, Dan, to offer to accompany me; but I cannot consent to your doing it. I know you love this place, and don't want to leave it.'

'No more do I. But I don't want to leave you either, or rather let you leave me. We can find another clearing, old boy; but there's only one Jack Quartermain—that Dan Kennedy knows of, and he has no intention of losing sight of him. —Drag out the old calf-skin, lad; he and I'll cross the herring-pond once more. So say no more about it. I'm not naturally superstitious; and dreams and visions and such-like I set down to simple indigestion; but I do feel the most extraordinary sensation in my head this morning, just as if Bow Bells were whispering: "Go back to England, Dan! Go back to England!"'

## CAVIARE.

'THE noble sturgeon from a distant sea,' which is occasionally caught in British waters, and sometimes exhibited by our fish-merchants as a curious monster of the deep, is a Russian fish, and used to be taken in the various seas and estuaries in that country in almost fabulous numbers. Caviare—the name given to the roe of the sturgeon after it has been prepared for the market as an article of commerce—is, as many of our readers doubtless know, frequently offered, especially in the absence of oysters, as a whet before dinner; on which occasions it is eaten raw, spread upon toasted bread, and seasoned with oil, vinegar, or lemon-juice, according to taste. Caviare is profusely used in all the hotels and public eating-places of Russia and Germany, as well as in private houses. In his celebrated *Ride to Khiva*, Captain Burnaby mentions that, a little pressed or fresh caviare, and a glass or so of Russian vodki, taken before sitting down to dinner, give a wonderful stimulus to the appetite, and are a strong provocative of thirst. The Captain says of the sturgeon itself that, when served in cold slices with jelly and horseradish sauce, it is by no means to be despised. Some centuries ago, when a sturgeon was caught in British waters it was claimed by the Crown, and made into a pie, or otherwise dressed to grace the royal dinner-table.

The flesh of this fish deserves the good char-

acter given to it by Captain Burnaby. It is highly susceptible to the arts of the cook, and may be prepared in a hundred ways; moreover, it is both nutritious and digestible. A celebrated Venetian chef once told Soyer that with a large sturgeon at his command he required neither flesh-meat nor fowls. He could purvey a dinner from the fish alone; he could obtain his veal from the upper portion of the fish, and his pork from the under; whilst a fowl could be cut with the greatest ease from any part of the body; and a few pieces of the flesh were all that was necessary for the preparation of a delicious soup. When well stewed and eaten with shrimps pounded in anchovy sauce, the fried flesh of the sturgeon is excellent; whilst the fresh roes eaten with apple-sauce—this on the authority of M. Soyer—form a rare dish.

In the northern basin of the Caspian Sea the sturgeon is thought by the fishermen to be inexhaustible. More than one hundred thousand nets and fifteen million hooks are employed in its capture, these being worked from thousands of fishing-boats. The weight and value of the various kinds of sturgeon captured in the Caspian Sea have been roughly estimated at thirty-five million pounds, worth a million sterling; whilst the total annual income from the fisheries of every description carried on in the Caspian Sea has been set down at two and a quarter million pounds sterling.

On the banks of the Volga may be seen many excellent examples of the *votaga* or fishing establishment of that part of Russia. A *votaga* comprises within itself all the people who are necessary for the carrying on of a large business, as well as the various requisites for the capture and cure of the fish; such as a dwelling-house for the proprietor, cottages for the various inspectors and labourers employed, likewise covered sheds and warehouses for the storage of such fishing-gear as is not in immediate use. There are also in the *votaga* ice and salt stores, and ranges of buildings devoted to the dressing and salting of the various kinds of fish and to the preparing of caviare and isinglass. These erections stand partially over the water, being built upon piles; a mode of construction which renders it easier for the unloading of the fishing-boats, some of the very large fish being hauled into the warehouses by machinery. On the shore, all about may be seen boats of various sizes, as well as great breadths of netting, rows of fishing-lines, and other apparatus of capture. A *votaga* is a busy place; there is life, motion, industry within its boundaries. There is a perpetual round of work, the industry of the fishery being so distributed as to last all the year round. The proprietor is ubiquitous—has a keen eye to the main chance, and having a considerable amount of capital at stake, is naturally anxious to obtain a good return for his money. The duty of the inspector at a *votaga* is to receive, count, measure, and register the fish which are taken, and for the capture of which the fishermen are paid according to size on a given scale of prices, which is nearly the same on all the *votagas* of the Astrakhan district.

The money arrangements of some of the fisheries are not unlike those of the Scottish herring-fishery, the actual fishermen being paid according to the number of fish which they capture, receiving also earnest-money in advance, and

likewise loans to equip their boats. Many of the journeymen fishermen of the Russian *votagas* are 'well to do'; generally speaking, they are the owners of their own houses, and sometimes of a horse and cow, as well as a boat, or part of a boat, and its fishing-gear.

The round of work at a Russian fishery is not a little laborious, but is rendered as light as possible by the division of labour. As soon as a fish is received, it is measured and recorded; quickly cut open and disembowelled by labourers with a skill and rapidity beyond the belief of persons who have not witnessed the process. The large sturgeons are rapidly decapitated, as also deprived of their tails, a portion of the abdomen being likewise removed; the roe, swimming-bladder, and dorsal cord being carefully laid aside for further manipulation. The fish are then salted and hung up, by women, who are employed in large numbers—it being not an uncommon day's work for one woman to pass as many as two thousand small fish through her hands.

Sturgeons, of which there are several kinds, are measured from the middle of the eye to the beginning of the tail. The larger are often seven feet in length, and the smaller ones two feet four inches, there being various intermediate sizes. It is on record that in the year 1769 a specimen was caught not far from the mouth of the Ural which weighed two thousand five hundred and twenty pounds, and contained nine hundred pounds of roe; and it has been assumed by many writers in consequence, that a female sturgeon will yield roe to the extent of a third of her weight. But another very heavy sturgeon which weighed two thousand eight hundred and eighty pounds, contained only three hundred and seventy-six pounds of roe; so that the ova in the first specimen must have been developed to an abnormal extent.

With reference to the different kinds and qualities of caviare, it may be stated that the roe of one species, the *belouga*, is the most highly esteemed, because the berries are larger and finer looking than those of the common sturgeon or of the *sévriouga*. The best of all caviars, however, is made from the roe of the *sterliad*, but it is generally kept for private use. It does not at any rate form an article of commerce. This particular kind of caviare is used by the royal family of Russia; and quantities of it are likewise sent to various royal and noble personages, by order of the Emperor, as a high compliment or especial mark of regard. The condition of the roe which is contained in the sturgeon varies from time to time. All roes are not alike well formed or fat, the summer-caught fish generally containing the fattest roe. The caviare of commerce is brought to market in two forms—the one fresh or grained caviare, the other pressed or hard in cakes or lumps. There is another kind of very inferior quality, which is formed from soft or spoiled roe. In preparing the superior kinds, the eggs of the fish are thrown upon a very fine and tightly stretched net fixed on a wooden frame, through which the grains are lightly pressed. The grains—which are usually black or very dark brown in colour—fall into a wooden receptacle placed below the net or sieve, and are at once liberally sprinkled with very fine salt, being at the same time carefully stirred with a many-pronged fork. The caviare is known

to be ready for packing when, upon being stirred, the grains begin to jingle or to emit a slight metallic or glassy sound, which never occurs till the whole mass has been sufficiently impregnated with salt. In preparing the pressed caviare, the grains are squeezed through the net or sieve into a tub of brine of a greater or lesser strength, according to the season. The whole mass is constantly stirred with a wooden fork, always turning the same way till the roe is thoroughly and evenly impregnated with the brine, after which the stuff is taken out with fine sieves, from which the brine is allowed to drip.

The next part of the process is that known as bagging the roe, which consists in putting it up in rough sacks made from the linden-tree bark, each large enough to contain one hundred and eight pounds. These bags, when well filled, are placed under a press, in order that all the brine may be thoroughly squeezed out and the roe crushed into a solid mass. The caviare is now ready for packing, and is taken from the sacks and placed in large casks containing thirty pounds, which is equal in British weight to ten hundred and eighty pounds. The reason why this kind of caviare is called *caviar à la serviette* is because of the casks being lined with fine linen. *Caviar à sac* is composed of the finest of the pressed stuff. It is packed for the market in long linen bags of a cylindrical shape. Some kinds of caviare are also made up in tin boxes, which are hermetically closed. Large quantities of the best caviare are annually contracted for by dealers, who send it to Berlin, Dresden, and Vienna, where it is much used. In some years half a million of pounds-weight will be so disposed of.

The price paid to the dealers in caviare at Astrakhan is from four to five pounds sterling per pound (thirty-six pounds) for fresh, and three pounds sterling for the same quantity of pressed stuff. At all the votagas the desire is to prepare grained caviare, which is done with less trouble, and pays better than the making of the pressed kind.

Other portions of the sturgeon are also carefully utilised for food-uses. Indeed, the whole body of the fish is used for some purpose or other; capital isinglass being made from the bladder, while the sinews are converted into whips or goads to urge on the oxen which are kept at every votaga. As an article of food, the sturgeon, being still plentiful, is of course very valuable, seeing that no part of it need be wasted, and that the fish is of great size, some specimens weighing as much as two thousand pounds!

## LA SERENISSIMA.

### A TALE OF VENICE.

How much has been written and said about Venice—how many authors have tried to describe it; and yet how little can the richest word-painting convey to the reader a correct idea of this wonderful city! It is so unlike any other; the conditions under which its inhabitants live now, and have lived since its foundation, are so different from all others, that they have given to its pleasures and to its troubles, to its past history

and to its future hopes, a special colouring of its own.

Whilst all other capitals have gradually increased, and are increasing every day in every direction, Venice, surrounded by its inland sea, attained several centuries ago its present size and shape. The Piazza San Marco has been since then its Forum; successive generations have daily repaired to it in quest of news, of sunshine, or of friends; and will continue to walk under its arcades, to cross it and recross it in every direction, as long as the Duomo and the Procuratie wall it round, as long as the golden angel on St Mark's Tower shines far above the silent city. Its glory and its power have disappeared; the Queen of the Seas is now only a small provincial town. But however fallen from a diplomatic or commercial point of view, Venice has still and will always have a peculiar thrilling interest for all whose souls rise above the commonplace events of our daily life. The mysterious silence that constitutes the most striking feature of this 'Italian Dream,' as Dickens so happily called it, seems specially apt to foster and preserve the innumerable legends of its past history, and they accordingly abound. Every stone has its own legacy of romance; every dark gate is haunted by its familiar ghost; every recess, every cranny, whispers its old weird story.

The official annals of the Most Serene Venetian Republic contain innumerable instances of secret arrests, secret trials, followed almost always by still more secret executions; but besides these, many a terrible drama has taken place within the stone walls of the state prisons. Conveniently situated under the Ducal Palace, and with their floors slightly under high-water mark, these 'wells'—as they were called on account of their dampness—very seldom gave up a victim except as a corpse. Silent and dark as the grave, they were a fit instrument for a stern and mysterious tribunal. The severity of the Council of Ten, the swiftness with which it reached both high and low, the secrecy of its nocturnal sittings and of its sentences, created a universal feeling of awe, that has not yet completely disappeared.

Amongst the poorer classes there are many who still believe in the existence of the Secret Council, and who expect it to reappear some day; they abstain therefore from any direct allusion to it, mentioning it, only when absolutely necessary, by the vague term of *La Serenissima*. We may smile at this childish fear; but it proves very clearly the terror it must have inspired. The following legend, that was whispered to me a short time ago by an old gondolier, will shew by what means this result was obtained. Though I cannot vouch for the accuracy of every detail, there is no doubt in my mind as to its general truth, because the grandfather of my informant lived at the time it occurred, and would not have dared to repeat any tale against the *Serenissima* unless he was sure of it. With this proviso, I will now relate the legend as I heard it whilst I was quietly lolling in a Venetian gondola.

It was towards the end of 1760, when one night an English king's messenger reached Mestre, wanting to cross over to Venice. Sir John Hawser

—such was his name—was young, brave, and very highly connected, and as such perhaps, he had been chosen by the ministry to convey some trifling message to King George III.'s representative in that town. After a delay that would seem enormous to our modern express-train travellers, a gondola was manned, his luggage loaded in it, and at last it began to glide towards the city. He reached Venice just before dawn; and after a hurried toilet and a still more hurried breakfast, Sir John delivered his packet, and began exploring the lanes and alleys of this incomprehensible town. Being tolerably proficient in the language, he soon found his way to the Piazza San Marco, and was duly astonished by its peculiar aspect. Then, as now, the Piazza was the heart of the city; laws and edicts were promulgated in it; sentences were pronounced from the Balcony of the Ducal Palace; whilst beggars, singers, and others of a similar caste gave it a strange animation.

Thoroughly enjoying the freedom of walking after his long journey by coach and gondola, Sir John indulged his rambling propensities to the full extent. Whilst he was doing so a crowd collected in front of the Ducal Palace. Naturally curious, and having nothing else to do, he hastened to the spot, and elbowed his way to the centre. By the red pillar of the Balcony an usher was reading out the sentence of some unknown felon, with all the pompous circumlocutions so much in favour in those days. The wretched prisoner, just brought out of some dark cell, seemed scarcely to realise the scene, as his eyes, unused now to the light of the sun, gazed vacantly on the excited mob that surrounded the low scaffold on which he was standing. The sentence having been read, the prisoner was taken away to the jail where he was to undergo the term of imprisonment to which he had just been condemned; and the crowd, the sight being over, gradually dispersed.

This incident was in itself very trifling, and Sir John would probably have forgotten it within a week had it not been for its strange consequences. Whilst pushing and elbowing his way in the crowd it seems that some clever pick-pocket had robbed him of his lace handkerchief. It is certainly very unpleasant to be robbed even of a valueless article; but in this case the thief had obtained a valuable prize; and besides, there was for Sir John Hawser the additional sting of having been robbed by an Italian. He would have been less angry if it had happened in London; the pickpockets there were so clever that there was no shame in being their victim; but to have been plundered by a clumsy Venetian was too much for his equanimity, and he burst out in a torrent of abuse. Speaking mostly in Italian, but mixing a few English anathemas in his speech, he related his loss to a few by-standers, and was advised by them to complain to the police, or rather to those officials who under the Serenissima fulfilled the present duties of the police. Though without great faith in this plan, he followed it, and gave notice to the authorities. He was assured by a very stately official that he need have no fear, and that his property would soon be found and restored to him. Forced to be content with this vague consolation, he went home to his supper and bed.

For three or four days afterwards he continued visiting the principal monuments and churches, but without receiving any further information about his lace handkerchief. I have said that Sir John was young and brave; as a consequence, he was impetuous and fiery; whilst being born and bred in a free-thinking, free-speaking country, he was apt to express his thoughts as they came to his mind without reflection and without fear. It is not surprising therefore that one night, under the arcades of the Procuratie, while relating his loss to a few friends, he should have said what he thought of the vaunted secret police of Venice. They were, he said, a lot of stupid fools, very pompous and very stately, trying to hide their ignorance and incapacity under very high-sounding phrases; but the meanest London detective was worth the whole lot of them. As to the Secret Council, he did not believe it existed at all; or if it did, it was no better than the rest.

Ah, Sir John! if you needs must speak so irreverently of the Serenissima, why did you not use your own language? Why did you express your rash thoughts in Italian? Did you not know that walls have ears, and that every stone of Venice is a spy?

His friends astonished by this sudden outburst, attributed it at first to those last glasses of *vino santo* they had been drinking together; but knowing full well the jealous care the Serenissima had of its reputation, they instinctively shrank from him, as from a dangerous man. Availing themselves of favourable opportunities, they disappeared round dark corners, down side alleys; and very soon Sir John found himself alone.

Alone! At least so he thought; but a silent figure had been following him for some time, and was now eagerly and stealthily dogging him. So carefully it walked, so noiselessly it stepped, that for a long time Sir John did not notice this unwelcome shadow, and even when he did, he attached no importance to it. But at last he began to feel some doubts about this follower. Nothing could be guessed from his appearance. Completely wrapped up in a dark cloak, and with a wide hat shading and concealing the upper part of his face, the man would not have been recognised by his own brother. It was only the peculiar way in which he followed, and the ability with which he availed himself of every nook and corner, that implied a danger.

Fearless still, but somewhat annoyed, Sir John pursued his way through the maze of alleys that led from the Piazza to his temporary home. Determined to try to throw off his masked companion, he quickened at first his step; but at the next turning, a glance back shewed that it was no use. Having by this time reached the Ponte San Moise—one of the innumerable bridges that cross the minor canals of Venice—he stopped on its steps to see what his shadow would do. Astonished at first by this new ruse, the man hesitated a second, but a second only, and then disappeared in the shadow of the church. Our hero vainly strained his eyes in trying to find out whether he had really gone, or whether he was only hiding behind the columns and watching. He certainly began to feel an intense interest in this new chase, in which he seemed to be the game hunted down. Then, convinced that he had seen the last of his

silent friend, he decided on continuing his way home; and was just going to move, when a cloak was thrown over his head and chest, completely gagging him, whilst several strong arms entwined themselves round his body and effectually pinioned him. Before he could recover his senses, a voice whispered in Italian, in his ear: 'You are a prisoner of the Serenissima; resistance is of no use.'

Even after these words, the import of which he dimly guessed, Sir John would have tried to strike one blow at least for his life or for his liberty; but the cloak in which he had been wrapped up was so artistically and so securely fastened that he could not move a muscle nor utter a cry. There was no help for it, and he doggedly awaited his fate. The voices round him seemed to hold a short conference, and then they lifted him from the ground, and carrying him a short distance, deposited him in what he felt to be a gondola. The journey was not long, though to him it seemed an age, and very soon the rocking motion ceased. They evidently had reached their destination. A few seconds more and he was landed in the same unceremonious manner.

After depriving him of his sword and securing his hands, his captors released him from the folds of the mantle in which he had been almost choked. He found himself in a very small passage, dimly lighted, and intensely damp. The low ceiling, the strong stone walls, the massive iron doors that lined it, reminded him at once of all he had heard and read about the state prisons of Venice, and his heart sank within him. Without, however, giving him much time for reflection, or asking him any questions, his captors opened one of the cells, thrust him in, and bolted the door. Left alone in the most absolute darkness, our friend groped about as well as his tied hands would allow him until he found a stone bench, on which he dropped, completely unmanned by the novelty and the horror of his position. He had heard of prisoners being kept in these state prisons for months, even for years without light, with just enough of the coarsest food to keep them alive, and without the shadow of a judgment. Others had been tried and executed within these dark walls, and their friends outside had never known their fate. Was he too going to disappear without a struggle from this world? Was his body going to be dropped into the 'Canal grande?' Or was he to linger in his cell until his youth, his strength, and perhaps his mind were gone, to be released only a wreck of his former self, as a warning to others? There were many in Venice, poor shattered beings, heart-broken, half-crazed, shunned by everybody, who had once been the leaders of fashion, of science, of politics, until an anonymous note dropped into the Lion's mouth had caused their arrest, and their trialless detention in the underground—or rather under-water—prisons of the Serenissima.

But then, who could have denounced him? Who could have an interest in destroying him in this cowardly fashion? All the people he knew were above suspicion; and yet even the Serenissima would not have arrested an Englishman, a king's messenger, without some good reason. In that dreadful silence, broken only by the quiet plashing of the water on the stone walls in which he was imprisoned, his memory was particularly vivid, and recalled to his mind all the incidents of

his stay. At last he remembered those few hot foolish words he had used that very night; they, and they alone could be the cause of his present condition. This, however, brought no relief; it aggravated only his fears and his despondency, since he well knew what awful punishments were inflicted on those who, to use the Venetian phrase, 'blasphemed the government.'

Having settled the cause of his arrest, he gradually fell into a dull, drowsy state of half-unconsciousness, staring blindly in the darkness, listening vacantly in the vain hope of catching some sound, however faint, of that outside world he had so recently left. The silence was as complete as the darkness that surrounded him, and hours passed without bringing any change. Now and then a muffled sound reached his ears. Was it a footstep in the passage? Was it a wave a little higher than the others? Was it only the plaintive cry of the seamew? Or was it the dying gasp of a fellow-prisoner? He could not tell. After a very long time, of which he could not even guess the length, he distinctly heard a noise as of bolts and keys at his prison-door; suddenly it opened, and a flood of light illuminated every corner of his dismal cell. Dazzled at first by the glare of the torches, he could not see the men by whom they were carried; but gradually, as his eyes grew accustomed to the light, he saw they were all armed, all masked, and all dressed in black. In the meantime his hands had been released of their fetters, and his guards had quietly surrounded him. Without a word, without a sound, they led him on in their midst. Through dark halls and narrow staircases, through crooked passages and low beetling doors they marched as noiselessly as a group of ghosts surrounding a mortal man. At last their goal is reached; a door is flung open, and Sir John is ushered into a spacious room. At one end, on a raised platform sit ten judges, all masked, all draped in large black cloaks. By their side, but a little lower down, are the scribes of this silent tribunal. Judges and scribes as motionless as if they had been statues, and not human beings. The first glimpses of dawn struggling through the painted windows, powerless as yet to supersede the wax candles, gave to the whole scene the most weird aspect. Outside, all was sleeping; and no sound reached the inmates of this hall to remind them that a powerful city, a numerous population, surrounded their silent abode.

As soon as the several actors in this strange scene had reached their proper places, a man still masked, and dressed in the same dark hue, began in a monotonous slow tone to give his evidence. Though muffled by the folds of his mask, his voice was peculiarly distinct and clear, and Sir John at once knew it as being the same he had heard when he was arrested. Cold and pitiless as steel, without a tremor and without a pause, the voice repeated all the words used by the culprit when, in his rash burst of passion, he had derided and mocked the knowledge and the power of the Serenissima. Slowly and regularly the words followed each other as the links of a lengthened chain, as steadily as the drops of rain on a winter's day. The pens of the scribes, creaking as they hurried over the paper, made a fit accompaniment to this recital. Except for them, all was as motionless, as still as if no human hearts were beating under those black silk mantles. It ended

at last; and with a sense of relief Sir John strained his senses to see, to hear what would follow.

After a short pause, the judge who sat at the centre of the table stood up and addressed him in these terms: 'You have heard the evidence against you; now follow us and hear your sentence.'

No cross-examination, no defence was allowed by the laws of this Council. Rising together as if moved by a single mind, the funereal procession followed its leader, and left the hall by the door through which Sir John had entered it. Again through the same winding passages, again down the same narrow steps, silently and noiselessly they glided like ghosts returning to their graves. Surrounded by his guards, Sir John followed immediately after the last of the judges, wondering all the time what was to be his fate. When they had reached the lowest floor of the building, and were nearing again the loathsome cell from which he had so lately been taken, the cortège divided, and Sir John was brought face to face with the senior judge.

'You have insulted the Serenissima; you have denied its power of punishing crime, because you had been robbed of a paltry handkerchief, and it had not been immediately found and given back to you. Now look!' As he said these last words, the masked judge stepped on one side and directed Sir John's gaze to a darker corner of the dark passage. There, hanging against the wall, the rope that encircled his neck disappearing through the stone, was the corpse of a man.

Entranced by this sight, and thinking that perhaps he also was going to be hanged in the same manner by an unseen hand, Sir John felt rooted to the spot.

After a short silence, the judge continued: 'This man was the thief; in his right hand you will find your handkerchief. Take it. As for you, we ought not perhaps to be so lenient; but in consideration of your youth and of the high position you hold in your country, we will overlook your fault. You are forgiven. Outside this gate a gondola waits for you; it will take you to Mestre, and thence you will be conveyed to the frontier. Go! But remember always what you have seen to-night.'

Seizing with a trembling hand the lace handkerchief that had been the cause of so much trouble, Sir John wanted to speak, wanted to thank his unknown judge; but before he could recover his voice, the phantoms had disappeared, and two jailers only were by his side. Without a word, and apparently without an effort, these two men opened a secret door leading to the canal, and helped the now liberated man into a gondola that was moored to the steps, and in the forepart of which lay his luggage. No word was said, no order was given; the two gondoliers seemed to know their duty, and they silently paddled away from the palace in which Sir John had spent that dreadful night. At Mestre a coach was waiting for him. In a few hours the frontier was crossed. Then only did he begin to breathe freely. But for a long time afterwards he avoided any allusion to his Venetian adventure; and for many years he could not bear to speak of it.

Now the Serenissima is gone, the cells have been sacked by an infuriated mob, and innumerable tourists visit the hall where the Secret

Council held its nightly sittings; but even now I cannot help feeling relieved when I have left behind me Venice, its dark canals, and the darker memories that cling to them.

#### TAKEN AT THEIR WORD.

To be taken at one's word frequently leads to droll and unexpected results, as the following instances will shew. Once upon a time a young man wooed and won a fair damsel. The trousseau was provided, the ring bought, the preparations for the wedding completed. But a little while before it should have come off at Liverpool, the bridegroom-expectant was called to Ireland on important business. There he was detained by uncontrollable circumstances, and the intended marriage morn found him still in Cork. He telegraphed that the wedding must be put off for a day or two; the unwelcome message reaching his lady-love as she was donning her bridal gear, nothing doubting he would come up to time. As mortified as Petruchio's Kate 'to wait the bridegroom when the priest attends,' the angry girl wired back: 'The marriage must take place now or never!'—her unreasonable ultimatum being put into the laggard's hand as he was stepping on board the steamer for England.

Seeing something was wrong with him, the kindly captain inquired the cause of his moody looks, and was quickly enlightened. To cheer him up, he introduced him to a lady occupying the state cabin. After a little chat, she challenged him to a game of chess, and over the board he told his sad story a second time. His fair opponent did her best to console the disconsolate swain; and being young, pretty, and every way charming, consoled him so effectually, that before the English coast was sighted he had proposed and been accepted. On landing at Liverpool he was greeted by the friend who was to have acted as best-man with the information that the bride was anxiously awaiting him. Great was that gentleman's surprise on being told he was mistaken—that 'the bride' was the lady on his friend's arm; and if he had any doubts, they were dispelled by the speedy marriage of the pair by special license.

When a man is liable to be cross-questioned, it behoves him to think twice ere speaking once, if he would not trip over stumbling-blocks of his own creating. A gentleman giving evidence before a Parliamentary Committee, said that in some districts the number of crows upon a farm would average at least fifty; that the birds were of great service in destroying wire-worms; and where they did not exist, the farmer was obliged to hire boys to do the work of the crow, paying them at the rate of three-halfpence per hundred worms. Mr Bright inquired how much a boy could earn worm-killing, and was told ninepence; but when asked, if a boy made ninepence a day at the rate of three-halfpence a hundred wire-worms, how many of these noxious creatures he destroyed in a day, the witness, turning restive, replied that he did not come there to answer arithmetical questions. Mr Bright, however, was not to be put off in that way. He asked if a boy did the work as well as a crow. 'A

crow is worth fifty boys!' was the rash reply. Then quoth Mr Bright: 'If a boy is worth ninepence a day, and a crow worth fifty boys, how much is the crow worth to the farmer in money?' Not unnaturally, the gentleman lost his temper; but in vain. Paper, pen, and ink were handed to him; and after battling with the figures awhile, he announced that a crow was worth just thirty-seven shillings and sixpence a day to the farmer. He was then asked to inform the Committee what, at that rate, was the yearly value of the bird; and of course could not make it less than six hundred and eighty-four pounds seven shillings and sixpence. His persecutor next reminded the badgered man that he had given fifty as the average number of crows on a farm, and desired him to find the aggregate annual value to the farmer of his proper quota of these useful aids; thereby eliciting the startling information, that the farmer must be a gainer of over thirty-four thousand pounds per annum by his half-hundred crows! Thus was the gentleman taken at his word, with a vengeance!

Makers of seemingly absurd assertions do not always get the worst of the deal. Two urchins sitting on a doorstep with their slates in their laps, were heard by a passer-by saying: 'Two from one, and one remains.' He at once challenged them with: 'I'll give you a sixpence if you can prove that, my boys.' They took him at his word and into a kitchen where their mother sat nursing twins. In a moment each boy had a baby in his arms, and was pointing at the wondering matron as a proof that their novel arithmetical proposition was correct. They had taken two from one, and one remained; and honestly won the reward.

Midshipman Marryat, a veritable chip of the old block, serving in a ship off Singapore, got into disgrace with his captain, and consequently found himself left out in the cold when his brother-middies were revelling in the delights of a ball on board ship. The next day, all the glass and crockery hired for the occasion was packed for re-conveyance on shore, and the young scapegrace told off to command the boat. He came to his duty so slowly that the angry commander shouted: 'Run sir; jump!' 'Ay, ay sir!' responded the middy; and then jump he did over the ship's side right into the midst of the fragile freight, much to its damage and Marryat's pretended dismay.

As wickedly anxious to obey orders to the letter was a Mexican taking the stand in a New York police court as a witness in an assault case. Having informed the judge that he spoke English, he was told to state what he knew of the affair in question. Thereupon the prosecuting attorney, an Irishman by birth, quite unnecessarily intervened with: 'Ye onderstand, sor, that ye are to go on, and state to the coort what ye know about this case in yer own language.' 'You want me to tell the story in my own language?' asked the witness. 'Yes sor, I do,' replied the lawyer. The Mexican began: 'Este mujer venia a mi casa.'—'What is that ye're saying?' exclaimed the attorney. 'I am speaking in my own language, as you requested me to do,' was the reply. 'I didn't mane for ye to spake yer own language when I said for ye to spake yer own language,' explained the legal gentleman. 'Can't ye spake to me as I am spakin' to ye?' 'I can try, sir,' said the Mexican;

and he went on with his story thus: 'Well thin, yer Honor, this man and this woman kem to my house, and sez the man to the woman, sez he: "I want to spake wid ye," sez he.' Here the indignant examiner broke in with: 'What do ye mane, sor, by spakin' in that way?' 'Shure sor, responded the witness, 'ye axed me to spake in the language ye use yerself, an' shure I'm after thryin' to oblige ye.' Then the judge thought it time to interfere, and bade the Mexican to talk English. 'With pleasure, your Honour,' said he. 'I should have done so at first; but the learned gentleman seemed rather particular in regard to the language in which he wished me to give my evidence.'

It now and again happens that the ire of the Bench is excited by the obtuseness and perversity of the gentlemen of the jury. Such a thing came to pass upon a certain occasion at Westminster, when, singularly enough, the judge himself brought about the delivery of a verdict not at all consonant with his idea of justice. The action arose out of a dispute between a Water Company and some of its customers, and the evidence in favour of the defendants was so irresistible that the judge expressed his wonder that the jury should want to retire to consider their verdict. Retire they did nevertheless; and upon returning after a long absence, the foreman announced that they had all agreed, with one exception. The judge was surprised and indignant, and made some very unflattering remarks on the intellectual capacity of the minority of one. He, however, upon the jury again retiring, was proof against criticism, and obstinately holding to his own opinion, the jury had to be discharged. Then it came out that the obstinate man had taken the same view of the evidence as the judge himself, while the eleven refused to adopt what the Bench thought to be the only reasonable conclusion to be drawn from the facts. When his Lordship was made aware of the state of the case, he very considerably altered his tone.

A speaker whose auditors 'take suggestion as a cat laps milk,' may well be proud of his power of arguing; yet Mr Stenson was not altogether happy when, upon sitting down after strenuously urging upon his fellow-councillors of Derby the necessity of immediately appointing a town-crier, one of them rose and gravely moved that the vacant office be conferred upon Mr Stenson himself; the motion being seconded, put, and carried, and the crier's cloak and bell presented to the newly made official almost before he could realise the situation.—In the same predicament of being hoist by his own petard was a certain worthy high-sheriff who, presiding at the opening of a fancy fair, counselled the ladies to be active and energetic in pressing their wares upon those who had money, but who had had neither brains nor time to make anything worth exhibiting. He had hardly ceased speaking before one of the fair stall-keepers dandled a little doll before his eyes, and insisted upon his giving her half a guinea for it. He was rather taken aback at his advice being so promptly acted upon; but the lady was so pressing and so energetic that he saw there was no help for it but to take the doll and part with his half-guinea.

Both of these victims to their own eloquence gave their advice with honourable intentions,

believing it to be good. As much could not be said for Dr Mason, a Californian mine superintendent, who, when a ragged fellow asked: 'Kin ye tell whar there's a good place to prospect?' after looking him well over, responded: 'You look like a lively industrious man. You see that oak-tree on the hill-side. Well, under that tree will be a good place to prospect; besides, it's nice and shady, and you can lie down and rest comfortably when you are tired.' The stranger went to work with pick and shovel at the spot indicated by the practical joker, replying to the 'chaff' of the miners that he guessed the superintendent knew what he was about; but nobody was more astonished than the Doctor when, at the end of a week, the confiding man was able to shew fifteen hundred dollars' worth of gold as the result of his labour,—an upshot undreamt of in his philosophy.

The heroine of a comical Circassian legend had more faith in her own prescience, and with very good reason. The story runs thus. A man was walking along one road, and a woman along another. The roads finally united into one, and reaching the point of junction at the same time, they walked on together. The man was carrying a large iron kettle on his back; in one hand he held the legs of a live chicken; in the other, a cane; and he was leading a goat. They neared a dark ravine. Said the woman: 'I am afraid to go through that ravine with you; it is a lonely place, and you might overpower me and kiss me by force.' Said the man: 'How can I possibly overpower you and kiss you by force, when I have this great iron kettle on my back, a cane in one hand, a live chicken in the other, and am leading this goat? I might as well be tied hand and foot.' 'Yes,' replied the woman. 'But if you should stick your cane in the ground and tie the goat to it, and turn the kettle bottom-side up and put the chicken under it, then you might wickedly kiss me in spite of my resistance.' 'Success to thy ingenuity, O woman!' said the rejoicing man to himself. 'I should never have thought of this or similar expedient.' And when they came to the ravine, he stuck his cane into the ground and tied the goat to it, gave the chicken to the woman, saying: 'Hold it while I cut some grass for the goat; and then—so runs the legend—lowering the kettle from his shoulders, he put the fowl under it, and wickedly kissed the woman, as she was afraid he would.

#### TO A BLACKBIRD.

BIRD on the bough,  
Why singest thou?  
O wherefore that redundant song?  
Dost long to pour,  
As heretofore,  
Thy flute-like music from the leafless tree,  
And herald Spring (ere storms have ceased to be)  
With silver tongue?

Upon mine ear  
Fall loud and clear  
The sweet notes of thy minstrelsy.  
Blow wind! Beat rain  
Upon the pane!

Yon bird of mellow throat and dusky feather  
Warbles, unmindful of the wintry weather,  
Now chilling me.

O joyous bird!  
My heart is stirred—  
My weary heart is comforted.  
Thy vesper hymn  
I' the twilight dim,  
When earth is tristful, and when skies are sobbing,  
Has quelled the pain that sent my pulses throbbing  
With anxious dread.

Bird on the bough!  
Say, mindest thou  
The day when all the world was white?  
When from my sill  
Thy yellow bill  
With sweets I ravished? When 'mid frost ferns peering  
I watched thee, joyed with thy presumptuous nearing,  
Nor scared to flight?

Say, is the song  
That floats along  
From airy regions to my heart,  
For sooth'd sense  
A recompense?  
Dost wish to chase my grief by rapturous singing?  
To teach me how to live—by lofty winging  
The clouds to part?

Or dost forget  
Thy paltry debt,  
And ring out liquid notes for joy?  
Ere yet the earth  
Has given birth  
To nascent buds that blossom into flowers—  
Ere yet the spring-tide raineth genial showers  
Of sunlight coy?

O sweet! O rare!  
Beyond compare!  
Dost dream of rose-flushed apple-tree?  
Of the coming day  
When laughing May,  
Will shake her magic bells to give thee pleasure,  
And spread her balsamed leaves to guard thy treasure  
And shelter thee?

Bird on the bough!  
Enough, that thou  
In thy glad pæan to the skies,  
Hast lifted me  
From apathy—  
Hast bid me vanquish pain, be brave and cheery,  
Even in unblissful hours, when days are dreary,  
And doubts arise.

## CONVICT LIFE.

PERSONS who are not very old can remember the time when crimes such as highway robbery, burglary, and forgery were punishable by death on the scaffold; and when crimes of a less aggravated kind were visited by transportation to penal colonies for life. The punishments were severe, but in a sense they were effectual. Society got rid of its torments. With milder views came the present system, which aims at the moral and intellectual improvement of offenders through the agency of penal discipline for longer or shorter periods. Without wishing to go back to the old merciless practices, one feels that the new and humane methods of punishment are far from satisfactory. In some cases, they may fulfil the desired reclamation; but it is too clear that for the most part the criminal class is not lessened, if it be not increased, in numbers. The penalties fail in deterrent influence. Obviously, large masses of people prefer a life of habitual crime, interspersed though it be with imprisonment. In short, a prison is viewed as a pleasant place of retirement, instead of being the terror it ought to be. Society would need to think over the whole subject. The present state of things cannot with decency go on much longer.

That our penal system signally fails in the manner we have summarised, is the accusation made in a volume before us—the personal experiences of a convict (*Convict Life*, by a Ticket-of-Leave Man. London: Wyman & Sons, 1879). The writer is a man of education, and his work bears frequent evidence to his discernment and judgment. He narrates his story perspicuously, and with an unaffected sincerity of tone that carries conviction with it.

After reaching middle life in the character of a gentleman, and with the reputation of an honourable man, our author confesses that he was weak enough to enter upon a course of dissipation at the advent of a terrible domestic calamity. On this supervened crime; and one who had never

before darkened the doors of a police court, was sent 'to herd with professional thieves in penal servitude for seven years.' In these words on the first page of the book is struck the keynote of the book. It is a protest by a criminal it is true, but yet for the most part a law-observing member of Society, against the system which levels to one common standard of degradation him who has once lapsed and him who is a declared and persevering marauder upon Society. He has no sympathy with the criminal class, nor with those who pity the thieves on account of the hideous dress they wear, or because their hair is cropped, or their beds hard, or their beef tough. He is quite right. Judging from the minute personal reminiscences, the physical comfort of criminals is far greater than most seamen enjoy; they are more daintily treated than the miners of Lancashire and Wales; their food is more nourishing and their bedding more luxurious than of the ordinary agricultural hind in English rural districts. Poor honesty has therefore every reason to complain that murderers and felons have more than their deserts of this world's enjoyments given them out of honesty's hardly paid taxes.

The free criminal population in England is a vast army, usually estimated at about one hundred thousand in number! These men are wholly destructive consumers; they live on the fruits of other men's labour; and their misdirected skill in filching is an art which each thief is eager to teach to any one who will listen. The Long Firm is an association of the most tenacious vitality; and amongst the main sources of its strength is the association of thieves in convict prisons, with free opportunity for elaborate schemes of predatory enterprise. The prisons are good cages, but bad reformatories; and outside, the police system is an excellent detector of crime committed, but the worst of preventives. Consequently, nefarious practices are neither prevented nor repressed. To sustain a charge, not to prevent a crime, seems to be the main object of the police-officer. A case in point occurs to mind. A policeman at the Liverpool Docks saw a suspicious character prowling

about. Ensconcing himself close at hand, Policeman X waited and afforded the thief full opportunity to declare his intentions. At length he did so by making off with, we think, a quantity of cotton, large quantities of which find their way to the dishonest receivers at that great entrepôt. Now, if Policeman X had wished to reach the fountain-head of crime, he would have followed the stolen goods to their destination, and bagged two birds with one stone. With such an object in view, his connivance—for it was nought else—in the theft would have been explicable. As a matter of fact he arrested the thief as soon as he had left the Dock Estate; and we suppose the 'clever capture' was lauded in the local press, and gained for him the approbation of his chiefs.

Comparatively few instances can be pointed to by the police, of the prevention of crime. Hundreds of examples they can adduce of captures more or less clever; but even this detection of crime is far from being satisfactorily performed. And it is a sad subject for reflection that the government prisons are perfect schools of crime, in which laziness is encouraged, leisure for conversation and conspiracy afforded, and a merely perfunctory course of education and of religious teaching all that there is of pretended reformatory effort.

Ingenious methods of depredation have not infrequently been disclosed in these columns, to interest and, if possible, safeguard our readers. Some of the tricks exposed by our author are extremely clever devices of the enemy. Officers of Excise, for example, might profitably turn their attention to such public-houses as make a practice of receiving leather portmanteaus, these seemingly innocent articles of baggage being often skilfully constructed bottles, containing up to two gallons of new spirits from illicit distilleries. Nor are these places always in poor or suspected neighbourhoods. The clever criminal knows a better trick. He takes a respectable villa, and under cover of this irreproachable exterior, pursues his nefarious craft. The only real difficulty—and it is but a slight one after all—is the procuring of the raw material. Another rascal was in the habit of 'earning' a good living by the sale of sapphire rings. These are set in gold, with eight real brilliants, easily recognisable as genuine. But the centre stone is but two pieces of colourless topaz, joined with Venice turpentine, and with a bit of blue glass sandwiched between. The topaz resists the file, the diamonds are genuine, and the pawnbroker is thus easily victimised.

One fellow served an eight years' 'lagging' on pretty easy terms. In thieves' language, 'he did it on his head.' His sentence was on account of a notorious diamond robbery in the now well-known style. Fashionable lodgings in Mayfair, horse and brougham, West-end jeweller, wife desirous of inspecting four thousand pounds-worth of jewellery, assistant chloroformed, escape of the thief—these were the elements of the adventure. His wife was watched, and the thief trapped when he returned to England to take her off to America; but the money was gone. And after a lenient and utterly incommensurate punishment, this rascal was discharged to continue his practices. He said that he had perfected a scheme to defy detection,

and by which he intended to make a fortune out of New York bankers.

Another phase of convict life quite as pernicious as the facilities offered for conspiracy and instruction in the thieves' art, is the never-ending lesson of laziness inculcated there. Indoor labour is of the lightest description, and the work of the outdoor gangs is by no means comparable in severity with the ordinary work of coal-miners or agricultural labourers. The dock porters who in our sea-port towns earn their four shillings a day, labour much more strenuously than the hardest-worked convict. And here we must insist upon the fact that the honest artisan and labourer in England is condemned by the very nature of his position to hard labour for life. The death-rate in the open world ranges up to forty per thousand in some towns. In convict prisons, despite the fact that the criminal classes are abandoned wretches, given to the commission of the most disgusting crimes, and that they bring with them into prison constitutions sapped by excess and debauchery, the rate of mortality, we are told, is only thirteen per thousand. Hence the grim joke of one of the comic papers which depicted a doctor and his patient, to whom the former ordered the novel prescription of a month's sojourn in jail as a cure for the effects of overwork. For the convict there is almost complete immunity from risk. Outside, the sailor risks his life for two pounds a month; and the miner dares the perils of the earth for wages not very much more liberal. But light as is the labour required from criminals, they use all kinds of artifices to shirk it. 'The most earnest prayer,' says our author, 'of the professional thief might be thus translated: "From the sacredness of work, and from all other sacredness, good Lord, deliver me."' The first object in life to this end is to 'fetch the farm'—that is, to get into the infirmary. Concerning the means employed to this end, the thieves compare notes, and evolve the most complex systems from their perverted imaginations by which to 'best the croker,' in other words, cheat the doctor. In the infirmary, a prisoner gets a good bed, and the close association of many other thieves in a large warm dormitory. 'He gets nice food, and he gets what every thief in England adores above everything else except drink—I mean entire laziness. He can lie on his back, eat, chat with his neighbour, and plot future villainy. The infirmary is the convicted thief's paradise.'

Other methods are also successfully employed by those old hands at crime who wish 'to do their lagging on their head,' that is, with as little discomfort as possible to themselves. Old thieves in for a second or third term are particularly adept in making themselves easy. They are treated almost like comrades by the warders, and curry favour with them by keeping watch for the advent of superior officers, or by assisting them in detecting minor infractions of the rules by novices, ever the scapegoats of others' delinquencies. Moreover, though the possession of tobacco is a heinous offence, severely punishable, and though only through the warders tobacco can enter a prison, yet the old hands frequently obtain this luxury. It is alleged, we cannot tell with what truth, that warders receive black-mail from the friends of convicts. These are matters which will doubtless be inquired into.

There is an utterly fallacious idea abroad that convict labour must not be allowed to compete with free labour. Against this we merely say, that if it be just that the honest man should labour for his bread, it is no less just that the criminal also should labour for his livelihood. If any man will not work neither shall he eat, is even yet a good principle to teach those who presume to live by depredations and not by work. Provided always that the products of convict labour are only sold at the market price, no injustice whatever is done to free men working in the same kind. We cannot force criminals to earn their bread when at large; we can at least punish them for getting it dishonestly; and common-sense teaches that whilst in confinement, they should be habituated to the hard, really hard labour of the average working-man, and not be allowed to make a mere play of working, as is stated to be often the case.

Out of doors the evil is even worse. Not the most ignorant hind would find fault with convict labour applied to the reclamation of bog and waste land. But although this is the theoretical aim of the outdoor labour, nothing has as yet been done worthy of notice. The men have similar freedom for plotting villainy, for degrading talk, and for proselytism in crime, as in the shops. And one general lesson is taught indiscriminately to all, taught not orally and weakly by precept, but forcibly and permanently in practice and example. That general lesson is 'the doctrine, that time and labour are of no value.'

What is most urgently needed in our penal system is a short sharp system of dealing with the casual offender, and entire separation of him from the contaminations of the other class. The habitual offenders should have their deserts—severe labour. What they have voluntarily shirked when free, should be forced upon them when confined. And if brave men risk their lives—say in the mines—surely we need be under no compunction in condemning the criminal to that kind of labour. We shall be glad to hear that the subject in all its bearings is carefully reconsidered. Present arrangements, the outcome of heedless philanthropists and crotcheteers, are little better than a scandal. A remedy must be found somehow.

## A LIFE'S ATONEMENT.

### CHAPTER XL—CONTINUED.

HASTINGS pursued his leisurely way to Montague Gardens, untroubled and light of heart. He beguiled the way by self-satisfied reflection. Yet he was in his way a philosopher, and valued himself pretty accurately at times. 'There is a little demon inside you, my friend,' he told himself, 'who overmasters you upon occasion, and clouds your finer faculties.' Having nobody else to chaff at this juncture, he chaffed himself, laughing at his own incongruities of character and of speech, and looking on at himself like a quite disinterested spectator, and enjoying the spectacle. Life had been so far an uninterrupted series of passages of light comedy. He was leading comedian and audience in one. He looked on at himself, admiring his own *sang-froid* and

impudence and jollity. He talked as much to himself as to others, and in the same strain. He was sufficient audience to himself, and perpetually aired himself behind the comedy footlights for his own delectation. He admired himself beyond measure, and thought himself at bottom one of the humblest men in the world.

Arriving at Frank's rooms, he found the artist hard at work, and jovial. At the sight of the picture, now nearly completed, Hastings stood still in genuine admiration. The artist had struggled after a very difficult and subtle effect, and had all but perfectly succeeded in catching it. An autumn corn-field, with shocks of corn here and there. A level country melts gradually into the distance. The late sunlight is so faint and dim that only the faintest shadows lie upon the ground. They are made the fainter by a pallid gleam of moonlight, which struggles for supremacy with the light of the fading sun, and will gain it before long. It is this delicate blending of light which makes the beauty of the picture. Perhaps the *technique* of the work is not altogether perfect. Over that let the critics quarrel if they will. But the poetry of the work is pure and strong. Its grouping is beyond all cavil. The ideal at which it aims is high, and only missed by the merest trifle. Only missed by that mere trifle because the painter has not yet arrived at the complete artistic mastery of himself. You feel somehow a suspicion of juvenility in the worker. You may see the picture now if you choose—at any time when the family is in town or abroad—by a journey to Chesterwood Castle. It is one of the gems of my lord's almost unrivalled collection. It has taken its place, and is pointed out now as the work of one who was the most promising artist of his time. The housekeeper will make a vague shot or two at the mystery which this story for the first time clears. She will tell you, if you care to listen, that she knew the young gentleman who painted it, and will describe him to you, and will relate further that a niece of hers was upper housemaid in the household of the artist's father. She will dwell on the respectability of that old county family, and on the melancholy enigma of the handsome and gifted young artist's fate.

'Fairholt,' said Hastings, laying a hand upon his friend's shoulder, 'this is noble; this is great; this is worthy of you.'

'It will sell, anyhow,' returned Frank, taking his friend's enthusiasm for badinage.

'My dear Fairholt,' said Hastings, 'I mean it, every word. It is my fate to be believed when I desire to be discredited, and doubted when I would be believed. This is a great work, Fairholt.'

'Be serious for once, and tell me what you really think of it.'

'I am about to give you practical proof of what I think of it. I am here on business. Wait until I have finished, and then tell me I am incredible. I am commissioned to buy this work; I am commissioned to offer you four hundred guineas for it. Now, I advise you—put another hundred on it. I advise you as a friend. Put another hundred on it. Do now—to oblige me.'

'You look serious,' said Frank, standing before him pipe in mouth.

'The Rhadamanthine gloom which veils my

brow, returned Hastings, with an airy cheerfulness of explanation, 'is but an earnest of the soul within.'

'Do you really mean that you have a commission to buy this picture?' Frank asked, pointing at it with his maul-stick.

'I am painfully reminded of the statement of Dr Watts, where, with a profound philosophy which was a real credit to him, he remarks: "A liar we can never trust, though he should speak the thing that's true."'

'I don't think you would have the execrable taste to do this in jest.'

'You do me honour,' replied Hastings.

'Doubt that the stars are fire;  
Doubt that the earth doth move;  
Doubt truth to be a liar,  
But never doubt

that I have a commission to purchase this work of art for the sum of four hundred guineas.'

'Then I have done work for the day. Come out, Hastings, and dine somewhere. Who's the purchaser?'

'There, I regret to say, I am forbidden to speak. The purchaser folds himself in mystery.'

'This is too absurd,' said Frank, a little angrily.

'My dear boy,' answered Hastings, 'but that I am forbid to tell the secrets of my prison-house, I would a tale unfold. Don't get angry, Fairholt. Now am I serious. The fact of the case is this, I am deputed by a gentleman who does not wish his name to appear, to offer you four hundred guineas for this picture. If you accept, the money will be paid within one week of the opening of the Winter Exhibition. If you refuse, the envoy retires discomfited.'

'Refuse! I have no intention that way, I assure you. Come. Is it your father, Hastings?'

'It is not my father, nor any relative of mine, or friend of mine. I am simply the agent. Am I to say you accept?'

'Yes. By Jove, sir, this is a fortunate hit! Do you know, Hastings, that I sold you daub at the Academy last week? Got two hundred for it. I am like that jolly old fellow the village blacksmith, and can look the whole world in the face, for I owe not any man. Paid all my debts. Deposited coin to meet the bill which dear old Will backed for me only a week or two ago. Free of all responsibilities. Five-and-forty pound to the good. Four hundred in prospective, and a quarterly allowance due in a fortnight.'

'I believe you dropped a hint just now about dining somewhere?'

'Which I did,' responded Frank. 'Which I will demean myself by standing treat to the commercial party wot negotiates.'

With a laugh, Frank flung himself out of the studio, and in a few minutes returned radiant in his pet artistic costume. Booted and gloved as delicately as a lady, his air was elate and sprightly. The well-browned meerschaum—Bohemian emblem—sent forth clouds. Removing the pipe from his lips, he roared forth scraps of the *Marseillaise*, and made tragic passes at Hastings with his walking-cane. Next seizing that impassive young gentleman by the arm, he sallied forth into the street with such a beaming pleasure in his handsome face, that people positively turned to

look after him. His spirits were at fever-heat, and he chattered incessantly. The streets were growing cool after the heat of the day; and when a man is happy, even the streets of London may be pleasant to him. The shadows were growing longer; there was a soft, hazy languor in the air. In these prosperous quarters, the window-gardens looked charming. The variegated blinds did something towards destroying the monotony of the streets. The very 'cooee' of the milkman was pleasant. Who cannot remember such times? I remember that London has been beautiful to me. But it was years ago.

If you are travelling from Montague Gardens to Pall-Mall, your pleasantest way is through St James's Park, though when hurried you may find a shorter route. Frank and Hastings were not hurried, but the contrary. Is there any beauty in a manly face like that given by unaffected gaiety? I think not. The young artist looked like a veritable sunbeam—so bright, so jovial. Nursemaids turned round and looked upon him with undisguised admiration, and their charges brightened at his merry, noisy laughter. Youth and high spirits sparkled in him like champagne, and flushed his face, and gave light to his eyes. His laugh rose like a bubbling fountain of wine. He and Hastings strolled through the park, and out of its sunlight and freshness into the shadows of Pall-Mall; dusty despite the one ribbon-like streak of moisture which the recent watering-cart had left behind.

Entering Pall-Mall, and taking the first turn to the left, you may find the site of the club at which these two dined that day. The club has vanished. Its members are distributed through the four quarters of the globe. Some are dead and buried long ago. They were all young fellows then—mostly followers of the arts. Very gay, very noisy, very untrammelled, very happy they were. The club system was a younger and a fresher thing then than now, and all the more enjoyment was therefore to be extracted from it. There are no clubs like it nowadays. The piano in the smoke-room—the nightly songs and speeches and discussions—the select section, a club within a club, which called itself the Claret Conclave, and whose members drank that wine alone within the club confines—the chorus wherein all men then present nightly joined—the moustached and olive-complexioned gentlemen of the Royal Opera, who came down late at night and sometimes stayed until early in the morning, making the walls sweetly vocal—the eminent old tragedian who spouted there, 'mouthing his hollow oes and aes' in sonorous dissertations upon *Hamlet*—the eminent old comedian who told his droll stories with so droll an air—where be all these things and people now? They are dead and gone, lady—they are dead and gone. Let the turf be green and light above them, and the stone of remembrance not unkindly graven.

The culinary resources of this establishment, though not at that pitch of perfection which satisfies Young England now, were not to be despised. Over the mysteries of the *cuisine* no Parisian *maitre d'hôtel* presided; but was not old Nicholas trained in the very citadel of cookery, and was there his equal in any of the statelier clubs hard by? The club bragged of Nicholas, not without justification. At Frank's special command,

Nicholas went beyond himself. It was another charm of this old club, that when you went to dine there, you held a special consultation with the cook, and arranged your dinner with as much deliberation and care and forethought as you chose to exercise. Nicholas took his clients—let me call them by no meaner name, for his sake—into his confidence. Sure of his resources, and eager and proud to please, he yet advised and persuaded, offering with a humility the more charming for the greatness of him who displayed it, gentle and suasive counsel, not often rejected. Would they give Nicholas but half an hour? Would they not? And at the end of it came such an atonement for delay as few men find in this unsatisfactory world.

All enjoyments come to an end. 'Ethereal, flushed,' these young gentlemen left the table and adjourned to the smoking-room. They were hailed boisterously. It was Music-night, and every man who entered these precincts must sing if the assembled members willed that he should sing. No plea of inability to sing—no excuse of hoarseness would avail. So long as the Gigantic Native sat at the piano, no lapsus of memory could serve as a loophole for escape. For the Gigantic Native knew by heart every song of Europe, or thereabouts, and would roar you the words, line by line, whilst those enormous but facile hands of his went flying over the keys. Now Frank was the swell vocalist of the club, and Hastings was its special singer of comic songs. With what a tragic fury the latter warbled the many-tuned ditties of Sam Cowell. In what a tremendous bass he declaimed 'Behold me! You told me,' and the rest of it. In what *debonair* fashion he related that Alonzo he was handsome and Alonzo he was young. How exquisitely and in what a soft and tender falsetto he trilled forth the protestations of the young lady. And could the Great Sam himself approach him in that exquisite fidelity to the Cockney style and accent which was one of the special features of his presentment of the story of Young Susan and the Ship's Carpen-ter? The varying emphasis of that charming chorus:

Singin' doddle, doddle, doddle, chip, chum, chow,  
choora, li, la,

now given with martial fire, and now with melting feeling, and now with scathing sarcasm, who—if not the Great Sam himself—should presume to strive to equal?

And was not Frank poet as well as singer—and had not Herr Broekenyack set his last to music, and was not the fame thereof brnited abroad? Herr Professor was absent; but the Gigantic Native was there with a blotted manuscript, undecipherable by any man save himself and the Professor, and with it he seated himself at the piano; and after preliminary settlings of his coat and arrangings of his wristbands, as though preparing to tear the instrument in sunder, instead thereof, kissed its keys most delicately with his finger-tips, and tripped through the dainty prelude. Frank stood at the piano, flushed, confident, handsome—a tender sentiment in his heart; for the words were of Maud, and reminded him of her. He closed his eyes for a second, and was back at the gate in the gardens again, and the evening sunlight was tranquil on the tranquil

fields. But the note of preparation sounded, and he sang this song:

Her spirit dwells about me like a thought;  
I know her far, yet feel her near the while;  
For me all rapture of delight is caught  
In her remembered smile.  
And London's wintry evening, mirk and gray,  
Is fair as summer's fairest, when the skies  
Fade into one pure azure, and the day,  
Worn out with pleasure, dies!

Great applause followed; for they were generous and genial young people all, and proud of their comrades and of their achievements, and they had a sublime belief in each other, and were bound in the bonds of an enduring brotherhood. So, with rattling of glasses and rapping of tables, and hearty *bravos* and *vivas* in his ears, Frank resumed his seat. We affected whisky-punch here, observe you, we who were not of that cold Claret Conclave. 'Whisky-punch, sir? Yessir.' The very waiter was proud to wait on Frank. Hastings had disseminated the story of the sold pictures. The Academy success of the year was already assured. Frank was the hero of the place and the hour. Hastings had of course told each man privately, and in confidence; and by the time each man felt disposed to impart the confidence to some one else, almost everybody knew. But they all came—to the number of five-and-twenty perhaps—and congratulated Frank in private, and shook hands with him gladly, and told him how pleased they were at his successes.

'Fairholt,' said Hastings, 'this is growing dull and noisy. Dullness is unpleasant, and noise is unpleasant. Combined they are unbearable. Come away.'

'I'll tell you what I'll do,' said Frank gaily. 'I'll give you your revenge. On one condition—that you never ask me to touch a card again. But I won heavily from you last time, old fellow, and I can afford to play to-night, eh?'

'Your star is in the ascendant to-night,' Hastings answered. 'But I like to go where the fight is hottest. Come along. Not here. Let us get away where we can be quiet.'

The time is an hour after midnight, the place the card-room of the club in which you first met Hastings. There are four men playing at *vingt-et-un*. Two of them we know; the other two you would probably not care to know.

'Cleaned out?' says Hastings, looking up at Frank.

'Cleaned out,' responds Frank with an idiotic laugh, and a lurch forward at a tumbler.

'Wait here a moment,' Hastings answers, and rising somewhat unsteadily, leaves the room.

There is an exultant light in Mr Tasker's eyes as he enters, with Hastings, a minute or two afterwards. A smile flickers at the corners of his mouth.

Frank comes to meet them.

'No, Hastings,' he says with an air of stern determination, 'I have no more to do with this fellow.'

'Why, Mr Vairhold,' says Mr Tasker cheerfully, 'you cannot surely bear malice for a hasty word. I am very sorry. I apologise with all my heart.'

Frank locks upon him for a moment, and relaxes. 'You're a good fellow, Tasker. I'm afraid I have been very unpolite. Excuse me.'

They shake hands, and the foolish young fellow laughs again. They retire to a table at the far end of the room.

'In your name, Mr Vairhold?' asks Tasker, sitting there with a pen in his hand.

'Of course,' Frank answers. 'Be quiet, Hastings.—Hastings is hard-up, you know,' he tells Tasker with another idiotic laugh.

'It is lucky,' says Tasker in a low voice, 'that I have gash about me. It is all a jance. I have seventy-five. Will that do?'

'That's enough,' says Frank lurching at the notes.

'Zhall I zay at three months?' asks Mr Tasker. 'I will not zay a hundred. I do not like level figures. Zay ninety-eight pounds ten; for value received. Thank you.' Mr Tasker puts the promissory-note into his pocket-book, shakes hands, and goes. Frank calls him back.

'You'll forget all about that, you know, old fellow. You're a good fellow.'

'O yes!' says Mr Tasker with genial good-humour. 'I am a good vellow. We are all good vellows.' As he goes down-stairs he rubs his hands gleefully. 'What a sdroke of luck!' He pauses beneath the lamp-light at the foot of the stairs, and looks at the note again. 'At three months—Ninety-eight pounds ten.'

## RECOLLECTIONS OF AN EQUESTRIAN MANAGER.

BY C. W. MONTAGUE.

### THIRD PAPER.

I HAVE already spoken at some length of our stay at Cardiff in the winter of 1860-61, and related a few of the incidents connected with our performances there. At the close of the season we started on a tenting tour through South Wales, at about the time when the fresh, warm, cheering days of early spring were making us forget the rigours of the past winter months. At such a time, and passing through scenery so romantic as that of Wales, a journey of this description has many attractions; and in spite of the really arduous work of the constantly recurring performances, the members of the company have a very pleasant time of it. This is more especially true in any well-appointed concern under efficient management and well established in the popular favour. But with some of the small strolling companies that traverse the kingdom in every direction and at all seasons of the year, the life they lead is, to say the least, anything but romantic. Having used the words 'tenting tour,' it occurs to me that my readers may perhaps be desirous to know more fully the meaning of the expression. I therefore propose to describe briefly the manner in which these undertakings are conducted, and the kind of life a travelling company of recognised standing leads.

It may be well to explain that there are two distinct kinds of circuses—firstly, those that perform in permanent buildings only; secondly, those that 'tent' in the spring and summer, and occupy buildings in the winter. Of the first kind there are at the time of writing (1879) five companies in the United Kingdom—namely, Newsome's, Hengler's, Cooke's, Adams', and Keith's. These never perform in tents. Of the other class, there

are eight recognised circuses; their proprietors being Messrs Sanger, Myers, Pinders, Batty, Powell and Clarke, F. Ginnett, G. Ginnett, and Swallow. These are the 'tenting' companies, giving their performances for the greater portion of the year in the tent which they carry about from town to town. Besides the names given, there are a few other small companies; but these are carried on by speculators only, who as a rule last but a few months, or even less than that. It is a well-known fact that none but those who are trained to the work from their youth, can ever properly manage a company or insure its financial success.

A matter of the first importance in projecting a tour is to prepare beforehand a plentiful supply of novelties, to be produced at the various performances, in order to serve as an additional attraction to those who perhaps would not favour us with their patronage, did they think that we were always grinding away, like a musical box, at the same old themes. There must be something new and good. Some unusually graceful or daring rider; some clever conjurer or mirth-provoking clown; some rare equine specimen, beautifully marked and wonderfully trained—all or some of these; and added to them, a variety of entirely new pieces for the company in general must be secured, brought together, and worked up into an attractive programme; proper steps being taken to let the public know in good time what treats there are in store for them. In order thoroughly to attain this latter point and to make other timely arrangements, each company sends forward an 'agent in advance' along the identical route to be followed by the circus, and arriving in each selected town some days, or even weeks before the date fixed for the performances. This agent's duties are multifarious and of a responsible nature; and indeed upon his shrewdness and experience not a little of the success of the tour depends. His first duty is to make prompt arrangements for thoroughly 'billing' the town—that is, displaying the large coloured pictorial and printed announcements on all the available hoardings, dead-walls, bridges, and other conspicuous places in the town and immediate neighbourhood. Then a suitable site has to be chosen on which to erect the tent with its adjuncts. Lodgings for the principals must be secured; and what is of no less importance, good stabling for the stud of valuable horses. All conveniences in fact in any way necessary for the comfort of the company are arranged beforehand, and are ready for them when they arrive. The agent in advance is to a travelling circus what scouts are to an invading army; with this difference, that he is the herald of a peaceful host which seeks no triumphs but those of Art, and strives to secure its conquests by leaving behind it in each town a strong garrison of pleasurable recollections.

To complete his round of duties, the agent sends back by post to the proprietor, copies of all contracts made by him, particulars of the lodgings secured for the company, full information for the stud-groom as to which are the best stables for the more valuable horses, descriptions of the road to be traversed; and in short, places the proprietor on the same footing as though the latter had himself visited the town and made all the arrangements. It is easy to perceive that by following out this methodical system, all chance of confusion when

the company arrives is entirely avoided. The agent having thus fulfilled his task, passes on to the next town, and leaves us at liberty to turn our attention to the coming guests.

I will suppose, for the sake of illustration, that a performance has been given in the town of A., and that it is intended to repeat the performance the next day at the town of B., say fifteen miles distant. Before the company separates for the evening, the hour of departure on the following morning is fixed and announced, and other necessary arrangements made. When long distances have to be traversed, the circus is often on the road as early as four in the morning. But for the distance above stated, the vans would start about six o'clock, and reach their destination, under average circumstances, at or a little after nine. Upon their arrival in the town, all sections of the company have their duties to perform, and not a moment to lose in setting about them. The vans having been driven straight to the chosen ground, and left there until required for 'parade,' the stud-groom sees that the horses are taken to their stables to be thoroughly groomed and fed. The principal members of the company seek out their lodgings and take a slight repast; while the tent-master and his assistants, having unloaded from each van its share of the tent, commence at once to erect that ephemeral structure, and to arrange within it the boxes, pit, and gallery for the spectators, and the ring for the performers. By noon the tent is complete—the tent-master being liable to a fine if not then ready—and the company begin to assemble in time to dress for parade. All the horses but a chosen few are gaily trapped in what is called their 'dress harness,' and are attached to the different caravans that are now relieved of their loads. Some of the company are mounted upon the choice horses of the stud—magnificent, proud-spirited, high-stepping creatures these animals are—while others, representing various allegorical characters, such as Britannia, Victory, Peace, Plenty, &c. are prominently enthroned on the vehicles. At last all is ready; the signal for the start is given, and the band going first, strikes up a lively air: the drummer having a lively faith in the power of his instrument to attract a crowd, plies his sticks vigorously—Plenty and not Peace being the goddess of his choice—crowds of ragged urchins and well-dressed children, and grown-up people no less plentiful, appear as if by magic on the scene, and elbow each other about in their endeavour to obtain a good position to see the 'cavalcade' go by. Thus the principal thoroughfares of the town and suburbs are paraded until towards 2 P.M., at which time the pay office is opened for the morning performance, and the audience begin to take their places in the tent.

At 2.30 the performance commences; the clown comes tumbling into the ring, and having brought himself somehow to a momentary stand-still, opens the proceedings with the original remark, at which every one laughs for the thousandth time, 'Here we are again!' after which he goes on with his tumbling, or carries on a wordy passage-of-arms with the polite and forbearing ring-master, until the equestrian business begins. The performance is usually over about 4 P.M.; and soon after this the company partake of their principal meal—their dinner. A word or two on the all-important

subject of dining will furnish a natural close to the day's proceedings and to this short description of them. The company forms itself into what are called 'catering parties,' usually consisting of six or seven persons, one member of each party—who is called the 'caterer'—being appointed to superintend the commissariat department. It is his duty, whether the stay in a town be long or short, to arrange terms for his party or 'mess' at some hotel or other establishment, and to see that the catering is good in quality and style. These messes usually have nicknames given them, according to the status of the members, or their character for lavishness or economy. Thus perhaps in a single company you may find such names as the 'Royal,' the 'Champagne,' the 'Quisby' mess—Quisby being a synonym for 'cheap,' and a word that has got into use in other quarters besides the ring and the stage. The mention of these two institutions together reminds me of another nickname common to both. The proprietor of a circus or lessee of a theatre, instead of being spoken of familiarly as the 'master' or 'governor' or 'gaffer,' frequently goes by the euphonious title of 'the Runcull.'

I will now return to the individual tour of which I had commenced to write. After completing our pilgrimage through South Wales, we found upon entering the Midlands again, that our American rivals, Messrs Howes and Cushing, were playing sad havoc among the English proprietors by the wholesale manner in which they had gone into the business. Their company had been so greatly increased in strength, that it had been divided, first into two distinct companies, then into three; and ultimately there were four American companies belonging to this single proprietary, competing keenly against us for popular support. As it is quite useless for two circuses to perform in the same town at or near the same time, this multiplication of rival establishments had the direct effect of limiting our field of operations, or rather, I should say, of compelling us to extend our operations into fresh fields and pastures new. For this reason, then, we 'took the fairs' at the various towns on our route; so that by offering special attractions, we received, in spite of the not very good state of trade in the district through which we passed, a fair share of support, and had no cause to complain of the pecuniary results. A few incidents connected with the remainder of our tour may be worth relating here.

A laughable but to me unpleasant incident happened at Eccleshall, in the following manner. I was staying at the *Royal Oak*, the landlord of which had formerly been a commercial traveller in those parts, had 'used the house,' had seen and loved the widowed landlady thereof, and finally had become her husband and landlord of the snug little inn. As a guest at the house, his welcome had invariably been cordial; as a suitor for the hand of the disconsolate widow, he had found little cause for complaint at the manner of his reception; but after the nuptial knot had been tied—Well, I will relate the incident; merely remarking that the goodman was always loath to lose a cheerful guest, and to have to fall back upon the resources of the family circle for good company. I had arrived on Saturday, had completed my business, had spent Sunday with mine

host and his spouse, the hour for my departure on the following morning had arrived, and my groom had driven round to the door with my dog Lion, a fine Newfoundland, at his heels. 'That's a fine dog of yours,' quoth the host, who had already shaken hands with me.

'Yes,' I replied; 'he's a handsome creature; and what's more, he's as clever as he's handsome.'

'Is he indeed now? Well, I know of a most extraordinary dog close by; didn't think of it before; you must see it before you go—won't take five minutes.'

Though pressed for time, I felt obliged to humour the man, and accordingly accompanied him down the street until he stopped at a high pair of gates leading into the yard of a large tannery. Being intimate with the proprietor, my host passed through the small door and bade me follow. The yard was full of pits used for the various processes of preparing and tanning the hides; the edges of these holes were level with the ground, without any protection, and each pit was full of hide in pickle; the liquid in which they were immersed having acquired a most vile and fetid smell of decomposing animal matter. Now for the dog.

'Look yonder,' said my guide; 'there's the dog. Isn't he a fine creature?'

I looked. A hideous monster met my gaze—a great bull-dog of the famous Spanish breed, with a head big enough for three, and the most formidable pair of jaws that one could wish to behold. I shrank back instinctively.

'Don't be frightened,' said my companion in reassuring tones; 'he's as quiet as a lamb when he knows you.'

'Very possibly,' I rejoined; 'and until he *does* know me, I prefer keeping at a safe distance,' saying which, I retreated another step or two backwards, and fell plump into a tan-pit! How I managed with my friend's assistance to scramble out again, is more than I can tell. The smell from my soaking garments was atrocious and well-nigh unbearable. However, there was nothing to be done but hurry back to the hotel and make the best of a bad business. Arrived at the door, I told my man to follow me up to my room with a complete change of clothes, which I always carried with me, and then I entered the house. Drip, drip, drip! Every step I took along the well-cleaned floor and up the neatly carpeted stairs into my room, a little stream of the horrible stuff ran freely down, spoiling everything where I went. As for the landlady, at first she witnessed all in silent horror; but after she had 'got the scent,' she 'gave tongue' with a vengeance! I stripped and washed from head to foot, put on my clean clothes, had the others stuffed into an empty corn-bag to be washed at the next town, and was soon on my way. But unpleasant as my adventure had proved, it must have been far preferable to the pickle in which my poor friend the landlord would find himself when the guest had quitted the scene!

As just explained, it was the presence of my dog and the landlord's admiration of him that led indirectly to my unsavoury adventure. But I am unwilling to dismiss my noble Lion from these pages without putting it on record that he

was capable of better deeds than getting others into trouble through his good looks.

We had been performing at Allston, a solitary little town surrounded by the Cumberland moors, where human habitations are few and far between, and where, in the winter, travellers have lost their way and perished in the snow. When we started across Allston Moor on our road to Keswick, the ground was covered deeply with snow, which was still falling; thus adding an element of difficulty and even of danger to our journey, considering the scant and imperfect character of the roads, which in some parts had no existence whatever, the direction being indicated by poles placed at long distances apart. When we arrived at Keswick, the tent-master, not having noticed my dog during the morning, came to ask if he was with me. I had not seen him, but felt no anxiety on the matter, as the dog would often roam about and find his way to us again. Presently the property-man came to me to say that he could not find the pulley-blocks and rope—specially constructed for hoisting and straining the tight-rope, a clever performance upon which, by two sisters of the name of Bourne, had been announced beforehand, and would form an important feature in our entertainment. A further search was made, but still the missing articles could not be found. As without these appliances it would be impossible to give the tight-rope performance, I had horses put to a light carriage and drove as rapidly as possible back towards Allston. Arrived near the town, a man informed me that a large dog, which he believed belonged to our company, was sitting in the field a little farther on, where our tent had lately stood. I soon reached the spot, and there sure enough was Lion standing breast-deep in the snow, in the middle of the field. I called to him; but he only wagged his tail and gave a little bark of satisfaction at seeing me, but would not stir from the spot. Jumping out of my vehicle, I crossed the field to where he stood; and beheld, half buried in the snow, the missing blocks and rope! The intelligent and faithful creature knew that the articles had been wrongly left behind, and I do not think it too much to say that he knew or hoped that some one would come back for them, and thus find them and him together! If any one should think I am claiming too much power of thought or insight for my dog, let him study the following incident, for the exact truth of which I vouch, and in corroboration, give the names of the persons and places concerned.

I was driving from Redhill in Surrey to the village of Mersham, about three miles away. When I had proceeded some distance on the road, it began to rain rather fast, and I discovered that I was without my umbrella. The last call I had made in Redhill was at the shop of Mr Kain the chemist, and I felt sure that I had left my umbrella there, standing against the front of the counter. Pulling up under a tree for shelter, I began to consider what I should do, and at the same moment Lion came suddenly round to the front of the trap, as though to learn what we were stopping for. The thought struck me that I might perhaps make Lion my messenger in the matter. If I could only get him to go back to the shop, Mr Kain would probably understand why he had been sent, and would put the umbrella in the

dog's mouth to carry to me. Having engaged Lion's attention, I waved my hand with an onward sweep along the road towards Redhill. The dog's eyes followed my hand readily enough, and then he looked in my face with a puzzled air. Again and again I repeated my gestures, the poor animal looking more perplexed each time, and thinking perhaps that his master was making a ridiculous exhibition of himself. However, I persevered with my efforts; and as I made one vigorous and expressive sweep of the hand, the dog pricked up his ears, the puzzled look vanished from his face, and then, with a little toss of his nose towards me, as though he would have said: 'All right, governor!—I know what you've been driving at,' he started off towards Redhill at the top of his speed, and was soon out of sight round a distant bend of the road. After this intelligent interpretation of my meaning, my readers will scarcely be surprised to hear that before long—in an incredibly short time, I thought—Lion reappeared round the curve carrying in his mouth my missing umbrella, which he delivered up to me with all the demonstrations of satisfaction and pleasure of which a dog is capable.

But the best has yet to come. Up to that moment all I knew, or could know, was that my dog had brought the umbrella for which I sent him. When I returned to Redhill in the evening, I called upon Mr Kain, and thanked him for his trouble; adding, before he had time to speak: 'You managed to understand him, then?'

'Managed to understand him!' he replied, with a curious look on his face. 'O yes; he didn't leave me in doubt very long. Confound the dog! And I've got a nice little bill against you for damages he has done.'

'Why, how's that?' said I in amazement.

'Well, I was standing near the door when your dog came bounding in at the top of his speed, nearly knocking me over. He began sniffing about; and then it struck me that you were returning for your umbrella, which I had found and put behind the counter, and that the dog had got here first. I was just going round to get the umbrella, so as to have it ready for you, when the great animal, after standing up against the counter and sniffing over it, made a spring off to the top, and was down at the back before I could get near him, breaking a lot of bottles and measures and upsetting others in his course. He took your umbrella in his mouth, and tried to jump on to the counter again. But the umbrella kept catching, first one end and then the other; and the space was so narrow that he could not make the leap. As soon as I dared, I took hold of the umbrella, to take it off him; but he held on tight, and would not let me have it; so partly by coaxing and partly by dragging, I got him round to the trap-door, and pulled him through. Then without stopping even to say "Thank you," he bolted through the door, and was off down the street like a shot out of a gun.'

Before quitting the subject of dogs, I will relate the following amusing anecdote. While our circus was at Brighton, a person whom I will call Mr Spill, paid frequent visits to our performances, and soon made himself at home behind the scenes. This gentleman had earned a name for curing numberless disorders that affect dogs and cats,

more especially dogs; and among these again, most especially lapdogs and other petted species so highly treasured by elderly single ladies. One day said Spill to me: 'Mr Montague, I should like you to come and see my infirmary.' (It must be understood that his cures were effected upon his own premises, and that he had adopted the high-sounding title of 'Dog and Cat Infirmary' for his far-famed establishment.) I accepted his invitation with pleasure, thinking that it would prove interesting to inspect the internal arrangements of his peculiar hospital. Arrived at the house—I beg pardon, the infirmary—I expected to see some signs or hear some sounds of Mr Spill's canine patients. Failing to do so, however, I asked my host if he kept his infirmary upstairs. 'O dear no,' he replied. 'Come this way, and I'll soon shew you all about it.' I followed him out into the garden; and there, ranged around the stump of an old tree, I beheld a number of broad shallow tubs, bottom upwards, and pierced with holes for ventilation. Under each of these tubs was a dog, the collection of tubs constituting the 'infirmary!' But how about the medicine, the dietary, &c.? Mr Spill's answer to my string of questions was so characteristic, that I will give it in his own words.

You see, said he, I suit the treatment to the disorder. Well-nigh every dog I am sent for to look at is suffering from the same thing—too much to eat and too little to do. They're pampered and messed with and overfed; and when they get here, I just give them a opposite treatment. Only yesterday, I took a little King Charles home to Lady G—. Well, her case is just about like the lot; at least in the main it is. When she first sent for me, I was ushered into her Ladyship's presence, and there was the dog lying in a basket that was stuffed with a feather pillow, and stuck right in front of a blazing fire.

'Ah,' sighed her Ladyship, 'I'm so glad you've come. My little dog seems much worse; he can hardly breathe, poor little darling!'

Well, I hoisted the poor little darling out of the basket—very carefully, you know, and put him on my knees. Dogs never snap at me; we understand each other.

'His nose is very warm, marm,' I said.

'Is it indeed?' said she.

'His eyes aren't at all bright, marm,' I said.

'O no, my good man; they're not like they used to be,' said she.

'And your Ladyship,' I said, just a bit sad, 'his little 'art beats very irregular.'

'Dear me!' said she.

'I assoom,' said I, 'that he is suffering from general nervous debility.'

'You don't say so!' said she.

'There's no doubt about it, marm,' I said; 'though most people as profess to understand dogs would think he'd got the distemper, and would a'most kill him in trying to cure him. But I know just what treatment he wants, marm; for he ain't no worse than the Duchess of B—'s dog, and I cured it.'

'O did you really?' said she. 'Well now, are you obliged to take dear, dear little Floss quite away? Couldn't you pay him daily visits and give him his medicine?'

'O no marm,' I said. 'This case is far too serious for that; he wants constant treatment. I

can do him more good in a week in the infirmary than in a month out.'

'Well, my good man, if he must go he must. But be sure and take very great care of him.' And then she gave me a long list of things I was to give him to eat, things for breakfast and things for dinner and things for tea and supper. And said she: 'The dear little creature is that poorly, he will scarcely touch the daintiest morsels.'

'Yes marm; most probable,' I said. 'But when I bring him back to you, his 'ealth will be so restored and his happitite so satisfactory that he'll eat dry bread with a relish.'

Well sir, she agreed to pay me a very liberal sum for curing him; and I brought the dog home here and clapped him under one o' them tubs, and left him there all night with nothing to eat, but plenty of clean water. Next morning I threw a lump of bread in; and when I went the next day, he hadn't touched a crumb of it. But the next morning it was mopped clean up; and I gave him a fresh supply—but only dry bread, mind you, and clean water every day. Well sir, in a week the dog had cured hisself, and could breathe freely once more, as they say. But I kept him another week, just to earn my money, you know. Her Ladyship had told me to call now and then; so I did, and told her how he was going on. But I didn't tell her he was living under that tub fed on bread and water, because though it sooted the dog admirable, it wouldn't 'a sooted her Ladyship to know it. When I took him home, I kept him under my arm until her Ladyship came into the room and then I set him down.

'Floss!' she cried out, 'why Floss! it's never you! O you dear little pet!' And the dog frisked and bounced about like a india-rubber ball, and barked and wagged his tail as brisk as anything. Then I took a piece of bread from my pocket and threw it on the floor; I'd given him nothing that morning, you know.

'Now you watch him, if you please, marm,' I said just as I threw the piece down; 'see how he'll relish this bit of bread.' And the little span'l bolted it eagerly and asked for more.

Well, her Ladyship was so pleased that she gave me a five-pound note over and above my charges; and I said thank you very much and good morning. I was just going out through the door when she called me back. 'O Mr Spill, I forgot to ask you. Are you quite sure the dear little pet has been well washed?'

I couldn't help smiling a bit, sir, as I answered her: 'O yes marm; I warrant you he's been well tubbed!'

### JACK QUARTERMAIN'S VISION.

IN THREE PARTS.—PART III.—HOME.

It was the first of February—a raw, gray, foggy, miserable morning. The streets were damp and sticky, as only the London streets during or after a fog can be, and the east wind was keen and cutting. A four-wheeled cab stood outside a gloomy house in Westminster; and the driver, who stood on the pavement, clapping his benumbed hands and stamping his half-frozen feet, grumbled audibly at being kept waiting. Presently another cab drove up; and two gentlemen alighted—rough-

looking, weather-stained, weary travellers, but gentlemen still, in spite of their strange garments and shaggy beards.

'Here's the house, old fellow,' exclaimed Jack Quartermain—for it was he—running up the steps. 'It don't look a scrap changed. I wonder if Burnet the old butler is here still?'

Old Burnet was; and in answer to Jack's loud knock he opened the door with his usual stately solemnity, and surveyed the two strange-looking visitors critically.

'Mr Verschoyle in?' inquired Jack hurriedly. 'Can I see him?'

'No sir,' replied Burnet, straightening himself up, and looking peculiarly solemn. 'He's not in, sir. In fact, Mr Verschoyle is dead, sir!'

'Dead! Burnet? Uncle Harry dead! When did he die?' stammered Jack, growing very white and shaking like a leaf.—'Is it possible that you don't remember me, Burnet—Jack Quartermain!'

'No sir—yes sir—of course, Mr John. Come in sir—come in. Oh, why didn't you come back sooner? Why did you ever go, Mr John? Things have gone wrong entirely ever since the day you left,' said Burnet, leading the way to the dining-room, where Mr Valentine Saunders was having his breakfast. For a moment he looked startled, then advanced to greet his old friend with outstretched arms. But Jack waved him back, and looking him steadily in the face, demanded to know what had befallen his uncle Mr Verschoyle.

'Alas, I grieve to tell you, Jack, that dear Mr Verschoyle is no more. He died on the first of January from'—

'From an overdose of opium, administered to him by—a friend. I know all about it, Mr Saunders. Will you be good enough to tell me how you come to be here in my uncle's house?'

'Your uncle was kind enough to remember me in his will, and bequeath me not only this house, but the remainder of his property, on condition that I agreed to marry his ward Miss Hamilton. And though the lady does not choose to agree to the conditions of the will, the house, nevertheless, becomes mine.—And now, may I ask what your business is here, Mr Quartermain?' continued Valentine, with an attempt at ease and hauteur which his pale face and trembling voice belied. 'I should have thought London, and above all the office of Verschoyle and Saunders—or Saunders and Saunders, as the firm now is—would be about the last place in the world you would care to shew your face in, considering the circumstances under which you left our employment!'

'You'll know my business soon enough,' quoth Quartermain sternly. 'At present I demand to know what has become of Miss Hamilton?'

'That you must find out for yourself. I decline to give you any information whatever. If you had come here in a proper spirit'—

'Take care,' said the other with a threatening look—'Take care of what you say, Valentine Saunders, or even my old friendship for you won't save you. I should like to see a copy of my uncle's will!'

'Certainly, by all means. You can see it at Doctors' Commons!'

'Yes; I know that. But I can see it without going there, and I mean to. You can tell me where there is a copy—a rough copy, to be found.'

'What do you mean?' cried Val, growing hot and confused before the stern steady glance of Jack. 'You talk in riddles, Mr Quartermain!'

'Yes; but you've got the key. Mr Saunders, you know there's a day of squaring up for everybody, if not in this world, in the next. The day for squaring accounts between you and me has come. Now, once and for all, will you produce that will, or shall I have to find it myself?'

Mr Saunders's answer was a violent ring, which was speedily answered by Burnet. 'Shew these persons out,' he exclaimed excitedly—'shew them out instantly!'

'What has become of Miss Jessie, Burnet?' inquired Jack, turning to the old servant, and quite ignoring Mr Saunders's words. 'Has she been turned out too?'

'Pretty nearly, sir—at least she's going. There's her box in the hall, and the cab waiting at the door. But Sister Agnes says she's not fit to leave the house such a morning as this!'

'But why is she going?'

Burnet elevated his eyebrows, shrugged his shoulders, and gave an expressive glance at his master, who was standing silent with rage and amazement.

'Why is Miss Hamilton leaving this house?' repeated Quartermain sternly.

'Here she's down, Mr John; she'd best answer for herself,' cried Burnet, throwing open the dining-room door.—'Miss Jessie—Miss Jessie, here's Mr Quartermain come back again!'

For a moment Miss Hamilton stood in the door-way, white, scared, trembling; then she staggered forward with a low cry between a sob and a moan: 'Jack! O Jack! Why did you not come before?'

'My child, this will never do; you must not excite yourself so,' interrupted Sister Agnes gently.—'She is weak and ill, sir; she cannot stand much fatigue.'

But Jack waved her away, and held Jessie close in his arms. 'My darling!' he whispered, 'are you really mine still?'

'Now, as always, Jack. But you—they told me—you were married; that you had given me up. But I never quite believed it.'

'It was a falsehood, darling, for which I mean to have rare satisfaction,' quoth Jack reassuringly, with a dangerous look at Mr Saunders. 'Sit down, my own, and do not attempt to leave the house.—This lady, is she a friend of yours?'

'Yes, Jack; such a dear friend! I think I should have died long ago had it not been for Sister Agnes. 'Oh, I have suffered—I have suffered so much!'

'It's all at an end now, Jessie; and I've come back to square up with my dear, loyal, old friend Val. I've brought another old friend with me—just to see fair-play, you know.—Don't look so scared, Dan; Val was always fonder of fair words than blows.'

Dan Kennedy meanwhile was gazing in stupefied wonder at the lady who was addressed as Sister Agnes—a pale, dark-eyed, sad-looking woman, with a sweet tremulous voice, who sat beside Jessie, and held one of her hands, and never raised her eyes from the carpet. There was but one woman in the world with such a face, and her name was Agnes too. A strange coincidence, but nothing more. The Agnes of

his dreams was rich, honoured, happy, safe from all sorrow and care, surrounded by every luxury. The Agnes, who sat beside Jessie Hamilton looked a weary, stricken woman, who had found peace after many fierce sorrows. Still Dan gazed, longing for her to raise her eyes, that he might look into them, and learn if she was indeed the Agnes of his dreams.

'Well sir, what other liberties do you mean to take in my house?' queried Saunders, after a few minutes' silence. 'I am getting weary of this farce.'

'So am I—and I mean to end it,' retorted Jack sternly. 'First of all, I want to know why you never replied to my letters?'

'I suppose I was at liberty to please myself on that point,' was the sullen answer.

'Certainly; but not at liberty to intercept my letters to Miss Hamilton, or her replies to me; not at liberty to keep back my uncle's letters by any manner of means, Mr Saunders; not at liberty to tell him all sorts of falsehoods about me; not at liberty to work upon his weakness to make you his heir.—You look surprised, Jessie, and no wonder; but there's worse still to be told. Valentine Saunders stole the deeds from Uncle Harry's office; Valentine Saunders stole all my letters to you, and yours to me; Valentine Saunders stole my uncle's last will, and forged one in its stead; and if you will all do me the favour to follow me up-stairs to his room—the room that was mine long ago, and from which his falsehood and treachery banished me—I will shew you the proof of what I say.—Come, Jessie; come, Dan; and you, Madam; and Burnet, you had better come too.' Quartermain pronounced the foregoing accusations calmly, and like a man who was repeating a task he had learned by rote; and then led the way up-stairs into Mr Saunders's room. Opposite to the fireplace, there stood a tall, old-fashioned, ebony bureau, inlaid and mounted with brass. It was a quaint ungainly piece of furniture, full of little odd drawers and unsuspected cavities. One of these, at the back of the bottom drawer, opened with a spring, and there securely reposed the stolen deeds, the intercepted letters, and Mr Verschoyle's will.

'Why, Jack, how did you know? Who told you of this?' exclaimed Jessie in amazement. 'Look! Here are all my letters to you, which I am quite sure I put in the bag myself. How did they get here, Jack?'

'In the same manner that mine got here. There has been some rare clever villainy at work, and Val Saunders is at the bottom of it!'

'If you mean that loafer down-stairs, you had better look after him,' remarked Dan. 'He seems a slippery sort of customer, and I should not wonder if he thought discretion the better part of valour and retired. He looked a little "slopy" as we left the room.'

'Run down, Burnet, and see if Mr Saunders is still below,' Jack said. He was not inclined to be very hard on his old friend, villain and traitor though he was; and if he chose to make his escape and keep out of the way, so much the better.

Presently Burnet returned with a very long face. 'He's gone, sir; cut and run like a rabbit, as he is. He left in the cab that was waitin' for Miss Jessie!'

'Well, let him go. As you once observed, Dan, he's a good riddance of very questionable value!'

'Yes sir,' remarked Burnet gravely. 'But if he's not looked after, he may take some very good value with him. How do you know he's not gone straight to the Bank to draw out a lot of money—thousands maybe? I'd just drive round to the Westminster and County, Mr John, if I was you, and stop his little game!'

'That's a happy thought of yours, Burnet.—You stay here, Dan. By the way, I have not introduced you yet.—Jessie, this is my friend and fellow-campaigner, the best fellow in the world—Dan Kennedy.'

Jessie held out her hand with a smile of welcome; and Sister Agnes, who stood beside her, started, raised her dark eyes in wonder, and looked steadily at the tall 'campaigner,' who regarded her with equal astonishment. 'I think I had the honour of knowing Mrs Lawson once,' he said with evident confusion.

'Not Mrs Lawson, Mr Kennedy—Agnes Oxenford still,' faltered the lady. 'It is indeed a fortunate meeting this, Mr Kennedy. I have so much to tell you, so much to explain, so much to—'

'Forgive, if indeed you *can* forgive me,' Dan whispered; and then Jessie and Jack left the room together; and when the former returned, she found that Mr Kennedy and Miss Agnes Oxenford were on remarkably friendly terms.

'Dan and I are old old friends, Jessie,' exclaimed Agnes, with a glad light in her eyes, which seemed to illuminate her whole face. 'We were parted years ago, by circumstances, and misunderstandings have kept us separate; but—'

'But they are all explained now,' interrupted Dan, throwing back his head proudly. 'And if anything could add to the happiness of finding Agnes, it would be that of finding her your friend, Miss Hamilton!'

That was a pretty compliment for a rough backwoodsman, and all very well in its way; but Jessie was somewhat taken aback at the proprietary and lover-like air assumed by Mr Kennedy. 'Agnes is a Sister of Mercy,' she explained in the tone of a person in a very serious difficulty; she could not quite reconcile love-making with the solemn black draperies and hideous bonnet of Sister Agnes.

'Yes, yes; I know,' replied Dan with a little shrug; 'and I hope she will continue one, Miss Hamilton; only she must limit her ministrations to one unworthy individual, who is sorely in need of mercy and charity and all other Christian offices. She tells me duty is always her first and dearest consideration, and I'm quite satisfied it's her duty to look after me, or I'll come to grief most certainly!'

'Besides, Jessie, remember I'm only a probationer,' interposed Agnes sweetly; and so Miss Oxenford's mission of mercy became considerably curtailed.

Presently Jack Quartermain returned. Mr Saunders had not been to the bank, nor called at the office. All valuable bonds and papers were there quite safe; and Jack had locked them all up in the great safe, and taken away the key, to the horror and amazement of old Mr Saunders. Then Dan and Jack examined the will, which was dated nearly five years before, and in which, to his dear

and only nephew, John Henry Quartermain, was Mr Verschoyle's wealth bequeathed, with the exception of a five thousand pound legacy to Jessie Hamilton, and a wish that his heir might make good the full amount, principal and interest, endangered by the disappearance of Miss Hamilton's bonds. Landed property, money in the funds, and three-fourths of the large business profits of Verschoyle and Saunders, came to Jack; but there was no mention whatever made about Valentine Saunders, or any conditions attached to either Miss Hamilton's legacy or her own fortune.

'Now then, Jessie, can you explain to me how Uncle Harry came to alter his mind and leave all his money to Val Saunders? There must have been some undue influence!'

'Yes indeed, Jack. About four years ago, Val came to live here; and from that time Uncle Harry was a different being. He would scarcely ever see me, refused to hear your name mentioned, and consulted Val about everything. Then he fell into ill health, and for a long time Mr Saunders was his only nurse. At last the doctor insisted on his having some one else, and sent us dear Sister Agnes. Uncle soon recovered then, and seemed in much better health and spirits. He even spoke about you, and wondered why you never wrote, and told me that he had made his will long ago—and you and I were provided for. Then Val told me that you were married to a wealthy American lady, and had actually the audacity to ask me to become his wife. Of course I refused him indignantly; and from that day forth he set himself to be my enemy. I was completely cut off from my uncle, and the only friend I had was dear Sister Agnes. It was very wretched here, Jack. I don't know whether Mr Saunders's persecution or affection was the most intolerable; but both together drove me distracted. Then in December poor Uncle grew worse. Several doctors were called in, and they all declared that he was sinking fast. Val was ever by his bedside, a most watchful if not very tender nurse. On New-year's Eve, about twelve o'clock, Uncle seemed to rouse up from a stupor he had been in for days, and called for me. I was resting on a couch in my own room, when Sister Agnes came to fetch me'—

'Let me tell you the rest,' Jack interrupted. 'You ran down-stairs; and as you entered Uncle Harry's dressing-room, Val was pouring out his medicine. He handed you the glass, to give him the draught, when you went in; and his hand trembled so that some of it was spilled over the white shawl you had wrapped round your shoulders. When you entered the room, Uncle sat up in bed, and said in a loud clear voice: "Jessie, I have provided for you and Jack. My will lies in the old cabinet in Val's room. Tell Jack, if ever you see him, that I fear I wronged him, and am sorry." Then he held out his hand for the medicine, drank it off, and lay back on his pillow. In a few moments he started up and called me, clearly and distinctly: "Jack—Jack Quartermain, come here!" then he closed his eyes and fell asleep. In the morning they told you he was dead!'

'Ay, that is precisely what happened. Who on earth could have told you?'

'No one told me,' replied John Quartermain

calmly. 'I saw it all, just as clearly as I see you now; and I saw Val take Uncle's will out of the cabinet, and put another in its stead. I saw him distinctly open the secret drawer, throw the true will in with a grim smile, and heard him mutter: "That may go to oblivion with the rest." I saw it all, Jessie, plainly and visibly; and the proof of the matter is here;' pointing to the will and the letters. 'I told Dan about it on New-year's Day—told him as we drove through the blinding snow, and across the solitary plains of Nebraska, that my uncle was lying dead in the gloomy old house in Westminster. He smiled incredulously, and endeavoured to reason me out of my fears; but he knew in his heart that what I said was true.—Didn't you, Dan?'

'Yes; I think I did, Jack,' said Dan solemnly.

'But I cannot understand it,' cried Jessie, staring in hopeless bewilderment. 'I don't believe in dreams and visions and things!'

'Well, I don't believe in them either in general. But in a case like this, you must either believe or be a fool.' Certain things were revealed to me on New-year's Eve. I come home to England, and find them perfectly true. But I can no more pretend to explain the why or the wherefore of it than you can. I am willing to take the matter as it stands, and be grateful for the beneficial results.'

'But Jack dear, if you make a practice of second-sight, I shall be afraid of you.'

'Nonsense, Jessie. Why should you be? Besides, I do not think such revelations ever happen twice in a lifetime,' replied Jack earnestly. 'And now, I really think the best thing we can do is to say no more about it, for it is one of those mysterious coincidences that no amount of discussion can elucidate. Tell me, Jessie, why were you going away this morning, and where were you going to?'

'I was going, because I could never consent to become Val Saunders's wife; and in the will read after the funeral that was an expressed condition. I was to have half my uncle's fortune if I married him; if not, I was to be penniless. I infinitely preferred poverty to such a union. So I was going to learn to be a nurse, like Sister Agnes!'

'Then it appears to me that we only arrived just in time. The discovery of this will saves all that painful necessity; but of course we must prove that the one by which Val claimed the property is a forgery. It may be somewhat difficult to do; but his flight is strong circumstantial evidence. Have you any idea where this precious document is, Jessie?'

'In the study probably; or at least a copy of it, if the document itself is gone to Doctors' Commons.'

'True. I remember Val said it was there; but somehow I don't believe it. Come down to the study, and let us have a look round.'

They had not to look very long. A fire was burning on the hearth, and on it and inside the fender were fragments of half-burned paper. 'That's it!' Jessie cried out. 'I know it was written on blue foolscap. I'm sure this is the will!'

'Or all that remains of it. And here's proof positive,' Jack added, taking up a scrap of paper on which some words were hastily scrawled: 'The Last Will of Mr Verschoyle is in the ebony cabinet in my room. I leave the country to-day; it will

be useless to try to follow or discover me. I am sorry for all that has occurred.—V. S.'

'This simplifies matters considerably; doesn't it, Dan? I really find it in my heart to be almost sorry for him.'

'I think he was punished, Jack. I think he lived in constant terror of discovery. During the last month, his life seemed a sad burden to him. Surely the way of the transgressor is hard!'

'Heaven help him, the poor wretch! I at all events forgive him, and hope he may live to amend his ways,' said Jack, to Jessie's sighed 'Amen!'

Two months after, there was a very quiet wedding in St Margaret's, Westminster. Jack and Jessie were united at last, after all their weary years of doubts and fears and hopes deferred; and they still live in the quiet gloomy old house in George Street. The firm is now Quartermain and Saunders; for Jack kept on the old man, who was hardly accountable for his son's misdeeds. There is serious talk of making the firm Quartermain, Saunders, and Kennedy; for Dan has not yet returned to 'Kennedy's Clearing;' and whenever he talks of doing so, his words are drowned in a chorus of reproachful negatives. He and Agnes are married, and live tolerably happily in Sloan Square; though Dan often longs for the freedom of the forest, and the tough and ready luxury of the log-cabin at Nebraska. If Agnes would only consent to accompany him, he would once more pack the calf-skin trunk, and start thither without delay. But every other year brings a fresh fetter to bind Agnes to her English home, and Kennedy's Clearing recedes farther and farther into the dim distance of the past. Even Dan himself is beginning to feel that he is chained by sundry clinging tiny arms, and persuaded to remain at home, as Paterfamilias should, by soft hissing voices.

Jack and Jessie love the old house in George Street, and are superlatively happy there. Nothing could induce them to change it for a gayer or more suburban residence. It is such a famous house to be cosy and comfortable, and even romantic in, nestling as it does under the shadow of the dear old Abbey, and possessing out-of-the-way nooks and corners innumerable. Often on the long cold winter evenings, when Dan with his great pipe is comfortably settled in one corner, and Jack in the other, and Jessie and Agnes with their knitting or embroidery seated on low chairs before the great fire, Jack relates how he and Dan first chummed together, and recounts some of the adventures and dangers which Dan and he shared in the Far West and in Australia; and scarcely ever a New-year's Eve passes by that Dan does not solemnly allude to Jack Quartermain's Vision, and its happy results.

P.S.—From the day Val Saunders left the old house in George Street to this, he has never been heard of. Year after year, Jack and Jessie and his poor feeble old father expect him to return—poor and penitent; or poor, without being penitent; or penitent, without being poor. Year after year Jack wonders what has become of him, and sometimes thinks he must be dead. In all probability he is. He had not the qualifications necessary for a magnificent sinner. Failure would be worse than death to a man of his temperament;

and the overthrow of all his plans was complete. But time alone can discover what has become of him; and his friends—or rather those who had been his friends—earnestly hope that he has repented of his wickedness and ingratitude; and learned that honesty is still the best policy.

### A MYSTERIOUS PIANIST.

ABOUT a year ago, I observed in the columns of this *Journal* an article in explanation of certain aural phenomena which are frequently ascribed to supernatural agency. Many similar events must frequently occur which are not recorded, and whose causes, owing to superstition or fear, remain undiscovered. An investigation of all such seeming mysteries at the time and in the place where they occur, might save many a one an infinity of discomposing thoughts, which not seldom end in the reception of a most absurd belief. If the veracity of the following narrative be questioned, names and places can afford no proof. I can therefore only assure the reader that the narrative is true to the minutest particular, and was jotted down while the circumstances were fresh in my memory.

On the last day of 1879 I left home to pay my annual visit to my widowed mother and deliver my new-year greetings in person. On my arrival, I found a number of old friends assembled to exchange good wishes and usher in the dawn of the new year. As the company was dispersing, some one suggested a song; and as I was credited with some ability in that direction, I was at once appealed to. I consented; and we adjourned to another room, where my sister's piano had stood untouched since her lamented death, which had happened two years before. It was an old instrument, of six and a half octaves, of the Cottage shape, with nothing remarkable about it save that solid substantial look which is so foreign to many articles of modern furniture. I sat down and rattled off a few rollicking ditties suited to the occasion, winding up with the ever-new *Auld Lang Syne* as our guests departed. I noticed while playing that the instrument was much out of tune, and that several of the levers were disordered or displaced. I specially noted that one wire of the C in the fifth octave was much flatter than the other, which gave the note a peculiar and easily recognisable sound.

As I was to sleep in the apartment, I sat down by the fire to smoke a pipe and muse on the changes time had wrought on the little world of my boyhood. The key-board of the instrument glistening in the firelight insensibly led my thoughts to that vanished hand that had, so often nimbly and skilfully pressed it. Only two short years ago she had sat there singing my favourite airs with the rich mellow voice that was hers alone. As wave after wave of memory surged over my heart, I became so abstracted that I fancied I heard the cadence of her beautiful voice like the distant echo in a dream.

I remembered too that the last song I heard her sing was that touching melody wedded to the words of Burns's weird song, *Open the Door to me, Oh*. With my mind's ear I heard the pathetic wail with which the melody concludes, and was just on the point of awaking from my day-dream, when the piano at my side slowly and distinctly repeated the last simple bar of the music, with the faulty C for key-note. I was not startled; the mysterious accompaniment was so in unison with my reverie, that it was some minutes before I realised what had occurred. My first idea was that, by long disuse, some of the hammers had become relaxed and had fallen forward on the strings. But on trying the notes, I found they responded readily to the touch. For some time I tried to solve the enigma; but at length coming to the conclusion that I had been duped by my own ears, I shut down the key-board, and jumped into bed, where I was soon unconscious of mortal and spirit alike.

I had slumbered for some time, when I suddenly awoke with that stinging sensation over the whole body which, with me, always betokens nervous excitement; and lo! the piano was sounding. I sat bolt upright; tried to shake off the hallucination, and listened again. There was no denying the fact. Some invisible power was touching both the bass and treble notes. I struggled against an eerie feeling that began to creep over me, and tried to reason. Judging from a former experience, I thought it might be some animal traversing the wires; but then I reflected that that was impossible in their perpendicular position; neither could any animal agitate both treble and bass at the same time, as my ear informed me was being done. Mustering courage, I jumped out of bed, and approached quietly, when the performance suddenly ceased. I opened the key-board and the top lid, peered into every nook and cranny, examined the floor and wall; but could discover nothing. I stirred up the fire, and sat down with my face towards the instrument. In this position I distinctly saw several of the keys move with a gentle undulating motion; but no sound followed. While I sat, this was repeated more than once, and the peculiarity was, that when the keys moved there was no sound, and when the sounds were produced there was no perceptible motion of the keys. I felt the eerie feeling steal over me again, but still sat and watched for a repetition of the music.

My patience was all but exhausted, when all at once the mystical performer resumed his playing, at first in an undecided hesitating manner, gradually merging into plaintive irregular kind of notes, of which the faulty C was again the key. When the sounds first struck the ear, they seemed to be weak and faint, but gradually increased in volume. The treble movement was now and then accompanied by a chromatic movement on the bass notes, which though not in accordance with

the rules of harmony, was not unpleasant to the ear. At times too, the treble made a rapid run to the highest possible note; then after a pause, the irregular notes were resumed. Seizing a moment when the mysterious performer seemed much engrossed with his task, I darted to the instrument, when the sounds again ceased, without affording a single clue to their origin. I endeavoured to open the front; but it resisted my efforts; and as I did not wish to alarm the household, I drew the piano forward from the wall, gave it a parting shake, and once more curled myself up in the bed-clothes, not without a fervent prayer that the player might transfer his musical entertainment to a more appreciative audience. All, however, was unavailing; for he shortly began again as brisk as ever; so bowing to the inevitable, I endeavoured to convert the disturbing performance into a well-intentioned lullaby. As I thus lay in a half-sleeping half-waking state, no longer interested in the cause of the phenomenon, I was conscious of a curious result. The strains seemed to adapt themselves to snatches—mere snatches, of familiar airs, curiously blended and interwoven. As soon as an interval occurred that reminded me of another jingle, it was immediately taken up only to give place to another. The range of the treble seemed to be confined to the third below the faulty note and the fourth above, which of course accounted for the plaintive character of the music. I cannot say how long this curious phase lasted. I have, however, a hazy consciousness of dropping off to sleep, lulled by these unaccountable note-ramblings.

In the morning I learned that none of the inmates had heard anything unusual during the night. Being, however, determined to solve the puzzle, I lost no time in returning to the room armed with a screw-driver. When I had laid bare the front of the instrument, I observed that the wires of the note adjacent to the faulty one had snapped, and its perpendicular lever had been disjoined from the hammer and fallen forward on the strings, thus forming an opening between the back and front, and establishing a communication between the wires and the lower or horizontal levers to which the ivories are attached. Still no key to the riddle presented itself. I then proceeded to remove the levers one by one, and had partially accomplished the task, when the Gordian knot of the mystery was severed in a rather prosaic manner. I pushed the instrument back to its original position, when out scampered—not one mouse—but two, by the slit in the back which serves for a handle. They ran along the wainscoting, which happened to be on the same level, and disappeared in a press in the corner of the room. It was plain that my mystic performer had resolved himself into the commonplace of a couple of mice, whose performances had been prolonged by the cutting off of their retreat. Still I comforted myself with the thought that, if I kept my own counsel, there was material enough to prove me a first-class spiritualistic medium!

An examination of their *modus operandi* explained in a very simple manner the awe-inspiring phenomena of the previous night. Mouse

No. 1, on popping through the opening in the perpendicular levers, climbed the broken one that lay handy, perched upon the end in contact with the wires, and in his efforts to ascend farther, or in the mere pleasure of the sound, produced the melody before referred to. Mouse No. 2, meanwhile condemned to play second-fiddle, amused himself by creeping through between the snapped wires and scampering up and down inside, where there was barely room for him to pass, and thus contributed the rumbling bass and the occasional sharp runs on the higher notes. A cross-bar for strengthening the front gave him foothold; and vestiges of his fur on the larger wires rendered the explanation more than a probability. The motion of the keys without the corresponding sounds, must have been occasioned by their pattering on the extreme ends of the horizontal levers, the majority of which I found to be somewhat worn and loose in their sockets. The contingent phenomena I believe to have been merely the unconscious promptings of my own mind, or of what may be termed my musical imagination.

On recounting the adventure at the breakfast-table, I discovered that the mysterious sounds had been heard by another member of the family on a quiet Sabbath afternoon some weeks previous: she, however, had been deterred from mentioning the circumstance from fear of the ridicule she supposed would have followed her recital. I may mention that the press in the room contained a goodly store of things seductive to the stomachs of mice in general. That they disregarded the tempting viands and betook themselves to the unproductive waste of the interior of a piano, must help to prove that the love of music often ascribed to this little quadruped is a fact of natural history resting on a more solid foundation than exceptional eccentricity.

[Though at first sight the foregoing tale—the truth of which is vouched for by our contributor—may appear somewhat weird, we gladly place it before our readers as offering additional testimony to the fact that ‘unaccountable sounds’ are in every case capable of being relegated to natural causes. A little trouble bestowed upon their calm investigation would, as our writer says, ‘save many a one an infinity of discomposing thoughts.’—ED.]

## FEET-DISTORTION IN CHINA.

OF all the abominations in female fashions, the Chinese practice of cramping and deforming the feet is the most iniquitous. The following are the latest particulars regarding this old and very odious custom.

It appears that the foot-binding of female infants in China is determined by locality rather than by the rank and wealth of the people who practise it. In the department of Tie-Chiu, province of Canton, it would be general but for the Hakkas, who settle there, and are strongly opposed to it. When they come in any numbers from their own country—which is contiguous—and take up their abode in Tie-Chiu villages, they use their influence and example against it pretty successfully. Of the women who attend the missionary schools in Swatow, at present about six in every ten have their feet bound; and the

Hakka influence is apparent in the fact that it is not an uncommon thing now for young women to bind their feet loosely just for a short time before marriage, and then unbind them afterwards. But occasionally they wear the bandage too long, in which case the foot remains crooked. The old women too have a way of dressing their feet so as to make them look extremely small on grand occasions, while they remain conveniently large for use when they have to travel or work.

The binding of a child's feet is not begun until she has learned to walk and do certain things for herself, as it would be difficult, if not impossible, to teach her afterwards. The rich bind their children's feet from the sixth or seventh year; but the poor do not begin until they are twelve, or even older. Parents who have been forced by poverty to sell a daughter as a slave when she was a child, will bring her back afterwards if they can; and then, no matter how old she is, they bind up her feet and marry her as a lady. But the pain of binding a full-grown foot is said to be most intense. Strong white bandages two inches wide are manufactured for the purpose. Those worn the first year are two yards long, and about five feet is the length worn afterwards. The following, according to Miss Fielde, is the method adopted: 'The end of the strip is laid on the inside of the foot at the instep, then carried over the top of the toes and under the foot, drawing the four toes with it down upon the sole; thence it is passed over the foot and around the heel; and by this stretch the toes and the heel are drawn together, leaving a bulge on the instep and a deep indentation in the sole, under the instep. This course is gone over in successive layers of bandage, until the strip of cloth is all used, and the final end is sown tight down.' To please a Chinawoman, the 'indentation' must measure about an inch and a half from the part of the foot which rests on the ground up to the instep. The toes are then completely drawn over the sole, and the foot is so squeezed upwards, that in walking, only the ball of the great toe touches the ground.

Large quantities of powdered alum are used when the feet are first bound, and always afterwards, to prevent ulceration and lessen the offensive odour. The bandage is taken off only once a month. At the end of the first month the foot is put in hot water, and after it has been allowed to soak some time, the bandage is carefully unwound; 'the dead cuticle, of which there is much, being abraded during the process of unbinding. When the foot is entirely unbound, it is not unusual to find ulcers and other abominations. Frequently too, we are told, 'a large piece of flesh sloughs off the sole, and it sometimes happens that one or two toes drop off.' When this happens, the patient considers herself amply repaid for the additional suffering by having smaller and more delicate feet than her neighbours! Indeed the desire to have small feet is so intense that girls will silyly tighten their own bandages in spite of the pain!

Each time the bandage is taken off 'the foot is kneaded' to make the joints flexible, and is then bound up again as quickly as possible with a fresh bandage; and the foot is drawn more tightly together each time. During the first year the pain is so intense that the sufferer can do nothing. When

she goes out, she has to be carried. Indoors, she moves about by kneeling on two stools. At night, she lies on her back across her bed, 'allowing the edge of the board bedstead to come under the knee and press on the cords in such a way as to benumb the lower limbs.' For about two years the foot aches continually, the pain being 'most severe in the ankle-bone, joints, and instep.' The aching is varied or accompanied by another pain like the pricking of 'sharp needles piercing the flesh.' If the binding is kept up rigorously, in two years 'the foot is dead and ceases to ache. But by this time the whole leg from the knee downwards has become shrunken; being little more than skin and bone.' The Chinese lady may then boast of her 'golden lilies,' and decorate them with tiny embroidered slippers, half an inch wide and three inches long in the sole. The Tie-Chiu women fasten the slipper 'to a band of blue cloth, which passes around the heel and is attached to a gaily painted wooden heel, on which the whole weight of the body falls in walking; the toe being elevated an inch or more above the ground. A very narrow "pantalet" of cotton or silk covers half of the wooden heel and all the instep, so that little more than an inch of the pointed toe of the shoe is visible.'\*

When once formed, a 'golden lily' can never resume its original shape; and when uncovered, it is so unsightly that women object to taking off their bandages even before members of their own family. The writer has seen long strings of small-footed women walking with their hands on each other's shoulders down the narrow streets of Canton. Many of them were blind, and the Chinese themselves declare that foot-binding causes blindness. But their obstinate adherence to this painful and barbarous custom, in spite of the many objections, which they themselves acknowledge to be just, is marvellous. Whatever is 'old fashion' is good, they say; and were it not for the persevering efforts of the English and American missionaries, which are now beginning to take effect, they would probably continue to make, and to rejoice in their 'golden lilies' for ever.

\* The quotations are taken from a Report on 'Foot-binding,' written by Miss Norwood, a lady in the American mission at Swatow.

#### EVENFALL.

WRATHFULLY in the ruddy West away,  
The sun goes down beyond yon upland field,  
As though he angry were that one more day  
Unto another night is forced to yield.  
Anon the West is broken into bars  
Of orange, amber, gray, and dusky gold;  
And darkness, stealing on, draws out the stars,  
Their nightly vigil—long and lone—to hold.  
Within yon wood, the last bird-warble fails,  
And all the air, emptied of every sound,  
Inviolat stillness holds. Above, around,  
The calm repose procured of peace prevails—  
The calm, the sweet; and now complete o'er all  
Hath gloomed the dim, the dusky evenfall.

## FLEUSS'S METHOD OF BREATHING UNDER WATER.

HITHERTO, as is well known, when a professional diver went under the water to search for any object, or to assist in other operations, he wore a particular kind of dress, and was supplied with air by a tube connected with a pumping apparatus. All this is now to be given up. A process has been invented of breathing under the water without any of the ordinary appliances. The invention is due to the perseverance and skill of Mr Fleuss, an officer of the mercantile marine, who at sixteen years of age went to sea as an apprentice, and afterwards served in several ships. On passing the examination for second-mate, he joined the Peninsular and Oriental service, and visited most parts of the world. The promotion being somewhat slow, Mr Fleuss subsequently attached himself to the British India Company, and speedily attained the position of second-officer. This life gave him many opportunities of recognising the importance of an improved method of diving; and as he was fond of mechanics and scientific studies, he speedily made himself master of the subject. He is still a young man, of twenty-eight years of age. His invention offers a gratifying instance of what may be effected by study, determined perseverance, and independent exertion; and we feel assured that when it becomes fully known, it will be employed for many important purposes. After maturing his invention, and personally demonstrating its validity by going under water at public exhibitions in London, Mr Fleuss patented the process in England and other countries. What we have therefore to say on the subject is from ascertained facts, and however extraordinary, is beyond the reach of cavil.

By Mr Fleuss's process any person with sufficient nerve, and who is accustomed to diving, can exist for hours beneath the water without connection with the surface. A special dress with a helmet inclosing the head requires, however, to be employed. The dress has much the outward

appearance of that hitherto used. The helmet is entirely closed, for there is no pipe to the air above water, as is customary with ordinary divers. The power of breathing depends on means within the sphere of the helmet and dress. To understand this, we must consider the composition of the air.

As is generally known, the atmosphere we breathe consists one-fifth of oxygen, and the remaining four-fifths of another gas called nitrogen. The mixture of these two gases is a strictly mechanical one; they have not entered into any chemical combination. The oxygen is the supporter of life; the nitrogen merely diluting it, so to speak, to a proper degree, for the purposes of our lungs. In breathing, the oxygen is partially lost by absorption into the system, and the exhaled air contains a large proportion of carbonic acid or—to call it by its more modern name—carbon dioxide, a gas which is a poison to animal life. According to Mr Fleuss's process, a continuous supply of oxygen is procured from the helmet, where it is stowed in a compressed state, the supply being regulated by a valve under the control of the diver. The original nitrogen in the lungs remains unaltered, and can be breathed over again along with a due admixture of the oxygen. The strange thing is the disposal of the deadly carbonic acid gas. What becomes of it? Is it bubbled up through the water? No, for the oxygen and nitrogen would go with it. A well-known chemical action is taken advantage of by causing the carbonic acid which is given off, to be absorbed by caustic soda; the result being the formation of carbonate of soda. The caustic soda is contained in a small tin or ebonite case placed in the body of the dress. It is in solution, and confined in the pores of spongy india-rubber, which is perhaps the only soft material impervious to its corrosive action. A proper arrangement of tubing causes the whole of the exhaled air to pass through this case, which requires emptying and recharging about once a week—supposing that the apparatus is in daily use. To sum up the means by which Mr Fleuss breathes in a dress

hermetically sealed from external air: He takes down a supply of compressed oxygen gas, dilutes it with the nitrogen—which is naturally present in his lungs and in the diving dress when he puts it on, and which remaining unaltered, he can, as we have already shewn, breathe over and over again; and by bringing the exhaled carbonic acid in contact with caustic soda, transforms the deadly gas into harmless carbonate of soda. Such is Mr Fleuss's invention or discovery, which will no doubt astonish every one with its beautiful simplicity, and call forth the usual amount of surprise in such cases, 'that nobody thought of it before.' Possibly many may have thought of it before. But it requires an unusual combination of perseverance, energy, chemical knowledge, and mechanical skill, to carry such thoughts to practical trial and ultimate success. Mr Fleuss not only studied chemistry to carry out his pet idea, but he made his apparatus almost entirely with his own hands. Moreover, he donned his dress, fitted with this home-made apparatus, and descended—the first time he had been under water in his life—in public, and remained under more than one hour. So to the qualities already mentioned, we must certainly add that of indomitable courage.

The advantages of Mr Fleuss's apparatus over that which it is most certainly destined to supersede, are numerous. There is no doubt too that its use will not be confined to subaqueous work. It might well form a most valuable addition to our fire-escape stations, for it would enable the wearer to enter into the densest smoke without any risk of suffocation. Its use in the rescue of unfortunate miners would also be possible without any fear from the deadly choke-damp. Wells and vats, where the heavy carbonic acid forms a layer beneath which no human being can go without almost instant suffocation, will also be penetrable by the wearer of Fleuss's apparatus; and in these several ways the apparatus will probably help in the saving of many lives. The advantages of the new diving system are mainly these. The diver requires but one attendant, to whom he can signal in case of need. The absence of an air-pipe relieves him of many anxieties as to his safety. He is free to move in every direction; and can creep under wreckage in a manner that the ordinary diver would consider hazardous, if not impossible.

By experiments and tests as to temperature and pulse after immersion for more than an hour, it has been conclusively proved that Mr Fleuss's system of breathing under water is attended by no inconveniences. Last, and by no means least, the expense of the outfit is estimated at one-half that required by the older method. The absence of pumps and gearing will at once account for the reduction.

In a manner suitable for a popular journal, we have now described this remarkable invention, which, had it been available a few months earlier,

might have led to the speedy recovery of the bodies of those who suffered in the Tay Bridge disaster, of whom, up till the time we write, only about one half have been found. What a triumph in art, and what a solacement to the feelings it would be, if by Mr Fleuss's process a great proportion of the still missing bodies were recovered for burial by friends and relatives!

## A LIFE'S ATONEMENT.

### CHAPTER XII.—HISTORY.

*The broken windows winked and leered with patches.*

DR BRAND sat in an easy-chair and smoked a quiet cigar after the fatigues of the day. You must recognise him, though you have spent so small a time in his society. Dr Brand was not a man to be easily forgotten, having been once encountered. In the first place, he had the advantage of physical size wherewith to impress you. In the second place, his aquiline nose and his square jaw, his keen and somewhat too imperious eyes, his big broad head and wavy mass of grizzled hair, were each memorable. A great loose-limbed, masterful-looking man, with kindnesses in him, and coarsenesses. A man who was alive to the very ends of his hair, and who rejoiced in life. An old Viking sort of man, who ate and drank hugely, worked inordinately, laughed out of all form and fashion, had gigantic rages, and strange fits of tenderness—altogether, a remarkable man.

Seated opposite was the Doctor's wife, who was just such a contrast to him as such a man might delight in—a pretty little creature who, though thirty, looked no more than twenty. The kind of woman who seems to be made for the express purpose of idolising the Dr Brand kind of man. You might almost guess how much she idolised him, by the satisfied expression of her eyes as they rested upon him in placid watchfulness of all his loose and careless movements.

'Ma mie,' quoth the Doctor, 'my practice increases enormously.'

'Indeed, James?'

'I shall shortly have to retire in self-defence. I have a whole mob of people who are trying to absorb my time. They live in a court off Oxford Street, and are not worth one penny per annum.'

'I suppose not.'

'I might,' said the Doctor, rolling himself round in his chair to look at her—'I might say, "Let the parish doctor see to 'em." But he can't see to 'em. I don't know him; but if that man does his duty, he will work himself to death. Six of him would be worked to death.'

'Is there so much sickness?'

'The wonder isn't that there's so much sickness, as that there is so little. You'd say so if you saw the hole they live in. I thought I knew the London slums, but God bless my soul,' said the Doctor, rolling round again, 'I couldn't have believed it.'

'What made you go there?' asked his wife.

'Do you remember Penkridge?' asked the Doctor, in return.

'Penkridge? Do you mean the odd little man

who kept the stationer's shop in Camberwell. O yes; I remember how I used to laugh at him, he was so comically civil.'

The Doctor set his feet upon a chair before him and lolled there broadcast. He smoked for a while, and answered: 'You wouldn't laugh at him now, *ma mie*. Such a ragged, drunken, helpless, hopeless scoundrel—such a lost, tearful, lachrymose, whining villain. A dog of such ill odour, spiritually and physically.'

'I think I remember to have heard,' said Mrs Brand, 'that he got into the hands of some dreadful person, who ruined him.'

'Bah!' roared the Doctor with sudden energy. 'That kind of man always gets into the hands of people who ruin him. The miserable fool of a fly invites the spider to live in his neighbourhood; he makes a chum of him, and helps him to spin his web. I do protest,' continued the Doctor, struggling up to say it, and sitting with a hand upon each elbow of his chair—'I do protest that I have no atom of sympathy with that sort of creature. I can get up no pity for him.'

'Now, I am sure, James,' said the Doctor's wife, 'that you have been helping him.'

'Helping him!' growled the Doctor behind his cigar like an angry bassoon. 'I know I've been helping him. But I have the grace to be ashamed of myself. What is it that favourite of yours says—the she-poet—Whatsheername? "I feel as if I had a man in me despising such a woman." To help a man of that sort is a waste of good material. There is only so much medical talent in the world. Not half enough to supply the world's wants—not half enough, I mean to supply that part of the world which deserves to have its wants supplied. Nine-tenths of the ridiculous world we live in is so hopelessly rotten, that a man tinkers at it to no purpose. It can't be mended—it can't be restored. The wisest and kindest thing to do would be to poison ninety per cent. of the people of this planet, and start afresh with the healthy remainder.'

'I have heard that dreadful theory before,' said the Doctor's wife. 'But how are you going to decide who is to live? Suppose some dreadful person wished to poison me?'

'I'd knock his head off,' said the Doctor promptly. 'Let me demonstrate your right to exist. I am a man of unusual abilities; I am profoundly versed in the noblest of all human arts; I have energies which are absolutely unweariable, and I get through the work of ten ordinary men daily.'

'I have heard all this before,' responded Mrs Brand, laughing; 'and used to believe it until I got married and disillusionised. But we are not concerned with you at present. What is my right to exist?'

'What a lovely sex it is!' said the Doctor; 'always waits to hear an argument out before it dreams of speaking. Your right to exist, my dear, is that I desire you to exist. If I am useful for ten, I may claim life for two.'

'Suppose your desire should cease, you mountain of egotism?'

'Your right would vanish, you atom of charms?'

'James—you're a monster.'

'Jennie—you're an angel!'

'A highly satisfactory termination,' quoth the Doctor's wife, 'to a most unsatisfactory debate.'

At this the Doctor rose, picked up his wife's chair with his wife in it, kissed the little lady, set her down again, burst into a great roar of laughter, and dropped back into his arm-chair. Mrs Brand accepted this as though she were quite used to it, and regarded the laughing giant with the same look of calm and watchful affection as before. 'What were you saying about Penkridge, James?' she asked after a little pause.

'It was his wife I was thinking of. She died last night.'

'What did she die of?'

'She died chiefly of Penkridge, I should say. But the shameless waste and sinful luxury of this big London helped her. In plain English, she died of hunger.'

'James!' exclaimed the Doctor's wife; 'you don't mean that?'

'Yes; I mean that. She died of actual hunger, Jennie; and that tearful villain her husband was half-drunk. Think what that means.'

'How dreadful!'

'Do you see?' said the Doctor, sitting up again. 'He had money enough to drink with somehow. She died of starvation.'

'Perhaps some one gave him drink who would not give him money.'

'I hope so.' The Doctor subsided again. 'Jennie,' he went on, 'these things hurt me. If a man could do anything in such a case— If I could have dropped Penkridge, for instance, from the garret window. That man's squalor and degradation,' continued the Doctor keenly, 'are not a misery to him. He finds a compensation in idleness and an occasional burst of drinking, and more than all, in his wailings about his having been ruined and so forth. There are some men to whom it's a positive comfort to have an injury done to them; they find a luxurious joy in the ability to complain that they have been damaged.'

'Do you know, James,' said the Doctor's wife, coming nearer, and sitting on an ottoman beside him, with a hand upon his arm—'do you know that I feel myself very idle and very useless? I daresay it's very foolish in me, but I feel almost sorrier for people who won't help themselves than I do for those who can't. I mean that when people won't help themselves, and don't even want to try, it seems to imply such a dreadful inward want somewhere. You know what I mean, don't you?'

'Perfectly.'

'James, I have been thinking seriously, and this talk reminds me again. I must do something; I must justify my claim to exist, dear.'

'*Ma mie*,' said the Doctor, throwing away his cigar, and taking one of her hands in both his, 'your clear mission is to give heart and hope to me. If it weren't for you, my energies would be wasted. I should have turned myself into a hermit, and have gone to live in the cave of speculative science, long ago, if I hadn't had you beside me.'

Mrs Brand looked at him smilingly, and shook her head. 'I must do something,' she reiterated. 'Now, shall I tell you what I have been thinking?'

'Wait a moment. Let me compose myself to listen. Give me a glass of claret, whilst I light another cigar.—Thank you. I am ready now.'

He set his slippered feet upon the chair before him, and composed his huge figure comfortably. His eyes had lost that too imperious glance. He stroked the little hand that rested upon the elbow of his chair.

'I have been thinking, James,' said Mrs Brand seriously, 'that I can see a clear way of doing good, and I want to ask your advice about it. It seems to me that a great many benevolent enterprises fail, dear, because the people who start them are anxious to do too much, and to do it in an unnatural way. Lady-visitors, for instance.'—The Doctor nodded, to signify attention.—'Now a lady goes into one of the places you were speaking of just now, and says a few kind words, and does a few kind things to a great many people. I hope it does good. I don't think it can fail to do some good. But wouldn't it be better, dear, to single out some one hopeful case—the case of a girl perhaps—and confine one's self to that case, not carrying it away from the place, but leaving it there, as a sort of wholesome centre, out of which something might possibly grow? I want to try some such experiment, James; and I want to get one or two other people to do the same. It seems to me that one clean room and one tidy figure in such a place as Bolter's Rents must be, might be of great service. And one clean heart and well-ordered mind might do incalculable good.'

'Have you thought at all of the counteracting influences?' asked the Doctor.

'Yes. I am really not too sanguine. I am only thinking of what might happen. But isn't there likelihood enough to make it worth while to try?'

'Put yourself for a moment,' said the Doctor, 'in the place of your imaginary girl. You have of course a surety against her gross temptations, which she couldn't have. Think how anybody not so vile as themselves would grow to loathe the people who live there. The place is a moral nightmare. You would grow sick at physical and spiritual filth, and would do one of three things: sink down to it—go mad over it—or run away from it.'

'You forget,' persisted the little lady, arguing her case more warmly. 'I am squeamish by training, as no girl brought up as any girl would have to be in such a case, could possibly be. I don't want to make a lady. I want to help to rear a decent Christian woman, who shall be clean and neat and sober, and know the ways of the people, and be able to do more for them than anybody from the outside. And I think that's possible.'

'Did you ever see Bolter's Rents?' asked the Doctor grimly.

'No,' answered the Doctor's wife.

'Come and see it now,' said the Doctor, rising.

'Ah! I was afraid you would not be particularly eager.'

'I am quite ready to go, James.'

'Then, put on your plainest bonnet and your quietest shawl. It's a fine moonlight night, and Bolter's Rents is not far from Wimpole Street.'

Mrs Brand left the room. If the truth must be told, her spirits faltered somewhat at the thought of a visit by night to such a place, and her enthusiasm cooled a little. But remembering her husband's familiarity with the place and people,

and recalling her confidence in him, she attired herself as plainly as she could, and rejoined the Doctor, who was already drawing on his gloves in the hall. They went out together arm-in-arm, through quiet ways, until they emerged on the long-drawn glare and bustle of Oxford Street.

'Have you your vinaigrette?' queried the Doctor.

'No, dear,' responded Mrs Brand.

Dr Brand turned into a chemist's shop and purchased a bottle of smelling-salts. 'Put that in your pocket,' said he; adding with an almost tragic solemnity: 'You may possibly want it. The scents are tremendous.'

Walking on the right-hand side of the street and facing towards Holborn, they turned abruptly into a narrow and low-browed passage, which yawned like a black mouth on brilliant Oxford Street. The passage was too narrow to allow of their walking abreast; and with a brief injunction to follow and a reassuring tap upon his wife's shoulder, the Doctor led the way. Looking past his ponderous figure, Mrs Brand saw before her a long dim vista of murky building, with one solitary light gleaming at the far end of it. The way underneath her feet grew moist and spongy; a faint and sickly odour greeted her nostrils. She laid her hand upon the bottle of smelling-salts, but resisted the inclination, determining to shew no sign of annoyance so soon. Entering on the court which lay beyond the passage, the two went side by side once more. One or two women, unutterably coarse and frowsy, stood in a little patch of moonlight with their hands under their aprons, and their hair in wild disorder. They lolled against the wall, or stood uprightly vacant, or shambled loosely from side to side, but said nothing, and were without occupation. There were one or two hulking lads engaged in coarse horse-play under the shadow of the houses on the other side of the court. The broken windows winked and leered with patches. If by chance a whole window was anywhere left, it stared out on the moonlight, vacant, blank, and blind. A house is always more or less human. The houses in Bolter's Rents were like humanity in vile decay. A door hanging stiffly from one useless hinge suggested lockjaw. This wall, which bowed inward until it seemed a wonder that it stood, had in it a reminder of the looks and bearing of a broken-down old debauchee. There was a mere hole where the garret window should have been, which looked in its dark blankness like the black patch over an eye. A great beam of timber which propped up the building, looked like the stick upon which that bankrupt old blackguard leaned. Rusty bars of iron passed from this ruin to the buildings on either side of it, as though the hoary rascal were chained to the companions whom he had by bad example led hither. They leaned upon him from either side, stupid and hopeless, and rapidly coming to his own sad case. Everywhere dilapidation and decay. Everywhere an air of shameful ruin, and an air of shame, as though the very walls and windows were conscious of their wretched plight, and had hidden away here from the gay and brilliant street outside. The end of the court was deserted, and the solitary lamp shewed nothing but an open doorway gaping darkly underneath it. Mrs Brand felt an almost unconquerable inclination to seize her

husband's arm and beg him to come away. Nothing but a feeling of shame restrained her.

The Doctor paused there, and said: 'This is the house I visited last night. You are not afraid to go in?'

'No,' answered his wife, belying her own quaking heart.

'You are quite safe with me, dear,' said he, taking her hand in his, and speaking in a cheerful tone. 'The steps of this establishment are eccentric. Step carefully after me, and let me keep your hand.'

They went up in the darkness until they came to the top of the third flight of steps, where the Doctor tapped at a door.

'You're mighty polite, whoever y'are,' said a voice inside with a tone of sarcasm. 'But we're not that private here that ye mayn't walk in.'

Dr Brand pushed open the door and entered, relinquishing his companion's hand.

'Is it you, Docthor?' exclaimed the owner of the voice—an Irishwoman, not uncomely in aspect, nor yet dreadfully unclean.—'But who's that with ye?' she asked sharply and suspiciously.—'Oh, a lady.—I beg your pardon, ma'am.—But they're afther Mike, sor, I'm afraid, an' it makes me that nervous. Will ye look at the choild?'

Mrs Brand looked round the room, and saw the old tea-chests which did duty for chairs, the larger chest which did duty as a table, the bed of sacking, the tattered hanging which parted off one corner of the chamber. Nothing else.

'The little gyurl's up-stairs with the choild,' said Mrs Closky; adding with a face and voice so significant that it struck the attention of Mrs Brand at once: 'She's watchin'.' With that she left the room; and Mrs Brand turned to her husband.

He read her glance, and answered: 'The body of that poor woman lies above. The rats here are as hungry as she was before she died.'

'James, James!' cried Mrs Brand, clinging to him. 'Oh, why did I dare to come into this dreadful place!'

'Hush!' said the Doctor, almost sternly. 'Let me think better of you than this, Jennie.—Come, come,' he added in a softer tone; 'take courage. This is but a little part of that pandemonium in which you fancy you could minister. There is nothing here but misery. This house is the most orderly, and decent in the court.' He ceased there; but turning round to the window, cried inwardly, in a silent rage of pity and emotion: 'O God! would it be a crime to give a sleeping-draught to every soul within it, and burn this hideous rookery down!'

He turned and took his wife's hand again, and found her trembling. He put his arm about her and drew her to his breast. Thought is swift; and as he held her there for a moment, he thought of all the placid quiet of her lot, the purity of her gentle life, the comfort and security which reigned about her. He thought too of his own chances in life, so favourably ordered, so smoothly progressive from good to better. He thanked God for these things; but a moment after, half-recalled the thanksgiving; for it seemed to him almost blasphemous in its selfishness that he should be thankful for that which gained a poignant bliss from such an awful contrast.

His wife withdrew herself from his embrace.

'I am stronger now, James,' she said, speaking with a self-possession which astonished herself. 'I think I am the more resolved for coming; indeed I am. I had read of things like this,' she continued, her eyes greatening as she spoke; 'but I never realised them before.'

'What you have seen and heard so far, *ma mie*, is nothing,' the Doctor answered. 'This squalor'—pointing round the room—'is nothing. The ugly fear up-stairs is common to places such as this. Vice is the seed from which the real horror of these places springs. Of that you have seen nothing—shall see nothing, if I can advise you.'

His wife returned no answer; and in another moment they heard a footstep and a weakly wailing voice upon the stairs; and Mrs Closky entered with the child. By the Doctor's orders, she took off such miserable clothing as it wore, and was about to lay it on the larger chest with a shawl underneath it, when Mrs Brand whipped off her own shawl, and deftly folding it, laid it on the chest beneath the other, to make the temporary couch a little softer. Mrs Closky looked at her and at the rich dress which now stood revealed, but said nothing.

The Doctor stooped to examine the child: 'Has the parish doctor been here, Mrs Closky?' he asked.

'Yes sor. He kem an' lift the death-paper, sor, an' looked at the choild. An' he says her inwards isn't damaged, but her back's twisted for loife; an' he lift a liniment.'

'Let me see it,' said the Doctor, still bending over the child. 'Is this it? H'm. No harm—and no good.' Then after a pause: 'I am afraid he is right about the child. Yes; he is right.'

Mrs Brand bent above the child also. Its feeble wail troubled her, as it might trouble any woman. 'Can I send it anything from the house, James?' she asked her husband.

He waved his hand in answer, as if asking for silence, and turned to Mrs Closky. 'Can you bring the child to my house to-night?'

'O yes sor,' answered Mrs Closky readily.

'Then do so—in an hour.—Now, *ma mie*, let us go.'

Mrs Closky lifted up the baby and the shawl. Mrs Brand looked at her own shawl lying on the chest, and then at the woman's bare shoulders; for Mrs Closky was innocent of what I believe the women call 'a body,' and had bestowed upon the baby the only covering her shoulders had. The Doctor saw the glance and read its meaning, but settled matters by taking up the shawl and wrapping Mrs Brand carefully up in it. They went carefully down the dark and creaking steps, and emerged from the court; and in another minute were back in Oxford Street, with its brilliant gas-lights and its hurrying crowds.

'I might have left it with her, James,' said the Doctor's wife, after a pause, during which they had reached one of the quieter streets.

'It would have been pawned in the morning,' the Doctor answered. 'Give the woman something cheap, unpawnable, and fragmentary, and you do her a charity. Give her anything pawnable, and her husband, on returning home, will knock her down to rob her of it, and will get drunk on the proceeds.'

Mrs Brand made no reply, but mused on these

things sorrowfully, hoping within herself that the evil was not quite so evil as her husband painted it. As they walked quietly along together and came near to the end of the street, a man suddenly darted round the corner, planted himself with his back against the wall, and stood there in shadow. The Doctor directed a glance at him in passing, and recognised Michael Closky. Knowing what he knew, it was not unnatural that the Doctor should suspect mischief of some sort. It was not his business to help the police, if Michael had upset one of the force, or in a playful ebullition of feeling had taken a cast in pewter from the face of a pot-boy, but he felt a momentary curiosity. Turning into the street from which Closky had so suddenly emerged, he found it quiet and deserted. There was no sign of pursuit. There was not a human being on the causeway. Half-way up the street there was an open door, at which two men stood smoking. As the Doctor and his wife went by, these two bade each other a friendly good-night, and one, closing the door, remained inside, whilst the other, gaily swinging his cane, tripped down the steps, humming a muffled fragment of an air behind his cigar. Dr Brand recognised in him a German Jew who once upon a time was a patient of his. This German Jew was something in the City, the Doctor remembered in an absent sort of way—an agent or something of that kind, whose name was Tasker. He gave no second thought to the gay foreigner, but passed on. And Tasker, unwitting of the darker shadow which nestled in the shadows round the corner, went merrily towards it, humming a muffled fragment of an air behind his cigar.

(To be continued.)

#### STORY OF THE PRESSGANG.

I WELL remember when a boy being frequently sent for a week to stay with an old uncle during some part of my holidays, and the pleasure I experienced in inducing him to relate some of the adventures of his past life, which had for the most part been spent at sea. In his young days the navy was equipped for the most part by boys, and men who were pressed into the service whether they liked it or not. Pressgangs were therefore held in no little dread by peaceable shore-going folks. My uncle was a good-humoured, kindly old gentleman, with a thick fringe of gray hair, and a clean shaven face, who delighted to teach me the mysteries of tying knots and splicing ropes or any other bit of sea-craft, which he said might be useful to me some day. The only singularity about him that I remember was, he never partook of tea, but had his pipe and a jug of ale in the evening instead. He was always ready at such times to tell me about his sea-life—to spin a yarn, he called it.

Well, my boy, said he upon one occasion, you want to know if I was ever pressed into His Majesty's service. Yes; I was once, and a good many times I have had a sharp run for it, to escape. I had just come home from a voyage in an Indiaman, and was glad to get a spell on shore, though it was dangerous work at that time, as there were so many crimps and pressgangs about in every sea-port town. I was staying with my mother in London, and was,

as I thought, well disguised; but there is something about a seafaring man that betrays his calling, however much he may try to hide it. Well, I was strolling down Tower-Hill way, just to see how things were going, when as I turned into Trinity Square, my heart leaped into my mouth as a strong hand was laid on my shoulder, and I heard the words: 'Ah! my fine fellow, you seem just the boy for us. Where do you hail from? His Majesty wants you to come and have a glass of grog at his expense.' I was surrounded by half-a-dozen strapping fellows; and I knew that I was caught, and that resistance was useless. I was walked off, in the king's name, to the Tower stairs, and put on board the tender lying off the Tower. The next morning I was brought up before the naval officer in command to give an account of myself. My denials and protestations of being innocent of the sea were scouted with derision. I was cut short by being asked if I would go as a volunteer or as a pressed man. We sailors knew that pressed men were looked upon with suspicion, and not trusted, never allowed to go on shore, and stood no chance of promotion. It was a common saying, 'One volunteer is worth ten pressed men;' so I perforce volunteered. I liked the merchant service best, for somehow the navy had got a bad name; but I was young, and did not care much. I thought if I did my duty it would be all right.

In a day or two I was sent, with about a hundred and twenty others, to the Downs, where the fleet was lying. Being a smart young fellow and a volunteer, I was drafted on board the flagship of Admiral Duncan, and after a while was made captain of a gun. The fleet consisted of sixteen sail of the line, and our cruising-ground was off the coast of Holland, the object being to watch the Dutch fleet, commanded by Admiral Van Winter, then lying in the Texel. I was fortunate in being drafted into the Admiral's ship, as we had a very fair crew. The other ships were not so well off; there was but a small sprinkling of real blue-jackets among their crews, which were made up for the most part of pressed men, who were always more or less sulky and discontented. The remainder were some of the worst characters to be found in sea-port towns. The 'cat' was going every day on board some ship of our fleet. Officers were tyrannous; the discipline harsh; provisions bad; and for the slightest fault a man's grog was stopped, which does not add to the sweetness of a fellow's temper at any time. One morning at daybreak, the Admiral was signalled that a rebellion had broken out on board one of the ships. It spread to others, and a mutiny prevailed on board nearly all the ships, which placed the Admiral in a very critical position; for if the Dutch had known it, and had come out to fight us at that time, they might have taken nearly all our ships without any resistance. By judicious management, however, the rebellion was quelled; a few of the ringleaders were hanged at the yard-arms of their ships, and some were sent home to be dealt with by the authorities at Portsmouth.

The Dutch wanted to get out of the Texel, and join the French fleet at Brest; but we kept the blockade so closely that they had no chance without fighting us, which was what we wanted. We had nasty weather at the beginning of October;

and during a storm, when our ships were scattered, they stole out in the night, and had made some way over towards the French coast before they were discovered. Our signal-guns, however, soon brought our ships together and cut off their escape; some long shots were exchanged, and a good deal of fine seamanship was shewn on both sides—for the Dutch are very good sailors, though slow—before we got well into action. I had been laid up for a week with the rheumatic fever. I was so bad I could not turn in my hammock; but when the shot began to crash into the ship, I got so excited that all the fever left me, and I tumbled out, went on deck, and took charge of my gun, a sixty-four pounder. There are usually from eight to ten men for the working of a gun. The first man I lost was assisting to run on the gun, after loading, by prising the hind-wheel of the gun-carriage with his rammer, when a shot came in, passed across his back harmlessly, but caught his projecting elbow, carrying the joint clean away, and leaving his arm hanging by a strip of skin. We were fighting with a ship larger than our own, broadside on, when a small ten-gun brig drew up astern and commenced raking us. Of course the shot swept the whole length of the deck, and did more mischief than our big antagonist.

The confusion caused by this raking fire was something unlooked for; but the remedy was at hand. The guns on the other side were shotted and all ready for action, when the order was passed along from the quarter-deck to man the starboard guns. By forging ahead we escaped being raked by our larger antagonist; and swinging half round, before the little wasp was aware of our manœuvre and could draw off, we poured into her a broadside that did not need repeating. Her spars came crashing on deck; she gave a lurch or two like a thing in pain, and went down stern foremost; for our guns were depressed, and had riddled her through from deck to keel. We got into position again with our enemy, which was no easy matter, for she tried to get her broadside into us, end on, to sweep us as we worked round; but we were too quick for her, and came round on the other side, which was well for us, for our larboard guns were getting hot, and two or three had come to grief. We had lost a great many men. Three had been carried below from my gun, and I was just taking sight for my next shot, when a large splinter struck me on the shin, and brought me down. These splinters do much mischief; as the shot comes through, it splits off the wood from the inner side and sends the pieces flying in all directions. My leg was not broken, but the bone was badly splintered. I crawled down into the cockpit, where the surgeons were hard at work, and the assistants were ready to put a tourniquet on the bleeding stump of leg or arm, directly a man was brought down, to prevent his bleeding to death before he could be attended to; for each had to wait his turn, which might be an hour or more in coming. When it did come, there was no time for any sentiment or sympathy; the work had to be done, and that quickly. The groans and cries were heart-rending, and the call for water incessant. The best was done, no doubt, under the circumstances. However kind-hearted a naval surgeon may be, there is no time in the heat of action to condole with his patients. He

needs a strong nerve, cool judgment, and steady hand to do the best he can at the moment for the sufferers; and all this has to be done with the roar of cannon and the crash of shot going on overhead. It was an awful time and scene; and if I could have crawled out of that cockpit again, I should have done it; but I could not move my leg, as it had become quite numbed. My turn came at last. I was lifted on to the table heart-sick, least I should hear the sentence I had heard so often pronounced upon others: 'Can't be saved; off with it!' The head-surgeon examined my leg quickly and carefully, but not over-tenderly; clapped me on the shoulder, and said: 'All right, my man; you'll do: we shan't have to remove it this time;' and turning to an assistant, said: 'Bandage it tightly; I'll see to him to-morrow.'

By this time the fighting was nearly over; our antagonist had struck; and altogether we had taken eight sail of the Dutch fleet and some smaller vessels. It was considered a brilliant victory, the Dutch admiral Van Winter being taken prisoner. Our Admiral was afterwards rewarded with a pension of two thousand a year. Two days after the battle, my fever all came back again, and I had a bad time of it. The fleet, with the prizes in tow, made the best of its way to Portsmouth, where all the sick and wounded were landed. I was sent on shore with the others; but my leg was very troublesome, and I was sixteen weeks in hospital before I got about again. I was not then fit for active service; but as soon as I got my discharge from hospital, I made my way to London; and it was full two months longer before my leg got quite strong.

I had received my pay at Portsmouth; and there was some prize-money coming to me; but I was afraid to apply for it lest they should claim me again. So I sacrificed that, and tried to find a berth on board a merchantman; but it had to be done very cautiously, for the sharks, as we called the pressgang, were about everywhere. Men were wanted badly for the king's ships; and bounty-money was offered to induce sailors to join a ship-of-war. But as I said before, the navy had a bad name, and ten pounds bounty would not induce men to volunteer. To the disgrace of the naval authorities of that time, any one who could betray or kidnap a sailor into boarding a king's ship was entitled to the bounty-money. This gave rise to a class of men called crimps, who would pretend to be the sailor's friend, and with great secrecy would board and lodge him at a moderate price. When he had got a few sailors together, he would ply them with liquor, and bring the pressgang down upon them. Another set of rogues would pretend to be private shipping agents, offering every inducement for men to apply to them, and conducting everything with the greatest apparent caution, lulling their victims into confidence, until they could draw by appointment eight or ten together at some secret rendezvous, under pretence of meeting some captain in want of men; when, to the consternation of the sailors, they would find themselves in the hands of the king's officers. This was not always quietly accomplished; a desperate resistance would be made as often as not; but the king's men were prepared for the worst; and the poor fellows would be forced, bleeding and for the time disabled, on

board the tenders in the river waiting to receive them.

Where St Katharine's Dock now stands was at that time covered with streets and houses, mostly inhabited by persons in some way connected with waterside business, and much frequented by sailors and captains of merchantmen in want of hands. Every one there was ready to earn a pound or two from a captain or a sailor, by secretly bringing the two together. This was of course known or suspected, and a sharp look-out was kept by the king's men; while on the other side, a careful watch was kept for them, for they were not regarded with any special favour in that quarter. The people were mostly poor; but they could be trusted. They hated crimps and pressgangs; a quiet resistance and a general desire to thwart all pressgangs was the prevailing feeling, and men felt pretty safe in that neighbourhood. If a man was in danger, the first open door he could find would be a sure refuge. It would be closed upon his pursuers, who could demand but not force an entrance until the demand was refused; but in the meantime the fugitive would be passed over backyard walls, or along the roofs into another house, where he would be safe; for the search, according to law, could only extend to the premises the man had been seen to enter. In one case, a shop-seller who did a good stroke of business secretly between merchant captains and sailors, had a room on his second floor where a hole was cut through the wall into the next house just wide enough to admit a man to pass, and neatly papered over, so as not to shew. If the pressmen entered his shop unexpectedly, Jack would fly to the stairs and mount to his room. If he gained it, he was safe, though his pursuers entered with him. It was furnished as Jack's bedroom; and all he had to do was make a show of resignation to his unlucky fate, humbly request a moment to change his jacket or pack his chest, which—the man being apparently secured—would be readily granted. Jack then, watching his opportunity, would spring through the wall into a dark cavity, having an outlet into the next house; and before his astonished friends could realise the situation, and grope their way into the dark chasm, Jack had locked the outlet behind him, and was safe away.

One day I had been down Shadwell way to meet the captain of a merchantman and settle with him for a voyage to China as mate. Everything was arranged, and I had agreed to go on board the next day. The ship had hauled out of dock, and was moored in the river. I was pleased at the prospect of getting away again, and was making my way back to my lodgings in the neighbourhood of the Minorities. I had got into Ratcliff Highway, at that time a busy and important thoroughfare of shops, doing business in every description of marine stores from a sail-needle to a best bower anchor. I was quietly threading my way through the throng of people, when I was brought up short by the sound of a boatswain's whistle just before me. I knew what it meant, and caught sight of the leader of a gang skulking in a doorway and whistling his men together. I guessed I was in for it, but determined to do my best to get clear. I knew the neighbourhood well, and made off, at my best pace, through the narrow lanes and by-ways leading to the

water-side, the whole gang after me in full chase. I knew if I could reach the locality of Wapping I should have a chance of shoving off in a waterman's boat, and of getting on board some ship, or finding a hiding-place somewhere. I was nearly spent, and could not have kept up much longer, when I rushed into a hemp wharf. Bales of that material were stacked in every available space, with openings between each stack, forming a labyrinth of passages from one part of the wharf to the other, and affording some dark nooks where a man might hide. But I knew my pursuers were too sharp to be baffled by any hiding-place I could find there. The semi-darkness caused by the bales of hemp piled up to the roof, and the noise of men at work, aided for a few minutes to confuse my followers, who had every obstruction thrown in their way; for instinctively every one guessed the nature of this sudden rush of men into the scene of their labour. It was not the first time that such an inroad had been made into their premises, despite the notice at the entrance—'No admission except on business.'

There was no other outlet from the wharf except that by which I had entered. I concluded I had bolted into a trap, when I caught sight of a double plank gangway leading from the wharf to the barges unloading alongside. In desperation, I rushed down it, and the thought flashed into me to pull the planking away from the wharf, so that I could not be followed. How I did it, I cannot tell, for it was beyond any one man's ordinary strength; but despair, I suppose, gave me for the moment superhuman power, for I managed to trip out the bottom sufficiently for the top to clear the edge of the wharf, when it slid and crashed down into the mud. As it fell, my pursuers reached the spot I had left, and perceiving the trick I had played them, in their rage hurled loud threats of vengeance after me, as they saw me springing from barge to barge along the wharfsides. Pursuit being hopelessly cut off in that direction, they could only go round and scatter themselves through the wharfs, where it was thought likely I should make an attempt to hide or gain the street again.

I knew my pursuers were in hot anger in being thus checked when they had so nearly run down their game, and would exercise all their ingenuity and strain every nerve to secure my capture. From some of the wharfs along the quay-side they would soon find a way down on to the barges; but while they had to go round to the front entrances, I had a clear field at the back. I had but a faint hope of escape. If a boat had been moored to any of the barges, I should have jumped into it, and taken my chance of getting across the river before they could find means to follow me; for no one would willingly have lent them a boat; and any waterman—if one could be found—had too much sympathy for poor Jack to engage in the chase. But no such chance of escape presented itself. There was nothing left for me but to land somewhere and trust to chance. Moments were precious; for as I looked backward I saw my pursuers appear in ones and twos at the edges of the different wharfs I had passed. I noticed in passing one wharf that a fixed perpendicular iron ladder faced it, up which I might have gone; but I should only have been running into the arms of

my foes to have ascended it; for in a few minutes they would reach that wharf, and make use of it to descend. As luck would have it, a lighter laden with barrel-staves was unloading, by means of a crane, at nearly the end of the line of barges I was upon. I reached it just as the word was given to hoist; and seizing the chain, I sprang upon the ascending load of wood, and was hoisted up with it. My pursuers had reached the wharf with the iron ladder, and were descending, when they caught sight of the load of wood and me on it, swinging in the air. It was mortal aggravating to them, I admit; for they were laughed and jeered at by the bargemen; and I knew I should get a rough handling if I fell into their hands. They raved horribly as they saw I had escaped for the second time at the moment they thought they had made sure of me. Nor was it of any use for them to try to follow that way, for there was no means of ascending but by the crane; and that they well knew would not be let down for the accommodation of hoisting them up. One fellow tried it, and they let him quietly mount the next load; but half way up the men above stopped working the crane, and left him swinging there until he was released by his companions, when they found him some time afterwards fuming with rage.

When the crane swung round with the load upon which I came up, I sprang off, and found it was a cooper's wharf. Men were busy all about at their work; loose heaps of staves and piles of hoops stood about in all directions. It seemed the worst place that could have landed me at, for concealment; but seeing a stack of large wooden hoops, seven or eight feet high, standing in the middle of the place, I scrambled to the top, and dropped down inside, where I lay curled up at the bottom thoroughly exhausted and worn out, feeling that I must abandon myself to my fate. I had been there barely a minute, when some of my pursuers rushed in, panting and blowing; others followed, running all over the place, searching every corner, and turning up half-finished barrels and casks upon which men were at work, expecting to find me under some of them. I could see through the chinks of my hiding-place all that was going on; but I lay still as a mouse, scarcely daring to breathe. I had been seen, of course, by the coopers. They had guessed in a moment the horrid game that was on foot, and though they might not resist the search, they pretended to shew ill temper at having their work interrupted in that way. Some bad words were exchanged, and a general row seemed imminent; when the foreman called out: 'Go on with your work, men, and let them search where they like.' At the same time, by way of shewing that he meant it, he trundled a barrel to the side of the hoop-stack where I lay concealed, and mounting on it, called a man to help him down with some of the hoops, which he commenced to leisurely take off the top. It was just the presence of mind on his part that suited the occasion; it threw dust in the eyes of the searchers, who presently abandoned the wharf as a place where I could not have found refuge, and proceeded to seek elsewhere. 'All right, my boy; lie still,' was whispered through to me; 'they are done this time.'

I sat up and breathed more freely, thankful for my escape so far. A sound of increased activity

and hammering went on through the wharf, and I was left alone, feeling pretty secure for the present. But how to get clear away was the difficulty that haunted me; for I knew my enemies were far too exasperated to give up the game as hopeless. They knew I must be in hiding somewhere along the wharfs; and though I could not be traced, a sharp watch would be kept outside, to prevent my getting away; for the gang were wild and savage at being thus balked of their prey. Some two hours had passed since I had dropped into my hiding-place, and it was time for knocking off work and closing the wharf. Some of the men had been out and in, helping to load carts, and with half an eye, as the saying is, could see that the coast was not clear; but the kind-hearted fellows were at no loss what to do. A few went out at a time, some going one way, some another. When they had nearly all gone—and the going was purposely spread over a much longer time than usual—the night-watchman came, and having received his instructions, the gates were closed. Then coming up to my hiding-place, he said: 'Now's your time, my man; here's a boat alongside waiting for you.'

I was glad enough to get out, for I was cramped and stiff. Two of the men who had gone out first, when they got clear of the locality, had obtained a boat, and had come round. It was a planned thing by the foreman. They rowed me up stream, and put me on shore over the water, and with a hearty shake of the hand, bid me God-speed. So I got clear off that time; but it was a narrow escape.

#### A LEAF FROM A CEYLON NOTE-BOOK.

SOME years ago, while quartered in the island of Ceylon, I left Kandy one fine morning at gun-fire, in company with some brother-officers who were desirous of witnessing a sight, which we were assured would amply repay us for the fatigue of a very rough thirty-mile ride through dense jungle in a tropical climate. The sport to be witnessed was that of elephant-decoying. The kraal into which the animals are decoyed, and which I shall describe presently, was situated not far from the banks of the fine river that flows by Kandy; it was in the midst of a dense forest, far away from any human habitations, and as some of us afterwards found out to our cost, in a very hotbed of malaria and jungle-fever. We despatched our horses to a ferry some twelve miles on, where the road dwindled to a mere jungle-path, impassable for a carriage, and even difficult for equestrians. I had barely time to snatch a mouthful of breakfast when the palanquin-carriage was announced, and off we started, I consoling myself with the prospect of catching up a coolie with provisions and beer, whom I had sent on. I never saw him again. The temptation was too great. He and some boon-companions demolished my prog, made free with the liquor, and absconded.

The road—if road it could be called—was a mere mountain-path, at times hardly distinguishable; and so covered with stones and thorny bushes which pierced the flesh at every step, that had I known of it, I should have preferred walking; but my gallant steed, hired for the nonce from some Arab dealers, would not lead

a step. We jogged on merrily enough in other respects for some way, as the trees were very lofty, and so thick overhead that the blazing rays of the sun could not penetrate through the dense foliage. The forest scenery was simply magnificent. Imagine a wilderness of the most splendid trees in the world, running up for seventy or eighty feet without a branch, and then spreading out in a glorious green canopy overhead, which both tempered the fierce rays of the noontide sun, and also moderated the glare so distressing to European eyes. One tree in particular filled me with admiration; it was a lofty forest tree of the largest size, with but few branches until near the top, and at the season I refer to without leaves; but ample amends were made for their absence by a display of most magnificent scarlet blossoms, which completely covered it. They were apparently full of honey, as the air was alive with hosts of bright-coloured birds, busily employed in catching the insects attracted by the sweet food. Green parrots, the yellow and white mango-bird, and many others that I was unacquainted with, formed a *tout-ensemble* of the most gorgeous description. Swarms of monkeys, and now and then a sulky old boar or a timid deer, varied the scene.

When about seven miles from our journey's end we lost the path amongst a lot of rice-fields. However, after a long search, one of our party, who had been out shooting in that district, remembered that if we kept to the left we were certain of hitting off the river before long, where we might meet some one to guide us. As luck would have it, we soon caught sight of an inquisitive, shining black face staring at us from a cocoa-nut tope. Never did I greet a nigger with so much delight before. Matters did not seem much improved though. As the river was very wide and rocky, full of treacherous holes and, as the natives told us, abounding with alligators, the predicament was not a pleasant one. But our horses were knocked up with the heat, and our friends, our kraal, and last, though in my case certainly not least, all our provisions were on the other side. The ferry was some miles up the river—far too distant for us to think of. So at it we went. Some natives crossed to assist us. Each black man took a white one in tow, who in his turn led his horse after him. Some of the scenes were most ridiculous. Sometimes the pony slipped, and pulled his owner in, who pulled the native after him, or the nigger pulled his master in, who naturally gave his steed the benefit of the bath, as it would never have done to let go the bridle. One of our party was roaring with laughter at another who had just had a glorious upset, nigger, horse, and all, when suddenly his mirth was checked by a similar mischance happening to himself.

However, barring the wetting, we got safe across, and I thought I would enjoy a bathe, so I left my party to proceed without me, intending to join them when lunch was ready. My clothes being wet through during the passage of the river, and making tolerably certain of meeting no one in that remote part of the country, I mounted my pony in veritable light marching order—namely, straw-hat, shirt, and boots; and very pleasant and cool was the aforesaid costume, and one that you would gladly have adopted, O my reader, under similar circumstances, and under such a sweltering sky. I had about three miles to go, and rattled

along, both horse and rider being thoroughly refreshed by this time; when all of a sudden my attention was attracted by a low but energetic whisper apparently coming from the clouds: 'Mahatmia, Mahatmia, Allia—Allia!' (Master, Master, elephants!) On looking up, I saw some twenty natives perched up high above me, making earnest signs for me to come up to them, and pointing along the path ahead of me and repeating the word 'Allia,' thereby giving me to understand that the animals were close at hand. I lost no time, but rode to a tree where a large jungle-rope—a species of giant creeper common in Ceylon—was hanging from a bough. Up I went like a lamplighter, leaving Master Pony to take care of himself, and utterly regardless in my haste of my attire, or rather want of it. And lucky it was that I did so. Hardly had I got well up and seated myself upon one of the branches, when round the corner came first one huge elephant, followed by another, then a third. Eleven more succeeded, and passed close under the tree where I was seated without, however, taking more notice of me than by tossing their trunks in the air, and emitting that peculiarly sharp scream commonly called 'trumpeting.' I soon got down, caught my pony, and set off as hard as I could for the kraal, not a little afraid that some more of the monsters might be in my way, from whom I might find escape more difficult. I got in, however, without any further danger or alarm, but half-dead with hunger and thirst.

The kraal was an inclosed space of some two hundred yards each way. The fence was composed of large trunks of trees, sunk into the ground, and of about sixteen feet in height. At one end was the entrance, about twenty yards across; at each gate-post were large trunks of trees, supported in an upright position by strong ropes attached to the surrounding trees. When the elephants enter, these ropes are cut, and down come the huge trees across the passage, effectually barring all retreat. We encamped in one of a row of huts hastily run up on the leeward side of the kraal, and at some distance from it, as the power of scent is particularly keen in an elephant, and if once a panic is raised, they would all rush madly away, and be never seen again in that locality. In the immediate vicinity of the kraal, and commanding a good view of the whole proceedings, were most extraordinary nests, constructed high up amongst the branches, and of sufficient dimensions to accommodate most of the party. They were thus made: a number of good stout poles were laid from the branches of one tree to another, some sixty feet from the ground, and carefully made fast; others were then placed across them, and side railings four feet high were added for security. These last were interwoven with leafy branches, which effectually concealed the occupants; a ladder of long bamboos completed the thing; and thus were constructed veritable crows' nests, admirably adapted for a good view of the proceedings combined with perfect security. The kraal was a government one; and about two thousand natives had been employed for more than a fortnight in driving the adjacent country; by day they had white wands, and at night torches. The elephant is a timid animal when not provoked or wounded, and the above simple means were amply sufficient to prevent the animals from 'hearking back.' On

this occasion, by good management a large body of elephants had been driven slowly into the neighbourhood of the kraal. The excitement was getting intense; every crash of a falling branch or the chattering of the large monkey common to these woods, made one start, and gaze expectantly in the direction of the elephants.

At last, when our patience was well-nigh exhausted, a fine herd was seen in the distance slowly approaching, under the guidance of three or four decoy elephants, who were employing every soothing art to induce the leaders to accompany them into the kraal. Strange to say, the elephant in its captive state seems to take absolute pleasure in decoying its wild congeners into the kraals, and in subsequently aiding in making them captive also. About forty had entered, when the rear-guard were seized with a panic and bolted through the line of beaters. The entrance was thereupon immediately barred, and those that were within made safe. Then came the fun of the thing. A decoy elephant cautiously approached the nearest wild one, its mahout (driver) walking on the off-side, and timing his movements so as to be always concealed by the fore-leg of his animal. With admirable tact, after many attempts the decoy persuaded the captive to raise one of its hind-legs, which was mainly brought about by the former tickling the wild elephant with its trunk, and so causing it to lift its leg. A noose was immediately slipped round it by the adroit attendant, and the other end was made fast to a neighbouring tree, after which the poor animal was left to its fate; and its insidious visitors proceeded to another, whom they served in the same manner; and so by degrees all the best elephants were secured. The remainder were subsequently shot by the sportsmen who were there.

Almost the entire breaking-in of the wild elephant is starvation. When once his spirit is broken, he becomes almost as amenable to discipline as one that has been captive all his life. After some days of total abstinence from food and water, they are led out to drink between two tame elephants, and if any sign of obstreperousness is shewn, the unhappy beast is beaten most unmercifully by its conductors, who use their trunks in a most punishing manner. In a few days they are set to work, harnessed alongside of a steady tame elephant; and in an incredibly short time they fall into their routine of duty, and perform their work as well as their docile friends.

The Ceylon elephant enjoys a good name not only in Ceylon but on the coast for docility and intelligence. However, they are not always to be trusted, and at certain seasons they lose all command over themselves, and are extremely dangerous. I remember an incident which took place at a kraal at Kornegal, between Colombo and Kandy. Amongst the decoy elephants was a splendid fellow, belonging to the temple of Buddha at Kandy. He was one of the finest I have ever seen, measuring upwards of eleven feet in height, with a pair of tusks that would have made Gordon Cumming go crazy about. He was always rather queer-tempered, perhaps from being made so much of as a temple elephant; and fears were entertained that his behaviour might be bad, and that the sight of so many old companions in a wild state might injuriously affect him. The result may be anticipated. In the middle of the day, and in

the height of the excitement, when many elephants had been secured, a wild trumpeting was heard, and presently all eyes were turned downwards from the crows' nests to witness the spectacle of the temple elephant in full chase of his driver, who had given him some cause for provocation. The man held his own gallantly for a time only, just out of reach of the elephant's trunk; still there appeared hopes that he would gain the jungle and set his pursuer at defiance. All of a sudden he was seen to fall, having stumbled over the projecting root of a tree. In an instant the elephant, mad with rage, had gone on his knees, and to all appearance had impaled the unfortunate man. A shriek burst from all present, who were sickened at a sight which so miserably marred the otherwise successful issue of the day. But what was our joy when the man was seen to wriggle himself out from between the tusks of the beast, regain his feet, and before his adversary could extricate his tusks from the ground, again continue his flight! He was, however, pressed closely, but managed to reach a deep, narrow, and dry water-course, covered with thorns and briers, into which he immediately threw himself. The elephant kept hunting him by scent from above in a most clever manner; but ultimately we had the pleasure of seeing the poor fellow emerge a hundred yards below his pursuer and gain a place of safety. The elephant eventually had to be destroyed, as the day's proceedings had made him irreclaimably savage and dangerous.

Little did we anticipate how dearly we should pay for our sport. In a few days, numbers were prostrated with jungle-fever, two or three planters died, and an officer of the Ceylon Rifles barely escaped with his life; nor were the fairer sex spared; and there were sad complaints about the horrid doctors, who had made such guys of them by cutting off their luxuriant tresses, and in some cases by close shaving their heads. So you see even such grand sport as the above may occasionally be too dearly purchased.

## THE OLD POT.

A STORY REFURBISHED FOR MODERN READERS.

FORTY years ago there was not in England a man more respected than my uncle, Farmer Bloomfield of Stanley Court. Strange to say, however, he did not always occupy so high a position in the estimation of those around him; for it was not until his sun had passed the meridian and the shadows were lengthening that the tide of his popularity set in. In early life he had been left an orphan, and was placed under the care of a maiden aunt, whose idiosyncrasy was not without its effect in moulding my uncle's character. Reserved in his manner and eccentric in the extreme, he often became the object of ridicule. There was little in his personal appearance to call for remark beyond a most unusual development of the nasal organ, and this not unfrequently became the subject of rude jests. The presiding genius of the Club which met nightly in the parlour of the village inn, once facetiously alluded to it as his 'proboscis'—a circumstance which

gave rise to the name 'Boscis,' by which my uncle was afterwards known.

In nothing did his eccentricity appear more strongly than in the antiquarian phase of his character. He grudged neither money nor time in collecting curiosities of all kinds, valuable or useless alike; and being in easy circumstances, was able to gratify every whim. Modern improvements he despised, whilst his admiration for the antique knew no bounds. It was wearisome to listen to the history of the many objects around him; and his visitors rarely escaped these inflictions. Scarcely a week passed without an addition to his Museum, as I styled his home; and knowing the penalty of a call, the visits of his friends were few and far between. But to have exhibited signs of impatience during his recital of these interesting particulars would have stamped the individual in my uncle's opinion as unworthy of his notice. He had the most profound contempt for those who could not regard with admiration an object, however mean in itself, upon which old Time had left the indelible marks of his fingers. Poor uncle! How often he was victimised! Designing rascals often relieved him of a good sum of money for an article as worthless as themselves. But such was his confiding nature that he believed their representations, and valued the article in proportion to the brightness of the halo which their duplicity threw around it. Far and wide he was known as Bloomfield the Antiquarian, which, while it pleased his vanity, often emptied his purse; nor did he ever know how largely it was due to the irony of those who laughed at his credulity. And yet, methinks, that to have removed the scales from his eyes, and to have shewn him how miserably he had been gulled, would have robbed him of the happiness of his life. His ruling passion grew with his years, and at length amounted to a cupiditv which not unfrequently led him into awkward scrapes. But he was suddenly awakened from these absurdities in a manner so remarkable, that he invoked my aid in reproducing a story often told by himself at his own fireside.

It was a sultry afternoon in the month of September when my uncle bent his steps across the common and through the meadows to visit a neighbouring farmer-friend. On the occasion of this visit, and just as he was leaving, after having partaken of the usual hospitalities of the place, he espied in a corner of the farmyard an old iron pot, nearly spherical in shape, which had formerly stood on three legs, but could now only boast of two. Owing to its unsafe condition, it had long since been disused, and had been consigned to its resting-place on the principle, that for all the ills of life prevention is better than cure. A somewhat minute inspection of its exterior revealed the figures 16, followed by something which could not readily be deciphered; and instead of concluding that these marks probably represented nothing more than the size of the article in ques-

tion, the great antiquary rashly concluded that the 16 with the obliterated marks represented nothing short of the date of its manufacture. A pot whose early existence was probably contemporary with Cromwell, could not be permitted to remain in such a place. Accordingly my uncle determined to transfer it to Stanley Court, there to keep company with the many relics of days long ago.

But his burden proved more inconvenient than he anticipated. After taxing his ingenuity to the utmost to discover a means of carrying it with a maximum amount of ease, it finally occurred to him that, inverted, it might rest on his head. Accordingly it was so placed, and my uncle proceeded with the queerest helmet that ever pressed the brow of a human being. His path lay along the bank of a small river, and so down to the mill. Here, it may be mentioned in parenthesis, lived an old sweetheart, who, out of patience, I suppose, in waiting for the 'question' from my uncle, had accepted his rival the miller fully twenty years before. Across the stream a dam had been constructed for the purpose of diverting the water to the mill, and thus a pond was formed at least five feet deep. The water often flowed over the dam, forming a beautiful cascade from six to eight feet in height; and when the water was low, people frequently passed over the wooden platform of the dam to save the walk to the bridge, which stood more than a hundred yards below the mill. But doubtless my uncle had another reason for selecting this route, a reason which received additional force from the strange appearance which he now presented.

As may be readily supposed, the action of the water had rendered the platform very smooth and slippery. Along this dangerous path, however, my uncle proceeded; but whether from the effect of the aforesaid hospitalities, or from the weight of the pot on his head, he became unsteady in his gait, and suddenly slipped. A fall of eight feet to the bed of the river was no joke; besides, such a fall could only end in the destruction of the pot. Now, divided attention is always to be avoided, where the possible issues are serious, as under even ordinary circumstances, a slip in such a place was no trifling matter; but with the object of his solicitude firmly fixed on his head, what wonder that his safety was doubly jeopardised. Be that as it may, the fact remains that he stumbled upon the slippery platform, and the pot *slipping over his nose*, enveloped his entire head! Practically blind, he was now less capable than ever of recovering his footing; and his attempts to do so ended in my worthy relative tumbling head first into the mill-pond. Thus was he brought literally face to face with an ignominious death, no better than that of the vilest cur which leaves the world with a stone tied to its neck. But the darkest hour is not unfrequently the hour of deliverance. It proved so here. The attention of Joe, the miller's man, had been attracted to my uncle before he reached the dam—by the strange head-gear worn by my relative. The unsteady gait, the slip, the fall, the plunge, were all observed; and having reached the pond as quickly as possible, Joe succeeded, after considerable difficulty, in extricating my uncle from his perilous position.

Whenever the old gentleman related the story to his friends, he moralised here on the vanity of human wishes. 'Yes, Nephew,' he would say, turning to me, 'that was the crisis in my history, not merely as regards the unexpected extension of my existence, but more particularly with reference to the folly which was the outcome of the mania which had seized me. I never felt how useless my life had been till Death stared me in the face under such ignominious surroundings. My punishment appeared to me as complete as it was deserved. Drowning seemed only the secondary cause of my death, the real cause being the ruling passion which had prompted me to possess the pot. The idea of dying with my head in such a position, humiliating though it was, bore no comparison to my thoughts as I felt the air rise in bubbles from the pot, in solemn mockery of my life, and thought how, in breaking upon the surface, they wrote my epitaph—"Emptiness."'

Having rescued my uncle, Joe carried him to the house of the miller, where he removed the wet garments, placed him in bed between the blankets, and applied those means for his restoration generally resorted to in cases of suspended animation. It was fortunate that Joe was familiar with the treatment, as he was the only person on the premises, and the nearest house was fully half a mile distant. He persevered in his efforts, and, ere long, was rewarded by returning consciousness. But the pot—the terrible pot, still canopied my uncle's head, in spite of every endeavour to remove it. 'The nose was the cause, you see,' the old gentleman would say, playfully tapping that protuberant organ with his finger; 'and appeared to be little short of a bolt, which defied the removal of that ungraceful head-gear.'

Now, of all places, the mill was perhaps the last which my uncle would have cared to visit under the circumstances. He could not endure the thought that the miller's wife, his old sweetheart, should witness such a spectacle, and was really distressed at the idea that her eyes might even now be resting on his misfortune. The old pot refused that assurance to him which his eyes would have supplied, and so he had to rest content with the repeated avowal of his benefactor Joe: 'Keep yer mind aisy; the maister and his wife and the whole lot of 'em be gone to the fair. But don't ye be afeard on the missus. She be mighty kind, and ud help ye heaps if she was here. And now ye be safe and a-comin' round a bit, I can't help a-laughin' just a little bit. I zeed ye go in head-vurmost, right down like, and yer legs a-kickin' up zumat, like the ducks when they goes a-divin' arter what 'em can catch in the pond. Then there's that there pot about yer head. La! I never zeed such a night-cap in all my born days. Don't think I'm a-makin' fun on ye; but I've a tried to get'n off, and 'er won't come, leastways without a piece o' yer nose, and I reckon you don't want to spare a slice o' that.'

With these and such-like speeches Joe enlivened his patient, introducing parenthetically such hearty bursts of laughter, that my uncle speedily recovered himself; but his increasing strength only intensified my uncle's desire to get clear away before the miller and his wife returned. As a first step in this direction he emerged from the blankets in which, barring his head, he had been enveloped, and with the

assistance of Joe as his valet, he dressed in the garments which that worthy supplied. There was nothing remarkable about these, with the exception of a smock-frock of snowy whiteness, which extended to my uncle's feet, and played a not unimportant part in the sequel of the story.

But here arose a difficulty. Joe being left in charge of the premises, could not leave until his master's return. Every argument which his ingenuity supplied to detain his patient, and every protest against my uncle's injustice in believing the miller's wife capable of aught but sympathy, fell upon my uncle's ears 'like water on a duck's back.' Finding that he could place the pot in a position which enabled him to see his feet, and consequently the path bit by bit along which he had to travel, besides being able to raise the plaguy apparatus sufficiently to enable him to breathe; and seeing that Joe could not accompany him as a guide and protector, he determined to make the attempt to reach the village alone. Being naturally anxious to avoid, as far as possible, the public gaze, all thought of taking the turnpike-road was abandoned, though he need not have been under such apprehension, for who amongst the many returning from the fair would be likely to recognise in that strange figure Farmer Bloomfield of Stanley Court!

Indeed his objection to this route might have been overcome but for his dread of meeting the miller and his wife, who—so he thought—might possibly recognise the garb which enveloped him, and would naturally feel unpleasantly inquisitive about the individual within it. Yet a walk of three miles through meadows and across a common after seven o'clock on a September evening, under such circumstances, appeared well nigh as possible for a blind man. Anything, however, appeared preferable to the disclosure he so much dreaded; and so, trusting to his circumscribed vision, he departed with slow and steady steps along the old familiar path, determined, by a happy thought, to make his way to the village blacksmith, whose ingenuity he had no doubt would speedily remove the encumbrance.

The keenest foresight is, however, unable to anticipate the circumstances which may befall us. For some time all went well, and the antiquary's progress, though slow, was sure. But what with the sultriness of the evening, the defective ventilation inside the pot, and the weight of that at other times useful article, my uncle was compelled to sink to the ground in a faint, just as he had reached a shallow brook, over which he had to pass; and there he lay until consciousness returned. How long he had been in this position he did not know; but he soon became painfully aware of the fact that the shades of night had closed around him. Nor was his anxiety diminished as a thunder-storm burst over his head. Heavy clouds overspread the sky, and deepened the darkness; so that when my uncle rose to his feet, he found the path completely hidden from his view.

In so helpless a condition, what wonder that he wandered from the familiar track! To add to his discomfort, the rain came down in torrents; whilst the lightning, flashing around him, filled him with a new terror. Still he continued to trudge his weary way; and at length, to his intense delight,

he heard the faint but welcome sounds which came from the anvil of the village blacksmith. Sweeter music he had never heard. He listened intently to the sound as it was wafted across the gloomy common, and with his ears as a pilot, walked on, cheered by the fact that every step brought him nearer to the man who would remove the load from his head—and heart. He had not proceeded far in the direction of the smithy, when he became aware of the approach of a man, and in the snatches of song which fell upon the darkness, he recognised a familiar voice. It was the village schoolmaster, who, being fully occupied by day in keeping other people's spirits down, resolved that his evenings should be spent in keeping his own spirits up, which he succeeded tolerably well in doing at the Club which met nightly at the village inn. A load of anxiety fell from my uncle's heart, as the schoolmaster approached him. But alas! the relief was only momentary. Whether the darkness hid my uncle from his sight, or whether he was so occupied with his thoughts as to be unconscious of such a person's presence, we need not stop to inquire. A vivid flash of lightning for an instant lit up the scene when they were but a few yards apart, revealing my uncle shrouded in garments of snowy whiteness; the song suddenly ceased; a shriek rent the air; and the tremulous voice of my belated relative, intended to remove the schoolmaster's fear, served only to quicken his flight across the common to the village inn, which he had left only half an hour before. With a face ghastly pale, with drops of perspiration like peas standing on his forehead, and trembling and gasping for breath, he threw himself into a chair, perfectly overcome and speechless. In the hands of the landlady he recovered in a few minutes sufficiently to explain the cause of his terror. He had witnessed that night, he said, such a sight as never before met his eyes. In passing the spot on the common where, in the remembrance of most of his hearers a murdered man had been found—a spot he confessed he never passed at night without nervous excitement—just as he had commenced a song, by way of diminishing the loneliness of his situation, a horrid being stood before him. It was clad in white, but had a head as black as night, from the top of which projected two short horns. It was impossible to be mistaken. A flash of lightning revealed all this too plainly, and seemed for an instant to dance around the head of the Satanic spectre. Besides this, a voice, sepulchral in its tones, plainly called him by name. Surely the evidence of two of his senses could not be rejected!

His associates at the inn gave a ready ear to the statement, and after partaking of some Dutch courage, at the earnest request of the schoolmaster they consented to accompany him across the common to his home. Amongst them was Joe, who, on the return of the miller, had walked to Stanley Court by the road, professedly to bring my uncle's clothes, but in reality from a feeling of anxiety about his safety. Finding he had not returned, Joe started off in search of the wanderer, and on his way stepped into the village inn just in time to hear the schoolmaster's account of the ghost on the common. He might easily have removed the schoolmaster's fears; but being of a frolicsome turn, and wishing to test the courage of

his body-guard, he remained silent, and followed them unobserved when they left the inn.

Meanwhile the ringing sounds from the anvil had guided the exhausted wanderer, and before the party from the inn had proceeded far, the supposed ghost was encountered. Dutch courage proved unequal to the shock, and Joe had the satisfaction of seeing them scamper away as fast as their legs could carry them, each one doubtless as much overcome as had been the schoolmaster when he sank speechless into a chair but a few minutes before.

The faithful Joe, however, was soon at my uncle's side, and under his guidance the smithy was reached. A consultation now took place as to the best means of effecting a release; and nothing appeared so practicable as to place the pot on the anvil, and with a sharp blow from a hammer, to shatter it into fragments. A hazardous proceeding, but desperate ills require desperate remedies. It was therefore not without forebodings of evil that my uncle, supported by Joe, placed the pot as directed. Down came the blow; and my uncle stood erect, a happier and a wiser man. The kind-hearted and faithful Joe lived long in my uncle's service as farm-bailiff, and never wanted a friend as long as the old gentleman lived; and in repeating these extraordinary proceedings to eager listeners, he would assure them that 'he never zeed sich a nut afore, nor sich a kernel!'

## THE MONTH.

### SCIENCE AND ARTS.

CHLOROPHYLL (the green colour) and starch and cellulose are developed in plants by the 'dissociation,' as chemists say, of carbonic acid and water in the cells of the leaves. The active power in the operation is sunlight.

Is the power confined exclusively to sunlight? Sunlight contains actinism; so does the electric light; and, as is well known, the actinic rays with their chemical energy play an important part in the ripening of grain and fruit. Mr C. W. Siemens, F.R.S., has made experiments at his pleasant country residence near Tunbridge Wells, which lead to the conclusion that the electric light may be employed with advantage in aiding or supplementing sunshine in the growth of plants, shrubs, fruit, and flowers. With a two-horse-power engine, and a dynamo-electric machine, making one thousand revolutions a minute, he produced a light equal to that of fourteen hundred candles, which, from a reflector fixed in the open air about six and a half feet above the ground, was directed upon a sunk melon-house. Pots were prepared with mustard, cress, carrots, cucumbers, and melons, and were divided into four groups. (1) was kept entirely in the dark; (2) was treated with electric light exclusively; (3) was exposed only to daylight; while (4) had both daylight and electric light; but the latter for not more than six hours in the twenty-four—namely from 5 to 11 P.M. The results were—(1) plants pale yellow, soon died; (2) light green, pretty strong leaves; (3) leaves of the ordinary colour and strength of daylight growth; (4) more strength, and the green remarkably rich and dark. In estimating these results, the comparatively short time allotted to the electric light must be borne

in mind, and also that as the experiments were carried on in cold weather, the effect of the light was weakened by the coating of moisture on the glass of the melon-house.

The next experiment was to place the electric lamp in the same glass-house with the plants, where during six successive nights they were exposed to electric light; commencing as soon as daylight failed, and ceasing at sunrise. The plants had thus no rest, but they did not suffer; and it was found that when the stove-heat was shut off, the heat from the electric light sufficed to maintain a temperature of seventy-five degrees in the house.

There remained now to try the effect in the open air. So far as it has been carried it confirms the previous results. Nine lamps suffice to illuminate three-quarters of an acre. Inclose this area with a wall, there will be shelter from winds, and vertical as well as horizontal space for crops of fruit and flowers. Mr Siemens is of opinion that in chilly summers the electric light would be very beneficial in securing the setting of the fruit-buds, and afterwards in ripening the fruit. If it develops chlorophyll, why not saccharine and aroma? That plants will bear constant light has long been proved by the three months of sunshine within the Arctic Circle. In Norway an acacia plant taken from a dark house and placed in the sunshine opened its leaves within two hours: an acacia plant in Kent behaved in the same way when exposed to electric light. Growing-plants also turn themselves towards it, and leaves are sometimes scorched as with sunshine.

Are we to have a new application of science in the form of electro-horticulture? Much depends on the cost. Where water-power is available for driving the electric machine, the expense will be moderate. Mr Siemens has read a paper on the subject before the Royal Society, and exhibited specimens of the plants above described, and of flowers, with obvious proof of the invigorating effects of electric light and sunshine combined. He promises to make known the results of further experiments, and we shall have much pleasure in communicating them to our readers.

Some excitement has been occasioned by the announcement that the diamond had at last been produced by a laboratory experiment, and thus verified the long-standing prediction that chemistry would one day find a way to that achievement. Some three months ago a chemist at Glasgow believed that he had made diamond; but his specimens failed on being tested. Now Mr J. B. Hannay, also of Glasgow, comes forward, and in a communication to the Royal Society describes the process by which real diamond can be produced. With that description before him, any competent chemist could repeat the experiment; but he would find it laborious and dangerous, for to resist the enormous pressure required, the operation is carried on in a coiled iron tube of small bore, but with walls two inches thick.

Mr Hannay was led to his discovery by a long series of experiments on the solubility of solids in gases; a question of rare interest for chemists. He found one day that when a gas containing carbon and hydrogen is heated under pressure in presence of certain metals, the hydrogen is attracted by the metal, and the carbon is left

free. When this takes place—to quote the description—‘in presence of a stable compound containing nitrogen, the whole being near a red-heat, and under several thousands of atmospheres of pressure, the carbon is so acted upon by the nitrogen compound that it is obtained in the clear transparent form of the diamond.’ The specimens thus obtained have been tested, and with conclusive results as to the reality of their substance.

From the scientific point of view, Mr Hannay's success is very important. It enlarges the field of experiment, confirms theory, and throws light on certain obscure questions. But it will not cheapen diamonds; and the wearers of and dealers in the sparkling stone may spare themselves anxiety and alarm. The diamonds hitherto produced are not larger than grains of sand; and when coiled cylinders of iron four inches in diameter, having a half-inch bore through the centre, burst in ‘nine cases out of ten’ under the almost inconceivable pressure, it is obvious that the manufacture cannot be rapid. In all probability we shall have further communications on this subject before the end of the session.

A French chemist has examined a large number of specimens of rocks, of sea-water, and mineral water, and found lithium, more or less, in all of them; also in the water of salt-marshes, and in the deposits left by evaporation of sea-water. In certain mineral waters lithium is so abundant that it ‘could be detected in the evaporation residue of a single drop of the water.’ This fact, taken in conjunction with previous investigations, strengthens the experimenter's theory that ‘saline waters are mineralised at the expense of saliferous deposits left by the evaporation of ancient seas.’

By a recent calculation it is shewn that the quantity of petroleum produced in Pennsylvania since the first discovery of the oil in 1859 amounts to 133,262,639 barrels, valued at more than 340,000,000 dollars.

Professor Schorlemmer of Owens College, Manchester, has in his researches into the chemical product called ‘aurin,’ ascertained that it can be transformed into aniline blue, and that all the aniline colours can now be obtained from phenol or carbolic acid.

In the *Journal* of the Chemical Society a new process for condensing the fumes of lead-works is described, and it is so effectual, that ‘lead or copper smoke will be rendered not more pernicious than that from ordinary chimneys.’ This will be good news for many a one.

By a series of observations with a delicate spirit-level, Mr P. Plantamour has found that in the Canton de Vaud there is a periodical oscillation of the ground, the rise and fall occupying each about six months. The amount is small, twenty-eight seconds of the scale employed, but was definitely made out. He believes that a slight diurnal oscillation is also perceptible, and that there may be some relation between the combined movements and the daily temperature. He suggests that observers in other parts of the world should make similar observations, and thus ascertain whether the oscillations are general or local. The observations would have to be continued through a number of years before trustworthy conclusions could be drawn, and some connection might then appear between the oscillations and the influence of terrestrial magnetism.

Last year an ingenious American at Chicago invented an *audiphone*, by which deaf persons could be surprisingly aided in hearing. The thing thus named is made of very thin caoutchouc, and resembles the hand-screens used by ladies when sitting near the fire. The bottom and two sides are rectangular; the top is curved, and from the centre of the curve, strings which can be stretched tight, pass downwards, and are fastened to the handle. A certain amount of tension is thus imparted to the instrument. If then the end of the handle be placed against the upper teeth, sounds of music and of a loud voice can be heard even by the deaf and dumb. These facts have been proved by numerous experiments.

The price of the audiphone is from ten to fifteen dollars, and films of caoutchouc are very brittle in cold weather. A Frenchman set himself to discover some material that should be cheap and durable, and have the same acoustic efficacy, and found it in a peculiar fine elastic cardboard, exceedingly thin, which requires no strings nor fixed tension. It may be held in a slit in a small thin piece of hard wood, which is to be pressed against the upper teeth. Instruments thus prepared were tried on deaf and dumb pupils with the happiest results. They heard the notes of a piano, and could distinguish spoken words; and persons accustomed to the use of an ear-trumpet find the audiphone more serviceable and less irritating. The apparatus was described at a meeting of the *Société pour l'Encouragement de l'Industrie Nationale*, at 44 Rue de Rennes, Paris.

In the *Transactions* of the Philosophical Society of Adelaide is a paper on the Subterranean Drainage of the Interior of Australia: an interesting question in a country where vast quantities of river-water disappear in a way not yet satisfactorily ascertained. For example, the Ovens river, with a flow of five hundred and ninety-six cubic feet a minute, falls into the Murray. The Murray above the confluence delivers two thousand six hundred and sixty cubic feet a minute; but below the confluence, not more than two thousand nine hundred and seventy-five cubic feet, which further down is reduced to two thousand and eleven cubic feet. The loss in the course of a few miles is thus eight hundred and fifty cubic feet of water a minute.

Other examples are to be found in the rivers of the hilly region, fed by perennial springs, and sending down prodigious quantities of water in the rainy season; but fail during the summer season, or 'empty themselves at nowhere in particular in the interior.'

The ordinary explanation of the disappearance of the water is that it is evaporated; but, as is shewn, the amount of the rainfall is by far too large for the evaporation theory. A large part of the interior of Australia is what geologists call 'tertiary,' resting at its edges on older strata; a vast underground reservoir is thereby formed, and into this reservoir, as certain experts contend, the water finds its way. Only by boring artesian wells could this view be tested. Should water be found, the interior of Australia will suffer no more from droughts, and green pastures and fruitful fields will overspread the now scorching landscape.

Mr W. J. M'Gee having had to survey and plot a large number of the mounds which have so long puzzled the anthropologists of the United States,

'has been struck by the constancy of certain dimensions and the harmony observable in all, whatever the variation, indicating to a certainty the use of a unit of linear measurement in their erection.' Hereby an interesting question has been raised: What was the value of that unit?

A paper on Architectural Competitions, read at the Institute of British Architects, had for its object to shew the harmful effects of competitions on the profession at large, and suggest to the Institute to 'take some practical steps to remedy the evils acknowledged to exist.' In the discussion that followed, Professor Kerr made a few remarks, which may perhaps be allowed a place in such a summary as the present. Having protested against the notion that competition favours modest merit, the Professor said: 'Modesty will wait; it is immodesty that will not. Merit can wait; it is demerit that cannot. The man who, in professional life, is the most fortunate is he who starts without false aids, without fallacious incentives, without self-conceit and without hurry. Waiting patiently, working diligently, and walking uprightly, until he has reached the age of matured usefulness, he then attains that position which matured usefulness alone can permanently hold, because it alone is worthy to hold it. In plain language, at the age of forty (which is recognised as the earliest period at which a man may expect to acquire a position in a profession as distinguished from a trade), he finds himself beginning to know the world well; youth has passed into full manhood, and he has five-and-twenty years before him during which to employ his energies at their best, and to win respect for a meritorious old age.'

#### THE BEGGAR'S DOG.

RAMBLING one day in London city,  
I saw a dog that raised my pity,  
A wretched cur all skin and bone,  
That in the gutter crawled along;  
And in his mouth (I smiled at that)  
He held an old and crownless hat.  
With quick and deferential eye,  
He watched the bustling passers-by,  
Who in their haste, as on they fared,  
Nor cast a glance at him nor cared.  
Yet some, when they had passed some paces,  
Would halt with grins upon their faces;  
His story was so plain indeed,  
So clear, that he who ran might read:  
'A beggar's dog—his master dead—  
The beast still carries on the trade,  
And trusts by diligence and care,  
The public patronage to share.'  
I sauntered on; but as I went,  
My thoughts upon that dog were bent.  
'Behold!' I said in meditation,  
'The force of custom, education;  
And though we laugh at him—'tis sad—  
Some human plans are quite as bad.  
How many schemes in this same town  
Are merely hats without the crown;  
Ways indirect, but most complete,  
Of tossing money on the street.'

## THE RESTORATION MOVEMENT.

### FIRST ARTICLE.

ABOUT forty years ago, after a long period of neglect and degradation, the fine old ecclesiastical edifices dotted over the British islands began to excite earnest attention, with a view to arresting their decay, and if possible restoring them to their original condition. We do not a little to deplore in the frivolity and heedless extravagance of the age, this revival of taste may be considered a redeeming feature. It shows an appreciation of the beautiful in that department of art which has for its special object the promotion of solemnising religious thought. There is much that is hopeful in this recently evoked spirit. It only needs to be properly directed.

The abuse, almost the obliteration, of architectural taste, as everybody knows, was primarily due to the ecclesiastical revolution in the sixteenth century. What was then spared was, a century later, subjected to the most odious abuse during the civil war and Commonwealth. By these several movements, particularly the latter, the finer feelings in art were subdued. From what must be deemed a perversion of principle, purity in religion was identified with ugliness to the eye, and discordance to the ear. The genius of dullness was predominant. Such old ecclesiastical structures as were not destroyed outright, were either allowed to sink to decay, or were repaired and altered with tasteless indifference. Churches were built like barns, as unsightly as it was possible to make them. Stuffed with pews and galleries, and unprovided with means of ventilation, their interior was often to the last degree offensive. By way of variety, the pews were sometimes arranged as inclosed seats round a table, like boxes in a restaurant. So low had sunk the public sense of decency in the seventeenth and eighteenth centuries, that national luminaries, such as poets, divines, essayists, historians, and novelists, to whom people now look back with a degree of reverence, do not seem to have remarked

that there was anything to find fault with in the debased condition of the ecclesiastical edifices. Sentiment, for a time, was divorced from religious observance.

Any revival of taste in church-building was retarded rather than advanced by introducing imitations of the Grecian and Roman styles of art into situations where they were wholly out of place. Ancient ecclesiastical structures, usually known as Gothic, can admit of no patching with Greek or Roman characteristics. There must be thorough congruity, and what is equally important, no counterfeits in the form of fantastic decoration. Until within the last hundred years, some architects committed grievous offences of this kind, and in this respect none brought greater discredit on the profession than Wyatt, architect, who flourished at the close of last century, and died in 1813. He is reputed to have done much damage to certain cathedrals of England that were subjected to his operations.

Men with his conceptions revelled in their absurdities, no one taking objection, during the early years of the present century. At length, in the writings of Rickman and Pugin, came the dawn of a true revival as concerns Gothic architecture. With all his strange dogmatising and eccentricity of expression, Augustus Welby Pugin, about 1841, gave an irresistible impetus to efforts at restoration on the pure and elegant Gothic model which prevailed in England in the fourteenth and fifteenth centuries. Since that time, through a remarkable advance in public taste, the restoration of cathedrals and churches on a correct architectural principle has been widely and satisfactorily effected.

In these few observations, we have merely glanced at a great subject that has been singularly neglected in literature. The vicissitudes of old ecclesiastical buildings throughout the United Kingdom remain to be written in a lucid compendious form. Out of a multiplicity of dry details might be gathered materials for an historical work as interesting as a popular romance. What revelations of enthusiastic piety, what out-

bursts of passion, and what interlardings of the comic with the pathetic! The proceedings of Wyatt and others of like stamp, as pretenders in the art of rectification, would compose the droll element in such a comprehensive narrative. Just to give an idea of what many cathedrals have gone through, we offer the following instances.

No ecclesiastical edifice in England suffered more by the civil war in the seventeenth century than the Cathedral of Lichfield. In a previous age, the cathedral and adjoining close had, for sake of security, been surrounded by a wall, forming a kind of defensive fort. This was a fatal precaution. The walled inclosure having held out for the Royalists, was captured by a force under Lord Brooke, a fiercely zealous Puritan, in March 1643, his lordship, however, being shot in the attack. Then followed a regular spoliation. Preachers quite as fanatical as Habakkuk Mucklewrath, incited the soldiers to destroy everything of a tasteful nature in the cathedral. The organ and stained glass windows were smashed in pieces, the tessellated pavements were torn up, and tombs and monuments laid in ruin. After misuse of this kind for a month, Prince Rupert succeeded in expelling the invaders; and the cathedral remained in the hands of the Royalists until 1646, when, as the result of a fresh siege, it was surrendered to the Parliamentary forces. On the Restoration of Charles II., the cathedral, as in other cases, was given up, and worship was resumed as before the troubles. Something was done in the way of repairs, but much remained to be effected. When the remedy was applied, it was as bad as the disease. In 1788, Wyatt was unfortunately employed upon the building. He caused the arches to be built up, and otherwise created havoc with the interior arrangements.\* The edifice remained in an unsatisfactory state until 1860, when, at a large cost, it was restored in the best taste by Sir Gilbert Scott, and now is one of the most beautiful cathedrals in England.

Salisbury Cathedral, a fine specimen of thirteenth-century art, and which is specially noted for its lofty tapering spire, suffered the misfortune of being submitted to Wyatt for some necessary repairs and restorations. Short work was made of the more ornamental parts of the edifice. Chapels, screens, and porches were swept away; ancient paintings were obliterated; stained glass windows were destroyed, and emptied into the city ditch; and a venerable campanile which stood in the churchyard was levelled with the ground.† So low was public taste in 1789, that these operations were generally thought to be very judicious. They were simply disgraceful. What Wyatt took away cannot be replaced; but everything has been done in recent times to make the best of what he left; and now the building in its

restored state is worthy of its architectural character and historical associations.

Rochester Cathedral also experienced cruel treatment from the troops of the Commonwealth. The nave was transformed into a carpenter's shop, with saw-pits. All the monumental brasses were destroyed. After being long in a deplorable condition, the building was restored by Sir Gilbert Scott.

A case of ruin through sheer neglect and mismanagement occurs in the history of the Cathedral of Llandaff. As a Norman church of the twelfth century, it was suffered to fall into great disrepair. Early in the eighteenth century, roofs and towers had fallen in, and the service was conducted in a corner of the building. In 1732, an effort was made to bring it into decent order, for which purpose, a Mr Wood of Bath was employed. Wood appears to have had no other notion of restoring a Gothic edifice than by supplying deficiencies with work in the Roman or modern style, so as to look neat and pretty. He actually introduced an Italian room as a portion of the nave, and planned a front with a plain façade surmounted by a dome. No uninstructed country mason could have done worse. Luckily, the dome was never built. While the cathedral was in the incongruous condition in which it had been left by Wood, Richard Watson, Professor of Divinity at Cambridge, was appointed Bishop of Llandaff in 1782. Well, here at last was a man who, it might be presumed, would further the restoration of the cathedral. Altogether a mistake. Watson appears to have cared nothing for his diocese. At least he kept away from it. He resided like a country gentleman in Westmoreland, where he flourished as an agriculturist and great planter of trees, particularly the larch. At his leisure he wrote the 'Apology for the Bible,' and one or two other works. As regards the restoration of his cathedral he manifested entire indifference. He died in 1816, leaving the work of restoration to others. Not until recent times, chiefly through the energy of the Rev. Bruce Knight, Chancellor of the Diocese, and Dean Conybeare, was the building resuscitated in its ancient beauty and condition, at a cost of more than thirty thousand pounds. Mr Pritchard, a resident architect, has the merit of restoring this gem of ancient art to what it had been in the original, indeed somewhat improving upon it.

York Minster, perhaps the grandest and most spacious of the English cathedrals, whose history takes us back to the seventh century, has undergone some extraordinary vicissitudes; while its ornate pillars, its lofty arches, its numerous chapels, its elegant screen, its finely carved tombs, and its towers with rich mouldings, excite the admiration of all lovers of art. The wealth lavished by pious donors on the building might well be matter for surprise. The very grandeur

\* Murray's 'Hand-Book to the Cathedrals of England,' Western Division, page 291.

† *Ibid.*, Southern Division, page 96.

and dignity of the edifice seem to have incited the destructive feelings of a madman. One day in February 1829, Jonathan Martin, brother of Martin the well-known artist, entered the building as an ordinary visitor, and having concealed himself behind a tomb in the north transept, he in the course of the night set fire to the woodwork in the choir and to the organ. The flames reached the roof, which was entirely consumed. Satisfied with what he had done, he escaped through a window; but was captured a few days afterwards. He was tried at York assizes, and being pronounced insane, was confined in a lunatic asylum, and died in 1838. Public sentiment was so roused by the calamity, that a subscription was set on foot, and yielded the sum of sixty-five thousand pounds, which was spent on repairing the parts destroyed. To aid in the undertaking, government contributed five thousand pounds worth of teak timber from the Naval Dockyards. The restoration was intrusted to Sir Robert Smirke. Unfortunately, through the carelessness of some workmen employed in repairing the clock in the south-west tower, in May 1840, a destructive fire broke out; and the restoration, also effected by subscription, cost twenty-three thousand pounds. The stained glass windows of York Minster, completed in recent times, are among the largest and finest of the kind in England.

St Paul's, the glory of London, the grand work of Sir Christopher Wren, which is well known to everybody, has a history and a character of its own. Built in the Roman style of architecture, after the model of St Peter's at Rome, it is a comparatively modern structure. The earliest ecclesiastical edifice on the spot was an old church of the Anglo-Saxon period, which being consumed by fire in 1087, was replaced by a massive Norman cathedral, for the building of which William the Conqueror contributed, and which was enlarged by the Plantagenets. Unhappily, it too suffered from fire. In 1561, it was struck by lightning, and partly consumed. By the efforts of the city authorities, it was repaired sufficiently to admit of being used for public worship, and as a place of general resort. The imperfect condition of St Paul's was lamented by Elizabeth, but she did nothing for it. James, her successor, was also grieved at the state of St Paul's; but excepting words and some ceremonial parade, he did nothing for its restoration. Charles I. took the matter up practically. Under his auspices, Inigo Jones made considerable reparations, but he committed a serious mistake, by giving the shattered Gothic edifice a splendid Roman portico, with a row of pillars of the Corinthian order!

While the scaffolding was still up, comes the rule of the Puritan parliament, which speedily changes the destiny of St Paul's. The sum of seventeen thousand pounds, designed to complete the repairs, was seized, and appropriated to pay arrears due to a regiment. The interior of the building was used as a cavalry barrack and stable. The Roman portico was let out for shops to sempstresses and hucksters. The building remained in this wretched condition till the Restoration, 1660, when it was cleared out, and put into a state of decency. Projects were now set on foot to thoroughly repair the edifice, and Wren gave some suggestions on the subject. Before a determination could be come to, 'Old St

Paul's,' as it was called, perished in the great fire of London, 1666. After this third burning, sprung up the magnificent structure of Wren, which, favoured by its commanding situation, exceeds in imposing grandeur its prototype, St Peter's. The only matter for regret is that its effect is to a certain extent lost by being too closely hemmed in by the surrounding streets. A Gothic edifice would, ecclesiastically, have been more congenial; but undeniably the choice of a Roman style of art with a massive towering dome has proved the most effectual in the circumstances. The work was finished in 1710; so that the building is now only a hundred and seventy years old. Completed in the reign of Queen Anne, an effigy of that Princess is placed in front of the building, facing down Ludgate Hill. It is pleasing to add that the cost of erection was, through local taxation, borne exclusively by the citizens of London. We are not without a hope that a great man will some day rise up in London, and make an effort—though, considering the value of property, it will be a costly one—to widen the open space round this noble structure, on which all Englishmen look with eyes of affection.

In a subsequent paper we shall present a summary of the vast expense which has been incurred in repairing the various cathedrals of England, and need only say here that the aggregate amount, as far as is known, is upwards of a million sterling. But the work of improvement is not at an end. We are constantly hearing of fresh outlays in conformity with the enlarged wants and wishes of the community. The ancient abbey of St Albans, which had been occupied as a parish church since the Reformation, is now constituted the cathedral of a new diocese, and much is being done to restore it in a creditable style—the outlay falling on the liberality of private individuals, among whom we may specially refer to Sir Edmund Becket, Bart. Q.C.

Obviously, the present extraordinary Restoration movement is due to the progress of taste among nearly all classes, irrespective of denominational differences. There has been no factitious device in the matter. The era of dullness has quietly passed away. Ugliness in churches, like discomfort in dwellings, is no longer the fashion. Each religious body vies with another as to which shall have the handsomest and most commodious place of worship. With a pervading feeling of this kind, the venerable structures that had suffered from decay or misusage could not be left to perish. The general wish is to preserve a class of buildings not only grand and pleasing to look at, but as being intimately associated with the national history. With the correct taste which now prevails on the subject, there has been a difficulty of treatment on the old lines. Attention has had to be paid to those changes in ritual that have taken place since the buildings were constructed. Neglect on this score would have rendered attempts at restoration useless.

We could fill pages with accounts of what has lately been done through voluntary contributions to restore old parish and collegiate churches that had sunk into disrepair in different parts of England; the object in every case being to bring back

the buildings to their original beauty of architecture and usefulness. Take, for example, the following newspaper notice respecting Winchester: 'Church restoration has in this city given back again to us every one of the ancient churches in all their beauty, and the latest and last example—for all are now done—is that of St Bartholomew Hyde, once the church of the servants and tenants of Hyde Abbey—where rested the remains of Alfred the Great and his family—and which, since the Reformation, has been the parish church of that extra-mural district named after the saint, who suffered death by being flayed alive. The church has many interesting architectural features, dating back, as it does, to the time of Henry I. There is a noble Norman doorway of that date; and the character of the church is generally transition, with Early English additions, and some even later. In consequence of the increasing population of the parish, additions have been necessary from time to time; and within the last few months the north aisle has been completed, together with other repairs. The architect and contractors adhering closely, and we may almost say reverently, to ancient details, have reproduced the ancient taste and grandeur of the original church without a fault, save that economy compelled the use of deal instead of oak in the roof. The repairs, completion, and furniture of the church have cost fifteen hundred pounds, exclusive of many special gifts. The venerable building is now as strong as when first built, seven hundred years ago.'

Looking to the hideous operations of some architects now deceased, we can readily understand how a terror should have sprung up lest interesting old buildings might be damaged in the process of restoration. Hence, in some quarters an anti-restoration craze, and an anti-restoration society. There may, however, be unreasonable apprehensions on this score, which may be set aside as ridiculous. Every case must be judged on its own merits. This is made clear by a speech of Sir Edmund Becket, on the occasion of a discussion before the Royal Institute of British Architects.\* Sir Edmund said: 'If we are to try and lay down anything that can be called rules for restoration, I should say that the primary things to be remembered are, that we want our churches to be both useful and beautiful; a building in a state of decay is neither. Generally speaking, the more we can make it look like what it was in its best times, the more beautiful it will be; and yet there are cases where it would be absurd and unpractical prudery not to add features which were never there before. When men talk against restoration, they forget that non-restoration is destruction, sometimes gradual, but sometimes as sudden and complete as if the building were knocked down. How many old Norman towers have fallen both in ancient and modern times for want of that repair which may be called restoration; and how many have been saved in our time from a like fate! Chichester fell, and St Alban's tower was within a few days of falling when it was saved. The finest Early English part of that nave is now shored up with timber. "Leave it alone," say the Anti-restoration Society, I suppose. ("No, no!") The members of the Society say "No;" then

where are their principles? Here is the very first restoration that is going to take place, and the moment they are asked, they say that must be excepted from their rule. I should like to know why. The work cannot be done without a great deal of actual rebuilding, and imitating the old work as well as we can, which I boldly avow is the proper mode of restoring work which is partially decayed, so that the old and new may look continuous and complete. I utterly deride all the nonsense that is talked about the baseness of imitation and copying. In such cases it is the only proper mode of restoration.'

All who take a comprehensive view of the subject will concur in these sensible remarks. The term 'restoration' must be accepted qualifiedly. No one can bring back what was destroyed; but in many instances, architectural details, such as the damaged shafts and capitals of pillars, can be mended with new stone-work to resemble the original. Coatings of whitewash and the dirt of centuries can be removed from finely vaulted ceilings. Division walls can be taken down, so as to develop the character of the edifice as designed by the architect. In effecting repairs of this kind we truly restore the building as far as man can restore anything. We shew in its integrity, or nearly so, what was admired and held in reverence by long by-gone generations, while in doing this we need not give up one iota of the advanced views sanctioned by modern habits of thought. Modern conceptions and scientific discoveries help us to improve and embellish the picture of the past. For ill-lagged floors we can substitute encaustic tiles or tessellated pavement. To the cold and shivering aisles, we can impart the warmth of a summer day by means of ingeniously contrived processes of heating. We can so purify the air by ventilation, that going to church may be no longer detrimental to health, or nauseous to the senses. To aid the solemnising thoughts befitting the place, we can fill the windows with stained glass representing events in Scripture history, 'teaching to live and die.' Surely, therefore, the restorers of cathedrals and churches, by rendering public worship more attractive, are doing no wrong; but rather among a crowd of workers are doing their best to cheer human life, and brighten up the close of the nineteenth century.

At another opportunity, we shall have something to say regarding the Restoration Movement as demonstrated in Scotland, Ireland, and elsewhere.

W. C.

## A LIFE'S ATONEMENT.

### CHAPTER VI.—HISTORY.

*A slipshod, threadbare figure, clad in weedy black.*

It was two o'clock A.M. in the Strand. Looked at from the gate of that obstructive church which faces westward in the centre of the thoroughfare, beneath the quivering gas-lamps on either side lay a gleaming desolation. No footstep broke the silence of the night. It was a true English summer, and the night-air was chill and raw; and a thin persistent drizzle fell upon the slippery flags, the muddy horse-road, and the gleaming

\* Sessional Papers, 1876, 1877; No. 14.

fronts of houses. A deserted London. It was too early for the market riot close at hand—too late for the homeward-reeling tavern roysterer. The great city slept, and the quiet heavens wept over it. Even they bending so long above it, had lost their brightness and their purity. They mourned above the city with thin tears, and a dreary wind was seeking here and there with mournful voices, for a something lost. A deserted London—a city of the dead. No soul abroad—not even the oil-skin-capped and caped policeman.

Who is this? A slipshod, careworn figure, clad in weedy black, which clings moistly about him, as though he had come up from the depths of that vile river which laps the pillars of the Bridge of Sighs, hard by. The figure crouched for refuge from the rain against a door which stood not more than a foot back from the flagged pathway, and his unwholesome garments shone with rain at every projecting angle. His boots gaped at the toes, and were so rotten and ragged at the sole, that they made a splashing noise within themselves whenever the wearer moved his feet, as he did often and uneasily, half in impatience, and half in search of warmth. From where he stood, the wet street gleamed beneath the gas-lamps like a river; and dead asleep as the great city might be, there was yet in the air a faint and distant hum, which spoke the seething life about him.

He peered from his meagre sheltering-place often. There came the measured tread of a policeman: and slinking from his shelter, the man concealed himself in an entry. The measured tread went by, and he emerged stealthily and took up his old position. There he waited and watched until a door on the opposite side of the street was opened, and with a curt 'Good-night,' addressed to some one within, a man came out upon the street and stepped briskly westward. The shivering figure left the doorway, and with his black rags fluttering in the wind, and gleaming in the gaslight and the rain, crossed the street. The man in front, greatcoated, well booted, vigorous, hummed an air as he walked, and kept time to it in his sturdy march. The shuddering, gleaming, ragged wretch behind him panted and groaned as he hurried in his footsteps. At last, however, he came up with him, and laid a hand upon his arm.

The man who was thus accosted turned, faced his follower, and recognised him. 'Hillo! What's the matter?'

'Scuse me, sir,' said the other, panting still after his brief run; 'but I thought I might make so bold, sir. I went down to your place, sir, an' they told me you'd gone out, an' wheer you'd gone, an' so I made bold for to follow you an' wait for you, sir.' Here he paused to cough huskily behind his wasted hand.

'Well?' the other asked.

'She's in a awful state, sir—dyin' sir. Would you be so good as come an' look at her?'

'Couldn't you have gone to the parish surgeon?'

'I went to him at five o'clock to-night, sir; an' again at nine; an' again at 'leven, an' he hadn't come home neither time.'

'Well, I suppose I must go,' returned the Doctor in a grumbling tone.

'God bless you, sir,' said the other; 'I know'd you would.'

'Don't humbug me, Penkridge,' replied the Doctor. 'You'll want all your breath for your walk. Come along.'

They turned back, threaded through half-a-dozen winding streets between the Strand and Oxford Street, and at last turned into a low, dark and noisome entry, which led them to a court, whose poverty and squalor were picturesque in the light of a single gas-lamp. The inhabitants might have preferred perhaps that it should be less picturesque and better lighted, as the Doctor, stumbling along the broken and uneven pavement, certainly would.

'Now, lead the way,' said the Doctor brusquely as they paused before a door. The man pushed the door open. It moved only upon one hinge, and groined upon the broken bricks behind it. It opened flush upon a staircase, above which hung a single oil-lamp, emitting a dim light and a sickly odour. The stairs, like the court, were broken and uneven, and the balustrades were gone here and there altogether; having been either broken up for fuel, or destroyed in the course of some broil amongst the inhabitants of the house. The Doctor and his companion passed up several flights of stairs, and came upon a room which seemed at first sight to be deserted. It was faintly illumined by the light of a candle stuck against the wall, and holding there by the congealed grease which had guttered from it. The wall above it was blackened by a tapering streak of smoke. In one corner of the room the shadows seemed to rest deeper than elsewhere; but as the eyes grew accustomed to the dim light, these shadows resolved themselves into the figure of a woman, stretched upon a heap of shavings, and covered by a piece of tattered sacking.

'Bring the light,' said the Doctor, kneeling down over this figure.

His companion obeyed him.

'Why, what's this?' the Doctor asked, turning down the sacking, and disclosing the face of a child, evidently not more than a few weeks old.

'That's it,' said the man kneeling beside him. At the apparent risk of setting the couch of shavings on fire—since he still held the candle in his hand—he took up the child. 'Tell me what you think of her, please sir,' he asked, indicating the recumbent figure by a motion of the hand.

The Doctor bent farther over, and laid his finger on a wasted wrist. The man knelt by him, holding the candle to her face and watching him keenly. The Doctor's hand passed from the wrist to the region of the heart. Then he took the candle and examined the face. He laid the tip of a finger upon an eyelid and raised it. The eye remained open, staring in a ghastly way. The Doctor closed it again, gave back the candle, and arose. The man also arose and faced him, holding the child in his left arm. The Doctor shook his head.

'You don't mean to say, sir,' the man asked sternly, 'as you can't do nothin' for her?'

The Doctor, with a motion of the hand towards the recumbent figure in the corner, answered: 'She has been dead an hour.' The man dropped the candle and the child, and fell upon his knees with a sharp cry. The candle, unextinguished, lay upon the shavings, and the Doctor set his foot upon it just in time. The wail of the child struck

through the darkness ; and the Doctor, groping his way down-stairs, found the malodorous lamp at the bottom, and returned with it—the child's cry assailing his ears all the time. The man still knelt beside the couch, and had taken one of the dead hands in both his own. The infant lay unheeded until the Doctor set the lamp upon the floor and took it in his arms, and examined its limbs, to see how far the tiny creature had been injured by the fall. The infant screamed and writhed with pain ; but the man on the floor took no heed until the Doctor laid a hand upon his shoulder. “

‘Penkridge,’ said the Doctor, ‘this is your child?’

The man looked stupidly at him, but returned no answer.

‘Is this your child, Penkridge?’ the Doctor asked again.

‘Yes,’ responded the man stonily. ‘Mine an’ hers. God help her! Mine an’ hers.’ He muttered this over and over again until he got it into a sort of rhythm, which was arrested by the Doctor’s hand again laid upon his shoulder.

‘Do you know that you have damaged the child seriously? Get up. You can do no good there, my poor fellow, and you may do something here.’

The man dropped the thin hand he had held caressingly within his own, and arose.

‘Have you any friends in the house?’ the Doctor asked.

He shook his head dismally, and said he had no friends. ‘Her was the larst,’ he said, and looked stonily down upon her.

‘Have you nobody you can ask to take care of the child? Is there no womanly neighbour who could see to it until the morning?’

He shook his head once more, answering that he didn’t know, and repeated: ‘Her was the larst.’

‘Have you any money?’

The man laughed drearily, and shook his head.

‘Any fuel? Any food?’

He shook his head again, and answered: ‘Not a mossel of anythin’.’

As the Doctor stood in perplexity with the wailing child still in his arms, a tap at the door was heard, and the face of a woman looked into the apartment. ‘Good-mornin’, Docthor,’ said the owner of the face. ‘Will I be able to do anything for you?’

‘You are a perfect blessing at this minute, Mrs Closky,’ the Doctor answered.

‘Ah, poor thing,’ said Mrs Closky, looking down at the miserable couch of shavings. ‘Her troubles is over. It don’t take much lookin’ to see that; God be good to us.—Ye tiny crathur, what chune’s that ye’re singin’? Lend her to me, Docthor dear. An’ ’tis plain he’s flured, poor crathur. Take him away down to Mick on the second flure, Docthor, an’ lave me to do the decent thing by her. I moind her when she was respectable an’ well to do; an’ him-tew, wid a dacent little place o’ business, till she fell in wid Misther Tasker, bad cess to him!’

‘Is there any other woman in the house, Mrs Closky,’ asks the Doctor, ‘or in the court? Any woman who could help you here, to take care of the child, and so forth?’

‘Sure, I’ll manage, Docthor,’ responds Mrs Closky. ‘What is it that’s the matther wid the child?’

‘She has had a fall, and is badly hurt, I am afraid.’

‘Will I bring her down to Nelly then?’ the woman asked. ‘Fetch the light wid ye, Docthor, av ye plaze, an’ fetch him along to Mick. I heerd ye comin’ in, an’ I see the poor crathur there wasn’t far off takin’ the blessed journey a month ago. An’ when I see ye goin’ down-stairs to bring the lamp just now, I thought that maybe ye might be wantin’ somebody, an’ I slipped up. Mick’s in bed, and so’s Nelly; but I’ll not be a minute gettin’ thim out.’

Mrs Closky led the way down-stairs with the child in her arms, the Doctor following with the lamp, and Penkridge bringing up the rear. The room into which the woman conducted her companions was almost as sparsely furnished as that they had just quitted. It boasted a table—contrived from a crate and an old door; and several tea-chests, which served as seats. A curtain hung half across the room, and on the near side of it a girl lay on a rough mattress, with an old greatcoat wrapped about her. Mrs Closky disappeared behind the curtain, and after an audible colloquy with her husband, in the course of which both he and she made use of a good deal of rough language, induced him to rise and shew himself. He came forth sleepy-eyed and scarcely sober; but at sight of the Doctor, professed himself ready to do anything in his power to oblige that gentleman, ‘from wilful murder downwards.’

‘Howld your tongue, ye omadhaun,’ says Mrs Closky; ‘an’ bring a dhrop o’ comfort for the poor sowl here that’s lost his wife; the heavens be her bed this noight!’

Thus commissioned, Mr Closky retired behind the curtain, and shortly reappeared with a black bottle and a wine-glass without a foot, and invited his visitor to drink. The invitation was at first declined, with a shake of the head; but Mr Closky grew pressing, and Penkridge at length took the footless glass and said: ‘My humble respects to all,’ and drank. Mr Closky, with a ‘sentiment’ suited to the occasion, followed his example. The Doctor occupied himself with the child, and having made use of such soothing appliances as were within reach, went away, promising to return in the morning, and leaving a few coins with Mrs Closky for the use of Penkridge and the child, until some further provision could be made for them.

Mrs Closky laid the child down by her daughter, and having instructed her to take care of it, went up-stairs to perform the last decent and composing offices for the dead. The two men sat and drank, turn and turn about, from the footless glass; and Mr Closky grew noisily cheerful.

‘Oi didn’t know that ye was resoid’n in this neebourhood, Misther Penkridge,’ said Mr Closky. ‘An’ it’s odd now the way that owld frinds is always meetin’ in this big city. Oi remimber ye whin ye wor the gentleman compleat, wid your shop an’ your trap, an’ your little servant gyurl, an’ whin I’d no omdaya that ye’d iver be sittin’ an’ dhrinkin’ with the loikes o’ me.’

‘I hope I never acted proud toward you, sir,’ returns Penkridge tearfully; ‘which I assure you, sir, that if I did, it was foreign to me so to do. My poor pardner, sir, as is now a-lyin’ dead up-stairs, it were also foreign to. I have knowed prosperity, an’ I have knowed this,’ he continues,

waving his threadbare sleeves in illustration; 'but I never had no pride, sir, an' neither did my pardner which is gone.'

'Oi'd ask no sweeter pleasure,' returns Mr Closky, 'than to track the scoundrel that said ye had.'

At this the shabby creature melts in tears. 'I loved her dear; heaven knows I loved her dear!'

Mr Closky shakes hands with his companion, and presses the glass upon him. 'It's loikely ye don't remimber me at all, Misther Penkridge. Oi remimber yew in the days o' your prosperity well. Oi've had me own days o' prosperity, an' oi know—no man betther—what comin' down in the world manes. Hadn't oi as foine an' nate a little public as ye'd wish to foind, till I came to grief with borrowed money?'

The other took no notice of his speech, but looked blankly before him, with tears in his maudlin eyes.

'Just be doon me a favour, Misther Penkridge. But wait while I provide ye with a tay-cup. There; it's not the clanest, but I'll do with it. Take the glass. Fill up. I want ye to drink a health to a frind of ours. Hare's to the blissid memory o' Misther Amiadab Tasker, an' may he'

'Who?' cried the other, rising to his feet.

'The noble gentleman that brought the pair of us to this pass, Misther Penkridge.'

The tatterdemalion's face flushed, and for a moment he was almost a man. 'Drink that scoundrel's 'ealth, sir! Not me. It's him as ruined me. It's him as dragged me down to this. It's him as has had me in his cruel grip for 'ears an' 'ears. It's him as'll have to answer for my pardner-in-life, sir. Drink his 'ealth! I'd like to make a hend of him; I would, if I'd got him 'ere.'

'When oi think of 'm,' rejoined Mr Closky, 'I loike to drink a health to 'm. Ye've no oidaya how oi love 'm.'

'You've no idea, sir, what a weight he's been to me, sir. You've no idea, sir; you can't have, or you wouldn't talk like that.'

'Are ye blöind?' cried Mr Closky with sudden anger. 'Are ye deaf? Are ye mad? Can't ye ondherstand divarsion. when ye listen to't? Wouldn't oi loike to have me fingers on the neck of 'm? Don't oi know that what he's been to me he's been to you, the blood-sucking blaggard! Haven't I promised day an' noight, an' noight an' day, to have his loife?'

Penkridge stared at the Irishman for a moment, and then, in answer to the other's invitation, 'Drink your will of him,' tossed off the contents of his glass, and sat down. 'Not as I like that sort of talk, sir,' he said, relapsing into the maudlin stage again.

The other snapped his fingers. 'Don't oi know 'im? Haven't oi watched 'm from his office, an' watched 'm home? That's a little treat oi 'm fond o' givin' meself whin oi know oi 'm sober. If oi did it whin the dhrink 's in me it wouldn't be safe. Oi could not howld off of 'm.'

'My poor pardner, sir,' says Penkridge, 'never forgiven him, sir, for what he done to us.'

'Look at 'm now,' cried the other, 'with his joolry, an' his foine house, an' his offices! Look at 'm rowlin' in wealth. He doesn't do business with the loikes o' you an' me now, Misther

Penkridge. No, no. The gintleman's got bigger fish to fry. He's loanin' hundreds where he used to loan a pound. Drink your wish to 'm. Never fear, me darlin', but we'll see ye paid yet, av we take a most onpleasant journey for it.'

Having given vent to the foregoing sentiment, Mr Closky fell asleep, and Penkridge followed his example. It was broad summer daylight when the latter awoke, and with the fumes of the liquor still upon him staggered down the stairs and out of the court. The way he took led him into Oxford Street, where he rambled blindly for a little while, blinking in the sunlight like an owl, and holding himself and all his looped and windowed raggedness together with his arms. Suddenly, as he took his slouching way, he was pushed somewhat heavily by the burly figure of a hurried passenger, and looking up, recognised the magnificent Hebraic nose and the carnivorous lips and teeth of Mr Tasker. With the desperation of drink and the memory of last night's anger upon him, he laid hold of Tasker's arm.

'Mis' Tasker—now I've got you. Do' know me, I s'pose, sir? Oh, yes, y'do. Know me v'ry well indeed. My name's Penk'—'

'Policeman,' said Mr Tasker calmly to an official who passed at the moment, 'will you take this man away?'

'Come now,' said the officer, taking Mr Penkridge by the collar. 'You move on. That's what you've got to do, you know. Move on.'

'Mis' Tasker, you've had poun's out o' me. Haven't got a farthin' in the world. Give me shillin'!'

The official disengaged Mr Penkridge's hold, and swung him into the gutter.

'Drunk and disorderly,' said Mr Tasker. 'You should take him up, officer.'

The officer took him up a little roughly, and holding him before him by the collar, conveyed him to the nearest station.

Mr Tasker took his smiling way down Holborn.

## ANIMALS I HAVE KNOWN AND LOVED.

BY A LADY.

### SECOND PAPER.

I WILL now give an account of cats that I have known. It is an opinion held by many that cats after all are but cats, and have no remarkable characteristics of their own; but this is quite contrary to the truth. They are very sensitive, and peculiarly alive to neglect or any slight. My grandfather had a special antipathy to black cats, but had a very beautiful tortoise-shell, which was a great favourite with him. She had a litter of kittens; and when this was announced, he went into the kitchen to look at them. He took them up, examined and praised them all but one, which was black. The same evening, when seated in his easy-chair, Pussy was heard scratching at the door. When it was opened, she had the black kitten in her mouth, and laid it at her master's feet. He was much affected; and taking up the little creature, he stroked it gently, and gave it back to its mother, who carried it away, but never brought it to him again.

My father had a very fine cat which had been trained to live in the barn to protect the young chickens and turkeys from the rats, which were

very numerous. There puss had a litter of kittens; and one of the men thinking there would be too many, took three of them to drown; but instead of doing this carefully, he merely threw them into a pond in the field, leaving them to sink or swim. We were sitting in the dining-room, Flora my beautiful Blenheim spaniel lying asleep on the hearth-rug, when in rushed the cat, covered with wet and mud. Almost wild with distress, she flew towards Flora, who jumped up and ran with her down the yard. We followed, to see what was the matter. When we reached the pond, Flora was in the water with a kitten in her mouth. She brought it safely to the bank, and swam back for the other. As she passed, she looked at the third, and seeing that it was dead, the intelligent creature did not return, but jumped on the bank and shook herself. But poor Pussy could not be satisfied to leave one behind. She looked imploringly at the dog, who in response jumped in again and brought the dead one also to the bank! We took the poor kittens, dried them, and put them in a basket by the fire, and Flora, who before this could not endure cats, constituted herself their nurse whenever their mother was absent; for she was allowed to shelter them in the kitchen while they were feeble, and kept them warm in the basket while the cat was away. A loving friendship was formed between the two, which lasted until little Flora died.

So well was this cat trained, that she never attempted to injure the birds that were fed at the window; they were as safe as the chickens. I have seen them come to the window for crumbs; and once a robin which had become quite tame from the severity of the weather, and would come into the room and alight upon the table, was alone with her, and remained uninjured. One morning I left the drawing-room window open, being suddenly called away. When I returned, puss was in front of the canary's cage which stood on the table—her gaze fixed upon a strange cat which was preparing to seize the bird. She was there to protect it.

I must pass over many tales I could tell about these curious animals, to give an account of one that was very dear to us, and had a sad end. Some years since, we had a kitten given to us—the most beautiful I ever saw, full of life and fun. We went into the country for a few weeks, and took him with us, delighted to watch him climbing the trees and enjoying his rambles. One day we missed him, to our great sorrow, for he had endeared himself to our hearts by his loving ways. He was lost on Saturday; and on Monday morning we heard that some tramps had been staying in the neighbourhood, and had a kitten with them, answering to the description given. They had gone on to Uttoxeter. My youngest daughter and I followed them by train. We made inquiries of the inspector of lodging-houses, and found they had been there, the kitten with them. I at once hired a conveyance and took a detective with me. When we arrived at the first toll-bar, we were told they had gone through in the morning, leading a kitten with a string, and a piece of white tape for a collar. The toll-keeper had remonstrated with the woman for her cruelty; but she said the animal could walk as well as she could, and she was not going to carry it. We traced them all

along the road. The detective, whose name was Dick, thought they were *en route* to Derby.

'But,' he said, 'never mind, Missis; we'll catch them up yet. Black Bess will fly like the wind.—Won't you, my lass?'

Away went the beautiful mare, as if she knew she were flying to the rescue. We heard of them on the road, and when Dick stopped to give the mare some oatmeal and water, the hostler told us they would be about a mile ahead.

'Sharp's the word now, for they may make across the fields. Are you able to hold the reins, Missis, if I give 'um you?'

I told him I was well accustomed to driving.

'Well, if I see 'um, we must be careful, for they might hurt the creature for spite. You'll see a bit of by-play with Bess, I can tell you, when I catch a sight of 'um. She has a way, has Bess, of getting a stone in her foot, and turning lame all of a minute. She makes such a *whobbling* with her feet you wouldn't believe. I am forced to get down and help her a bit, you know.'

He said this with such a knowing wink that it was irresistible, and I laughed heartily.

In a few minutes, right before us, resting on the grass by the side of the road, we saw a man and a woman; the man had a pedler's box. He was smoking; the woman was reading a bit of newspaper.

'There they be; we're in time. Now for it;' and just before we got near to them, Dick called to the mare: 'What's the matter with you, Bess? Turning lame again? That'll never do.' As she came close to the tramps she stumbled, making quite a noise. Then I understood what Dick meant when he said she made such a *whobbling* with her feet. I took the reins; and suiting the action to the word, he jumped down, and began examining the mare. Satisfying himself that all was right, he took off his hat, wiped his forehead, and turning to the man, asked him if he could give him a light for his pipe. Then drawing near, he said to the woman, who had something concealed under her shawl: 'What have you got there? Is it a pup?'

'What's that to you? Mind your own business,' she sulkily replied.

'Well, you might be civil,' said Dick.

A pitiful cry came from the kitten.

'Hollo! If it ain't a cat, I do declare. It must be an uncommon favourite, for you to bring it with you. Are you going to sell it?'

'Yes,' she said. 'My aunt gave it me in the Isle of Man, and I am going to take it where I shall get a good price for it.'

'Maybe it will be one of them queer ones I have heard tell of, as is born without a tail?'

'No indeed; it isn't. It's got the handsomest tail I ever saw.'

'Well, let's have a look at it;' and stooping down he lifted it up, and bringing it to the dog-cart, he held it up for us to see. In a moment I recognised my favourite. I nodded to the man; and calling to the poor little creature by its name, it sprang into my lap, and I had it safe. The rage of the man and woman was unbounded, but we were determined to keep our hard-won prize.

A pompous old gentleman who was walking along the road, took their part, and insisted upon our giving up the cat to its rightful owners, threatening to have us stopped if we did not leave

it at the public-house until we could prove that it was ours. In reply to his demand who we were, Dick told him that he was a detective from Uttoxeter, and if he liked to go and ask for One-eyed Dick, he would soon find out where he put up.

Our return along the road was a complete ovation, for their conduct had raised the indignation of all who had witnessed the woman's cruelty. It seems incredible, but it is nevertheless true that the poor little grimalkin had been compelled to walk nearly twelve miles. He was received on our return with great joy, and had a nice warm soft bed prepared. But he never rallied; the strain upon his strength had been too great, and in a few days, to our grief, our little pet died.

I will now go back several years, and tell of the most remarkable parrot I ever knew. My father knowing my desire to have one, employed a connoisseur to make the purchase. It was a fine young gray bird, with a scarlet tail. When she came to me, the bird had never spoken, and it was some weeks before she did. I took great pains with her. When she began to speak, I taught her to do so distinctly, and Polly soon caught the tones of my voice, though I never anticipated that she would become the clever intelligent bird she did. Her speaking powers were wonderful—not as a simple imitation of words, but like a reasoning, thinking creature. She was my constant companion. When I went into the garden, she would go too, and never attempt to leave me. When I was alone reading or writing, she came out of her cage and amused herself by walking about the room. Polly was excessively proud and sensitive. Sometimes my brother teased her, and spoke in a contemptuous manner, when she would only shrug her shoulders and relapse into silence, as if he were quite beneath her contempt. I had had her about two years, when the late Rev. Dr L—— of London came to pay us a visit. Naturally, Polly was spoken of, and we related to him some of her clever sayings and doings. I remember his looking at the bird, and calling to her: 'Well, Polly, I hope that I shall hear some of your clever speeches while I am here. I can scarcely believe what they tell me of you.'

Dr L—— was a large, I might almost say ponderous man. The bedroom he occupied was above the dining-room; he could not walk across the room or come down-stairs without being heard. The next morning at breakfast, instead of talking as she was accustomed to do, Polly remained silent; so I thought she must be ill. Accordingly, when all left the room, I took her out of her cage and fondled her, when she at once spoke to me in her most endearing manner, using the fondest expressions, but in a low whisper. Thinking that she had taken cold, I gave her some warm food, trusting she would soon be better. In the afternoon, Dr L—— went out to pay some visits, and as soon as the carriage drove away out of the gate, she began in her loudest tones talking and laughing in the happiest manner. He remained with us a fortnight, but she never spoke in his presence. When she heard him coming down stairs, she would whisper: 'The Doctor is coming,' and relapse into utter silence.

The last day of his visit he was dining with us.

Turning to mamma, he said: 'I am sorry I have never heard that bird speak. Of course I believe all you tell me about it, but I am very much disappointed.'

Thereupon Polly looked down from her cage, and in her loudest and most dignified tone exclaimed 'Doctor!' and then came one of her merriest laughs; the ice was broken, and she chatted away in her happiest and best manner.

There were two dear friends who at that time were constant visitors. Polly was a great favourite with them, and a source of much amusement to both. One day while we were sitting in the dining-room, she observed them coming across the field at a short distance, and called to me: 'Here's W—— and R—— coming; they will want their dinner. Won't Lizzy be in a rage! Ah! ah! won't she, that's all.'

'Nonsense, Polly,' I said. 'Don't tell stories. They are not coming; and if they were, you could not see them?' not supposing her sight was so keen.

'Well, you'll see,' replied Polly.

In a few moments the bell rang, and Mr W—— and Mr R—— appeared. Nothing could quiet the bird. She seemed in an ecstasy of fun and mischief, and had to be carried away into the kitchen to the cook, who, to her no little annoyance, had to prepare an impromptu dinner. The dinner was served, and Polly returned to her own place. By this time she was thoroughly excited, and began praising herself and her dear mistress. Mr R——, who thoroughly admired the bird, led the conversation.

First she looked at her foot. 'What a beautiful foot! What a tail, and a red one too!'

'Yes, Polly, you are a beautiful bird, and a clever one as well. You saw us coming across the field, and knew we had not had our dinner. You are a knowing bird, Polly.'

'Ha, ha!' with her curious laugh. 'Polly is a clever bird, Polly's a beautiful bird. What a Polly! what a—whataful Polly!'

We all laughed heartily, in which she joined—Polly loudest of all.

Mr R—— said: 'Well done! You ought to be sent to the College, to teach the students elocution.'

One of the most singular instances of her intelligence and great naughtiness was the following. One morning I had gone from home. A young servant went to Polly's cage and, not knowing that she was very savage, opened it. Polly flew at her hand. The girl was frightened, left the door open, and ran away; and the window being open, Polly walked out into the front-garden. The cook saw her, and called; but the bird would not come back; so thinking it was best to leave her until my return, cook watched her climb into a tree.

I had had experience of Polly's perverse disposition, and knew that only by stratagem I could manage her. I walked down the path, and carrying a favourite cat with me, sat down near the tree, and proceeded to stroke Pussy and pet her. 'Poor Pussy! poor Pussy! You shall be my pet now. Polly has gone away and left me.' I often bought her a sweet biscuit, and I had some with me, which I gave to the cat, still stroking her. My ruse had succeeded; I had roused her jealousy. I heard a rustling in the branches, and presently Polly called out: 'Pussy is a wretch.'

I did not take any notice; but still fondling the

cat, I said: 'Come, Pussy. We will go and see if dinner is ready.'

Matters were now progressing. I glanced up, and saw Polly quietly descending the tree; and when she came to the bottom, cried: 'Polly's out; Polly has been a walk.'

'So I see. Polly can stop out altogether now, if she likes.'

'Pussy is a fool—a horrid fool.' Her temper was thoroughly roused. She came to me, climbed upon my knee, and rubbed her pretty head upon my hand. I had her safely now. After this, a strong padlock was put upon her cage, to prevent any more tree-escapades.

We had a very handsome peacock, which Polly could see from her cage when he was on the lawn. It was absurd to see the strutting bird, his pride and self-assumption, and equally amusing to listen to Polly talking to him. We called him Ralph. Polly then would say: 'Come here, Ralph—beautiful Ralph, handsome Ralph! Come, spread your tail.'

The tail would be outspread.

'Oh, you beauty! Now, stamp—stamp your foot, good, clever Ralph.'

One day while listening to such talk as this, she turned to me and demurely said: 'What a fool that Ralph is!'

'Nay, Polly; Ralph is not a fool: he is a very clever bird, and I like him.'

Whenever she was not pleased, she shrugged her shoulders, as if in derision. 'Now, I say Ralph is a fool.' Just then the peacock gave one of those awful cries that peacocks alone can utter. Polly therefore gave another in imitation, and laughing loudly, shrieked: 'Ralph is singing—Ralph is singing! Oh, I shall die—I shall die of laughing.'

A remarkable instance of her jealous temper was displayed to a parrot which had been purchased by a friend, who sent it to stay with us, hoping that it would learn to speak if it associated with my bird. But Polly conceived an inveterate dislike to the interloper, treating it with contempt, calling it all the ill names she knew. They were both in the dining-room one morning. I had trained her so well to be silent during family worship, that she never disturbed us. The other bird made various sounds, not very loud; but Polly knew that all noise was wrong. By way of chiding her ill-bred companion, she said in a whisper: 'Hush, hush! Be quiet, you naughty bird!' When prayer was over, she burst out: 'You naughty, wicked bird—you horrid bird, you kitchen bird—get out, get out! Away with you!' After this, we saw it was useless to employ her as an instructress, and so sent the despised bird home.

Nevertheless she had her favourites, and was very kind to them. She was very fond of the cat, and would call her to the cage. But the most singular fancy she took was to a little mouse. The winter was very cold, and as Polly suffered much from it, she was taken every night to my bedroom, where there was a fire, and her cage placed on a low stool near it. One night I heard her talking in a low tone. I listened, and heard her say: 'Pretty little dear—pretty darling, Polly won't hurt you—Polly won't bite you.'

Wondering what she meant, for I was sure that she was not talking to me, I got out of bed, and went to her cage. There, in the bottom of the

cage, was a little mouse underneath the wires, feeding quite contentedly, and without any sign of fear. I often saw the tiny creature come in and out of Polly's cage, nor did she ever attempt to injure it or drive it away. Her speech was very peculiar when those she did not like were present. She had a great dislike to my husband; I suppose from a feeling of jealousy, and always seemed unhappy when he was near. A few months after our marriage, we paid a short visit to my father, and one day when I was alone with Polly in the dining-room she said to me in her tenderest tones: 'Why did you go away and get married, dear? Why did you go to Scotland, and leave your own Polly? Polly loves you. Don't go away again and leave me! Ma cried when you left and went away. Don't leave Polly again!'

He had never before heard her speak in such a gentle manner, and before my husband entered the room, he thought I was in conversation with a friend, and paused outside to listen. He has never forgotten the impression made upon him by that touching colloquy. We had to leave Polly behind, under mamma's care, and in writing to me afterwards, she told me that the dear bird would talk about me continually. One day mamma said to her: 'Polly, I am writing to your mistress. Shall I send your love?'

'O yes; and here's a pretty feather. E—loves Polly's feathers.' It was sent to me, and I have it still. But unfortunately for Polly's beauty, she bit off nearly all her scarlet feathers to send to me!

When I revisited my former home, I took my little baby with me. Polly was delighted. It was something belonging to her dear mistress, and must be loved. When any one called, she would say: 'Have you seen the baby? Such a beauty! Give it to me. Polly won't bite it; Polly will only kiss it.' I had full confidence in her love for me; but I need scarcely say I never tried her affection for the little one. She, like other pets, has passed away, but is not forgotten.

#### THE IRISH REVENUE POLICE INSPECTOR'S DREAM.

MACKIN'S Hotel is, or was, a refuge for the waifs and strays of male humanity whom circumstances and the Limited Mail bring to Dublin; and the walls of its dingy smoking-room have in their time listened to many a strange tale of adventure told over the punch. One afternoon, the weather—an Irish drizzle, twin-sister of a Scotch mist—putting out of the question a saunter in Grafton Street, the writer sat before its fire in company with another waif, a retired West India Colonel, when we were joined by a third waif, tall, elderly, and who, from his appearance, had also evidently 'served.' The conversation, general at first, took eventually a turn which led to this gentleman beguiling the time for us until the dinner-hour by the recital of a remarkable dream, for which and the events connected with it, it is perhaps superfluous to say the narrator vouched. The dream occurred to himself. The events he had either participated in or was cognisant of, and his narrative ran thus:

Some five-and-twenty years ago—faix, its mebbe more—I held an appointment in the revenue

police, employed in this country specially to suppress the illicit manufacture of whisky—still-hunting as it was called. The duty now forms part of those undertaken by the constabulary. In those days it alone gave us plenty to do. At the time of my story, I was quartered in the County Fermanagh, and engaged with my party in scouring the picturesque hills and glens of its western border. Few who know anything of Ireland and its past will doubt that in the execution of my duty I had difficulties to contend with. Every man's hand was against us, and every man's mouth too for the matter of that as long as it was kept shut. There were few facilities for gaining information necessary to guide us to the lonely spots selected for the secret and primitive distilleries. The disposal of the stock was no easy matter with the potheen-makers, it is true, and in their attempts to get rid of the 'craytur' and realise the profits, though often baffling us by the ingenuity of their devices, they frequently gave us a clue to their haunts. Still, every other man was engaged in the unlawful proceedings, and the remainder indirectly if not directly benefited by them.

The dream itself will not take long to tell, the story connected with it a little longer. I returned one night from rather a long round, hungry and tired. After a good supper and a glass of punch—which for all I knew might have been 'still'-made—I was glad to turn in. I most probably slept soundly the first part of the night; but in the middle of it I awoke, startled by an ugly dream. I was travelling along a road well known to me, and was, as usual, on horseback. As it seemed, I had arrived at a spot—the bottom of a valley or glen—where the road crossed a purling brook by one of those little bridges common enough in Ireland, especially in highland districts. The same peaceful spot now presented in my dream I had often paused to admire in my waking senses. There were the babbling brook, the rustic bridge, the heath-covered hills sloping away on each side, their summits merging into the blue of the horizon; while around me the birds were singing in the copses, and the sun shining brightly. Peaceful the scene but for one ghastly and mournful feature my dream added to it. On the bridge, in the middle almost of the path, lay the body of a young man, face upwards; the face marred by a gunshot wound a little towards the left on the forehead. His cap—a caubeen like what the boys wear—lay a little way from him; and beside him sat a woman, her figure muffled in her shawl, and her head between her knees, her voice giving forth that wailing, crooning sound that Irish women make over their dead. I awoke with that unsatisfactory feeling we sometimes experience in dreams of being unable to do something we wish. I was trying to make my horse pass the bridge, and he wouldn't. I am not in the habit of remembering dreams, but that scene haunted me for many a day. So much or little for the dream. Now for what happened.

About ten miles from my headquarters, away among the hills, nestled the pretty little village of Lisnamorna, secluded and peaceful, composed of a few humble dwellings, and surrounded by a farm or two, whose rudely cultivated fields occupied the adjoining slopes. As it belonged to my district, I had to visit it occasionally, and there was

only one establishment at which I could rest and refresh myself at these times. It was a decent little shebeen—an alehouse properly, I suppose; but cleanly and tidily kept by a widow woman of the name of Power. Widow Power had one child—a daughter, bright-eyed, rosy-cheeked, and buxom; always clean and tidy too, with a bright smile and a gay word for everybody at all times. A village, however small or sequestered it may be, is sure to have one if not rival belles to boast of, and Nancy Power was the acknowledged belle of Lisnamorna. Though belonging to the constabulary, I managed to pick up plenty of private gossip—indeed, anything not connected with potheen or potheen-making, I was free as other folk to know. And I knew that Nancy Power had scores of suitors equally desirous to win her favours, and ready to break each other's heads for the sake of a smile or a glance from her. All the boys for miles round were after her; and all the girls for exactly the same distance were mad with jealousy on account of her. And Nancy, for all she had not learned her art in Merriion Square, kept her admirers in the usual state of palpitation, and her rivals in agonies of envy just as long as it suited her mischievous nature. Faith the jade, I had a kind of sneaking regard for her myself, I think, for I used to like her to wait upon me. But although Nancy tossed her head and laughed when Mike broke Andy's crown, or Phil declared he'd go and list for a sojer for the love of her, it was another matter when Jim Brady, whose old father owned one of the little farms up on the hills, vowed if she didn't give up her shilly-shallyin', and tell him once for all Yes or No, he'd clear out to America. Like most Irish girls, she was fond of fun and loath to give up her freedom; but Jim was a determined fellow, America a long way off, and moreover Jim was master of pretty Nancy's heart. So Nancy said Yes, just for fear he'd go out there, and get killed by the 'nagurs' or Indians across the seas, she said. But that wasn't agreeable news for somebody, as I quite accidentally learned.

'See here Nancy, d'ye mind me now! Av ye don't quit with that spalpeen Jim Brady, it'll be the worse for yez both. It's the last word I'll spake to ye, if ye don't promise me. Sure, it's all through you I'm not the quiet, dacent boy I wance was.'

'G'out o' that wid you, Dan Morrissey! Is it your slave ye think I am, to be doin' your biddin'? Off about yer business. Spalpeen yer-self.'

Dan Morrissey went about his business, but with the heaviest anathemas I think I ever heard a man utter; and Nancy, when she found me sitting in her mother's little back-room, coloured to the roots of her hair; for she knew I must have overheard the conclusion, at all events, of her conversation with her discarded lover in the little potato-patch behind the cottage.

'Well Nancy, and whar is it to be?' I said, knowing the best way with my countrywomen is to rally them out of their confusion. 'Has old Brady made enough profit out of the whisky yet, to set you and Jim up?'

'Ah thin, yer honor, it's not suspectin' the dacent owld man av such a thing, ye are surely!'

'Well Nance, never mind—keep Jim out of mischief anyway, when ye get him under your

thumb, as I know well you'll have him. But when is it?'

As Nancy stood modestly blushing and fingering with the corner of her apron, I could not help thinking young Brady was a lucky fellow.

'Faith, if it was only to spite that black-hearted Dan Morrissey to-morrow, I'd marry any one o' them to-night,' at length replied Nancy, her eyes flashing, and the blushes deepening and spreading over her pretty face in an angry flush.

'Then I fancy Jim will not have much longer to wait for his answer,' I said, as Nancy left to bring me my refreshment.

Dan Morrissey? I have that lad's name on my list, I reflected. He's one of Brady's gang. A tight, strapping young blade, with a roguish eye and a smart tongue. The life of a wake or a wedding, and the foremost boy at every fair for drinking, dancing, or 'divarshun,' as they call whacking each other's skulls with their black-thorns. A good lad too, barring the potheen-making, and a 'cute one. Well Sergeant M'Loughlin and I knew his 'cuteness. Maybe, it wasn't a 'cute trick to leave Brady's farm for a week, pretending he'd quarrelled with the old man and was turned off, that he might put us on a false scent the night they carted off two loads in Murphy Macmorrogh's wagons, my party and I following Brady's empty carts in another direction! Maybe it wasn't kind of him to drive M'Loughlin over to Ballymena, Mac sitting on top the sacks of potatoes with eight kegs of potheen under him all the while! Who but he ran fourteen demijohns into Ennis under a load of turf for 'his riv'rince!' A jaunty, rollicking young blade, the same 'handy Dan,' as they called him.

'We'll nab that Brady now sir,' said M'Loughlin, a short time after the occurrence of my overhearing the angry conversation between Nancy and Dan Morrissey. 'Handy Dan's broke wid the gang fairly this time. It's all along o' Nancy Power. She's to be marrit soon to Jim Brady; and Dan's just mad with jealousy and spite, and he's ready to give us the office.'

'Take care it's not a plant again, sergeant.'

'Sorra bit, sir. The lad's goin' to the dogs fast. Quarrellin' and gamblin' at fairs now, instead of jigging and making sport for the boys and girls. He's nigh broke his 'ould father and mother's heart.'

'Well M'Loughlin, it's no matter to us what's happened. Information's hard enough to get, and it is our duty to get it how we best can, and make the best use of it. Keep your eye on Dan Morrissey.'

Brady the elder, ostensibly a small farmer, was virtually the most extensive defrauder of the revenue in my district. Others, his inferiors, were associated with him, as of necessity there must have been, to carry on the number of stills he was connected with, and the amount of traffic he controlled; but although I had made a successful raid or two, I had been unable, hitherto, to bring home to Brady his share of complicity in any of the concerns seized. Failure in this respect had not exactly drawn reflections upon me from my superiors; but I was aware that nothing would accelerate my promotion to the rank of Inspector—I was only a sub then—so much as the despatch of old Brady to the county town with a clear case against him for trial.

Love and jealousy are powerful agents in human affairs; but they are more likely to be turned to account by the smart detectives of London and Paris, than by a revenue policeman still-hunting in the north-west of Ireland. It had indeed occurred to me that amongst Mr Jim Brady's unsuccessful rivals it would be strange if there were not one bearing a grudge against him strong enough to make him do, what, I knew no bribe in money would the most avaricious—turn informer. I had compunction, however, about setting evil passions to work even to further the ends of justice, and dismissed the idea, not without a secret apprehension that I was too scrupulous and tender-hearted to make an efficient revenue detective. If M'Loughlin was right now, however, about this jealousy-driven young fellow Morrissey, stern duty would compel me to avail myself of any information he volunteered.

Upon my word, gentlemen, when a week or two afterwards my sergeant came to me to make a long report of valuable information he had received from this Morrissey, I was not so rejoiced as you would naturally expect me to be—considering my promotion was insured by success—at the prospect of old Brady, his son, and all their gang falling into our clutches. I never could all my life help sharing my countrymen's hatred of an informer, and experiencing a feeling of disgust when duty compelled me to employ such tools. Moreover, I thought of Nancy Power newly married, and half hoped that the younger law-breaker might escape us. In any case, our success would ruin both the Bradies and Powers; for I had a shrewd suspicion all along that there was more of old Brady's potheen consumed on the widow's premises than either Guinness's porter or Jamieson's ale. But duty is duty, I needn't say to you. Sergeant M'Loughlin, eager like all of us for promotion, was keen on the hunt.

Furnished with the requisite information, my plans were soon arranged to make the seizures; and choosing a favourable evening, the expedition started. M'Loughlin with the larger party, guided by Morrissey—for whom a spare suit of uniform had been found—was to take a round-about to the most important of Brady's stills; while with a couple of constables I went through Lisnamorna, starting an hour before daylight, as if on an ordinary round, and to join the main party at a rendezvous in the hills beyond the village. The disguise was necessary for Morrissey, whose life would not be worth a moment's purchase if it were known he had turned informer. On reaching Lisnamorna with the two constables, we halted; and having given them each a glass of ale, I sent them on, directing them to take a cut across the hills to the rendezvous. I was in no hurry myself, knowing that being mounted, I should reach it as soon as they, or soon after they did, and did not expect M'Loughlin there before noon; so I staid chatting to Widow Power about the wedding and the new-married couple.

When I took the road again, I started slowly, not wishing those in the village to suspect I was after anything in particular, as my track would be visible to them for a mile or two as I followed its windings amongst the defiles. Presently I was out of sight, and trotted on. Excited with the

prospect of success and the work before me, my dream certainly was not in my thoughts, when, as I got to the bottom of the hill, a turn of the road brought me in view of the spot already described as its scene. I could hear the murmuring brook, and see it above the bridge like a silver thread winding through the glen—only the farther parapet of the bridge as yet visible. There were the sloping hills clad with heather; the birds were singing in the trees, and the noonday sun shining peacefully on the landscape. I suppose the recollection of my dream rushed upon me with sudden and overwhelming force—at all events I experienced a feeling I cannot describe and had never felt before, nor have I since. My heart beat fast, I know, and my bridle-hand shook the reins on the horse's neck as if I were palsied. A few paces more, and the animal I was riding pulled back with the snort a horse gives when terrified, causing me from habit to sit down tight, as he seemed inclined to rear. But as he swerved, he brought me in full view of the bridge, and there before my eyes was the ghastly and mournful group so mysteriously prefigured in my dream. Exactly as in my vision I had seen it, lay the dead body of the youth extended on the path, a little to the one side of it—the gunshot wound on his brow, his head in a pool of blood, his pale features upturned to the bright sun, and even his caubeen lying near him. The female also sat beside him, her shawl drawn over her head, her head bent down between her knees; and mingling with the babble of the stream and the twitterings of the birds came the low, weird wailing—the Irishwoman's requiem for her dead. There was not a single particular in which the scene before my waking senses did not correspond with that which my dream had presented to me three nights before.

Whether the woman heard my horse's hoofs, I know not, but she never turned or ceased her dismal 'keening.' I would have spoken to her; but nothing I could do would make the animal approach, and eventually I had to leave the road and jump the brook. Then I galloped off in the direction of the spot to which my two men had proceeded by the mountain pathway, which was not far off now. My look and manner evidently astonished them.

'What's happened sir, for the love of the Virgin? Ye look as pale as death.'

'Who is that young fellow lying dead on Mona Bridge?' I asked, forgetting in my excitement that these men could not have seen the sight I had come upon. 'And how has he come by his death?'

But of course they only looked more astonished than ever, gazing at one another and at me by turns.

But the presence of my own men restored me to calmness. The miserable shieling at which we had arrived was deserted, although the embers of a fire were still glowing on the hearth. I now ordered the men to take a shutter from the hut, and march with it down to the bridge, while I rode alongside. But it took longer for them to reach the bridge than it had done me previously to gallop from it; and when we came to the spot there was no one there.

'Ah, botheration sir, ye must have had no sleep last night, and just tuk a nap in yer saddle! It's a dhrame ye had.'

'Hush, you fool!' I said angrily, and pointed to

the pool of blood on the road; while the other constable picked up the poor fellow's caubeen.

Well, of course you would like to know how it happened that my dream came true; but that is what I cannot fully satisfy you about. All I can tell you is that Nancy Power was by this time a widow. It was young Jim Brady's dead body I saw lying on the bridge. Jim had been at the shieling before mentioned with others, all the previous night; but towards morning, wind of M'Loughlin's doings at other stills had reached them, and of course they all scattered, eventually finding their way to Brady's farm. But when hours passed and young Jim did not turn up like the others, they got uneasy about him, and ventured out to see after him. They found him as I had seen him, shot through the head. When they returned for a stretcher to bring him home, his wife had run off to him, on hearing the dreadful news, and it was she I had heard bewailing the poor fellow's death after her country fashion. In the interval between my first coming upon the sad spectacle and my return with the two constables, the party from Brady's farm—which was close by—had returned with the stretcher to fetch away the body, which of course accounted for our finding nothing there but the pool of blood and the poor fellow's cap.

Who shot him?—Well, there's not much doubt on my mind. When M'Loughlin came in and made his report, it appeared that the spy Dan Morrissey was missing from the party shortly after they had commenced operations on the first still. M'Loughlin, however, had all the necessary information to proceed with his work without Morrissey, and having his hands full, never bothered about him, believing he had made off, in fear of being recognised. A musket with blank cartridge, had been put in Morrissey's hands when he donned the uniform. Brady, it was found, was killed with a large slug. Putting this and that together, I think if we had caught 'handy Dan,' we'd have twisted a hempen cravat round his neck; but he had planned other things beside the seizure of old Brady's stills that night, and his own escape amongst others successfully.

Old Brady was let off easier, on account of the catastrophe; more especially as his illicit trade was completely spoiled. He lingered on for a few years a broken-hearted man. After his death, Nancy Brady, the young widow, married again, so I heard; but I got my promotion, and left the station long before these latter events. From that day, however, my reluctance to employ informers was greater than ever.

#### DOMESTIC HARMONY.

HOME, to be a *home*, is essentially patriarchal; not in the sense in which this term is used among tribal nations, but in the necessary reverence for, submission to, and sympathy with the head of the family. On him rests almost solely the responsibility of provision, and to him belongs the right of direction. It is difficult for those who have not yet achieved this headship to realise the sense of responsibility which often oppresses the head of the family. Provision may be so easy to some of us that few clouds cross the sunshine of our lives, and we may smile at or joke away the little domestic troubles which greet

us sometimes when we cross the home threshold. Few of us are so blessed. It is the far more common lot that the business events of the day have been more or less chequered, and the head quits the office or warehouse with the brain more or less perturbed, the heart oppressed, and both needing and longing for the sunshine and the joy of the home and the family circle. To be transferred at such a time from the troubles and heavy cares of business to the petty but often irritating squabbles of domestic life, is a case to make angels weep, and almost enough to drive humanity mad. Let, therefore, but the cares and responsibilities of the head of the family be duly realised, and each member of the household must feel towards him the necessary sympathy, to guard him from all needless obtrusion of little domestic difficulties. It may be—it unhappily is the case—that there are heads of families who are unworthy of reverence; or who are so tyrannical or oppressive in their rule that submission is difficult; or who are so unsympathetic that it is not easy to feel sympathy with them. These are family misfortunes which, however much they may be regretted, lie outside our purpose in this paper, and require a consideration beyond our limits. It is enough for our purpose here, that if there be not reverence for, submission to, and sympathy with the head of the family, there cannot be domestic harmony.

The infinitely slight modifications of form which make up the distinctive external features of mankind are but types of the numberless variations of temperament and character. It is not possible that the family can be constituted without the intrusion of these varieties. Often they are marked, and sometimes so strong and antagonistic as to become a fertile source of domestic disquietude. Often home-loves are enough to smooth down the transient asperities arising from this cause; and some of the most charming instances of the overpowering influence of home-love occur, where differences of temperament and character would otherwise more or less seriously disturb the household. The well-known axiom in civil life, 'that personal right ends where it encroaches on the right of others,' applies with equal or greater force to the closer relations of the household.

The enforcement of selfish claims is often submitted to by the more generous members of the household, for the sake of external peace; whilst the more generous heart bleeds under the enforced wrong. Jealousy of petty privilege is incompatible with domestic peace. The green-eyed monster glares upon all favours in which it does not share. Whatever the apparent sunshine, there can be no real harmony in a household where jealousy influences one or more of its members. For instance, a gentleman once offered a fortnight at the seaside to two of four children forming the family of a widowed friend; but the mother felt compelled to decline this generous offer, because she was afraid that if made to two only, the jealousy of the others would be painfully excited. The instance is one that gravely illustrates the losses often entailed on families by this unhappy feeling.

Jealousy, although a transient feeling, is a fertile soil for the growth of envy, which once possessed, grasps us with more persistency, gives a

deep gloom to the domestic life of the possessor, and often overshadows the whole household. Hatred and malice happily rarely intrude their destructive power upon domestic life; but the instinctive propensities which generate them must needs exist; and it is a powerful antidote to their development that the ordinary courtesies of our homes should be constantly and carefully regarded. If in the external world a due regard for social courtesies is essential to its enjoyable constitution, it is greatly more necessary that the varied members of a household should practise with scrupulous care the softening amenities of family life.

How often have the jealousies and envyings of individual members been calmed down or banished by the sunshiny greeting of its more joyous members! It is said, 'There is a skeleton in every house.' This may be; but a skeleton may be locked up in the strong-room and kept out of sight. With more truth, let us hope, there is an angel in every house. Reader, have you not one in yours? If you have not, then the chances of domestic harmony have indeed fallen hard upon you. If you have, assiduously cultivate it. You have no conception of how the careful observation and tending of this divine element will rub off your own angularities, and tend to invest you with its own simplicity and beauty. Avoid, however, all undue familiarity. As much freedom as is essential to graceful intercourse must enter into our domestic life; but this freedom must at all times be qualified by a subtle delicacy. The most joyous and generous are the most likely to be culpable on this point, and may by a little spontaneous carelessness 'tread on the toes' of their more reserved domestic companions. Nor may we forget that when we have inadvertently passed the boundary of domestic propriety, the truest politeness dictates a ready and graceful apology. The pride which forbids this is the product of selfishness, and is itself often a disturbing element of domestic harmony.

Mutual confidence, oneness, and openness are among the constituents of a harmonious household. 'Cross-purposes' are well known as a disturbing element; but do not cross-purposes come from the concealment and consequent misapprehension of purposes? Difference of purposes must needs arise, and the French provide for this by giving largely to each mature member of the household, liberty to live out the individual purpose without regard to the others. This, however, is wholly uncongenial to the English idea of the home, where the diverse purposes of the members must somehow or other be made to dovetail, or be arranged for their separate working out without interfering with the harmony of the whole. This is scarcely possible where there is concealment and consequent misapprehension. Let the life of every member of a family be transparent in all matters that affect the others; let the wishes and purposes of each be freely talked over; and then a little arrangement by the head or others, and the concession and conciliation which mutual regard will always generate, will suffice to bring all the purposes of the domestic group into harmonious working. If the selfish pressure of a purpose of subordinate character produce a little antagonism, the judicial interference of the head must be accepted, and obedience should be granted

without audible or felt disappointment. The mutual sympathy of a household should make the purposes of all a source of happiness to each.

Much of the provider's troubles would often be lessened by a little free chat at home about difficulties and purposes. A mother's smaller vexations would often vanish under the sunshine of loving discussions with the offending or other members of the family. A brother's or a sister's love affair, which generally has absorbing interest for the individual concerned, is far too often a subject of painful concealment or of rude banter. The propriety of such a love should of course at the first be referred to parental judgments. This point settled, it should be known to every member of the family, be treated with becoming delicacy and sympathetic gravity, or become a subject of pleasant conversation whenever the chief agent so wishes or may need loving guidance in reference to it. 'I do not like Mr Welford, Annie,' said George to his sister; 'and I do wish you would transfer your love to some one I could like better.' 'Well, George, I should very much like to oblige you; but lovers are not so plentiful, and perhaps I should be equally unsuccessful in another attempt to please you. Besides, you see, I am the person chiefly concerned; and as Mr Welford is very much to my liking, and our father and mother have sanctioned his suit, I think, as a loving act of brotherly courtesy to me, dear George, you should try to like him.'

And if Annie did not win her brother by this graceful appeal, he proved himself unable to make the necessary concession to the social harmony of the household, and so far rendered himself unworthy of his place there.

The measure of domestic happiness enjoyed by a household is the sum of its several parts. And the happiness of each of its members is enhanced by the consciousness of the happiness enjoyed by the others. As difficulties and troubles dwindle by sympathetic discussion, so inversely the joys of a household accumulate by that harmony of feeling which prompts us to 'rejoice with those that do rejoice.' So interwoven are family interests, that every severance of purpose detracts from the family sum of joyous life. So sensitive are family loves, that any diversion from family oneness arouses suspicion, and disturbs the harmony of feeling. Mutual sympathy must reign with least possible disturbance; and if disturbed, be restored with all possible speed and grace. Let every member of the household strive to be a source of contributory sunshine, for every ray will be reflected upon the source; and whilst enlivening other souls, that whence it came, grows brighter. Even the sadder spirits cannot fail to be more or less joyously excited under the happy influences of a sunshiny household, where by mutual confidence and loving sympathy, all is known, and each member is a link in the chain of domestic harmony.

#### ECCENTRIC RETURNS.

MR COWDEN CLARKE tells a story of a gentleman whose 'return' of his income to the Tax Commissioners ran: 'For the last three years my income has been somewhat under one hundred and fifty pounds; in future it will be more precarious, as the man is dead of whom I borrowed

the money.' In a similar serio-comic vein did a countryman, not too proud to confess the smallness of his means, respond to the kind inquiries of the Commissioners for the Income Tax, in the earliest days of its imposition. He rhymed; putting in a claim for exemption in this form:

I, John Ware, do declare  
I have but little money to spare.

I have,

1 Little house, 1 little maid.

2 Little boys, 2 little trade.

2 Little land.

2 ditto money at command.

• Rather too little is my little all,  
• To supply with comfort my dear little squall,  
And 2 too little to pay taxes at all.

By this you see

I have children three

Depend on me.

Sometimes official inquirers get more information than they desire. At the taking of the last census, an enumerator in South Ayrshire received from a miner the following conscientious return. We give it verbatim, only altering the names: 'Thomas Moran boren in ireland county of armaugh Silver Brige eage 303 years. To the best of my nolge i Am that eage, and i am married the secent time the furst wife Mary Conolly be longed to ireland in county armaugh the Secent Wife be longed to County Dereay hur name was elen M'Ghee Now hur name is elen Moran but she run a way From me five years and ten months since and i dont now wheare she is for if she is Dead or not i havent hard from hur since but if she is Dead i think she wood have sent me woard before now my father was a Farmer and had a great power of land in ireland and when i came to scotland it was a navey i was working In the Coll Pitt but sure i am not working no place now for i got my lege broken 5 weeks and 3 days since gon to morrow. Rosey Moran my sister be longing to ireland is Marred and hur name now is Misses Cross and hur eage is 205 years and she has Fore of a family the oulest Is tomas Cross 7 years of eage and boren in ireland newery County armaugh Mary Cross eaged 6 years gen the sevene day of august Boren in ireland County of armaugh Elsie Cross eaged Fore years gen the 10t May Boren in newcastle england Clety Cross eaged 1 yere and 9 month gen Saturdeay Boren in newery ireland and the father of them is Able Cross boren in england eaged 40 years and was a soger and sarved his Quane and his country 201 years now in the Pit Working and all that sins this paper is catholecks.' Glancing over this extraordinary schedule, the enumerator remarked to the miner that he seemed to have a rather large household, to which the surprised man replied: 'Sure, and there's just meeself!'

That was more than could be said by the honest farmer of Caithness, who, recording the births of his children in the Family Bible, wrote: 'Betty was born on the day that John Cathel lost his gray mare in the moss. Jemmy was born the day they began mending the roof o' the kirk. Sandy was born the night my mother broke her leg, and the day after Kitty gaed away with the sodgers. The

twins, Willie and Marget, was born the day Sanny Bremner bigget his new barn, and the very day after the battle o' Waterloo. Kirsty was born the night o' the great fecht on the Reedsmas, atween Peter Donaldson and a south country drover. Forbye, the factor raised the rent the same year. Anny was born the night the kiln gaed on fire, six years syne. David was born the night o' the great speat, and three days afore Jamie Miller had a lift frae the fairies.'

The Irishman's peculiar method of retaining the nothings is not so uncommon as one might suppose. A census schedule from an English village was dated 'April the 3, 18701,' and purported to give all the necessary information regarding the family of a farm labourer 'aged 305,' whose roof, according to his account, also sheltered a widow 'aged 704.'

An insurance agent seeing a would-be insurer had, in filling up the proposal form, answered the questions, 'Age of father, if living?' 'Age of mother, if living?' by making the one a hundred and twelve years, and the other a hundred and two years old, congratulated him on coming of such a very long-lived family. 'Oh,' said the applicant, 'my parents died many years ago; but if living, would be aged as there put down.'

There is nothing like exactness. An officer having to proceed on duty from one station to another, in making out his claim for travelling expenses put down the item, 'Porter, 6d.:' an item struck out by the War Office. Not being inclined to be defrauded of his sixpence, the officer informed the authorities that the porter had conveyed his baggage from one station to another, and that had he not employed him, he must have taken a cab, which would have cost eighteenpence. In reply came an official notification that his claim would be allowed, but instructing him that he ought to have used the term 'portage' instead of 'porter.' He was determined, however, to have the last word, and wrote back that he was unable to find any precedent for using the word 'portage,' but for the future would do so; and at the same time requested to know if he was to use the term 'cabbage' when he meant 'cab.'

The other day, a summons commanding Thatcher Magoin to present himself for service on the jury-box, was returned to the New York Commissioner of Jurors with the information that it had been served on the wrong party. 'Magoin,' said the Commissioner, 'must come here and shew cause why he should not be a juror.' 'He can't come,' was the reply; 'he's too busy. If he did come, he would make things hot for you. Besides, you would have to send a derrick and a truck to bring him; he turns the scales at five thousand pounds.' The Commissioner expressed his belief that the speaker had been imbibing more than was good for him. 'I'm telling you facts, Mr Commissioner,' said the indignant man. 'Thatcher Magoin is a steam-engine, located at the foot of Fletcher Street. Years ago, I was employed by a man named Thatcher Magoin. I named my engine on Pier 19, East River, after him. When the Directory-man came to the Dock to get names, he saw the name on the engine; and thinking it represented the name of the boss [master], put Thatcher Magoin down in the book.'

Of course the engine-owner was to blame for not having the Directory-man's false return cor-

rected, but then the mistake entailed no inconvenient consequences to himself. It was different in the case of the member of the Michigan House of Representatives who found himself set down as a married man in the official list of members. He lost no time in writing to the compiler of the manual: 'In proof-sheet of manual I see you say I am married. Please correct, or send the woman around, and oblige.' He was obliged one way or another. But as a rule, it is difficult to get the official mind to bow to correction; its aversion to owning itself in the wrong being as great as that of the Suffolk clergyman who, misled by a farmer's pronunciation, christened his boy 'Joan' instead of 'John,' and registered the youngster as a girl. On the blunder being discovered some time afterwards by the parish clerk, the vicar was implored to alter the register or perform the ceremony anew. 'I will make a memorandum of the circumstance,' said he; and he kept his promise by writing at the foot of the register: 'Mem.—The girl baptised on the 10th instant by the name of Joan, proved a fortnight afterwards to be a boy!' A very eccentric return, this.

#### A MAORI SERENADE.

HE.

WHEN queenly rides the moon above,  
And softly falls the dew;  
Across the wave to thee, my love,  
I'll steer the light canoe.'

The watchful maid his coming spied;  
Into the bark she came;  
While drifting gaily down the tide,  
He thus avowed his flame.

'How roguish yonder stars, my dear,  
Are twinkling in the sky!  
Yet none our tale of love can hear  
But only thou and I.

'Serenely sails the moon above,  
Across the liquid blue;  
So, gently down Life's waters, love,  
We'll steer the light canoe.'

SHE.

'Man ever was inconstant known.  
Should I be called away  
To where beyond the stars 'tis shewn  
We find eternal day;

'So sure as shines you moon above,  
Thy heart will prove untrue;  
To seek some English lady-love,  
Thou'll steer the light canoe.'

HE.

'The beauteous forms who will may boast  
Of Albion's favoured isle;  
The joy on earth I value most,  
My Maori maiden's smile.

'And if in death's repose my love  
Retire from earthly view;  
To join her then, for Heaven above  
I'll steer the light canoe.

## LUGGAGE MANAGEMENT.

THE method of managing luggage by the railways of the United Kingdom is about as loose and unsatisfactory as it is possible to be. For it there is only one extenuation, and that is the difficulty of dealing with masses of people who are disinclined to submit to any interference with their freedom of action. Accustomed to so far look after their luggage themselves, they do not like the idea of coming under the obligation of abandoning it wholly to officials. This seems to be at the root of present arrangements; but the time has come when, for the sake of security, better views ought to prevail. It is not saying too much, or saying what is not the fact, to affirm that by the existing system, universal we believe in this country, facilities and temptations are offered to every thievish rascal to make off with luggage at any station he may choose, but especially at the termini. Several cases of this sort of theft have lately been reported in the newspapers, but these represent only a very small proportion of the cases that are daily occurring. Newspapers take note of those only which result in an occasional capture. We noticed some time ago that the Plymouth police had captured a man in the act of making off with a gentleman's portmanteau at the railway station, and found at his lodgings a number of portmanteaus which had been stolen, amongst them one which contained securities for over ten thousand pounds. Now, it is intolerable that such a thing should be possible, and all the more so, as there can be no difficulty whatever in preventing it.
